

THE MOORISH DIRECTOR

Gifts of Wisdoms

Preface
by
Jonathan Bey

Each mystery systems has its own value, and the essence of its true cosmic value can only be fully appreciated if a chosen system is carried out in its entirety. These systems are the calisthenics of consciousness, and aim at gradually developing the powers of the mind. The value does not lie in the prescribed exercises as ends in themselves, but in the powers that will be developed if they are persevered with. If we intend to take our occult studies seriously and make of them anything more than desultory light reading, we must choose our system and carry it out faithfully until we arrive, if not at its ultimate goal, at any rate at definite practical results and a permanent enhancement of consciousness. After this has been achieved we may, not without advantage, experiment with the methods that have been developed upon other Paths, and build up an eclectic technique and philosophy therefrom; but the student who sets out to be an eclectic before he or she has made themselves an expert will never be anything more than a dabbler.

In addition to reading and studying for retention what I would call the imperative collection of literature for any aspiring initiate of any ancient mystery system, The Teachings of Ptah Hotep and The Ancient *Ketmetian Pa Ashutat* and Sacred Rites of Islamism must of course be included. The aforementioned imperative collection would without doubt at a minimum include:

- Mentu Neter Vol. 1 The Great Oracle of Tehuti And the Egyptian System of Spiritual Cultivation
- THE KYBALION - The Teachings of Tehuti “The Great Master Teacher of The Great Masters”
- The Mystical Qabalah and Rav Michale Laitman’s Guide To The Hidden Wisdom of Kabbalah
- Albert Pike’s MORALS & DOGMAS for a comprehensive understanding of the Morals and Dogma of the Ancient and Accepted Scottish Rite of Freemasonry , prepared for the Supreme Council of the Thirty Third Degree for the Southern Jurisdiction of the United States: Charleston, 1871.
- Mark Allen Wasmuth of The Rabbit Hole Research Group’s research findings and certified documentation compilation “What Happened To The Constitution”

The last two above listings are included as a measure of balance toward a meaningful end. Because an enlightened comprehension of the system we are now within is imperative to the success of anyone seeking to know Self, Pike’s and Wasmuth’s works are included as a means to understanding much more clearly this current Matrix of systems designed with the intent of keeping you ignorant of the others which lead to higher consciousness and re-connectivity to your creator. Other valuable insights and key significant truths may be acquired by visiting us the at MoorishDirectory.com

THE MOORISH DIRECTOR

Gifts of Wisdoms

The Teachings
of

Ptahhotep

The Oldest Book in the World

First Published Circa 2388 B.C. to 2356 B.C.

First Kemetic (*Egyptian*) Dynasty
under the title:

*Teachings of the Prefect of the City, Dja Ptahhotep
under the majesty of the king of the South and the North,
Assa Djed - Ka- Ra, living eternally forever.*

These are instructions by the Mayor of the City who is also the Vizier. His name is Ptahhotep and he serves under Pharaoh Assa who lives for all eternity. The mayor of the City, Vizier Ptahhotep, addressed the Supreme Divinity, the Diety as follows:

"God upon the crocodiles." (Reference to Heru) who is sometimes shown standing on two crocodiles. My God, the process of aging brings senility. My mind decays and forgetfulness of the things of yesterday has already begun. Feebleness has come and weakness grows. Childlike one sleeps all day. The eyes are dim and the ears are becoming deaf. The strength is being sapped. The mouth has grown silent and does not speak. The bones ache through and through. Good things now seem evil. The taste is gone. What old age does to people in evil is everything. **The nose is clogged and does not breath.** It is painful even to stand or to sit. May your servant be authorized to use the status that old age affords, to teach the hearers, so as to tell them the words of those who have listened to the ways of our ancestors, and of those who have listened to the Gods. May I do this for you, so that strife may be banned from among our people, and so that the Two Shores may serve you?

Then the majesty of the Diety said to Ptahhotep, go ahead and instruct him in the Ancient Wisdom. May he become a model for the children of the great. May obedience enter into him, and may he be devoted to the one who speaks to him. No one is born wise.

THE MOORISH DIRECTOR

Gifts of Wisdoms

And so begins the formulation of Mdw Ntr, **good speech**, to be spoken by the Prince, the Count, God's beloved, the eldest son of the Pharoah, the son of his body, Mayor of the City and Vizier, Ptahhotep, instructs the ignorant in the knowledge and in the standards of **good speech**. It will profit those who hear. It will be a loss to those who transgress. Ptahhotep began to speak to "Pharoah's son" (to posterity).

1. Do not be proud and arrogant with your knowledge. Consult and converse with ignorant and the wise, for the limits of art are not reached. No artist ever possesses that perfection to which he should aspire. **Good speech** is more hidden than greenstone (emeralds), yet it may be found among maids at the grindstones.

2. If you meet a disputant in the heat of action, one who more powerful than you, simply fold your arms and bend your back. To confront him will not make him agree with you. Pay no attention to his **evil speech**. If you do not confront him while he is raging, people will call him an ignoramus. Your self-control will be the match for his evil utterances.

3. If you meet a disputant in action, one who is your equal, one who is on your level, you will overcome him by being silent while he is speaking evilly. There will be much talk among those who hear and your name will be held in high regard among the great.

4. If you meet a disputant in action who is a poor man and who is not your equal do not attack him because he is weak. Leave him alone. He will confound himself. Do not answer him just so that you can relieve your own heart. Do not vent yourself against your opponent. Wretched is he who injures a poor man. If you ignore him listeners will wish to do what you want. You will beat him through their reproach.

5. If you are a man who leads, a man who controls the affairs of many, then seek the most perfect way of performing your responsibility so that your conduct will be blameless. Great is Maat (truth, justice, and righteousness). It is everlasting. Maat has been unchanged since the time of Osiris. To create obstacles to the following of laws, is to open a way to a **condition of violence**. The *transgressor of laws* is punished, although the greedy person overlooks this. Baseness may obtain riches, yet crime never lands its wares on the shore. In the end only Maat lasts. Man says, "Maat is my father's ground."

6. Do not scheme against people. God will punish accordingly; If a man says, "I will live by scheming," he will lack bread for his mouth. If a man says, "I will be rich," he will have to say, "My cleverness has trapped me." If he says, "I will trap for myself" he will not be able to say, "I trapped for myself" he will not be able to say, "I trapped for my profit." If a man says, "I will rob someone," he will end by being given to a stranger. People schemes do not prevail. God's command is what prevails. Therefore, live in the midst of peace. What God gives comes by itself.

THE MOORISH DIRECTOR

Gifts of Wisdoms

7. If you are one among guests at the table of person who is more powerful than you, take what that person gives just as it is set before you. Look at what is before you. Don't stare at your host. Don't speak to him until he asks. One does not know what may displease him. Speak when he has spoken to you. Then your words will please the heart. The man who has plenty of the means of existence acts as his Ka commands. He will give food to those who he favors. It is the Ka that makes his hand stretch out. The great man gives to the chosen man, thus eating is under the direction of God. It is a fool who complains about it.

8. If you are a person of trust sent by one great person to another great person, be careful to stick to the essence of the message that you were asked to transmit. Give the message exactly as he gave it to you. Guard against provocative speech which makes one great person angry with another. Just keep to the truth. Do not exceed it. However, even though there may have been an out-burst in the message you should not repeat it. Do not malign anyone, great or small, the Ka abhors it.

9. If you plow and if there is growth in your field and God lets it prosper in you hand, don't boast to your neighbor. One has great respect for the silent person. A person of character is a person of wealth. If that person robs, he or she like a crocodile in the middle of the waters. If God gives you children, don't impose on one who has no children. Neither should you decry or brag about having your own children, for there is many a father who has grief and many a mother with children who is less content whan another. It is the lonely whom God nurtures while the family man prays for a follower.

10. If you are poor, then serve a person of worth so that your conduct may be well with God. Do not bring up the fact that he was once poor. Do not be arrogant towards him just because you know about his former state. Respect him now for his position of authority. As for fortune, it obeys its own law and that is her will. It is God's gift. It is God who makes him worthy and who protects him whil he sleeps, or who can turn away from him.

11. Follow your heart as long as you live. Do more than is required of you. Do not shorten the time of "follow the heart", since that offends the Ka. Don't waste time on daily cares over and beyond providing for your household. When wealth finally comes, then follow your heart. Weatlh does no good if you are glum.

12. If you are a wise man, train up a son who will be pleasing to God. If he is straight and takes after you, take good care of him. Do everything that is good for him. He is your son, your Ka begot him. Don't withdraw your heart from him. But an offspring can make trouble. If your son strays and neglects your council and disobeys all that is said, with his mouth spouting evil speech, then punish him for all his talk. God will hate him who crosses you. His guilt was determined in the womb. He who God makes boatless cannot cross the water.

13. If you are a guard in the storehouse, stand or sit rather than leave your post and trespass into someones else's place. Follow this rule from the first. Never leave your post, even when fatigued. Keen is the face to him who enters announced, and spacious is the seat of him who has been

THE MOORISH DIRECTOR

Gifts of Wisdoms

asked to come in. The storehouse has fixed rules. All behaviour is strictly by the rule. Only a God can penetrate the secure warehouse where the rules are followed, even by privileged persons.

14. If you are among the people then gain your supporters by building trust. The trusted man is one who does not speak the first thing that comes to mind; and he will become a leader. A man of means has a good name, and his face is benign. People will praise him even without his knowledge. On the other hand, he whose heart obeys his belly asks for contempt of himself in the place of love. His heart is naked. His body is unanointed. The great hearted is a gift of God. He who is ruled by his appetite belongs to the enemy.

15. Report the thing that you were commissioned to report without error. Give your advice in the high council. If you are fluent in your speech, it will not be hard for you to report. Nor will anyone say of you, "who is he to know this?" As to the authorities, their affairs will fail if they punish you for speaking truth. They should be silent upon hearing the report that you have rendered as you have been told.

16. If you are a man who leads, a man whose authority reaches widely, they you should do perfect things, those which posterity will remember. Don't listen to the words of flatterers or to words that puff you up with pride and vanity.

17. If you are a person who judges, listen carefully to the speech of one who pleads. Don't stop the person from telling you everything that they had planned to tell you. A person in distress wants to pour out his or her heart, even more than they want their case to be won. If you are one who stops a person who is pleading, that person will say "why does he reject my plea?" Of course not all that one pleads for can be granted, but a good hearing soothes the heart. The means for getting a true and clear explanation is to listen with kindness.

18. If you want friendship to endure in the house that you enter, the house of a master, of a brother or of a friend, then in whatever place you enter beware of approaching the women there. Unhappy is the place where this is done. Unwelcome is he who intrudes on them. A thousand men are turned away from their good because of a short moment that is like a dream, and then that moment is followed by death that comes from having known that dream. Anyone who encourages you take advantage of the situation gives you poor advice. When you go to do it, your heart says no. If you are one who fails through the lust of women, then no affair of yours can prosper.

19. If you want to have perfect conduct, to be free from every evil, then above all guard against the vice of greed. Greed is a grievous sickness that has no cure. There is no treatment for it. It embroils fathers, mothers and the brothers of the mother. It parts the wife from the husband. Greed is a compound of all the evils. It is a bundle of all hateful things. That person endures whose rule is righteous, who walks a straight line, for that person will leave a legacy by such behavior. On the other hand, the greedy has no tomb.

20. Do not be greedy in the division of things. Do not covet more than your share. Don't be greedy towards your relatives. A mild person has a greater claim than the harsh one. Poor is the

THE MOORISH DIRECTOR

Gifts of Wisdoms

person who forgets his relatives. He is deprived of their company. Even a little bit of what is wanted will turn a quarreler into a friendly person.

21. When you prosper and establish your home, love your wife with ardor. Then fill her belly and clothe her back. Caress her. Give her ointments to soothe her body. Fulfill her wishes for as long as you live. She is a fertile field for her husband. Do not be brutal. Good manners will influence her better than force. Do not contend with her in the courts. Keep her from the need to resort to outside powers. Her eye is her storm when she gazes. It is by such treatment that she will be compelled to stay in your house.

22. Help your friends with things that you have, for you have these things by the grace of God. If you fail to help your friends, one will say you have a selfish Ka. One plans for tomorrow, but you do not know what tomorrow will bring. The right soul is the soul by which one is sustained. If you do praiseworthy deeds your friends will say, "welcome" in your time of need.

23. Don't repeat slander nor should you even listen to it. It is the spouting of the hot bellied. Just report a thing that has been observed, not something that has been heard secondhand. If it is something negligible, don't even say anything. He who is standing before you will recognize your worth. Slander is like a terrible dream against which one covers the face.

24. If you are a man of worth who sits at the council of a leader, concentrate on being excellent. Your silence is much better than boasting. Speak when you know that you have a solution. It is the skilled person who should speak when in council. Speaking is harder than all other work. The one who understands this makes speech a servant.

25. If you are mighty and powerful then gain respect through knowledge and through your gentleness of speech. Don't order things except as it is fitting. The one who provokes others gets into trouble. Don't be haughty lest you be humbled. But also don't be mute lest you be chided. When you answer one who is fuming, turn your face and control yourself. The flame of the hot hearted sweeps across everything. But he who steps gently, his path is a paved road. He who is agitated all day has no happy moments but he who amuses himself all day can't keep his fortune.

26. Do not disturb a great man or distract his attention when he is occupied, trying to understand his task. When he is thus occupied, he strips his body through the love of what he does. Love for the work which they do brings men closer to God. These are the people who succeed in what they do.

27. Teach the great what is useful to them. Be an aide to the great before the people. If you let your knowledge impress your leader, your subsistence from him will then come from his soul. As his favorite's belly is filled, so will your back be clothed and his help will be there to sustain you. For you leader whom you love and who lives by useful knowledge, he in turn will give you good support. Thus will the love of you endure in his belly. He is a soul who loves to listen.

28. If you are an official of high standing, and you are commissioned to satisfy the many, then hold to a straight line. When you speak don't lean to one side or to the other. Beware lest

THE MOORISH DIRECTOR

Gifts of Wisdoms

someone complain, saying to the judges, "he has distorted things", and then your very deeds will turn into a judgement of you.

29. If you are angered by a misdeed, then lean toward a man on account of his rightness. Pass over the misdeed and don't remember it, since God was silent to you on the first day on your misdeed.

30. If you are great after having been humble, if you have gained your wealth after having been poor, and then go to town that you know and that knows your former condition, don't put your trust in your newly acquired wealth which has come to you as a gift of God. If you do, one day someone there who is poor may very well overtake you.

31. Accept the authority of your leaders then your house will endure in it's wealth. Your rewards will come from the right place. Wretched is he who opposes his leader. One lives as long as he is mild. Baring your arm does not hurt it. Do not plunder your neighbor's house or steal the goods of one that is near you, lest he denounce you before you are even heard. One who is argumentative is a mildless person. If he is also known as an aggressor, then that hostile man will have trouble in the neighborhood.

32. Be circumspect in matters of sexual relations.

33. If you examine the character of a friend, don't ask other people, approach your friend. Deal with him alone, so as not to suffer from his anger. You may argue with him after a little while. You may test his heart in conversation. If what he has seen escapes him, if he does something that annoys you, stay friendly with him and do not attack. Be restrained and don't answer him with hostility. Do not leave him and do not attack him. His time will not fail to come. He cannot escape his fate.

34. Be generous as long as you live. What leaves the storehouse does not return. It is the food in the storehouse that one must share that is coveted. One whose belly is empty becomes an opponent. Therefore, do not have an accuser or an opponent as a neighbor. Your kindness to your neighbors will be a memorial to you for years, after you satisfy their needs.

35. Know your friends and then you prosper. Don't be mean towards your friends. They are like a watered field and greater than any material riches that you may have, for what **belongs to one belongs to another.** The character of one who is well born should be a profit to him. Good nature is a memorial.

36. Punish firmly and chastise soundly, then repression of crime becomes an example. But punishment except for crime will turn the complainer into an enemy.

37. If you take a wife a good time woman who is joyful and who is well known in the town, if she is fickle and seems to live for the moment, do not reject her. Let her eat. **The joyful person brings happiness.**

THE MOORISH DIRECTOR

Gifts of Wisdoms

If you listen to my sayings all of your affairs will go forward. Their value resides in their truth. The memory of these sayings goes on in the speech of men and women because of the worth of their precepts. If every word is carried on, they will not perish in this land. If advice is given for the good, the great will speak accordingly. This is a matter of teaching a person to speak to posterity. He or she who hears it becomes a master hearer. It is good to speak to posterity. Posterity will listen.

If an example is set by him or her who leads, he or she will be beneficent forever, his wisdom lasting for all time. The wise person feeds the Ka with what endures, so that it is happy with that person on earth. The wise is known by his or her wisdom, the great is known by his or her good actions. The heart of the wise matches his or her tongue and his or her lips are straight when he or she speaks. The wise have eyes that are made to see and ears that are made to hear what will profit the offspring. The wise person who acts with Maat is free of falsehood and disorder.

Useful is hearing to a son who hears. If hearing enters the hearer, then the hearer becomes a listener. Hearing well is speaking well. Useful is hearing to one who hears. Hearing is better than everything else. It creates good will. How good is it for a son to understand his father's words. That son will reach old age through those words.

He who hears is beloved of God. He whom God hates does not hear. The heart makes of its owner hearer or a non-hearer. Man's heart is his life, prosperity and health. The hearer is one who hears what is said. He who loves to hear is one who acts on what is said. How good is it for a son to listen to his father. How happy is he to whom it is said "Your son, is a master of hearing." The hearer of whom this is said is well endowed indeed and is honored by his father. That hearer's remembrance is in the mouth of the living, those that are on earth and those who will be.

If a man's son accepts his father's words then no plan of his will go wrong. So teach your son to be a hearer, one who will be valued by the officials, one who will guide his speech by what he has been told, one who is regarded as a hearer. This son will excel and his deeds will stand out while failure will follow those who do not hear. The wise wakes up early to his lasting gain while the fool is hard pressed.

The fool who does not hear, he can do nothing at all. He looks at ignorance and sees knowledge. He looks at harmfulness and sees usefulness. He does everything that one detests and is blamed for it every day. He lives on the things by which one dies. His food is evil speech. His sort is known to the officials who say, "There goes a living death every day." One ignores the things that he does because of his many daily troubles.

A son who hears is a follower of Heru. It will go well with him when he has heard. When he old and has reached the period where he is venerated, then he will speak likewise to his own children, renewing then the teachings of his father.

THE MOORISH DIRECTOR

Gifts of Wisdoms

Every man teaches as he acts. He will speak to the children so that they will speak to their children. He will set an example and not give offense. So if justice stands firm, your children will live. As to the first child who gets into trouble, when people see it, they will say about the child "that is just like him", and they will also say when they even hear a rumor about the child, "that is just like him too."

To see everyone is to satisfy the many. Any riches that you have are useless without the many. Don't say something and then take it back. Don't put one thing in place of another. Beware of releasing the restraints in you, lest the wise man say, "listen, if you want to endure in the mouth of the hearers, speak after you have mastered the craft." If you speak to good purpose all your affairs will be in place.

Conceal your heart. Control your mouth. Then you will be known among the officials. Be quite exact before your leader. Act so that no one will say to him "he is the son of that one."

Be deliberate when you speak so as to say things that count. Then the officials who listen will say, "how good is the thing that comes from his mouth." Act so that your leader will say of you, "how good is he whom his father has taught. When he came forth from his body, he told him all that was in his mind, and he does even more than he was told."

The good son is the gift of God and exceeds what is told him by his leader. He will do right when his heart is straight. As you succeed me sound in body, a Pharaoh, content with all that was done, may obtain many years of life.

The things that I did on earth were not small. I have had 110 years of life. As a gift of the Pharaoh, I have had honors exceeding those of the ancestors, by doing Maat until the state of veneration.

Is is done, from its beginning to its end, as it was found in the writings of the ancestors and Deity.

THE ANCIENT KETMETIAN PA ASHUTAT & THE SACRED RITES OF ISLAMISM

Smai Tawi

"Kemetian (Egyptian) Yoga"

{Union of the Higher and Lower Self }

{Warning if your highest ideal of GOD is found outside of yourself return this manual back to the sender and contact an Adept / Swift Angel to assist you immediately! THE CIRCLE 7 RITE OF CLENSING THE SOUL

16. The teacher treads the way; on every span of ground he leaves his footprints, clearly cut, which all can see and be assured that he, their master went that way.

17. Men comprehend the inner life by what they see and do. They come to Allah through ceremonies and forms.

18. And so when you would make men know that sins are washed away by purity in life, a rite symbolic may be introduced.

19. In water wash the bodies of the people who would turn away from sin and strive for purity in life.

20. This rite of cleansing is a preparation rite and they who thus are cleansed comprise the temple of purity.

21. And you shall say, You men of Israel {Moorish America}, hear; reform and wash; become the sons of purity, and you shall be forgiven.

22. This rite of cleansing and this temple are but symbolic of the cleansing of the soul, which does not come from outward show, but is the temple within.

23. Now, you may never point the way and tell the multitudes to do what you have never done; but you must go before and show the way.

24. You are to teach that men must wash; so you must lead the way, your body must be washed, symbolic of the cleansing of the soul." Chapter IV M.H.K.

The 42 Negative Confessions of Ma'at

1. I have not done iniquity.
2. I have not robbed with violence.
3. I have not stolen.
4. I have done no murder; I have done no harm.
5. I have not defrauded offerings.
6. I have not diminished obligations.
7. I have not plundered the neteru.
8. I have not spoken lies.
9. I have not uttered evil words.
10. I have not caused pain.
11. I have not committed fornication.
12. I have not caused shedding of tears.
13. I have not dealt deceitfully.
14. I have not transgressed.
15. I have not acted guilefully.
16. I have not laid waste the ploughed land.
17. I have not been an eavesdropper.
18. I have not set my lips in motion (against any man).
19. I have not been angry and wrathful except for a just cause.
20. I have not defiled the wife of any man.
21. I have not been a man of anger.
22. I have not polluted myself.
23. I have not caused terror.
24. I have not burned with rage.
25. I have not stopped my ears against the words of Right and Truth. (Ma-at)
26. I have not worked grief.
27. I have not acted with insolence.
28. I have not stirred up strife.
29. I have not judged hastily.
30. I have not sought for distinctions.
31. I have not multiplied words exceedingly.
32. I have not done neither harm nor ill.
33. I have not cursed the Kinꜥ. (i.e. violation of laws)
34. I have not fouled the water.
35. I have not spoken scornfully.
36. I have never cursed the neteru.
37. I have not stolen.
38. I have not defrauded the offerings of the neteru.
39. I have not plundered the offerings of the blessed dead.
40. I have not filched the food of the infant.
41. I have not sinned against the neter of my native town.
42. I have not slaughtered with evil intent the cattle of the neter.

Ma'at, The 11 Laws of God

by Ra Un Nefer Amen

Law of Amen

You were made in the likeness of a peace that nothing can disturb. Reclaim your peace that you may attain to your reason for coming into existence – the enjoyment of life.

Reasoning:

If in truth it is our nature to be at peace (free of automatic emotional responses) in situations of challenge, then the only thing we need to do is to ignore the emotional reflexes that come up in such situations. What is the point of suffering and destroying our health and performance abilities if we can be at peace—especially when the peace in situations of challenge leads to enhanced intuition and spiritual power.

Amen Truisms:

I live expecting neither gain nor loss, pain nor pleasure from the things I need in life, because my nature is essentially unconditioned.

That which is my Self has no likes, dislikes, preferences or predetermined emotional or thought responses to situations.

I am essentially unconditioned. I cultivate my happiness through spiritual development. I understand that happiness is not a continuous freedom from pain resulting from difficulties.

No one knows my name, neither men nor gods. No one has seen my face, neither my father nor my mother. I was before the first time and shall be beyond the last.

Law of Ausar

Your nature is unconquerable peace, therefore nothing or no one in the world can be against you. All experiences come to you to promote your reclamation of peace, that you may in turn acquire wisdom and spiritual power.

Reasoning:

If attaining our natural state of peace in situations of challenge enhances our intuition and spiritual strength, then we should not label situations of challenge as detrimental to our being. If a bad event cannot be avoided, what is the point of allowing it to degrade us, when it can be used for enhancement by simply manifesting the proper attitude?

Ausar Truisms:

I identify as my Self the indwelling divinity that guides the functions of my being. My person is therefore always in the presence of the Lord. Would I give more respect to men than to the God within Who is witness to all of my thoughts, feelings and actions?

I am the One Life dwelling as the Self of all beings. Myself as the indwelling divinity in all things is the source of prosperity and peace in the world.

**Law of Tehuti**

When all of your thoughts, feelings, and actions reflect the Word of God, then the power of God's spirit and a peace that nothing can challenge will flow through your being.

**Reasoning:**

If we can intuit the Word of God by cultivating our ability to be at peace in situations of challenge, why give in to anger, fear, lust, etc.? If we have access to the Word of God (wisdom) which is superior to our own minds, why rely primarily on our minds?

Tehuti Truisms:

My ability to know is unlimited. I understand that what seems as my not knowing is merely the momentary inability of my knowledge to take verbal form in my mind. I understand that God manifests Its divine plan in the world of Man by incarnating in the soul of men and women who have elevated their consciousness to the higher parts of their spirits. I therefore honor and follow the guidance of Sages and Prophets above all other kinds of men.

I am successful in handling the emotional and sensual challenges in my life because I realize that nothing has an emotional or sensual quality in itself. My emotional and sensual reactions are betrayal of my lack of spiritual cultivation in relation to these objects.

Until I can still my thoughts to let my wisdom manifest itself at will, I go to the oracles that the eye that was harmed by Set can be restored.

I understand that God has saved us by sharing Its power of wisdom within us. I will be successful in its awakening because I have no problem in giving up my head, and keeping my heart still.

**Law of Seker**

When the emotions of Man manifest in response to the Word of God, they have the power to influence the course of any and all events in the world.

**Reasoning:**

If we have access to God's spiritual power through the cultivation of the ability to be at peace in situations of difficulties, why give in to anger, fear, lust, etc.? Why shouldn't we be at peace in the face of difficulties?

Seker Truisms:

I understand that God has saved us by sharing Its spiritual power with us. I know I will successfully develop these powers because I have no problem keeping my heart still and dying to the things of the world for the kingdom of heaven.

I am the likeness of God. I've got the power of God within me. I am the power of God, not in amount but in kind, thus I am relaxed in the face of the greatest challenges.

I will succeed in life because I have surrendered to the Divine Plan.

Law of Ma'at

**God needs you in order to come into the world. Fulfilling God's need is the highest act of love, and only through your love for God can you fulfill your love for others.
Become the Love of God in the world for the protection of the world.**

Reasoning:

If we have access to a peace that cannot be disturbed by anything in the world—our nature—if we are one with all, if we have access to spiritual power, why then can we not love those who commit transgressions on us—especially when the act of loving is the generation of the most powerful force in the universe? If we are one (Ausar), then the good I do to you I have done to myself—is this not the key to wealth and health?

Ma'at Truisms:

The Divine Law is the likeness of God and the measure of my being. I live by it. I am it, and I therefore enjoy a life of order and prosperity.

I know Truth. It is the reciprocal relationship of things to each other and the whole as fixed by nature. I live by it and am therefore in harmony with the whole. My being is in order and I am a source of harmony to all.

Law of Herukhuti

Know that God neither punishes nor rewards nor protects, that you will have the comfort of controlling these for yourself.

Reasoning:

If adversity which cannot be avoided is not the cause of suffering that follows our failure to reclaim our original nature (peace), then we must make spiritual growth our highest priority. If we are one (Ausar), then I must refrain from doing you wrong (even self-defensively wishing you ill) to avoid doing me wrong—the key to justice and protection from others.

Herukhuti Truisms:

I realize that I have the power to force my person to ignore my emotions to ensure that my life will be a reflection of Divine Law.

I am not the person, but Ausar, and can therefore transcend the pain of invoking divine retribution against my person when it transgresses the Law of God.

I understand that God has ordained a place for all beings in their own time, and will thus, in Its own time right all wrongs.

I sow justice towards men and reap it from God.

Law of Heru

You have the power but not the right to ignore God's Law. Choose to follow the Law of God with the love and joy that grows out of your understanding, and the wisdom and power of God's spirit will flow through your being.

Reasoning:

If we have been given free will, why should we give in to emotions that have proven to be detrimental to our well-being? Why not choose to be at peace in all situations of challenge, especially since this is the key to wisdom, power and happiness?

Heru Truisms:

I understand that at any time I have the freedom to act as if I have successfully overcome a given emotion.

My freedom to choose is the essence of my divinity.

I will, therefore I am free.

I am never compelled to do anything by my emotions and passion.

God does not compel me to do what is right. How then can the animal within me compel me to do what is wrong. Shall I make Set greater than God?

My emotions are children of impotent revolt.

I have the freedom to hold myself in check to take a view of the whole before acting.

Law of Het-Heru

It is not what you imagine. It is who is imagining. Are you a human or a divine being?

Reasoning:

[Het-Heru] corresponds to [one of] the tools through which behavior is programmed. Through the understanding of the law such programming can be done at will. If we have the tools to program any desired behavior at will, then we can choose to allow only peace and pleasure to manifest as our emotional reactions to all events.

Het-Heru Truisms:

My ability to cultivate through trance the experience of joy for living by divine law as Ausar does, greatly enhances my chances of success in my pursuits in life.

I will myself to be joyful, therefore I am successful in life and healthy.

Joy is the engine of success and it comes from within, therefore I am successful.

I am Ausar. I cannot be other than joyful.

I am joyful because I will myself to be joyful.

Law of Sebek

It is not what you think or what you affirm. It is who is thinking and who is affirming. Are you a human or a divine being?

Reasoning:

[Sebek] corresponds to [one of] the tools through which behavior is programmed. Through the understanding of the law such programming can be done at will. If we have the tools to program any desired behavior at will, then we can choose to allow only peace and pleasure to manifest as our emotional reactions to all events.

Sebek Truisms:

I am well on my way to success because I understand the suggestive power of belief. I reject all negative beliefs, and deliberately and consistently cultivate positive beliefs.

My positive thoughts flow naturally from my being Ausar.

I know that my spirit is essentially unconditioned, therefore whatever beliefs I take into trance, my spirit will make come true if it is at all humanly possible.

I do not delude myself into mistaking my education for knowledge of reality itself. My way to success remains open.

I am well on my way to becoming Ausar because I no longer mask my motives through rationalizations.

I am that, therefore I think.

Law of Auset

Prepare to sacrifice everything to become the vessel of God on earth, and you will, in turn, receive everything. This is devotion to serving God.

Reasoning:

[Auset] corresponds to [one of] the tools through which behavior is programmed. Through the understanding of the law such programming can be done at will. If we have the tools to program any desired behavior at will, then we can choose to allow only peace and pleasure to manifest as our emotional reactions to all events.

Auset Truisms:

I know that I am devoted to spirituality for I have given the highest priority in my life to the resurrection of Ausar.

I am the master of my person. Through trance, I can cultivate any emotion I desire to manifest.

My ability to cultivate the experience of remorse at will and to apologize in any situation of transgression assures me a solid foundation in my quest to become Ausar.

Law of Geb

Know that from heaven you came and to heaven you will return, seek not enduring works on earth. You are the master of the earth through your likeness with God.

Reasoning:

Our physical nature is totally amenable to reprogramming. Since we have the laws and faculties to do so, why not dedicate the use of our will to program desirable ends in our lives—peace, happiness, health and prosperity?

The Teachings of Ptah Hotep

These are instructions by the Mayor of the City who is also the Vizier. His name is Ptahhotep and he serves under Pharaoh Assa who lives for all eternity. The mayor of the City, Vizier Ptahhotep, addressed the Supreme Divinity, the Deity as follows:

"God upon the crocodiles." (Reference to Heru) who is sometimes shown standing on two crocodiles. My God, the process of aging brings senility. My mind decays and forgetfulness of the things of yesterday has already begun. Feebleness has come and weakness grows. Childlike one sleeps all day. The eyes are dim and the ears are becoming deaf. The strength is being sapped. The mouth has grown silent and does not speak. The bones ache through and through. Good things now seem evil. The taste is gone. What old age does to people in evil is everything. The nose is closed and does not breathe. It is painful even to stand or to sit. May your servant be authorized to use the status that old age affords, to teach the hearers, so as to tell them the words of those who have listened to the ways of our ancestors, and of those who have listened to the Gods. May I do this for you, so that strife may be banned from among our people, and so that the Two Shores may serve you?

Then the majesty of the Deity said to Ptahhotep, go ahead and instruct him in the Ancient Wisdom. May he become a model for the children of the great. May obedience enter into him, and may he be devoted to the one who speaks to him. No one is born wise.

And so begins the formulation of Mdw Ntr, good speech, to be spoken by the Prince, the Count, God's beloved, the eldest son of the Pharaoh, the son of his body, Mayor of the City and Vizier, Ptahhotep, instructs the ignorant in the knowledge and in the standards of good speech. It will profit those who hear. It will be a loss to those who transgress. Ptahhotep began to speak to "Pharaoh's son" (to posterity).

1. Do not be proud and arrogant with your knowledge. Consult and converse with ignorant and the wise, for the limits of art are not reached. No artist ever possesses that perfection to which he should aspire. Good speech is more hidden than greenstone (emeralds), yet it may be found among maids at the grindstones.

2. If you meet a disputant in the heat of action, one who more powerful than you, simply fold your arms and bend your back. To confront him will not make him agree with you. Pay no attention to his evil speech. If you do not confront him while he is raging, people will call him an ignoramus. Your self-control will be the match for his evil utterances.

3. If you meet a disputant in action, one who is your equal, one who is on your level, you will overcome him by being silent while he is speaking evilly. There will be much talk among those who hear and your name will be held in high regard among the great.

4. If you meet a disputant in action who is a poor man and who is not your equal do not attack him because he is weak. Leave him alone. He will confound himself. Do not answer him just so that you can relieve your own heart. Do not vent yourself against your opponent. Wretched is he who injures a poor man. If you ignore him listeners will wish to do what you want. You will beat him through their reproof.

5. If you are a man who leads, a man who controls the affairs of many, then seek the most perfect way of performing your responsibility so that your conduct will be blameless. Great is Maat (truth, justice, and righteousness). It is everlasting. Maat has been unchanged since the time of Ausar. To create obstacles on the following of laws, is to open a way to a condition of violence. The *transgressor of laws* is punished, although the greedy person overlooks this. Baseness may obtain riches, yet crime never lands its wares on the shore. In the end only Maat lasts. Man says, "Maat is my father's ground."

6. Do not scheme against people. God will punish accordingly; If a man says, "I will live by scheming," he will lack bread for his mouth. If a man says, "I will be rich," he will have to say, "My cleverness has trapped me." If he says, "I will trap for myself" he will not be able to say, "I trapped for myself" he will not be able to say, "I trapped for my profit." If a man says, "I will rob someone," he will end by being given to a stranger. People schemes do not prevail. God's command is what prevails. Therefore, live in the midst of peace. What God gives comes by itself.

7. If you are one among guests at the table of person who is more powerful than you, take what that person gives just as it is set before you. Look at what is before you. Don't stare at your host. Don't speak to him until he asks. One does not know what may displease him. Speak when he has spoken to you. Then your words will please the heart. The man who has plenty of the means of existence acts as his Ka commands. He will give food to those who he favors. It is the Ka that makes his hand stretch out. The great man gives to the chosen man, thus eating is under the direction of God. It is a fool who complains about it.

8. If you are a person of trust sent by one great person to another great person, be careful to stick to the essence of the message that you were asked to transmit. Give the message exactly as he gave it to you. Guard against provocative speech which makes one great person angry with another. Just keep to the truth. Do not exceed it. However, even though there may have been an out-burst in the message you should not repeat it. Do not malign anyone, great or small, the Ka abhors it.

9. If you plow and if there is growth in your field and God lets it prosper in your hand, don't boast to your neighbor. One has great respect for the silent person. A person of character is a person of wealth. If that person robs, he or she like a crocodile in the middle of the waters. If God gives you children, don't impose on one who has no children. Neither should you decry or brag about having your own children, for there is many a father who has grief and many a mother with children who is less content than another. It is the lonely whom God nurtures while the family man prays for a follower.

10. If you are poor, then serve a person of worth so that your conduct may be well with God. Do not bring up the fact that he was once poor. Do not be arrogant towards him just because you know about his former state. Respect him now for his position of authority. As for fortune, it obeys its own law and that is her will. It is God's gift. It is God who makes him worthy and who protects him while he sleeps, or who can turn away from him.

11. Follow your heart as long as you live. Do more than is required of you. Do not shorten the time of "follow the heart", since that offends the Ka. Don't waste time on daily cares over and beyond providing for your household. When wealth finally comes, then follow your heart. Wealth does no good if you are glum.

12. If you are a wise man, train up a son who will be pleasing to God. If he is straight and takes after you, take good care of him. Do everything that is good for him. He is your son, your Ka begot him. Don't withdraw your heart from him. But an offspring can make trouble. If your son strays and neglects your council and disobeys all that is said, with his mouth spouting evil speech, then punish him for all his talk. God will hate him who crosses you. His guilt was determined in the womb. He who God makes boatless cannot cross the water.

13. If you are a guard in the storehouse, stand or sit rather than leave your post and trespass into someone's else's place. Follow this rule from the first. Never leave your post, even when fatigued. Keen is the face to him who enters announced, and spacious is the seat of him who has been asked to come in. The storehouse has fixed rules. All behaviour is strictly by the rule. Only a God can penetrate the secure warehouse where the rules are followed, even by privileged persons.

14. If you are among the people then gain your supporters by building trust. The trusted man is one who does not speak the first thing that comes to mind; and he will become a leader. A man of means has a good name, and his face is benign. People will praise him even without his knowledge. On the other hand, he whose heart obeys his belly asks for contempt of himself in the place of love. His heart is naked. His body is unanointed. The great hearted is a gift of God. He who is ruled by his appetite belongs to the enemy.

15. Report the thing that you were commissioned to report without error. Give your advice in the high council. If you are fluent in your speech, it will not be hard for you to report. Nor will anyone say of you, "who is he to know this?" As to the authorities, their affairs will fail if they punish you for speaking truth. They should be silent upon hearing the report that you have rendered as you have been told.

16. If you are a man who leads, a man whose authority reaches widely, then you should do perfect things, those which posterity will remember. Don't listen to the words of flatterers or to words that puff you up with pride and vanity.

17. If you are a person who judges, listen carefully to the speech of one who pleads. Don't stop the person from telling you everything that they had planned to tell you. A person in distress wants to pour out his or her heart, even more than they want their case to be won. If you are one who stops a person who is pleading, that person will say "why does he reject my plea?" Of course not all that one pleads for can be granted, but a good hearing soothes the heart. The means for getting a true and clear explanation is to listen with kindness.

18. If you want friendship to endure in the house that you enter, the house of a master, of a brother or of a friend, then in whatever place you enter beware of approaching the women there. Unhappy is the place where this is done. Unwelcome is he who intrudes on them. A thousand men are turned away from their good because of a short moment that is like a dream, and then that moment is followed by death that comes from having known that dream. Anyone who encourages you take advantage of the situation gives you poor advice. When you go to do it, your heart says no. If you are one who fails through the lust of women, then no affair of yours can prosper.

19. If you want to have perfect conduct, to be free from every evil, then above all guard against the vice of greed. Greed is a grievous sickness that has no cure. There is no treatment for it. It embroils fathers, mothers and the brothers of the mother. It parts the wife from the husband. Greed is a compound of all the evils. It is a bundle of all hateful things. That person endures whose rule is righteous, who walks a straight line, for that person will leave a legacy by such behavior. On the other hand, the greedy has no tomb.

20. Do not be greedy in the division of things. Do not covet more than your share. Don't be greedy towards your relatives. A mild person has a greater claim than the harsh one. Poor is the person who forgets his relatives. He is deprived of their company. Even a little bit of what is wanted will turn a quarreler into a friendly person.

21. When you prosper and establish your home, love your wife with ardor. Then fill her belly and clothe her back. Caress her. Give her ointments to soothe her body. Fulfill her wishes for as long as you live. She is a fertile field for her husband. Do not be brutal. Good manners will influence her better than force. Do not contend with her in the courts. Keep her from the need to resort to outside powers. Her eye is her storm when she gazes. It is by such treatment that she will be compelled to stay in your house.

22. Help your friends with things that you have, for you have these things by the grace of God. If you fail to help your friends, one will say you have a selfish Ka. One plans for tomorrow, but you do not know what tomorrow will bring. The right soul is the soul by which one is sustained. If you do praiseworthy deeds your friends will say, "welcome" in your time of need.

23. Don't repeat slander nor should you even listen to it. It is the spouting of the hot bellied. Just report a thing that has been observed, not something that has been heard secondhand. If it is something negligible, don't even say anything. He who is standing before you will recognize your worth. Slander is like a terrible dream against which one covers the face.

24. If you are a man of worth who sits at the council of a leader, concentrate on being excellent. Your silence is much better than boasting. Speak when you know that you have a solution. It is the skilled person who should speak when in council. Speaking is harder than all other work. The one who understands this makes speech a servant.

25. If you are mighty and powerful then gain respect through knowledge and through your gentleness of speech. Don't order things except as it is fitting. The one who provokes others gets into trouble. Don't be haughty lest you be humbled. But also don't be mute lest you be chided. When you answer one who is fuming, turn your face and control yourself. The flame of the hot hearted sweeps across everything. But he who steps gently, his path is a paved road. He who is agitated all day has no happy moments but he who amuses himself all day can't keep his fortune.

26. Do not disturb a great man or distract his attention when he is occupied, trying to understand his task. When he is thus occupied, he strips his body through the love of what he does. Love for the work which they do brings men closer to God. These are the people who succeed in what they do.

27. Teach the great what is useful to them. Be an aide to the great before the people. If you let your knowledge impress your leader, your sustenance from him will then come from his soul. As his favorite's belly is filled, so will your back be clothed and his help will be there to sustain you. For you leader whom you love and who lives by useful knowledge, he in turn will give you good support. Thus will the love of you endure in his belly. He is a soul who loves to listen.

28. If you are an official of high standing, and you are commissioned to satisfy the many, then hold to a straight line. When you speak don't lean to one side or to the other. Beware lest someone complain, saying to the judges, "he has distorted things", and then your very deeds will turn into a judgement of you.

29. If you are angered by a misdeed, then lean toward a man on account of his rightness. Pass over the misdeed and don't remember it, since God was silent to you on the first day on your misdeed.

30. If you are great after having been humble, if you have gained your wealth after having been poor, and then go to town that you know and that knows your former condition, don't put your trust in your newly acquired wealth which has come to you as a gift of God. If you do, one day someone there who is poor may very well overtake you.

31. Accept the authority of your leaders then your house will endure in its wealth. Your rewards will come from the right place. Wretched is he who opposes his leader. One lives as long as he is mild. Baring your arm does not hurt it. Do not plunder your neighbor's house or steal the goods of one that is near you, lest he denounce you before you are even heard. One who is argumentative is a mildless person. If he is also known as an aggressor, then that hostile man will have trouble in the neighborhood.

32. Be circumspect in matters of sexual relations.

33. If you examine the character of a friend, don't ask other people, approach your friend. Deal with him alone, so as not to suffer from his anger. You may argue with him after a little while. You may test his heart in conversation. If what he has seen escapes him, if he does something that annoys you, stay friendly with him and do not attack. Be restrained and don't answer him with hostility. Do not leave him and do not attack him. His time will not fail to come. He cannot escape his fate.

34. Be generous as long as you live. What leaves the storehouse does not return. It is the food in the storehouse that one must share that is coveted. One whose belly is empty becomes an opponent. Therefore, do not have an accuser or an opponent as a neighbor. Your kindness to your neighbors will be a memorial to you for years, after you satisfy their needs.

35. Know your friends and then you prosper. Don't be mean towards your friends. They are like a watered field and greater than any material riches that you may have, for what belongs to one belongs to another. The character of one who is well born should be a profit to him. Good nature is a memorial.

36. Punish firmly and chastise soundly, then repression of crime becomes an example. But punishment except for crime will turn the complainer into an enemy.

37. If you take a wife a good time woman who is joyful and who is well known in the town, if she is fickle and seems to live for the moment, do not reject her. Let her eat. The joyful person brings happiness.

If you listen to my sayings all of your affairs will go forward. Their value resides in their truth. The memory of these sayings goes on in the speech of men and women because of the worth of their precepts. If every word is carried on, they will not perish in this land. If advice is given for the good, the great will speak accordingly. This is a matter of teaching a person to speak to posterity. He or she who hears it becomes a master hearer. It is good to speak to posterity. Posterity will listen.

If an example is set by him or her who leads, he or she will be beneficent forever, his wisdom lasting for all time. The wise person feeds the Ka with what endures, so that he is happy with that person on earth. The wise is known by his or her wisdom. The great is known by his or her good actions. The heart of the wise matches his or her tongue and his or her lips are straight when he or she speaks. The wise have eyes that are made to see and ears that are made to hear what will profit the offspring. The wise person who acts with Maat is free of falsehood and disorder.

Useful is hearing to a son who hears. If hearing enters the hearer, then the hearer becomes a listener. Hearing well is speaking well. Useful is hearing to one who hears. Hearing is better than everything else. It creates good will. How good is it for a son to understand his father's words. That son will reach old age through those words.

He who hears is beloved of God. He whom God hates does not hear. The heart makes of its owner hearer or a non-hearer. Man's heart is his life, prosperity and health. The hearer is one who hears what is said. He who loves to hear is one who acts on what is said. How good is it for a son to listen to his father. How happy is he to whom it is said "Your son, is a master of hearing." The hearer of whom this is said is well endowed indeed and is honored by his father. That hearer's remembrance is in the mouth of the living, those that are on earth and those who will be.

If a man's son accepts his father's words then no plan of his will go wrong. So teach your son to be a hearer, one who will be valued by the officials, one who will guide his speech by what he has been told, one who is regarded as a hearer. This son will excel and his deeds will stand out while failure will follow those who do not hear. The wise wakes up early to his lasting gain while the fool is hard pressed.

The fool who does not hear, he can do nothing at all. He looks at ignorance and sees knowledge. He looks at harmfulness and see usefulness. He does everything that one detests and is blamed for it every day. He lives on the things by which one dies. His food is evil speech. His sort is known to the officials who say, "There goes a living death every day." One ignores the things that he does because of his many daily troubles.

A son who hears is a follower of Heru. It will go well with him when he has heard. When he old and has reached the period where he is venerated, then he will speak likewise to his own children, renewing then the teachings of his father.

Every man teaches as he acts. He will speak to the children so that they will speak to their children. He will set an example and not give offense. So if justice stands firm, your children will live. As to the first child who gets into trouble, when people see it, they will say about the child "that is just like him", and they will also say when they even hear a rumor about the child, "that is just like him too."

To see everyone is to satisfy the many. Any riches that you have are useless without the many. Don't say something and then take it back. Don't put one thing in place of another. Beware of releasing the restraints in you, lest the wise man say, "listen, if you want to endure in the mouth of the hearers, speak after you have mastered the craft." If you speak to good purpose all your affairs will be in place.

Conceal your heart. Control your mouth. Then you will be known among the officials. Be quite exact before your leader. Act so that no one will say to him "he is the son of that one."

Be deliberate when you speak so as to say things that count. Then the officials who listen will say, "how good is the thing that comes from his mouth." Act so that your leader will say of you, "how good is he whom his father has taught. When he came forth from his body, he told him all that was in his mind, and he does even more than he was told."

The good son is the gift of God and exceeds what is told him by his leader. He will do right when his heart is straight. As you succeed me sound in body, a Pharaoh, content with all that was done, may obtain many years of life.

The things that I did on earth were not small. I have had 110 years of life. As a gift of the Pharaoh, I have had honors exceeding those of the ancestors, by doing Maat until the state of veneration.

Is is done, from its beginning to its end, as it was found in the writings of the ancestors and Diety.

EGYPTIAN YOGA THE PHILOSOPHY OF ENLIGHTENMENT

By Dr. Muata Abhaya Ashby

SEMA TAWI MEANS EGYPTIAN YOGA

Most students of yoga are familiar with the yogic traditions of India consider that the Indian texts such as the Bhaṣavad Gita, Mahabharata, Patan-jali Yoḡa Sutras, etc. are the primary and original source of Yoḡic philosophy and teaching. However, upon examination, the teachings currently espoused in all of the major forms of Indian Yoḡa can be found in Ancient Egyptian scriptures, inscribed in papyrus and on temple walls as well as steles, statues, obelisks and other sources.

WHAT IS YOGA?

Yoḡa is the practice of mental, physical and spiritual disciplines which lead to self-control and self-discovery by purifying the mind, body and spirit, so as to discover the deeper spiritual essence which lies within every human being and object in the universe. In essence, the goal of Yoḡa practice is to unite or yoke one's individual consciousness with Universal or Cosmic consciousness. Therefore, Ancient Egyptian religious practice, especially in terms of the rituals and other practices of the Ancient Egyptian Temple system known as Shetaut Neter (the way of the hidden Supreme Being), also known in Ancient times as:

SMAI TAWI

"Egyptian Yoḡa," should as well be considered as universal streams of self-knowledge philosophy which influenced and inspired the great religions and philosophers to this day. In this sense, religion, in its purest form, is also a Yoḡa system, as it seeks to reunite the soul with its true and original source, God. In broad terms, any spiritual movement or discipline that brings one closer to self-knowledge is a "Yoḡic" movement. The main recognized forms of Yoḡa disciplines are:

YOGA OF WISDOM

YOGA OF DEVOTIONAL LOVE

YOGA OF MEDITATION

PHYSICAL POSTURES YOGA

YOGA OF SELFLESS ACTION

TANTRIC YOGA

SERPENT POWER YOGA

The diagram below shows the relationship between the Yoga disciplines and the path of mystical religion (religion practiced in its three complete steps: 1st receiving the {knowledge}, 2nd practicing the rituals of the Legend {following the teachings of the Legend} and 3rd entering into a mystical experience {becoming one with the central figure of the Legend}).

The disciplines of Yoga fall under five major categories. These are: Yoga of Wisdom, Yoga of Devotional Love, Yoga of Meditation, Tantric Yoga, Yoga of Selfless Action. When these disciplines are practiced in a harmonized manner this practice is called "Integral Yoga." Within these categories there are subsidiary forms which are part of the main disciplines. The emphasis in the Kamitan Asarian (Osirian) Legend is on the Yoga of Wisdom, Yoga of Devotional Love and Yoga of Selfless Action. The important point to remember is that all aspects of Yoga can and should be used in an integral fashion to effect an efficient and harmonized spiritual movement in the practitioner. Therefore, while there may be an area of special emphasis, other elements are bound to become part of the Yoga program as needed. For example, while a Yogī (practitioner of Yoga, aspirant, initiate) may place emphasis on the Yoga of Wisdom, they may also practice Devotional Yoga and Meditation Yoga along with the wisdom studies. So the practice of any discipline that leads to oneness with Supreme Consciousness can be called Yoga. If you study, rationalize and reflect upon the teachings, you are practicing Yoga of Wisdom. If you meditate upon the teachings and your Higher Self, you are practicing Yoga of Meditation. Thus, whether or not you refer to it as such, if you practice rituals which identify you with your spiritual nature, you are practicing, Yoga of Ritual Identification (which is part of the Yoga of Wisdom {Kamitan-Rekh, Indian-Jnana} and the Yoga of Devotional Love {Kamitan-Ushet, Indian-Bhakti} of the Divine). If you develop your physical nature and psychic energy centers, you are practicing Serpent Power (Kamitan-Uraeusor Indian-Kundalini) Yoga, (which is part of Tantric Yoga). If you practice living according to the teachings of ethical behavior and selflessness, you are practicing Yoga of Action, (Kamitan-Maat, Indian-Karma) in daily life. If you practice turning your attention towards the Divine by developing love for the Divine, then it is called Devotional Yoga, or Yoga of Divine Love. The practitioner of Yoga is called a Yogin (male practitioner) or Yogini (female practitioner), or the term "Yogī" may be used to refer to either a female or male practitioner in general terms. One who has attained the culmination of Yoga (union with the Divine) is also called a Yogī. In this manner, Yoga has been developed into many disciplines which may be used in an integral fashion to achieve the same goal: Enlightenment. Therefore, the aspirant is to learn about all of the paths of Yoga and choose those elements which best suit {his/her} personality or practice them all in an integral, balanced way. Enlightenment is the term used to describe the highest level of spiritual awakening. It means attaining such a level of spiritual awareness that one discovers the underlying unity of the entire universe as well as the fact that the source of all creation is the same source from which the innermost Self within every human heart arises.

WHAT IS EGYPTIAN YOGA?

The Term “Egyptian Yoga” and The Philosophy Behind It As previously discussed, Yoga in all of its forms were practiced in Egypt apparently earlier than anywhere else in our history. This point of view is supported by the fact that there is documented scriptural and iconographical evidence of the disciplines of virtuous living, dietary purification, study of the wisdom teachings and their practice in daily life, psychophysical and psycho-spiritual exercises and meditation being practiced in Ancient Egypt, long before the evidence of its existence is detected in India (including the Indus Valley Civilization) or any other early civilization (Sumer, Greece, China, etc.). The teachings of Yoga are at the heart of Pt m Hru. As explained earlier, the word “Yoga” is a Sanskrit term meaning to unite the individual with the Cosmic. The term has been used in certain parts of this book for ease of communication since the word “Yoga” has received wide popularity especially in western countries in recent years. The Ancient Egyptian equivalent term to the Sanskrit word yoga is: “Smai.” Smai means union, and the following determinative terms give it a spiritual significance, at once equating it with the term “Yoga” as it is used in India. When used in conjunction with the Ancient Egyptian symbol which means land, “Ta,” the term “uni-on of the two lands” arises. In Chapter 4 and Chapter 17 of the Pt m Hru, a term “Smai Tawi” is used. It means “Union of the two lands of Egypt,” ergo “Egyptian Yoga.” The two lands refer to the two main districts of the country (North and South). In ancient times, Egypt was divided into two sections or land areas. These were known as Lower and Upper Egypt. In Ancient Egyptian mystical philosophy, the land of Upper Egypt relates to the divinity Heru (Hera), who represents the Higher Self, and the land of Lower Egypt relates to Set, the divinity of the lower self. So Smai Tawi means “the union of the two lands” or the “Union of the lower self with the Higher Self. The lower self relates to that which is negative and uncontrolled in the human mind including worldliness, egoism, ignorance, etc. (Set), while the Higher Self relates to that which is above temptations and is good in the human heart as well as in touch with transcendental consciousness (Hera). Thus, we also have the Ancient Egyptian term Smai Heru-Set, or the union of Heru and Set. So Smai Tawi or Smai Heru-Set are the Ancient Egyptian words which are to be translated as “Egyptian Yoga.” Above: the main symbol of Egyptian Yoga: Sma. The Ancient Egyptian language and symbols provide the first “historical” record of Yoga Philosophy and Religious literature. The hieroglyph Sma, ? “Sema,” represented by the union of two lungs and the trachea, symbolizes that the union of the duality, that is, the Higher Self and lower self, leads to Non-duality, the One, singular consciousness.

The Ancient Egyptians called the disciplines of Yoga in Ancient Egypt by the term “ Smai Tawi.” So what does Smai Tawi mean?

Above left: Smai Heru-Set, Heru and Set join forces to tie up the symbol of Union (Sema –see above). The Sema symbol refers to the Union of Up-per Egypt (Lotus) and Lower Egypt (Papyrus) under one ruler, but also at amore subtle level, it refers to the union of one's Higher Self and lower self (Heru and Set), as well as the control of one's breath (Life Force) through the union (control) of the lungs (breathing orğans). The character of Heru and Set are an integral part of the Pert Em Heru.

The central and most popular character within Ancient Egyptian Religion of Asar is Heru, who is an incarnation of his father, Asar. Asar is killed by his brother Set who, out of greed and demoniac (Setian) tendency, craved to be the ruler of Egypt. With the help of Djehuti, the God of wisdom, Aset, the great mother and Het heru, his consort, Heru prevailed in the battle against Set for the rulership of Kemit (Egypt). Heru's struggle symbolizes the struggle of every human being to regain rulership of the Higher Self and to subdue the lower self.

The most ancient writings in our historical period are from the Ancient Egyptians. These writings are referred to as hieroglyphics. The original name given to these writings by the Ancient Egyptians is Metu Neter, meaning "the writing of God" or Neter Metu or "Divine Speech." These writings were inscribed in temples, coffins and papyrus and contained the teachings in reference to the spiritual nature of the human being and the ways to promote spiritual emancipation, awakening or resurrection. The Ancient Egyptian proverbs presented in this text are translations from the original hieroglyphic scriptures. An example of hieroglyphic text was presented above in the form of the text of Smai Tauu or "Egyptian Yoga." Egyptian Philosophy may be summed up in the following proverbs, which clearly state that the soul is heavenly or divine and that the human being must awaken to the true reality, which is the Spirit, Self.

"Self-knowledge is the basis of true knowledge." "Soul to heaven, body to earth." "Man is to become God-like through a life of virtue and the cultivation of the spirit through scientific knowledge, practice and bodily discipline." "Salvation is accomplished through the efforts of the individual. There is no mediator between man and {his/her} salvation." "Salvation is the freeing of the soul from its bodily fetters, be-coming a God through knowledge and wisdom, controlling the forces of the cosmos instead of being a slave to them, subduing the lower nature and through awakening the Higher Self, ending the cycle of rebirth and dwelling with the Neters who direct and control the Great Plan."

Egyptian Yoga is a revolutionary new way to understand and practice Ancient Egyptian Mysticism, the Ancient Egyptian mystical religion (Shet-autNeter). Egyptian Yoga is what has been commonly referred to by Egyptologists as Egyptian "Religion" or "Mythology," but to think of it as just another set of stories or allegories about a long lost civilization is to completely miss the greatest secret of human existence. What is Yoga? The literal meaning of the word YOGA is to "YOKE" or to "LINK" back. The implication is to link back individual consciousness to its original source, the original essence: Universal Consciousness. In a broad sense Yoga is any process which helps one to achieve liberation or freedom from the bondage to human pain and spiritual ignorance. So whenever you engage in any activity with the goal of promoting the discovery of your true Self, be it studying the wisdom teachings, exercise, fasting, meditation, breath control, rituals, chanting, prayer, etc., you are practicing yoga. If the goal is to help you to discover your essential nature as one with God or the Supreme Being or Consciousness, then it is Yoga. Yoga, in all of its forms as the disciplines of spiritual development, as practiced in Ancient Egypt earlier than anywhere else in history. The ancient scriptures describe how Asar the first king of Ancient Egypt, traveled throughout Asia and Europe establishing civilization and the practice of religion. This partially explains why the teachings of mystical spirituality known as Yoga and Vedanta in India are so similar to the teachings of Shetaut Neter (Ancient Egyptian religion - Egyptian Yoga. This unique perspective from the highest philosophical system which developed in Africa over seven thousand years ago provides a new way to look at life, religion, psychology and the way to spiritual development leading to spiritual Enlightenment. So Egyptian Yoga is not merely a philosophy but a discipline for promoting spiritual evolution in a human being, allowing him or her to discover the ultimate truth, supreme peace and utmost joy which lies within the human heart. These are the true worthwhile goals of life. Anything else is settling for less. It would be like a personality who owns vast riches thinking that he is poor and homeless. Every human being has the potential to discover the greatest treasure of all existence if they apply themselves to the study and practice of the teachings of Yoga with the proper guidance. Sema (?) is the Ancient Egyptian word and symbol meaning union or Yoga. This is the vision of Egyptian Yoga.

THE STUDY OF YOGA

When we look out upon the world, we are often baffled by the multiplicity, which constitutes the human experience. What do we really know about this experience? Many scientific disciplines have developed over the last two hundred years for the purpose of discovering the mysteries of nature, but this search has only engendered new questions about the nature of existence. Yoga is a discipline or way of life designed to promote the physical, mental and spiritual development of the human being. It leads a person to discover the answers to the most important questions of life such as, Who am I? Why am I here? Where am I going? As explained earlier, the literal meaning of the word Yoga is to "Yoke" or to "Link" back, the implication being to link the individual consciousness back to the original source, the original essence, that which transcends all mental and intellectual attempts at comprehension, but which is the essential nature of everything in Creation, termed "Universal Consciousness. While in the strict sense, Yoga may be seen as a separate discipline from religion, yoga and religion have been linked at many points throughout history and continue to be linked even today. In a manner of speaking, Yoga as a discipline may be seen as a non-sectarian transpersonal science or practice to promote spiritual development and harmony of mind and body thorough mental and physical disciplines including meditation, psycho-physical exercises, and performing action with the correct attitude. The teachings which were practiced in the Ancient Egyptian temples were the same ones later intellectually defined into a literary form by the Indian Sages of Vedanta and Yoga. This was discussed in our book Egyptian Yoga: The Philosophy of Enlightenment. The Indian Mysteries of Yoga and Vedanta may therefore be understood as representing an unfolding exposition of the Egyptian Mysteries. The question is how to accomplish these seemingly impossible tasks? How to transform yourself and realize the deepest mysteries of existence? How to discover "Who am I?" This is the mission of Yoga Philosophy and the purpose of yogic practices. Yoga does not seek to convert or impose religious beliefs on any one. Ancient Egypt was the source of civilization and the source of religion and Yoga. Therefore, all systems of mystical spirituality can coexist harmoniously within these teachings when they are correctly understood.

The goal of yoga is to promote integration of the mind-body-spirit complex in order to produce optimal health of the human being. This is accomplished through mental and physical exercises which promote the free flow of spiritual energy by reducing mental complexes caused by ignorance. There are two roads which human beings can follow, one of wisdom and the other of ignorance. The path of the masses is generally the path of ignorance which leads them into negative situations, thoughts and deeds. These in turn lead to ill health and sorrow in life. The other road is based on wisdom and it leads to health, true happiness and enlightenment. The central and most popular character within ancient Egyptian Religion of Asar is Heru who is an incarnation of his father, Asar. Asar is killed by his brother Set who, out of greed and demoniac (Setian) tendency, craves to be the ruler of Egypt. With the help of Djehuti, the God of wisdom, Aset, the great mother and Het heru, his consort, Heru prevails in the battle against Set for the rulership of Egypt. Heru's struggle symbolizes the struggle of every human being to regain rulership of the Higher Self and to subdue the lower self. With this understanding, the land of Egypt is equivalent to the Kingdom/Queendom concept of Christianity. The most ancient writings in our historical period are from the ancient Egyptians. These writings are referred to as hieroglyphics. Also, the most ancient civilization known was the ancient Egyptian civilization. The proof of this lies in the ancient Sphinx which is over 12,000 years old. The original name given to these writings by the ancient Egyptians is MetuNeter, meaning "the writing of God" or NeterMetu or "Divine Speech." These writings were inscribed in temples, coffins and papyruses and contained the teachings in reference to the spiritual nature of the human being and the ways to promote spiritual emancipation, awakening or resurrection. The –Ancient Egyptian Proverbs presented in this text are translations from the original hieroglyphic scriptures. An example of hieroglyphic text is presented on the front cover.

Egyptian Philosophy may be summed up in the following proverbs which clearly state that the soul is heavenly or divine and that the human being must awaken to the true reality which is the spirit Self.

"Self knowledge is the basis of true knowledge." "Soul to heaven, body to earth." "Man is to become God-like through a life of virtue and the cultivation of the spirit through scientific knowledge, practice and bodily discipline." "Salvation is accomplished through the efforts of the individual. There is no mediator between man and his / her salvation." "Salvation is the freeing of the soul from its bodily fetters, be-coming a God through knowledge and wisdom, controlling the forces of the cosmos instead of being a slave to the, subduing the lower nature and through awakening the Higher Self, ending the cycle of rebirth and dwelling with the Neters who direct and control the Great Plan."

THE SEVEN POWERS AND ENERGY CENTERS

Each ring of
the scale
represents
an energy
center

*The weighing of the heart
of the deceased against
the Feather of Maat.*

*Goddess Maat (F)
presides over the
judgment. Each rung
(Fig. A.) represents a
level (chakras, energy
centers) of evolution of
the heart (consciousness)
(Fig. B.) of the deceased
(initiate) against the
Feather of Maat (D). The
judgment is presided over
by Djehuti (wisdom
faculty of the deceased)
in the form of a Baboon
(C) and Anubis (E).*

*(From the Greenfield
Papyrus)*

In ancient Egypt there existed a concept of seven vortices of energy in the subtle spine called sephk ba ra (seven souls of ra). in India they are called chakras. in the beginning, neter was one, and then through the power of thought, became three (holy trinity); from these three came the uncountable number of neters which through the extension of their consciousness (mental-thought power), created the projection (illusion) which we call creation. these are the souls of ra (heru). the neters sustain and govern creation with their thought-power. there are seven levels of creation (with many sub-levels in each), and there are a total of seven levels of consciousness. the task is then to attune the seven individual energy-

consciousness centers in the human being with the seven powers of the universe (god) through wisdom and virtue. the knowledge of the attainment of wisdom and virtue are encompassed in the 42 precepts of maat which are a multiple of 7, and in the 42 books of hermes (djehuti) which contain the knowledge of the nature of the universe which is also the subject of this volume. The psychic energy centers are located in the spiritual body and runs parallel to the spinal column. The energy centers are 7 centers of expanding levels of consciousness from the base of the spine (physical - animal consciousness - apophis)

to the top (spiritual consciousness) at the crown of the head: uraeus - buto.as in the Indian chakra system, the Egyptian seven powers are related to the seven energy centers of the spine and are linked to the awakening of one's spiritual powers. as one progresses on their spiritual path of evolution, while either purposely employing a spiritual discipline (study and application of spiritual and philosophic scriptures, reflection and meditation) or learning through the process of trial and error, these centers will automatically open, allowing one to experience increasing communion with the higher self: god. the process of raising one's spiritual power may be accomplished by concentration, proper breathing, meditation on the meanings of the symbols and surrendering to the will of the higher self (god). these techniques allow one to transform one's waking personality so that one may discover their innermost self: god. this should be done under the guidance of a qualified teacher (spiritual master, guru, etc.).

***SEPEKH BA RA** (the seven souls of ra) or **sefek hu adjit** (the seven serpent goddesses)*

the subtle body and the energy centers of the human body

the 7 energy centers

the psychic energy centers in the spiritual body are distributed throughout the spine going up from the base to the crown of the head:

THE URAEUS. SEPEKHT

corresponds to the first energy-consciousness center (indian- sanskrit -

"muladhara chakra")

Also known as the shat, it is the root center(chakra) which is located at the base of the spine. It is the level of energy-consciousness we use to manifest (project) our "body" on the physical plane of existence, so that our spirit may be able to have experience in the physical realm. The energies here are concerned with survival issues and in the unbalanced state, manifest as our "task" is to convert this sexual energy into spiritual energy, thereby achieving expanded consciousness in the realms above and beyond the physical. we must develop, raise and master this energy to the 7th energy center, thus becoming one with the universe: god. the mastery of the primal energies is represented by the goddess buto of egypt and goddess kunda-lini of india.

TEKH

corresponds to the second energy-consciousness center (chakra- indian sanskrit:

"swadhishtan chakra")

It is in the area of the organs of procreation where, if controlled by the higher centers, cosmic energy may be absorbed and transmuted to create more than just physical offspring; one may give birth to their untapped creative talents. however, if the individual is psychologically developed to this level only, he or she will be preoccupied with sexual matters.

AB (ob)

corresponds to the third energy-consciousness center (indian sanskrit:

"manipura chakra")

Its location is in the solar plexus. The vital fire which sustains the physical body is located here. This energy center gives one a sense of power and will. meditation on this spot sends sekhem or vital energy (prana, chi) to this center which promotes health by increased digestion and equal distribution of energy through out the body; the effect is physical and emotional balance. This is a pre-requisite for higher spiritual advancement .imbalance or obstruction in this energy center manifests as feelings of inadequacy and powerlessness; one feels incapable of expressing their willpower.

The fourth to the seventh energy-consciousness centers (chakras) represent the evolution of spiritual life, the divine nature which is latent in everyone. the lower energy centers (3-1) represent the life of the lower nature, the animal nature which seeks

survival and supremacy over others and gratification of the senses. Moving from the lower to the higher consciousness represents the second birth, the birth of the spirit.

KHEPER

corresponds to the fourth energy-consciousness center (indian- sanskrit -

"anahata chakra")

Its location is at the heart. This center opens up the possibility of the

"virgin birth"

Which is the spiritual consciousness as opposed to the lower animal consciousness. At this level, your spiritual essence becomes revealed in the caring (expressing love) for others. The kheper or anahata chakra is related to a gland in the body known as the thymus. Being very large in babies, the thymus shrinks as we mature. The thymus is intricately related to the immune system, producing anti bodies to ward off infections. It is not surprising then, that when we are stressed, our immune system weakens and we become ill. If we evaluate ourselves when we become ill, we will find that we usually are involved with self-defeating and self-destructive attitudes and behaviors—overworking, frustration, drugs, alcohol, bad relationships—and are not in a situation to freely give love to our very selves, much less to all humanity. If we are not cautious, we become trapped in this negative way of existence which becomes a vicious cycle. How do we break this cycle? By performing self-less service to others, a very difficult task when we feel as though we are the ones who need to be served. However, we must remember the divine rule (cosmic law): to give is to receive.

SEKHEM

corresponds to the fifth energy-consciousness center (indian- sanskrit -

"vishudhi chakra")

It is the throat chakra, the chakra of

meduneter

(divine speech). This center is involved with our ability to receive love from others—our self-value. Imbalance in this energy center may be expressed as the inability to communicate our needs to people around us and the world at large. Thus, it is linked to illnesses such as hoarseness and sore throats, which usually occur as a result of communication difficulties such as shouting and screaming in an attempt to be heard.

MER

corresponds to the sixth energy-consciousness center (indian- sanskrit -

"ajna chakra")

It is the third eye, the level of intuitive wisdom that does not require "thinking" or the mind processes. "This is the eye of heru, the light of intuitive vision. It is the level of "knowing" something instead of "thinking" we know something. Herein lies the ability to perceive the spirit as well as matter, and to live in both equally.

IKH

corresponds to the seventh energy-consciousness center (indian- sanskrit - *"sahasrara chakra"*) this is the energy-consciousness level where the dualistic mind symbolized by apopis and the

"life giving fire"

(primal energies), becomes united into one whole. This is where apopis is transformed into the uraeus (buto), the highest achievement of all spiritual movement. This consciousness level represents the level of transcendence, where the christ anointing occurs. It is here where the merging of the individual ba (soul) with the absolute reality (the universal ba, heru, ra, asar, ptah, etc.) occurs. The same symbolism is expressed in the idea of the sphinx where in the lion body (lower self) of the sphinx merges with the human head (higher self, god). the sphinx is also a symbol of heru.

below: from the

book of coming forth by day

of kenna*. am-mit- devourer of sinful souls shows the difference between animals (centers 1-3) and those born of the spirit (centers 4-7) by biting the staff of the scale of maat at the point between the third and fourth circles which symbolize the energy centers of the body. maat holds south in her left hand and which is holding the men-at, symbol of union of the male-female or phans. these seven energy centers are also called

"the seven uraeuses".

At right: a drawing from indian kundalini yoga showing the location of the energy centers of the body.

*this particular version of the

"Egyptian book of coming forth by day"

was prepared for initiate kenna. the !kun people of Africa the knowledge of the "life-force" inherent in the human body which was known as ra-buto in Egypt, kundalini in India, chi in china, and qi or ki in Japan, existed in various traditions around the world. The !kun nation of Africa who reside in the Kalahari desert are one of the societies referred to as "bushmen." they possess the knowledge of the inner life-force, and from ancient times, practiced the disciplines to arouse it for the purpose of attaining spiritual evolution. The !kun practitioners describe the classical life force arousal which begins at the pelvic region, moves up the back and rises to the brain, there causing ecstatic and mystical experiences which allow the practitioners to attain expanded states of consciousness known to them as: !kia*. this allows them to better serve their society. as in other nations of africa, the !kun begin by engaging in hours long rituals of dancing (see also the whirling dervishes). the goal is to arouse n/um (life force) which is said to reside in the pit of the stomach (see also lower dantien, energy centers in the body: chakra #3), and when "warmed"*** (aroused), rises from the base of the spine. as with other accounts from around the world, the initial onset of the arousal may be painless or may be attended by the painful movement of energy (not unlike the birth of a child) with such a force that it may challenge the sanity of the individual (see also altered states of consciousness) . this occurrence can understandably cause intense fear (of bodily injury or loss of sanity) which when overcome, allows the release of the spirit into new realms of consciousness (the !kia state). the state of !kia is equal to the state of samadhi in indian yoga and satori in zen meditation. *kiai is also a word of power in china and japan describing the life force which resides in the solar plexus or "lower dantien" region of the body. **see also: "the secret of the philosopher's stone."

THE DIVINE INTENTION OF HERU TO OFFER PA ASHUTAT

But unto you that fear my name shall the Sun of Righteousness arise with healing in his wings; and ye shall go forth, and grow up as calves of the stall.

{MALACHI 4:2}

In ancient KEMET this posture shows HERU invoking the blessings of PA NETER in the orthodox Islamic world it is called NIYYAH (offering the Hearts intention).

THE DASHUR PYRAMID COMPLEX

Pharaoah Hor Awibra 7 Months Ca. 1760 BC, 13th Dynasty

The above posture has been grossly misunderstood by those whom are held captive under the spell of **W.F.M.** as ("The Grand Hailing Sign of Distress") and those of the arabized version of Islam derived from the **Tomb of PA SHEDU** and the **NOBLE PRECEPTS** of **PTAH HOTEF** as merely chanting **ALLAHU AKBAR!!!!** From **AaH** ("Defender") or "**AaKHU**" ("Protection;") **Ba** ("The Soul of man") **Ra** ("Ruh-Allah/The Spiritual Light of the Heart").....accurately translated as; The latent Powers of Psychic Self Defense invoked to aid the Soul of Man thru the protection and provision of the Spiritual Light of Allah also known as "**Wajh-Allah**" ("The Presence & Face of God; The Inner/Higher Self" of Ones Whole Being)..... see the Grand Quran of Mecca **G.Q.M.**.....{The 2nd Degree; Ayatal Landkmars 112-115}; or **WADJET** ("The Eye of Heru") of ancient kemet..... ("God is the Greatest")and without doubt or contradiction indeed he is "**THE GREAT GOD**" see **K.Q. 94**.....In **MEDU NETER** ("The Language of God") we say: **PA NETER** ("The Most High God") The 1st Order of Divinity we know as ("The Old Time Religion") **ISLAMISM**.....a.k.a. **SHEDU NETER** ("Seuton Gnothi") "**Know Thy Self**" is the manifestation of a **Divine Theocracy of Law**; {Just Divinum/Just Naturale}..... see **M.H.K. Chp 36**; **L.B. Ali**(Introduction). We the **M.A.N.G.** are enforcing Allahs Supreme Laws thru the **Circle of 7 Acts** as delegated thru the **OUR AUTHORITY** at the command of our Holy Prophet El Hajj Sharif Abdul Ali..... Next to the **KEMETIAN ADEPT**..... **Dr. AKHNATON PERT M HRU TUTANKHAMUN BEY**..... THE TOMB OF ZED-AMUN-EFANKH IN THE BAHARIYA OASIS

The Bahariya Oasis Enjoyed A Golden Age During The 26th Dynasty, Particularly During The Reign Of Ahmose II (570-526 BC)

THE EXALTATION OF HOLY BREATH THRU SHU NETER

“The Neter Shu is “nothing other than the breath of the creator god”. The breath is life itself.”

Shu (Su) was the god of light and air and as such personified the wind and the earth's atmosphere. Shu is the god of sky (in ancient Egypt). **Shu** (pron.: /ʃu:/; meaning "emptiness" and "he who rises up") As the god of light he represented illuminated the primordial darkness and marked the separation between day and night and between the world of the living and the world of the dead. As the god of air, he represented the space between the earth and the heavens, and gave the breath of life to all living creatures. As a god of the wind, sailors invoked him to provide the good wind to power their boats. The clouds were considered to be his bones, and he supported the ladder by which the deceased souls could reach the heavens.

He was generally depicted as a man wearing a headdress composed of ostrich feathers carrying a Was sceptre (representing power) and an Ankh (representing the breath of life). Alternatively, he wore a headdress of a single ostrich feather (like that of Ma'at) which represented the breath of life. Occasionally, he wore a sun disk on his head due to his connection with the sun god. His skin was often painted with an Olive Tone, possibly to represent his connection with Nubia or to emphasise his role in the rebirth of the sun god. He is commonly shown standing on the body of Geb with his arms raised to support Nut. When he is linked with his wife Tefnut, he often appears as a lion and the two were known as the "twin lion gods". Less often he is given the hind parts of a lion and the body and head of a man.

THE ANCIENT CITY OF NEKHEN

Naqada III– Early Dynasty 1 (Ca. 3300– 3000 BC)

It has been stated that this posture is symbolic to the suppression of ones passions & desires for the 1st rung of the **12 STEP LADDER** is **OBEDIANCE** where we learn to **OBEY** the laws of The Great God as revealed thru our Holy Prophet The **Kemetian Adept Master & Servant** of HumanityThe term **OBEY** {OH! BEY} itself implies **O! GOVERNOR** of **THE SELF**, or **O! MAN**..... Whereas we must learn to govern self before governing others. It was thru selfless service that **N.D.A.** obtained the title "**Faithful Moslem**",or the divine attribute "**Abdul**" (Servant) in fact one of the greatest titles to earn in the Mystery Schools was that of Servant this is why our **Circle 7** states: "Man needs a path he is willing to follow and not one wherein he wishes to lead"!!!!..... It has been defined in High Definition according to the Higher dictates of the Deific Will, that we first become good followers in order that we may become great leaders.....Therefore a Master Mind knows that when Allah is leading on then the victory has already been assured. Thus we have been giving the **SQUARE & COMPASS** that we may draw a circle around our passions and desires and keep them within the bounds of righteousness; and thus! Keep our conduct square. The Right Hand above the left is symbolic to {**Right Thinking, Right Willing, Right Reasoning, Right Understanding & Right Remembrance**} of our Holy Covenant and Obligation of Obedience as Children of our Father God Allah provided for by his careBearing Free National Standards principles & power as an Upright, Independent & Fearless Nation of People.....

In the orthodox Islamic world the above posture is known as **Qiyam** ("to stand"upright) from the Arabic word **TAQWIM** meaning : (mould,shape,form,symmetry,constitution) **TAQWAH** it means (Self-Awareness, God Consciousness, inclined toward Righteousness, to be Pious).....It also demonstrates the **YAWM AL QIYAMAH** ("Day of Resurrection") Referred to so often by the orthodox Islamic clergymen.....Little has it been known that each day we arise is a new mile stone in our race to perfection. Every day on this plane made manifest we are unfolding into our highest ideals of The Great God and therefore our judgments' today are not the same tomorrow.....Truth is the only thing that remains the same and changeth not. It is then safe to say that when the mind of the Prince Thinker becomes content with the free thoughts of a God Man the fix will then be solved, and the resurrection shall become a fact thru the Exhuming of a Clean & Pure Nation. Hence According to **SEVA YOGA**:

YAMA & NIYAMA - PART OF THE EIGHT FOLD YOGA PATH OF PATANJALI

Yama and Niyama are the do's and don'ts, or ethical disciplines, which have existed in the human race since the beginning of civilisations. Yama and Niyama are traditional whether one is from the civilisations of the East or the West. By following these traditional precepts, which are closely related in many ways to the Buddhist Eight Fold Path, we work towards individual development of the body, mind, and soul.

Yama - Self Restraint

Yama is the foundation of yoga. It is the first step in the Eightfold Path of Patanjali. Yama tells us what to avoid doing because it would do harm to the individual and that of society. The observance of yama disciplines the five organs of action which are the arms, the legs, mouth, the organs of regeneration, and the organs of excretion. It is natural for the organs of action to control the organs of perception and of the mind. If the mind wishes to bring harm to something but the organ of action refuse, then no harm will be done. Therefore, Yama is said to be the foundation or root of the tree of yoga. By doing asanas alone, without the incorporation of Yama and Niyama, there will be very little advancement upon the spiritual path.

The Five Don'ts of Yoga:

Violence & killing ~ Lying or untruthfulness ~ Stealing & misappropriation ~ Continence & celibacy ~ Greed & selfishness

Niyama - Observance

Niyama is religious observance. It is the second step in the path of the Eightfold Path of Patanjali. The five principles of Niyama control the organs of perception, which are the eyes, the ears, the nose, the tongue and the skin. It consists of purity, both internal and external, contentment, the practice of austerity, the study and learning of religious books, and self-surrender to God.

The five Do's of Yoga:

Purity in thought, deeds, & body ~ Contentment with self ~ Spiritual discipline ~ Spiritual learning ~ Surrender to God

THE TOMB OF AHMOSE

1550–1525 Bc (Conventional Egyptian Chronology) (Disputed) 25 Years In Manetho, 18th Dynasty

The word “*rak’ah*” {circle} which is used in counting the cycles of prayer is derived from the word “*ruku*”. In this posture one demonstrates the physiological geometric equivalent of a 90° Degree Angle forming a Square. This conveys that all corners of our conduct be made **SQUARE** and the actions of our souls are Righteous inclined toward OBEDIANCE in our HUMILITY before The Great God. This is known to Adepts as Squaring the Circle 7; The Uniting of Divinity & Matter 360° “As Above” + 360° “So Below” + 360° “Within” = 1080°..... Q. How humble should Man be? A. As He art Weak and Ignorant. This exercise allows the awakening of the **Seva**, That the **Seven Eyes** of **Allah** may lead to victory!!!! Hence then “**Ra**” (“The Divine Light of Our God / “**Wadjet**”, or 3rd Eye”); “**Ka**” (“The Holy Unity /The Deific will”); & “**AaH**” (“Salvation/”**Tehuti**”, or Divine Mind)..... **Ra Ka AaH**..... “*rak’ah*” means {circle}. But if you were to view the congregation from the Right Angle you would see a “7”..... Behold the Circle 7 Mantra **Aah Tehuti Ra Wadjet Ka**.....{Salvation- Our God-Unity}.

TOMB OF PASHEDU

Tomb Of Pashedu, Servant In The Place Of Truth, Dayr Al-Madina, Reigns Of Seti I And Ramesses II, 13th Cent. B.C.

Above is a Grand display of the ancient origins of prostration as practiced by our ancient ancestors in fact much of the so called **SUNNA** of orthodox islam can be traced back to this particular Tomb and many other chambers, or crypts of the **Kemetian Mystery System**..... The name **PASHEDU** alone is enough to make clear our ancient customs i.e. Our Ancient way of life **SHEDU NETER** ("Know Thy Self"); Therefore we know that when prostration was demonstrated it was simply a **Yogic** exercise to activate the will for Ascension & Self Mastery..... The Sufis of the Islamic world knew this however even they suffered a terrible chastisement for daring to teach the old time religion of Ancient Kemet in the presence of the Ummayyad Chaliphate. Which is why they chose to migrate into exile and create the Grand Chain of **TASAWUFF**. Oh and not to mention many of the founders of the **Order of W.F.M.** studied at the feet of these Eastern Adepts and decided to create there on version of what they consider to be the (European)**Ancient Arabic Order Of The Nobles Of the Mystic Shrine**.....& N.B.C. **Ancient Egyptian Arabic Order Of The Nobles Of the Mystic Shrine**..... Even with all the symbolic **fezs** dawned with the names **Mecca, Mohammed, Moslem, Morocco, Egypt** etc.... including initiation chambers with the Grand **Quran** upon their secret alters Opened to **33rd Sura** Symbolizing the **Amalgamated Confederacy of States 1861** {Assumable Jurisdiction} a shallow grave that has remained the Death Bed of the Moorish Hiram every since. The so called Moorish Grand Master Potentates have failed to return to their post as chief protectors of their 1st religious creed.....The Above posture is known to Muslims as **SAJDAH**, or "Sujud"(The Secret of Prayer) In Muslim tradition **Muhammad Ibn Abdullah** is said to have stated: To be close to Allah, you have to go into *sujood*. "The closest that a servant is to his Lord is when he is in prostration." The more you humble yourself and go into *sujood*, the closer you are getting to Allah; and indeed, He elevates you. Here we enter Allahs Temple of Self Mastery.....

PRAYER OR MEDITATION

(The Word)

The Vedas call it **Sruti** (that which is heard).

The Upanishads call it **Nad** or **Udgīt** (song of the other world).

The Moslems call it **Banġ-I-Asmani** or **Kalma**.

The Gurbani call it **Shabd**.

The Moorish Moslems calls: "**Holy Issa**"

The Zoroastrians call it **Sarosha**.

The Hebrew calls "**The Word**" (was and is **Jehovah**).

There is but one true way and the nearest place to meet the Great God is in the silence of the Heart, the divine ground behind the eyebrows. Knock and the door shall be open/ seek and you will find. But you must be helped by the grace of a Master Soul, one who is adept in the Science of Spirituality. This is the way of the Prophets, Saints, Gurus and all Master Minds. This is true Prayer, meditation and true worship. No middleman, no Priest, Preacher, Rabbi, Iman or others to intercede. An ounce of practice is 360 degrees more valuable than a ton of theory.

Prayer is to meditation as a young boy is to a Master Mind. Although one will unfold into the fruition of the other, one world is by chance, rehearsed rituals, hope and often selfish. While meditation is the use of conscious wisdom of man to the Divine Mind. Prayer is used by those unguided in the science of meditation or until they can find the solitude to do so. Meditation is direct, man's hand (mind) is God's hand (mind) and all is well. Prayers are like pollen blown into the ether from human needs with hopes they may be received somewhere on fertile ground. With Meditation all thoughts form a complete circle of purity, love and peace.

Most congregational prayers are by rituals and forms that are scheduled social pacifiers from man's inhumanity to other men. But if man truly wants to meet the Great God, he must go alone and look within; (Actually, once on this straight path, he will meet the heavenly host of Malchizedek –the White Brotherhood of Prophets, Saints, Sages and Conquerors of the world of manifest). Some congregate for fashion, appearance or to satisfy the required Sabbath. Immediately, the same worshippers are rejoicing while they eat the flesh of the slain, executing (murder) another human or other things that harm. All in the name of the same Lord in which they were just praising. The science of Meditation places one beyond (dissimulation).

By no means is this to negate prayer or the power of prayer. Especially if one knows how to pray. Prayer is the spirit-to-spirit path of communication between the Godchild-Man and his Creator, Father God. The parent and the child have this path, even when the child has strayed. Middlemen usually require sacrificial payment dressed up in fancy words like donation, charity, tithes, cost of initiation or intensives, and contributions to be placed at the altar, shrine or basket of their religion.

Worshippers pay for the words *about* god but not the word *with* God because that word *is* God. When God and Man are one it is then the resurrection of The Great God and Man becomes a fact. Only when his will meets the deific

“Serve no god(s) outside of the self because those gods will surely enslave you again.” He also told the Moors the **“If you are not careful your own brother will enslave you. Your new slave master may just be wearing a Fez like the old master wore.”** Be aware, the god you serve may not be your own.

THE MOORISH AMERICAN ADEPT PRAYER

First The History and Warnings of Prostrations

The Forefathers of the LamuriAsians, known as the Ancient Moabites, are the true and divine founders of the world's first religious Creed for the redemption and Salvation of mankind on earth (MHK 48-6). It must be remembered the very word man means “Thinker.” Of all creatures, man is the only one that grows outward from the roots in his head.

Agēs before the advent of Prophet Mohammed, the ancient Kemetians of the Eden were the first people to prostrate in prayer. Prostration became the original sign of humbleness, respect and subservience from man towards his Creator. Bowing down to earth with knees, hands and head was a symbol of his premeditated return of “ashes to ashes and dust to dust.” Prostration is man way to park the flesh while he journeys inwardly to meet the Great God. Without the hindrances of the body all that is left is for man to return to his natural and divine status. Prayer leads man away from the trappings of his lower self and sustains him on the journey inward to his lofty estate. Through prayer man can receive unseen powers from his Father God as the child receives nourishment from the breast of one mother.

Prostration brings a higher degree in the observance of the National Moorish American Prayer. From this horizontal position there is a revelation of understanding and communicative power that rest dormant in every human; just as adulthood waits in every child. The will of man and his purity of heart are the keys used to perform the Adept Prayer. These keys unlock man's straightway of natural passage from civilization to divinity.

In the higher science in African based Nations the route to the center or heart of man is called the 3rd Eye or The Ajana (See: Chapter-15, The Third Eye). Often referred to as the 6th Chakra, the Ajana is a conscious entrance into the heart where things are made of thought. Meditation is the most secured passageway into this paradise. The Adept is made during the resurrection of the will of man and the will of Allah becomes a fact. Meditation during prostration is conscious fulfillments of this divine bond between man and himself as God.

“Issa” is the name of the first physical man before the fall when he was more God than Human. The true transliteration of Issa is “The Great God.” Issa is the name handed down to every major Prophet from Adam to Ali. This is the Holy name given to the son born to Mary and Joseph and can be found throughout the Holy Qur’an. In this stage he went about the creative and governing business of God. But as Issa began to spend more time in human form and conquering the weaker manifestations until he dumb-down and became “Adam.” Now being “a damn” is not a good thing to be. But because Adam remembered to pray is how he became the first Prophet. The fall of man is when he lost consciousness of himself as God. Man fell because his will to think became too sluggish. This is when the survival of the fittest became a way of life and he developed a carnal nature made of false sensations and gratifications. The holy name of „Issa“ has been weakened in the west with additional attributes e.g. “Issa Allah El” and “Issa El Ali.” The problem here is the attributes „El“ and „Allah“ and „Ali“ are already perfectly incorporated in the holy name “Issa.” This only goes to show finite minds cannot comprehend those things infinite. And this is why anyone can possess the name but it can only be actively used by those with pure hearts. It cannot be used by those who are slaves to sin.

Which Direction Do we Face to Pray?

Be advised: Due to the advent of the last Avatar, Noble Drew Ali, we and the world are in a new era of time NOW! This means another age has past and the consciousness of humans has reached another level towards being himself, the light. It is time to formulate the code of law, religious postulates and plans of rule best suited for this age. The days when men look to serve Allah outside of the self in places, objects, forms and times no longer satisfy their search for truth. "There is no way to Allah from any idol shrine. The Allah I speak about is everywhere; He cannot be compassed with walls, nor hedged about with bounds of any kind" (MHK 10-12). As an example: Today there are more than 1.5 billion Muslims praying towards a rock in the east, five times a day, does not negate to reality only the lost needs directions. The directions of north, east, south and west were devised by man when he lost his way as God. Sura-2; 177 clearly forbid using earthly directions when facing Allah in prayer: **"It is not righteousness that ye turn your faces towards east or west."** The directions of north, east, south and west were devised by carnal man when he lost his straightway as God. The universal Great God is omnipotent and omnipresent and therefore never lost. The Moors must also remember their Prophet taught them the answer to the first question "Who made you?" The answer is "Allah, The Great God." This is to say, no matter where the Holy Fruit falls it still is from the same Divine Tree. So which way do we pray??? Inwardly. The universal Great God is omnipotent and omnipresent and therefore never lost. Muslims are those who submit their will to Allah and Moslems *are* the will of Allah. Moslems do not pray according to the dictates of times, directions, days, rituals and forms.

The Moors must also remember their Prophet taught them the answer to the first question "Who made you?" The answer is "Allah, The Great God." This is to say, no matter where the Holy Fruit falls it still is from the same Divine Tree. So which way do we pray??? Inwardly.

What time do Moslems pray? Moslems are Spirits and created by Allah. They do not follow time because all times are illusions of finite duration and cannot dictate the courses of man. Again throughout his holy instructions The Moorish American born Prophet taught his Nationals "Why need we wait?" (Meaning there is no set time {finite duration} to meet Allah).

Ages before the advent of Prophet Mohammed, the ancient Kemetians of the Eden were the first people to prostrate in prayer. Prostration became the original sign of humbleness, respect and subservience from man towards his Creator. Bowing down to earth with knees, hands and head was a symbol of his premeditated return of ashes to ashes and dust to dust. The conscious purpose of true Prostration is meditation/elevation away from the human body thereby acknowledging „flesh cannot think nor can its bones reason.“ All that is left is to return to his natural divine status.

The majority of „Muslims“ still face a rock in the east to pray. This too is paganism and constitute the worshipper as one still looking for The Great God somewhere outside of the self. Meanwhile all "Moslems" are the will of Allah. They do not pray according to days, time, rituals and forms. These are they whose will has reached the deific will and spend their life perfecting themselves as God. When the last Prophet, Noble Drew Ali, reintroduced the original Islam (Old Time Religion, World's first religious Creed) to the west he taught the Moorish to pray standing on their feet, with their eyes wide open because the nearest place to meet their Creator was, is and forever will be in the heart." All other worships "Outside the place most dearest unto thee" is uncut paganism. Again throughout his holy instructions The Moorish American born Prophet taught his Nationals "Why need we wait? (Meaning there is no set time {time is finite duration} to meet Allah).

Adept Prayer / The Ritual

Prostrating while reciting the Moorish American Prayer can be very effective when sent by the breath. But the Moorish Americans are hereby warned: The performances of prostrations while in enemy territory are strictly forbidden in the world of Islam (Sura 4:102-104). To prostrate in prayer knowing the population of the USA is 99.9% anti-Islamic is unforgivable. This is why Drew Ali taught the Moorish to pray standing on their feet with their eyes open. They will only prostrate in a venue where there is no apparent danger nor are they subject to being overtaken while they are lost in prayer. For those who may have short memories please research the events of 1492 Granada Spain. After being attacked while prostrating during Juma Services, only those Moorish Moslems who survived the massacre were used to begin the new West African Slave Trade. 520 years later the descendants of these Moors compile the denationalized population of NBC sold to the United States. The warning about prostration should be taken in full effect because in 1492 those Moors knew full well Queen Isabella and King Ferdinand were the Christian Rulers of Europe with allegiances with the Turks and Arabs.

Rewards of The Prostrated Adept Prayer

It is the Holy Breath which empowers every word of this prayer. Before citing each line of words one must inhale deeply inhales, hold that breathe for about 7 to 9 seconds then exhale the breath with the words of that especial line. The Holy Breath is what elevates the prayer into the infinite domain.

Find a still uninterrupted area where you can go into silence for self examination. One should sit, as close to the ground (floor) as possible and meditate on the intent of Holy Unity in search for guidance. During meditation one must master all external distractions normally responded by the carnal senses. Once this thought control is at the level of obedience the prostration can began. From the knelling position, with the hands in front of the face, place the thumbs and forefingers touch-to-touch forming a pyramid (See; diagram at top). Place the open-palm pyramid on the floor, followed by the forehead (between the eyebrows) into the center and direct the will inwardly to the Deific Will. Remember, **It is the Holy Breath which empowers every word of this prayer. Before citing each line of words one**

must inhale deeply inhales, hold that breathe for about 7 to 9 seconds then exhale the breath with the words of that especial line. The Holy Breath is what elevates the prayer into the infinite domain. You were summonsing The Great Will during meditation. Now, using She the Holy breath say this prayer as instructed:

O' Allah, The Father of the universe.

O' Allah, The Father of Love.

O' Allah, The Spirit of Truth.

O' Allah, the Spirit of Peace

O' Allah, The Spirit of Freedom

O' Allah, The Spirit of Justice.

O' Allah, You are my protector

O' Allah, You are my Guide

O' Allah, You are my Salvation By Night and By Day

O' Allah, Through Your Holy Prophet

O' Allah, Drew Ali, Amen.

Holy Issa, Holy Issa, Holy Issa

Upon success, tested by your sincerity and purity of heart, you have made a hajj (Pilgrimage) into 3rd Heaven. Third Heaven is the only true Adept Chamber: Belief is 1st Heaven, Faith is 2nd Heaven and you, yourself now in deific life is an Adept. The Moorish inherited these divine rites of passage from their ancient Fathers through Allah's Last Prophet. The Moorish are entitled to their true name of Faithful "Moslem" as a reward for their years in Maafa. Moslem and Adept are other names for God. The Adept Prayer is Perfected Man's journey into the Spirit Self and must be traveled alone. Notice the absence of any middleman, priest, and Grand Hoodwinkers. Now, welcome home Moslems.

Humbly Submitted, Your Brother-In-The Law

THE TOMB OF HUY

An Egyptian Official Who Lived During The Reign Of King Tutankhamun (1336-1327 Bc). Thebes, Qurnet Murai

Here we find In front of (1) on top are the words "Princes of Lower Wawat", between (2) and (3) top is the label "Children of the princes of all the foreign lands." The discretely placed label in front of the chest of (1) adds an unusual element of familiarity in naming the individual: "Prince of Miam, Hekanefer." Notice their Sash White Clad attire and the feathers in the headdress as they perform **PA ASHUTAT** does that look familiar. Did not N.D.A. tell us that his mantel represented the Royal Prince? Or perhaps could it be our Holy Prophet manifesting his presence thru His universal MER KA & BA (Merkabah) again???? An intensive for Kemetian/Moorish Adepts; i.e. Master Minds.....To reflect upon.

THE TOMB OF SEBEKHOTEP

Egypt, Upper Egypt, Tomb Of Sobekhotep (Thebes)) Date 1400bc (Circa)Period/Culture 18th Dynasty Authority Ruler Thutmose Iv

Here we find the silent brotherhood performing **PA ASHUTAT** as a groupThus! what came to be known as congregational Salawat the Ibadat of **SUNNI** muslims was really derived from **Smai Tawi "Kemetian (Egyptian) Yoga"** . This practice was taught to them by the Kemetian Sage, **DEJHUTY** (Tehuti) he was the first scribe of Ancient Kemet to teach **SHEDU NETER** and translate the Supreme Laws of a Divine Theocracy from the **MEDU NETER** that all men may comprehend.He was also the first to Ascend into 3rd heaven and become the Grand Hierophant who instructs all aspiring Student Adepts unto this very day. **DEJHUTY** means (Divine Mind).

OUR MOORISH GREETING & HAND CLASP OF UNITY CAN ALSO BE TRACED BACK TO ANCIENT KEMET

THE ROYAL DRESS OF THE PRINCES OF KEMET

NURIANA

Author's Preface

The Divine Plan

We live in a world that was created, and is maintained by the *unified* working of a *multiplicity* of agencies.

We live in a world that is composed of a *multiplicity* of entities that are *unified* through a web of interdependence.

In the infancy of his spiritual evolutionary career, Man is unable to perceive the hidden forces and abstract principles that *unify*, the working of the shaping forces of the world, and the entities that make up the world. He creates, therefore, a way of life-systems of religion, science, economics, government, education, family, philosophy, etc. - that is incapable of establishing, and maintaining unity-law, order, peace, harmony-in the world. Thus the world has been plunged, and is sinking deeper, day by day, into the jaws of death.

It is true that he has amassed a great number of facts concerning the workings of nature, and a great collection of ideas concerning religion, and so on, but the possession of a mass of facts, however reliable the facts are, does not constitute the possession of a science, nor does the possession of a collection of ideas about religion, constitute the possession of a religion, for the knowledge contained in these facts regarding nature, and these ideas concerning religion, does not embody the principles that are necessary to unify the facts, and ideas. It is only when the facts concerning nature, or the ideas about religion are linked to each other, and to the whole, that a science, or a religion is formed.

Man's perception of the world, however, cannot change the reality that the world is shaped, and maintained by a unified multiplicity of agencies, and that the world is made up of an infinitude of interdependent entities. This reality has been known to Black and Oriental cultures, and ignored by Westerners as far back as history can take us. The Black nations of antiquity, through the cultivation of the science of inducing the state of waking trance, which enables Man to perceive the working of abstract principles, and the hidden shaping forces of the world, were able to create a way of life-systems of religion, science, philosophy, government,

economics, etc. - that was capable of establishing and maintaining unity, and thus led to the creation of civilization.

Unity, harmony, and order in society cannot be achieved through the making of laws by Man, and the policing of people's behavior. As Man's life on earth is a product of the Supreme Being's creative process, every aspect of Man's life, is therefore, controlled by the divine creative agencies. Unity, and thus, prosperity in society can only be achieved by Man's efforts to intuit the knowledge of how the divine agencies are shaping his life, i.e., to intuit the knowledge of the Divine Plan¹. It follows, logically, that the Divine Plan would contain the knowledge of the unifying principles, of the multiplicity of shaping forces of the world, and of the entities making up the world. Through it, all things, and events in the world were unified. Religion with science with government with philosophy with medicine, and so on. Man with nature with God, etc. It achieved this monumental accomplishment by assigning to each event, force, entity, and idea a place in space (hierarchy, rank), and time. It is the purpose of this book to give the reader a working knowledge of this system. The Divine Plan is presented in this book, not as the museum pieces that are the delight and folly of historians, but as a system to be lived. The jab at historians was thrown, both in jest, and in seriousness. The fun side is dictated by the fact that they have, cumulatively, amassed a great deal of facts on our past, for which we must be grateful. The other side is dictated by the fact that, although most historians of religious subjects know of their lack of first hand experience of the religious phenomena they report on, it does not stop them from arrogating to themselves the aura of authoritativeness in reporting, "explaining," and passing judgments.

Although, the material in this book has the full support of historical documentation, I am writing foremost as a priest of over 20 years of practice. I am here presenting a practical syncretism of the best that the Kamitic (Ancient Egyptian), the Dravidian (Black India), and the Canaanite (true authors of Kabala) religions have to offer. They were among the six nations that laid the foundation of civilization. But it would be folly on our part to merely document this fact, and to compile and explain a list of who, when, why and what. Would it not be a sign of intelligence, to be more interested in

1. Maat.

the methods employed by them for the creation of civilization, that we may learn and apply them to its recreation? If the religious, and philosophical systems of ancient civilizations were so great, why aren't we practicing them?

Yes! In this volume, one of many as the topics are too broad to be fully explained in one book, I have given the world, the means through which everyone can discover the links between all aspects of life, the means of discovering the Plan-the structural continuum-that the Supreme Being has put in place to enable the events in the world, to unfold in an orderly, and harmonious way. Become the Plan, and let Peace, Prosperity, and Spiritual Realization reign in the world. Hetep!

Chapter 1

INTRODUCTION

The world is on a collision course with disaster. Not only from, or because of the threat of nuclear war, but from the massive collapse of its institutions (political, social, economical, religious, spiritual, educational, etc.). It is the combined failure of these institutions, and traditions that is at the root of the widespread decay and stagnation that we are witnessing in just about every nation in the world.

"This state of affairs," a Kamitian (Ancient Egyptian) priest(ess) would say, "is due to 'Lack of Self Knowledge'." This injunction has been quoted often by scholars yet none have given much insight into its true meaning.

In explaining what is 'Knowledge of Self', I ought to begin, it seems most natural, at the beginning. But that would take us into such an abstruse discussion that it makes better sense to start, instead, at a very familiar midpoint.

Let's start with what you are doing this very moment. As your eyes race across these lines I want you to make the effort of becoming aware of the fact that you are involved in two sets of functions. On one hand, you are **making the effort** to keep your attention on the sequence of words as you read on. On the other hand, **without your conscious effort, and awareness**, the meaning of what you are reading is taking shape. These two sets of functions are more apparent in more complex activities. While you need to think of getting up and going somewhere, you need not think of the details of the muscular activities involved in getting up itself. They are taken care of for you. When you type, dance, play an instrument, perform in a sport, drive, write, etc., you can become aware of the fact that some part of your activities is performed without conscious effort.

Now, this dualization of your being into two fundamental sets of functions is the central theme of 'Self Knowledge'. One part of your being is concerned with activities that you have to direct, while the other deals with activities that occur without your attention to them. You may have noticed that I have gone to a little trouble to avoid the popular designations, "voluntary vs. involuntary, or conscious

vs. subconscious" behavior. We will later see why. Let us for now label them "willed," and "automatic" respectively.

It might not surprise you, because you already know, that great performers make poor teachers. Yet, you might be surprised to know that you could not give an accurate description of how you walk, or articulate the words that you speak, etc. You fail for the same reasons that most great performers do as teachers. The performance of the tasks in question is carried out without your attention, and awareness of the intricate details involved. You direct your attention to the desired result and the other part of your being unattended takes care of the execution. In fact as you sit here, this other part is, without your attention, or consent, determining what understanding you are extracting from what you are reading, and at the same time, it is taking care of your breathing, exchanging oxygen for carbon dioxide in your blood, circulating the latter through every cell in your body, probably digesting some food, and getting ready to shut down the part of you that directs activities, that it (the automatic part of being) may have more freedom and energy to do some major repairs on your vehicle while you sleep . . . among many, many other, very complicated things¹.

It should be obvious by now that there exists a vast difference in the knowledge and capabilities between the two parts of our being. While the willed part of our being has to be instructed and is no better in its performance than the quality of the material taught it, the automatic part of being is directed by an omniscient factor, -let's realize that it directed the formation of the physical part of our being the very moment that our progenitor sperm and egg came together.

What if the willed part of our being, instead of learning from the nescient will of others, learned from the omniscient being that directs the automaton within us? I.e., instead of the "limited in knowledge" learning from the "limited in knowledge," learn from the omniscient.

The answers to these questions will provide full insight into the nature of our being, the cultures we have produced, the shaping forces of our history, and explain the causes of the problems besetting mankind, and will also show, definitively, the way to their solutions. It is sufficient to say for now that according to the African spiritual

1. This so-called subconscious mind is the Deity Ra of the Kamitic tradition.

tradition, the automaton within us is in touch with all functions in the world and is capable of manipulating them.

With the proper directions, we will come to see that there are three kinds of people in the world. One type inclines toward relying on the willed part of being for survival and flourishing, the second, on the omniscient intelligence and the automaton, and the third, on an equilibrium of both parts of being. In fact, all cultures fall into one of these categories.

These three categories do not represent distinct types, but stages in the spiritual development of individuals and nations. The first stage corresponds to the polarization in the willed (outer) part of being, the second, in the polarization in the inner, and the third to their equilibration. We can better comprehend this if we paraphrase it as the stages of 1) reliance on the part of being with limited knowledge and capability, 2) reliance on the part of being with infinite knowledge and capability, and 3) the equilibrium between the two. Another paraphrase will explain further. 1) Polarization in learning from outside of ourselves (from someone else), 2) in learning from within ourselves, and 3) an equilibrium of both approaches. Further still, 1) polarization in reliance on externals (tools, machinery, medicines, etc.), 2) polarization in reliance on internals (the power of the spirit), and 3) an equilibrium of both methods.

We can begin to see which cultures shape up to which categories. The 1st type, polarized in the cultivation of the external part of being corresponds fundamentally to Western Man and some Orientals, while the opposite, polarized in the cultivation of the internal, corresponds to the Black race, and some Orientals. Success in the cultivation of both parts has only been truly achieved by the Kamitians (Ancient Egyptians), who, for the record, belong to the Black race.

Now we can understand why, for example, all the fundamental skills and institutions of civilization began with Black nations (Kamit [Ancient Egypt], Sumer, Babylon, Elam, the Harappa Valley civilization, Kush [Ethiopia], Indus Kush [Black India], and Canaan). Because of their people's ability to learn from the internal part of being, with its storehouse of knowledge concerning every secret of the world, they were able to intuit, 6000+ years ago, the knowledge that forms the basis of our civilization (religion, mathematics, geometry, medicine, astronomy, writing, literature, agriculture, metallurgy, government, architecture, painting,

sculpturing, algebra, science, etc.). Because Western man is polarized in the cultivation of the external part of his being, he had to learn these skills from others (Blacks and Orientals) who were able to learn these things intuitively.

This brings us to the critical part of our introductory discourse. Underlying all the functions of the automaton within us is a 'program of order'. The maintenance of our bodily processes in a state of order according to this program, is what we call health. We will come to see that this very same 'program of order'² is in charge of regulating the social behavior of people. Where it finds full expression in the social arena, there is morality, wealth, spirituality, and prosperity. True religion, we will come to see, deals with the techniques of communicating with the director of the automaton within us, in order to gain access to the power, storehouse of information, and the host of shaping factors of our lives.

The world is in the sorry mess that it now finds itself because the dominant culture in the world is that of the external part of being. It is not enough to say that the external part of our being does not know much about creating and maintaining order. For, even if it did, it lacks the ability to generate order in the life of people. Hearing sermons, and reading books (external means) on moral behavior will make you as moral as reading books on healing will heal your illnesses. The most that a book on health, for example, can do is to direct you to some means of directly influencing the automaton. Yet such information must have originated from some person's intuition. The same holds true for religious, moral, and spiritual behavior. All teachings on the subjects originated from the inner part of people's being. If you observe very carefully you will see that in the religions of the dominant cultures today, people are directed outside themselves (to scriptures, sermons from priests, etc.) for moral, and spiritual guidance. In contrast, African, and some Oriental cultures direct their members within themselves (trance) for intuitive guidance for the same ends. The differences are vast. We must recall the fact that the external part of being, however lucid on a subject, lacks the power to direct the processes that shape our behavior, and bodily functions. Now we can fully understand the lack of wisdom in denouncing Westerners as hypocrites for preaching doctrines of such high moral values, while their destructive acts in the world are unparalleled. The

2. This 'program of order' corresponds to Maat.

'inner culture' for accessing the 'program of order' that is the shaping force of a harmonious social life, an essential prerequisite for man's spiritual growth, and the flourishing of all social institutions, has been displaced by the 'outer culture', which is far from equal to the task although it is long on words on the subject of spirituality. A detailed account of the history of this phenomenon is necessary for the understanding and use of the teachings in this book. But first we must get a better grasp of the structure of the subject.

THE HEMISPHERES OF THE BRAIN

During the last forty years or so, the western scientific community has come to realize that the human brain is composed of two parts with diametrically opposed, yet complementary functions. They are known as the left, and the right hemispheres of the brain. To understand this subject, we must realize that underlying all mental activities are two sets of functions, one in charge of relating us, and the variety of things in our environment to each other, and to the whole, and the other function is in charge of separating us and the variety of things in our environment from each other. The latter function, which corresponds to the left hemisphere of the brain enables us, for example, to distinguish between the sounds made in speaking and verbal thinking, that we will be able to speak, and think verbally. The language function of the right hemisphere enables us to unify the words we perceive, into phrases, these into sentences, and so on into larger units, that we will be able to comprehend what has been spoken or thought. The acts of speaking and verbal thinking are processes that occur in a series of steps one at a time. The understanding of what is thought, and said is a process that occurs in one step. Since the acts of speaking, and verbal thinking are processes that occur at separate points in time they are therefore carried out by the left hemisphere, which is in charge of all processes of segregation, and differentiation. Conversely, the act of extracting the significance from a series of related units, which is carried out in one step, is under the jurisdiction of the right hemisphere, which is in charge of all functions of unification, and integration.

In summary, let's note that the left hemisphere of the brain is in charge of noting the differences between things, separating wholes into parts, and enabling us to deal with all sequential phenomena

(wholes presented pieces at a time). This mode of thinking is popularly known as analytical, Cartesian, serial, linear, deductive, segregative, etc. The right side is in charge of noting the similarities between things, and their relation to each other and the whole thus unifying them. This mode of thinking is generally known as synthetical, holistic, congregative, etc. We must also note that the left side of the brain is extroverted and is therefore the means for the 'outer culture' noted above. The right side, is introverted and is the means for the 'inner culture'.

Although both functions are complementary, that is, their equal inputs are needed for every mental activity to be complete, most people have a predominance of one over the other. We all know too well of people who can generate a profusion of words, yet make little sense, or go off on tangents, etc. (too much left, and too little right). On the other hand, we know of people who are not very expressive verbally, - in fact are poor communicators- yet are profound. Critical to this book is the fact that these hemispheric differences are not randomly distributed through society. Men in general are more left-sided than women, and so are members of the White race, in comparison to non-Whites (a well known fact to Western psychologists). We will come to learn that hemispheric differences are one of the main shaping forces of cultural differences, and the historical events that such differences have engendered. In fact, without this concept there can be no science of history, or psychology, or anthropology, or understanding of religion.

The differences in thought patterns between the White and Black races are well known. To prove the point, I will quote from well established scholars. Writing about the Bantus of South Africa, Placid Temples, at the turn of the century states in his *Bantu Philosophy*, that:

This (European) concept of separate beings, of substance (to use the scholastic term again) which find themselves side by side, entirely independent one of another, is foreign to Bantu thought. Bantu hold that created beings preserve a bond one with another, an intimate ontological relationship, comparable with the causal tie which binds creature and Creator . . . Just as Bantu ontology is opposed to the European concept of individuated things, existing in

themselves, isolated from others, so Bantu psychology cannot conceive of man as an individual, as a force existing by itself and apart from its ontological relationships with other living beings and from its connection with animals, or intimate forces around it.

Writing about the same people, Janheinz Jahn, states in *Muntu*:

When we say that the traditional African view of the world is one of extraordinary harmony, then except for the word 'African' every single word in the sentence is both right and wrong. For in the first place the traditional world view is still alive today; secondly it is a question not of a world view in the European sense, since things that are contemplated, experienced and lived are not separable in it; thirdly it can be called extraordinary only in the European sense, while for the African it is entirely commonplace; and fourth, the expression 'harmony' is entirely inadequate, since it does not indicate what parts are being harmonized in what whole. And if we say 'everything' is harmonized, that tells us less than ever.

Jahn then quotes Adebayo Adesanya, a Yoruba writer:

This is not simply a coherence of fact and faith, nor of reason and traditional beliefs, nor of reason and contingent facts, but a coherence or compatibility among all disciplines. A medical theory, e.g., which contradicted a theological conclusion was rejected as absurd and vice versa. This demand of mutual compatibility among all disciplines considered as a system was the main weapon of Yoruba thinking. God might be banished from Greek thought without any harm being done to the logical architecture of it, but this cannot be done in the case of Yoruba. In medieval thought, science could be dismissed at pleasure, but this is impossible in the case of Yoruba thought, since faith and reason are mutually dependent. In modern times, God even has no place in scientific thinking. This was impossible to the Yoruba.

These observations extend to all contemporary Africans as well as ancient. A. A. Barb, writing in the *The Legacy of Egypt* states the following:

Certainly scholars have since provided dictionaries and grammars of the ancient Egyptian language, but that is not enough to grasp the Egyptian way of thinking, so utterly different from our Western logical mind. There is first of all what has been called the multiplicity of approaches: statements (and answers to problems) which to us would seem absolutely contradictory appear side by side and did not in the least disturb the Egyptian, on the contrary, our own logical abstractions would probably have appeared to the Egyptian mind as an impoverishment and falsification of the fullness of significant truth . . . All this would lead--as a modern scholar has put it--to the impossibility of translating Egyptian thoughts into modern language, for the distinctions we cannot avoid making did not exist for the Egyptians.

In speaking of the Greeks and Romans, regarding their ability to comprehend Egyptian beliefs, Wallis Budge, in *The Gods of the Egyptians*, vol. I, states:

The evidence on the subject now available indicates that he [the Greeks] was racially incapable of appreciating the importance of such beliefs to those who held them, and that although, as in the case of the Ptolomies, he was ready to tolerate, and even, for state purposes, to adopt them, it was impossible for him to absorb them into his life.

It is important to note that these observations on the differences in thinking between Whites and Blacks were all made before the appearance of literature concerning the cerebral hemispheres. I could have piled up enough evidence on the subject to fill this book, but the foregoing should prove the point.

The consensus on the differences between these two modes of thinking, is that they each represent, by and of themselves, legitimate approaches, -"schools of thought"- to knowing. On one hand, this belief must be rejected on the ground that as the two are

complementary to each other, they are incomplete by themselves. On the other hand, we will see, as history records, that the evils arising from the unbalanced expressions of the left hemisphere far exceed in destructiveness those of the right hemisphere. While the former is responsible primarily for man's inhumanity to man, and all social disharmony, the latter is responsible for stagnation in physical technology.

The greatest problem arises from the fact that the greatest validators of our actions, i.e., religion, and science, which are intrinsic products of "right-sided" cultures are now used by predominantly "left-sided" cultures in the characteristic fashion of the left hemisphere. Although the left side is totally incapable of truly religious, and scientific thinking, the grafting of its processes onto these subjects has gone unnoticed due, on one hand to ignorance, and on the other, to the military supremacy acquired by Europeans in the last 2000 years. The results have been that "scientific" and "religious" validation has been given to false doctrines, practices, and institutions that now control the cultures of the nations dominating the world, and set the cultural trends for the others. It is important to see how this has come about.

A BRIEF DEFINITION OF RELIGION

An analysis of the word "religion" shows that it is to the right side of the brain what a glove is to the hand. The word is composed of the Latin prefix "re," meaning, "again, back" + "ligare," meaning "tie, bind, fasten," as well as the Indo-European root "leg," meaning "to collect," from whence the Greek "legein," and the Latin "legere," meaning "logic," and "legal." From this we can conclude that the coiners of the word religion applied it to those beliefs and practices aimed at tying people back to something with which they had originally been one, and belong with by natural connectivity. The original oneness is implied by the prefix "re" (back, again), and the natural connectivity is explicit in the root meaning "law, and logic." Right at the outset we can see that in the meaning of the word itself, according to its components, religion was not thought to be opposed to reason and logics, which are the foundations of science, and philosophy. More on this later.

We have seen that the predominant function of the right side of the brain is a unifying, or collecting, or synthesizing one. Religion is

therefore nothing more than one of its organized expressions. Its concern with realities existing beyond the visible is a further proof of its intrinsic relationship to the right hemisphere. We can thus conclude that all efforts by left-sided cultures that are aimed at creating religious doctrines and practices, must produce results off the expected mark. Western religions are good examples. We will see that the Hebraic, and Christian religions are hybrids resulting from the juxtaposition of a left hemispheric thought process upon religious doctrines created by right or balanced hemispheric cultures. The same can be said for Hinduism, and Islam, although they have maintained a greater faithfulness to the fundamental culture upon which they are based.

During the first 2000 years of history (4000 - 2000 B.C.), the only nations that attained to a high degree of civilization were Kamit (Ancient Egypt), Sumer, Babylon, Canaan, Harappa Valley, and Kush (Ethiopia). Although it is well known to all serious historians that all these nations were Black, to this day much effort is being made to hide the fact from the general population. With some it is due to racism. With others it is due to feelings of shame over the fact that throughout the first 4000 years of history (6000 - 1+ B.C.) it is well known that Western people had attained to very little cultural development, as well as the fact that they are indebted to the above Black nations for the foundation of their scientific, religious, and philosophical accomplishments. They repaid these nations by utterly destroying their civilizations, and enslaving their descendants. And with others, it is because they took the traditions of these Black nations, added a few touches here and there to make it more in keeping with some of their social values, and then claimed that the final product was a revelation from God to them.

RELIGION, TRANCE, AND ANCESTORS

As religion concerns itself with the inner realm of being, its main vehicle is the phenomenon of trance. Proficiency in this state, which we will later define, gives one full acquaintance with the metaphysical realm. On one hand, communication with the two classes of entities dwelling therein, - the dead (ancestors), and the spirits administrating natural phenomena (angels, deities)- becomes possible. On the other hand, first hand knowledge of man's metaphysical (higher) vehicles, and the "insperience" of man's true

relation with God, and all other creatures are attained. The central theme of this discourse becomes clear when we take note of the fact that while Westerners believe in the survival of the spirit after death, they have no tradition of "ancestor worship," (i.e., communication with the deceased). Now the reason is clear. It is for lack of a culture of trance working, which is the only means to that end. The same holds true for angels. While Western religions claim belief in their existence, these metaphysical dwellers have been banished, of late, to the pages of the scriptures.

The ability, through trance, to communicate with deceased beings has led Blacks to the greatest understanding of the nature of Man. It has provided us with an inner empirical evidence of the immortality of Man. Immortality is not merely the survival of the spirit, but of one's identity across incarnations. On one hand, because of the pricelessness of the revelation that Man is immortal, and on the other hand, because of the unparalleled guidance that ancestors provide, rituals for communion with the ancestors (so called ancestor worship) play a prominent role in the religion of Black nations. It is instructive to note that the greatest architectural marvels of the ancient civilizations (Kamit, Mohenjo Daro, etc.) were burial shrines. Entire cities were filled with these structures (pyramids, etc.) that surpassed in opulence the dwellings of even the kings. In place of this insight Western scholars could only see what they believed to be the work of megalomaniacal builders.

Only from the ancestors, the "living proof of life after death," could have been learned the observances and practices that lead to immortality (the survival of an individual's identity across incarnations). Such practices and observances became the fundamental doctrines for the spiritual development of men and nations.

Participation in a series of African, and Oriental rituals will reveal to all that women in general can attain to the trance state with greater ease, and power than men. Societies that have a deep appreciation for synthetical thinking and introversion, due to their right-sidedness, or equilibration, cannot fail then to hold in great esteem their women. Just the opposite is found in left-sided societies. It is no wonder then to find that in all Black nations (not led astray by Whites) women, and Goddesses occupy positions, and play roles equalling those of the males. Women in Kamit, and other Black nations of antiquity occupied positions not yet achieved by Western

women to date. As Queen Mothers they determined the transference of the kingship, and legitimized the king; inheritance was through them. That is they held the wealth of the nation. They were priestesses in their own right, and it is a matter of record that the Goddesses whose shrines they were responsible for, commanded greater importance than those of the Gods, in many cases. In contrast we find Western women just beginning to make headway in their struggle for equality, 6000 years behind their Black counterparts. Where is the female Rabbi, Iman, Bishop, etc.?

To summarize, I would like to point to the fact that what I have done is to simply carry to the logical conclusion well known facts regarding the division of the brain's functions. It was not until the early part of the 1950's that western scientists began to understand fully that the higher functions of the human brain were divided between hemispheres.

Teams of surgeons, psychologists, neurologists and biologists discovered that the two hemispheres process information regarding the same things in diametrically opposed, yet complementary ways. Unfortunately, western scientists went on to characterize the separate functions of each hemisphere by wild generalizations. "The left side governs language, scientific thinking, etc.," for example. Even wilder generalizations were given. The left, and the right hemispheres, respectively, were said to differ from each other in that the first is "intellectual, the other intuitive," "intellectual vs. sensuous," "secondary vs. primary" (Freud), "deductive vs. imaginative," "realistic vs. impulsive," "analytic vs. relational," "sequential vs. multiple," "rational vs. intuitive," "discursive vs. iedetic," etc. There is a bit of truth in some of these statements, but they cannot be accepted without due caution, and corrections. We will deal with them in later chapters. It has also been recognized that in some people the functions of the left hemisphere predominate, while in others, those of the right side do. Central to our discourse is the fact that the characteristics of western culture are predominantly the productions of the left hemisphere of the brain while the characteristics of Black and most other Nonwestern cultures are that of the right.

Let's return to the earlier quotation from Placid Temples' book. *"This European concept of separate beings, or substance which find themselves side by side, entirely independent one of another is*

foreign to Bantu (an African group) thought." This observation, which is one of thousands, implicitly, but unequivocally states that something in the European makes them "see," and postulate differences, while something in the Bantu (as with all other Africans, which includes the Ancient Egyptians) makes them see and postulate unity, when viewing the same reality. Again, in the *Legacy of Egypt*, Barb states that although Westerners are now in possession of dictionaries, and grammars of the Egyptian language they are not in a position to understand it because "... the Egyptian way of thinking, so utterly different from our Western 'logical' mind." Again, one has to be obtuse not to see that what Barb refers to as the European 'logical mind' is the predominance of the left side of the brain. Of course the statement must be corrected to syllogistic logic, for the right side has a logical function of its own. Barb concludes by referring to the "impossibility of translating Egyptian thoughts into modern language, for the distinctions we cannot avoid making did not exist for the Egyptians." It begs several questions. Why can't European thinking avoid making distinctions that do not exist for the Egyptians? Or equally valid, why cannot the Egyptians avoid unifying, and synthesizing where Westerners cannot avoid segregating and analyzing? Before we answer these questions let's dispose of the racist statement "modern." It is a tool of the theory of evolutionism that holds that the Black races and their cultural expressions exemplify the primitive phase of mankind, while the White race, represent the more evolved (modern).

The observation made by many scholars concerning the difference in thinking between African people and Westerners can only be intelligently explained by reference to the hemispheres of the brain. If the cultural expressions of the individual nations of an entire race share the same trait, - analytical, for example, it can only be because their thinking is dominated by the left hemisphere. Fortunately we don't have to speculate on the issue for the simple fact that it is well known by professionals in the area. Western scientists have long arrived at the conclusion that western culture is predominantly left-sided, and is now attempting very strongly to introduce into the school system methods that would make more use of the right hemisphere. This has been especially encouraged by the discovery that such educational methods that appeal to the right side of the brain excel greatly over those of the left. "Super learning," "accelerated learning," etc. are the superlatives that are being thrown

around as they are finding that such methods shorten the learning period (2 to 20 times faster), and produce a greater yield in understanding, and retention (500% in the same time span) over the left side. Is this the reason why Black nations were the first to achieve a high level of civilization? We will see that it is. The techniques used in the current "Super learning" systems, are nothing more than a minor fraction of the techniques used in traditional Africa from time immemorial. By pretending that the whole thing is a recent western discovery, and invention, Westerners are dooming themselves to stagnation, again! They need to humbly ask the African people to show them the way.

A study of the literature on brain hemispheres will show that analytical, and segregative thinking are carried out by the left hemisphere, while synthetical thinking is done by the right side. Let's put it another way; the left side is responsible for the differences we make between things. It is the author, for example, of the western attitude of seeing themselves as being separate from nature, and therefore ruining the ecological balance (killing off whole species of animals, polluting the air, soil, etc.); of denying diet a significant role in healing - poisons play a higher role; of racial, and sexual discrimination, and so forth. On the other hand, the ecological mindfulness of most other Nonwestern people, for example, must be attributed to the dominance of the right hemisphere in their thinking; the respect and high regards for their women, is the result of the same function. A most important expression of the right side of the brain, concerns the Nonwestern belief in the indivisibility between all things in the world. Far from being a mere intellectual notion, it is the basis of their entire way of life. Affect one thing, and all others are. The Western Man's response to this is to call it primitive "animism" (fortunately it is just a word, - without objective reality!). But is this not the foundation of religion? To "tie (legion)" "back (re)" the things that have been separated? "Unity" states the Kabala is the foundation of good, while "disunity" is the foundation of evil. Egotism, a failure to experience the interdependence between humans, is a function of the left side, and a major problem that religion sees as a chief obstacle to the spiritual life. We will see that the cure for egotism is the activation of the right side of the brain. We also will see that the religions of Black nations were well acquainted with the dualization (the knowledge of good and evil) of the spirit, and made its unification the foundation of their spiritual tradition. What today the Western man

calls the functions of the hemispheres of the brain, the Kamitian referred to as the Two Truths (Maati), Ta-ui; the Taoist, as the doctrine of Yin and Yang; the Dogons, as the twin Nummo serpents that govern the various aspects of the world.

Finally, we must note that racial differences go beyond the color of the skin, type of hair, skeletal structure, and other physiognomical items. In future chapters we will accumulate all the evidence to show that *there is a cultural unity among all White nations, all Black nations, and all Oriental nations. And that the common factors in each are traceable to the hemisphere of the brain that dominates their thinking, their language, and cultural expressions.* And finally, that since the behavior of nations is a product of this part of their biological make-up they could hardly help the manner in which they created their cultural expressions, and reacted to others, determining thus the events that make up world history. This and only this, I dare say, can establish history, and anthropology as sciences, as well as to put the study of religion on a scientific basis.

CHAPTER 2

THE BLACK FOUNDERS OF CIVILIZATION

In the preceding chapter we saw that one of the main factors that is responsible for the differences in cultural expressions, is the division of the brain into two hemispheres, each with its own peculiar way of thinking. We were able to go beyond the mere listing of the cultural traits of nations, and to catalog them into two fundamental sets, based on the traits of each of the hemispheres of the brain. I.e., if it is not shown why, it is of no use to say that the fundamental traits of Black cultures are the burial of the dead (especially accompanied by grave offerings), and communication with ancestors; high recognition of women (matrilocal marriages, matriarchal inheritance system, etc.), and "female divine powers"; high degree of social stratification; high degree of stratification of the "celestial hierarchy of powers controlling events on earth"; and the involvement of religion in every area of life. We saw how these are all the results of a people's mental output dominated by the side of the brain whose strong point is trance. White culture, which is extroverted (left hemispheric) produced and sustains a culture that (before contact with Blacks) cremated its dead, or exposed them to be eaten by animals, and has a negative attitude toward, and horror of spirits of the dead to this day; holds its women, and "female divine powers" in low esteem (the Christian divine pantheon is made of a Father, a Son, and a ghost, for example); low degree of social stratification and the love of freedom from authority that goes with it (*laissez faire*); separation of religion from all other social institutions (government, education, etc.), and the restriction of the divine to special places, and times (church, Sunday, holidays, etc.); the separation of the divine from healing, and so on. If you can't help thinking this way, it's because the left side of the brain is dominating your thinking.

Keeping these ideas firmly in awareness, let's attempt to establish the racial characteristics of certain nations of antiquity.

The importance of knowing the racial identity of the nations that were the founders of civilization lies in the fact that:

- 1) Religious doctrines, and systems cannot be understood in a vacuum. They cannot be separated from the social environment that produced them. The various components of the religious system of each nation are, for example, ritual vehicles to condition the population to support, or reject particulars of interest or

detriment to the nation. The ritual system of Ausar (Osiris) will always remain a mystery to people who have no understanding of the African Kingship, and the history of the peculiar difficulties that the Kamitians experienced with their kingship. In the same way, people who know little regarding the African Queen mothership, and high priestesship (e.g., the rituals performed with the skeletal remains of deceased kings) will understand little regarding the ritual system of Auset (Isis).

2) The White nations who became the heirs of these civilizations understood only the external aspects (what appealed to the left side of the brain), and distorted the spiritual (internal, right-brained). What passes for the world's major religions are attempts of the left side of the brain to practice what can only be done by the right side. Can you imagine where chemistry would be today if it were in the hands of poets (right-sided function)? Each element would no longer be a complex of exact weight, and electrical behavior, but, "grey clouds," or "wolves," according to the poet's mood. This is what the sons of Eurasia have done to the science of religion. The result is that, with the destruction of the ancient Black founders of civilization some 4000 - 2000 years ago, the world has been plunged into a spiritual dark age, and is sinking ever into that jaw whose fiery tongue flickers with death.

3) *The solution to our problem is the restitution of the science of life that actually gave birth to civilization.* The only way that this can be done is by correlating the spiritual doctrines, and religious practices of the founding civilizations with those of the Black civilizations of today. This is of extreme importance for the simple fact that most students of spiritual culture and esotericism have received their education from western organizations (Rosicrucians, Aryan Hindus, Semitic and European Kabalists, etc.) who have falsely claimed that they are the custodians of the wisdom of the ancients. After going through this book, the reader can decide if this is true. Last, but not least we will come to understand that religion cannot save mankind unless it is allowed to govern all social institutions. All such teachings regarding the lone sage, and individual salvation will be seen to be, on one hand, natural conceptions of the left side of the brain with its isolationist thinking, and on the other, to be impotent as far as being vehicles for the spiritual upliftment of the world. In our study we will see that when the White nations adopted the religious institutions of the Blacks

they allowed only those doctrines that did not interfere, for the most part, with their most cherished social beliefs, whether these were right or wrong. In fact many of the religious myths, and doctrines have their origin in the political competition that arose out of their contacts with Blacks. The extreme manner in which women were humiliated (made the source of all of mankind's suffering, the heavily lopsided adultery laws against them, etc.) in Semitic Asia 4000 years ago, for example, was chiefly due to the fact that the occupation of very high positions of the Black women of Canaan, Sumer, Phoenicia, etc., was a serious challenge to the patriarchal system of the Whites, as it filled the heads of their women with another view of social possibilities. In those days, the White people of Mesopotamia were under the cultural, if not political, domination of Blacks.

Establishing the racial identity of the founders of civilization is a simple matter. Yet, the issue needs to be heavily detailed so that there is no room for doubt. Western writers have tried so hard to hide the fact of the blackness of these civilizations, that their culture is so distorted, and misunderstood, and their descendants, modern day Blacks, have been totally culturally disenfranchised.

THE THREE FUNDAMENTAL RACES OF MANKIND AND THE PRINCIPLE OF GEOGRAPHIC CONTIGUITY

If we put the variations and admixtures aside, then we find that the races of mankind are the White, the Black, and the Yellow/Red (Oriental, which includes the American Indian). When we trace these people back to late prehistoric and early historic times we find that each of these people reside in separate geographic locations; the Oriental in the Northeasternmost part of Asia (and later, America), the Eurasian (White) in the Northwesternmost part of Asia and Northern Europe, and the Blacks, occupying from the Southern parts of Europe, Western and Central Asia, and all of Africa. Within each of these three great geographical divisions of the world we find, in late prehistoric and early historic times (before the great migrations of people), nations speaking related languages, with similar racial characteristics, and cultural patterns. We could say that the Supreme Being made men with certain differences and put them in different parts of the globe. Western historians have used these concepts to discover the kinship and origin of their people after thousand of years of separation.

When it comes to the great Black civilizations, it is a different story. Western historians are always postulating an unproven (and unprovable) geographic origin for them in areas where they have no kin. I.e., they seek the origins of the Sumerians in eastern Asia, when the people who most closely share their racial, and cultural characteristics reside in Africa. They do the same for the Ancient Egyptians. The exact locations of the origin of many of the great White nations of antiquity are unknown, yet no historian has proposed an origin for them in America, or Africa. It is such a natural reflex to search for their origins in the geographic location where all Whites have been known to inhabit since prehistoric times. We must take note of the fact that plants and animals of related characteristics have been thus distributed around the earth.

Trick number two has been to postulate that the "precocious" development of Kamitian (Ancient Egyptian) culture was either the product of an invading "master White 'Semitic' race (the Shemsu Heru)," or the result of the blending of the White and the Black races. First of all, it is important to realize that at work is the racist offshoot ideas of Darwinism. To wit: clearly, Blacks (a primitive race) could not solely, or primarily be responsible for such a culture. Period! Rather than pass in deserved silence the allegation that a White race was responsible for Kamitian civilization, wholly or in part, let's look at some facts. 1) No facts have ever been given to support the allegation, showing that the concept is born solely from the unwillingness to accept the fact that Blacks could have created such a civilization, 2) This alleged master "White race" has no other achievement. Previous or otherwise. They left no traces of civilization anywhere else. At the time when this alleged "dynastic race" is supposed to have come to Kamit (and placed themselves under the military leadership of the Kamitian leader Narmer?!), Eurasia was still in the paleolithic stage (hunter, gatherer, - around 3500 B.C.), while all of North Africa was in the Neolithic, and early agricultural stage, and Kamit had passed into the historical stage. The proposal that they came from Arabia is even worse. At that time Arabia was mostly inhabited by Blacks who were less developed regarding civilization. Thus we are to believe that a people, who achieved nothing at home, came and established civilization in an entirely more advanced area . . . and then vanished, leaving no remains of themselves. No bones, cultural items, likeness of themselves in paintings, sculptures, etc. In reality, the Shemsu Heru, the people who historians have tried to equate

with their hypothetical race, are the very Blacks that are called Nubians.

What can you say of historians who ignore the fact that all the nations in the Northeastern section of Africa at that time were far ahead of Eurasia in the technologies that were chiefly responsible for the development of Kamit, and who prefer to invent a Eurasian cause for the development of Kamitian civilization?

An important part of this argument rests on the false theory that racial contact is a chief cause for the advancement of civilization. Let's look at the facts:

a) The Hyksos occupation of Kamit for 150 years contributed nothing to the progress of Kamitian culture. In fact all historians are in agreement that it retarded it. So did the occupation of Kamit, by the Persians, Greeks, and Romans. In fact, the contact of Whites with the Kamitian culture ended in the destruction of the latter, culturally, and physically. I cannot imagine one single historian who would not agree that the civilizations of Ancient Egypt, Sumer, Indus Valley, and Kush would far surpass anything in the present world had they not been destroyed by Whites. It is a very interesting subject to speculate upon.

b) The same retardation, arrest of progress, and eventual destruction occurred with the mingling of White culture with that of Sumer, Canaan, Phoenicia, Indus Valley.

c) The theory has only held true in the reverse direction, as Western man greatly benefitted from his contact with the ancient Black civilizations.

The point of this detailed look at the issue is not merely to prove historians wrong, but to emphasize the real source of civilization. Today's leading psychologists will tell you that when you have to come up with the solution of a problem for which there are no precedents, it's to the right side of the brain that you have to make your appeal. It is in charge of invention, and creativity. The progress of western science is more one of technological advancement and variation, than of invention without precedents. To this day, no one has explained how the Chinese were able to come so far in science since the end of World War II. They have done in less than 40 years, what normally takes over 150 years for Europeans. We will see that the Chinese is an eminently "right-sided" culture. The ability of the great Black nations to invent civilization, and make such rapid progress must be seen as the result of their advanced techniques for using the right side of the brain. In

fact, Kamit out-distanced Sumer, Canaan, the Indus Valley, and Phoenicia because it adhered closely to a right side methodology of thinking, in which its hieroglyphic system played a pivotal role.

The third ruse used by historians is an insult to their intelligence. It concerns their play with the word Ham. In the Old Testament the races of mankind are classified as descendants of Ham, Shem, and Japheth (the sons of Noah). While it is accepted by all that Japheth corresponds to the European and Northern Asiatics, and Shem to the Semites, there is a great deal of, well, you would have to call it, idiotic talk regarding Ham. Since there are no Oriental people depicted in the paintings and sculptures of Kamit, Greece, and Mesopotamian nations, it is not far fetched to conclude that the compilers of the Old Testament were not familiar with this race. Especially given the fact that they were located so far away. This explains why the Orientals were not included among the races of mankind. Now we know, that the biblical compilers were very well acquainted with Black people,- after all their ancestors were heavily intermarried with them, to say the least. Now if the Semites correspond to Shem, the European to Japheth, then where do we assign the Blacks? Still don't know? Let's modify the question. If Ham does not correspond to the Semites, or the Europeans, or the Orientals, to whom does it correspond? The Old Testament compilers assigned Ham to Ancient Egypt, Canaan, Kush (Ethiopia), and Put (Punt, a nation that was located at the horn of Africa,- modern day Somaliland. The Ancient Egyptians claimed that it was the location of their origin, hence made regular pilgrimages to it. They called it Ta Neter,- Land of God. Incidentally, the people of this area dressed in the same fashion as that of the Egyptians, and their men styled their beard in the same manner as the false beard worn by the Kamitian "Pharaoh." These similarities clearly support the Kamitian claim that they descended not only from this area, but from these people. And through Kush (Ethiopia), Ham relates to the indigenous original inhabitants of Arabia, and Sumer, which last was referred to as Nimrod (ruler of Babel, Erech, and Akkad in the land of Shinear (Sumer)), according to the biblical Table of Nations.

Hebrew scholars claim that the etymology and meaning of the word "Ham" is uncertain (we will see that this is the case with many of the most important words in the Hebrew language, and why). Now the word is actually pronounced "Kam" as it is spelled with the guttural "H," Cheth (Keth). The popular pronunciation with the aspirated H is the product of sloppy scholasticism. It is a

loan word from the Ancient Egyptian language, where it means black. And the Ancient Egyptians called their country Kamit (land of the Blacks), and themselves Kamau (Black people). This can explain why of all races, the Black has been referred to since ancient times by the color of their skin,- "Negroes," from the Latin, "negro" meaning black. If it were natural to do so, we would find that other people would be referred to in a similar manner. Instead all other people of antiquity are referred to by the name of their nation. White people call Blacks black, because the Kamitian people started the whole thing by thus calling themselves. Their paintings and sculptures of themselves testify to the fact that they are of the Black (Negro) race, and so are the words of foreign eyewitnesses. Herodotus, the eminent Greek historian who visited Egypt around 450 B.C. describes the Kamitian people as having "black skins and woolly hair."

In *Eternal Egypt*, Pierre Montet describes the Kamitians (ancient Egyptians) as follow; *"They had clearly defined features, prominent eyes, usually large, almost flat, noses, thickish lips, and somewhat low foreheads. Such were without exception the kings of Egypt at the time of the Old Kingdom. Many individuals presented the same features—for instance Ranefer, who lived during the fifth Dynasty, of whom there are two statues in the Cairo Museum."* It is interesting to note that Montet fails to sum up these characteristics as Black,- especially when he has seen the statue of the priest Ranefer, which is indisputably that of a so called "negro."

So desperate have historians become, that in their attempts to identify Ham with another race (perhaps Martian will qualify) they have classified most Nilotic Blacks, like the Massai, and the Somali, as non-Negroes. Yet, they are Hamitic! Interestingly, the same historians label the same Blacks as Negroes, when they are referring to them during the Egyptian historical period. So how come today they are of the so-called non-black Hamitic, or Nilotic race (note: a race unknown by scientists)? The answer is to be seen in the fact that more and more evidence is pouring in showing that the Ancient Egyptians and the contemporary Negroes of the Sudan (the Galla, Bari, Dinka, Nuer, etc.), and northeastern Africa are linguistically related.

To show that Kamit is ethnically and culturally related to Africa, Frankfort wrote of several of the earlier African prehistoric cultures of the Sudan south of Egypt:

Together they represent the African substratum of Pharaonic civilization, the material counterpart of the affinities between ancient Egyptian and modern Hamitic languages; of the physical resemblances between the ancient Egyptians and the modern Hamites; and the remarkable similarities in mentality between these two groups which makes it possible to understand ancient Egyptian customs and beliefs by reference to modern Hamitic analogies. (*The First Great Civilizations*, p. 46, Jacketta Hawkes).

In the *Symposium on the Peopling of Ancient Egypt and the Deciphering of Meroitic Script*, 28 January, 1974, (Published in 1978 by the UNESCO), Theophile Obenga introduced the irrefutable evidence that the Ancient Egyptian language, and its descendant, the Coptic language used by the Coptic Church, are related to the African languages. He proved the point by giving a substantial list of words that are common in 'meaning as well as grammatical functions' to the Kamitian, Coptic, and modern Negro-African languages. I.e., he used the same principles that proved the unity of the languages that are classified as Indo-European-Iranian.

A very important aspect of the Kamitian language that I am sure Egyptologists must have noted but have kept silent is the widespread occurrence of words that are written in the same manner but differ totally in meaning. They have kept silent about this because it irrefutably ties Kamit to the rest of Africa. For example, the Kamitian word "a-au-au" has the following meanings: grave, tomb; to come; sleep, slumber; to punish, to do harm; to bespatter, to make a charge against; foreign interpreter. In every case, the word is written with the same letters. While the reader distinguishes the meaning from the added hieroglyphic symbolic determinant, the only way that speakers - listeners could do the same would be through variations of intonation and accents. For example, in the Twi language of the Akans of West Africa, "Me ba," means "my son," when the "ba" is accented, and "I (am) going," when the "me" is accented. In the Chinese language (which exhibits the same principle), the word "Shi" means "damp," "stone," "to cause," and "to be" when pronounced in an even pitch, rising pitch, dropping then rising pitch, and dropping pitch, respectively. The only way that Kamitian speakers could use the word "a-au-au" to mean so many things would be by such intonation differences. If we let " ^ " represent the accent, " < , " a drop in pitch, and " > , " a rise, we

would get the following: a-au-au; a-au-au>; a^au-au; a^au-au>; a^au-au<; a-au>-au>; a-au<- au<; a-au<-au>; a;au>-au<, and so on. It must be noted that this phenomenon is widespread in all African languages and is the main problem in the creation of alphabetical systems for recording these languages. This is one of the reasons why the Kamitians never abandoned their hieroglyphic system, - a fact that historians to this day cannot understand (Their chief explanation relies on the racist Darwinist theory of linguistic evolution, which explains hieroglyphic writing as the primitive expression of man's efforts to write.). Incidentally, this linguistic phenomenon is what gives the Oriental, and African dictions their characteristic sing-song pattern. Studies on the hemispheres of the brain have shown that this "melodic" superimposition on speech in relation to meaning is due to the right side of the brain. This ties in with my premise relating the Black and Oriental races to the right side of the brain. This pattern is virtually foreign to the diction of Western man, and poses a great barrier to their learning these languages.

Perhaps the real source of the Hamitic problem is to be sought in Canaan. Thus far it seems that historians are getting away with making it a White, and Semitic nation. The basic argument is that the Old Testament (OT) compilers believed that it was Hamitic because it had extensive economic and cultural dealings with Kamit. Jewish scholars know better. In their later religious texts commenting on the OT we find the following:

"Others say that Ham himself unmanned (castrated) Noah who, awakening from his drunken sleep and understanding what had been done to him, cried: 'Now I cannot beget the fourth son whose children I would have ordered to serve you and your brothers! Therefore it must be Canaan, your first born, who they enslave. And since you have disabled me from doing ugly things in the blackness of night, Canaan's children shall be born ugly and black! Moreover, because you twisted your head around to see my nakedness, your grandchildren's hair shall be twisted into kinks, and their eyes red; again, because your lips jested at my misfortune, theirs shall swell; and because you neglected my nakedness, they shall go naked, and their male members shall be shamefully elongated.' Men of this race are called Negroes; their forefather Canaan

commanded them to love theft and fornication, to be banded together in hatred of their masters and never to tell the truth." This quotation was taken from *Hebrew Myths* by Graves and Patai. It cites the following Jewish religious texts as the original sources: B. Sanhedrin 72a-b, 108b; B. Pesachim 113b; Tanhuma Buber Gen. 49-50; Tanhuma Noah 13, 15; Gen. Rab. 341.

The above is one of many Rabbinical texts created for the purpose of "clearing up" difficult biblical passages. In order to "justify" taking the land of Palestine from its original inhabitants, the Canaanites, Genesis states that Canaan shall bear the curse of perpetual slavery to the Semites, and Europeans for the "sin" committed by his father, Ham. Accordingly, Ham committed an injustice against his father Noah by walking into the latter's tent unknowing of the fact that the latter was drunk (not sinful?), and naked. Later rabbis were uncomfortable with the passage, on one hand, because they could not justify the rationale for charging Ham with a crime, and the punishment, -sentencing his descendant to eternal enslavement, cannot stand up to a common sense of justice. On the other hand, they knew that the story was an adaptation of the well known Middle Eastern mythical theme of the father's castration by his son(s). It occurs with the Greeks in the story of Kronos' castration of his father Uranous in order to usurp his power. The Hebrew version is most likely derived from the Hittite myth (derived from the Hurrians) in which the Supreme God Anu curses his son and cup-bearer Kumarbi, because the latter bit off his genitals (who afterwards rejoiced and laughed as Ham was supposed to have done). I trace their version of the story to the Hittites because the Hebrew people originated ethnically from a mixture of Hittites, Amorites, and Blacks. Their language and religion is an adaptation of the Canaanite tradition, - which is Black. That the Jews got their language, and religion from the Canaanites, and Sumerians (through Babylon) is well documented by historians.

If the preceding is not convincing enough, let's quote from the *Babylonian Talmud* translated, or edited by Rabbi Dr. I. Epstein (*Sanhedrin*, Vol. II, pp. 608-609):

"For when the Africans came to plead against the Jews before Alexander of Macedonia, they said Canaan belongs to us, as it is written, the land of Canaan with the coast

thereof; and Canaan was the ancestors of these people (ourselves)."

Here we find a Jewish Rabbi dealing with historical records of Babylonian historians who were eyewitnesses to the historical life of Canaan, calling its inhabitants "Africans," as the latter called themselves. The event described above occurred around 332 B.C. when Alexander took Palestine away from the Jews, who had initially taken it away from the Canaanites. Incidentally the taking of Palestine from the Canaanites by the Jews is the pivotal theme of the Old Testament, - the Hebrew's quest for a land of their own. Because of the Jewish involvement in the history of Canaan, I cite their references as the most authoritative regarding the racial identity of the people of Canaan. This fact must be extended to embrace Phoenicia which was merely one of the cities of Canaan.

It is very important to take note of the fact that racially speaking the Semitic people originate from the same stock as the European. They were the first of the Eurasians to migrate from the north (around 3000 B.C.) into Western Asia. There they became politically, and culturally subjected to the Blacks (Sumerians, Canaanites/Phoenicians, etc.) who were far ahead of them in civilization. Having adopted the culture, and language of the latter, they practically lost the knowledge of their original tongue, and most of their culture, as has happened to Blacks in America. The main stock of these people must be traced to the Amorites (Martu, Aamu, and Amurru), and Hittites. The Amorites as known from Kamitian paintings (as the Aamu), and other sources are tall, fair, blue-eyed, some are blondes, and others, brown haired. The Hittites appear in history as an essentially White people slightly mixed with Black, and Oriental. As they are depicted in their own sculptures, and Kamitian paintings they cannot be told apart from modern day Persians, and Armenians. The language of the Hittites was related to the Latin, and Celtic, which may account for the guttural element in Semitic speech. Once these people were assimilated culturally by the Blacks of Western Asia, they lost their language, but not their speech articulation pattern, as has happened to Blacks in the West Indies, and America. For certain, we know that the Hebrews were a mixture of Hittites, and Amorites, and Canaanites. In *Ezekiel* 16:3 we read of the Jews saying about themselves, "And say, thus saith the Lord God unto Jerusalem; Thy birth and thy nativity is of the land of Canaan; thy father was an Amorite, and thy mother a

Hittite." Why cannot we conclude that the guttural element of Hebraic speech came from the Indo-European language of the Hittites? Additionally, the terms "Hebrew" and "Arab" were derived from their common ancestor Eber, who was the grandson of Arphaxad ('arpsad), who was a direct descendant from Shem. But Arphaxad is a good Indo-Iranian name. I relate it to the Medaeans.

My argument is finally strengthened by the fact that it should strike anyone as a great oddity, that studies of the "Semitic" languages which were written down long before that of the Indo-Europeans, and thus stabilized, have yielded no common parent "before they were separated" as has been done for Indo-European. Before commenting on this, let's take note of the fact that while the languages of the Indo-Europeans, Africans, and Orientals number over a hundred each, with hundreds of dialects, there are, with generous concessions, only three Semitic languages with no more than four dialects. They are 1) Akkadian and its dialects (Babylonian, and Assyrian), 2) Aramaic, and its dialect (Hebrew), and 3) Arabic. The reason for this is that the "Semitic" languages, are really variants of essentially Black languages (of Canaan/Phoenicia). Therefore, any attempt to find the original Semitic language must lead back to Canaan/Phoenicia. In fact this study has been done, but it is suppressed by mere silence on one hand, and on the other, by passing Canaan, and Phoenicia as Semites (Whites). We will see that in their mode of thinking, and therefore in their cultural expression they share everything in common with the rest of Africa.

The conclusion is inescapable. There is no such reality as a Semitic language! What we call Semitic languages, are really dialectical variants of African (Hamitic) languages. Let's quote a highly regarded Jewish author, and professor of Sociology at the University of Toronto. *Ancient Judaism* by Irving M. Zeitlin (Polity Press). On page 19, we read concerning Israel's debt to Canaan:

Canaanite influence on ancient Israel

What the Ras Shamra evidence shows beyond doubt is that the Canaanites did in fact have an influence upon the culture of Israel. The only question is not whether such an influence existed, but rather its nature, and how and when it occurred. Beginning with the biblical literature, it is evident that they are perfected and polished

writings, attesting to the existence of literary traditions going back many centuries. These traditions are neither Mesopotamian nor Egyptian, but Canaanite. Just as the Hebrew language developed from Canaanite, so Hebrew literature built on the Canaanite literary traditions which had crystallized long before the Israelites had become a people. Israel took over norms and techniques of literary expressions that were established in the most ancient Canaanite dialects. We find, first of all, many words common to both the Ugaritic and the biblical literatures. Rosh (head), Shamayim (heaven), Aretz (earth or land) are just a few examples.

And on page 23 we read:

Many contemporary biblical scholars continue to take for granted that the Israelites *borrowed* from the Canaanites *almost everything essential*. - language, elements of religion and knowledge of agriculture. This occurred, scholars believe, as a result of the well-known phenomenon of cultural assimilation. Denying the historicity of the Book of Joshua, where it related that a large number of Canaanite city-states were destroyed together with their inhabitants, these scholars argued that the Joshua narratives are largely fictional. The Israelites did not conquer Canaan in a series of wars, they rather settled gradually in the sparsely populated hill-country, far from the Canaanite centers of power. (Emphasis is mine).

The above material was quoted to show how Western historians have played down, and have sought to conceal the Canaanite origin of Jewish culture. The reason? It is obvious. The Canaanites were Black.

The book of *Joshua* is very important because it contains the fulfillment of Yahweh's promise to give to the descendants of Abraham the land of the Canaanites. Yet, excavations conducted at Tell-es-Sultan, 1951-1957 by the British School of Archeology totally disproves the historicity of a Jewish conquest of Canaan. The

supposed destruction of the walled city of Jericho, leading to the downfall of Canaan was no more than a creation of priests writing during the exile (about 700 years after the alleged event). The only finding of the dig was a group of walled towns dating way before the Israelite period. Some even dated back to 6800 B.C.!

Let's examine one of the most desperate attempts to whiten the Hamites. The Coptic language is classified by White historians as Semitic. Now, what is the Coptic language? The word "Copt" is the Arabic corruption ("Quft") of the Greek word "Aigypotos," or "Aiguptos" from which is derived "Egypt." The Coptic language is the very same language of the Ancient Egyptians with dialectical modifications that survives today in the liturgies of the Coptic (Ethiopian, Kushite, Abyssinian) Christian Church. In fact, it was spoken in Ethiopia for over a thousand years after the fall of the Kamitian kingdom, until the Islamic invasion drove it out of popular use, and into the sanctuary of the Church. So, if Coptic is Semitic, then the ancient Egyptians are Semitic (no one would try this), and so are the Ethiopians. In fact, all biblical scholars make extensive use of the Coptic language to clarify the meaning of "obscure" and "archaic" so called Semitic words, as well as to understand the writings of the Ancient Egyptians. When we study the people of Canaan, and Phoenicia we find that in their fashion of dressing, and picturing their deities they followed the Kamitian pattern so closely that often times, you could not tell one from the other. If historians classify the Coptic language as Semitic in full knowledge that it is the survival of the Ancient Kamitian language, does this not show duplicity at work? But they had to do it on compulsion of the principle that makes a bad lie be followed with the most idiotic of lies. I.e., after having made the Canaanites and Phoenicians white, they had to make the Ancient Egyptian language in its Coptic form Semitic. In all of this we must not lose sight of the biblical table of nations that tells us that Canaan is descended from Kush (Nubia). There is much more evidence that can be given on this point, but that would take us beyond our theme.

According to the biblical table of nations, another descendant of Kush (Nubia) is Sumer (biblical Shinear). We must interpret this as meaning that these people originated in the Sudan from where they migrated to Mesopotamia. My theory is that these were the authors of the Qadan culture, which appeared between Northern Sudan and Southern Egypt from 13,000 and 9000 B.C.

The remains of these Paleolithic Africans include grinding stones, and sickle blades showing that they were already involved in agricultural operations (the earliest on record). This conclusion is supported by the findings of wheatlike and barley pollen in the area. I also contend that these same people, having moved out of Nubia, due to the desiccation of the southern Sahara were also the authors of the Merimden culture (3500 B.C.) in the Egyptian Delta. There they exhibit many of the technologies common to the Qadan, and early Sumerian cultures. It is of interest to see how historians treat the subject of the racial identity of the Sumerians, whom they agree are not of the White, nor Mongolian, nor of the Far Eastern races (What is left for them to be?). In *The First Great Civilizations*, p. 37, the eminent historian Jacquetta Hawkes describes the Sumerians as follows:

Their sculpture suggests that they were round-headed, with large noses slightly convex in profile, and with well-shaped lips of medium breadth.

The description of a nose as "slightly convex" is interesting. Of course she means "not straight," but rounded,- i.e., broad, wide, Negroid! I will let the "well shaped-lips" speak for themselves.

Keeping with the fact that the Sumerians were ethnically and culturally similar to the Dravidians ("original" Black inhabitants of India), I will quote R. S. Tripathi, who in *History Of Ancient India*, p. 15, says about the Dravidians that "*Western Asia is, however, generally supposed to have been their original abode, and the similarity of the Dravidian and Sumerian ethnic types undoubtedly lends some colour to this view.*" And on page 30, speaking of the destruction of the Black civilization of India by the invading Whites (Aryans) he states, "*the Aryans were engaged in struggles with the 'Dasyus' or 'Dasas.' They were carried on with unceasing relentlessness for the two people had strong differences, both racial and cultural. The Aryans were tall and fair, and the Dasyus were dark-skinned and of short stature. Their features were uncouth, being flat-nosed . . . The characteristics indicate that the Dasyus probably belonged to the Dravidian stock.*" It is a shame that we have to do so much detective work to get at the truth of such issues.

The motive for hiding the racial identity of the Sumerians must be found in the fact that they were the source of Semitic culture. They were the first to teach the Semites (Akkadians, later Babylonians, and Assyrians) how to write in their cuneiform script;

mathematics, science, religion, literature, agriculture, and all the other critical elements of civilization. Their religious and secular literature, proverbs, and "Myths" became the main source of Semitic, including Jewish religious scriptures (modified to suit their individual needs.) It seems that Western historians have problems admitting to the world that they received the fundamentals of civilization from Negroes. It is just now that a handful of historians are giving credit to Kamit, and Sumer, what has been dishonestly credited to the Greeks and Hebrews.

The importance of dealing with the subject of the racial identity of the great Black nations who founded civilization in this manner will become more and more evident later in this book. For now let's realize the following:

1. The contemporary major world cultures, religions, and esoteric teachings are adaptations of the cultures of the Black founders of civilization.
2. These adaptations have veiled the true original values and purpose of the original cultures.
3. As a result of the veiling of the true elements of civilization, the world, suffering from the cultural domination of the Western nations, has fallen into a state of decadence, and is verging on the brink of destruction, from nuclear war, and social decay (AIDS, drugs, etc.).
4. The majority of the material floating around as esoteric teachings suffers from the same perversion. We will see, for example, that the vast literature of Kabalistical science as known to date is such a distortion of the original traditions that students of the subject can only but fail to achieve the lofty goals promised by it. Similarly, a great part of the material passing as the spiritual wisdom of India, is in reality the work of the White conquerors of India speculating on the Black tradition which is the true foundation of Hindu culture. As the esoteric tradition in Europe (Rosicrucian, Cabalism, etc.) is based on the above mentioned traditions, it too is in a similar position.

Very few people are aware of the fact that the Kabalistical tradition is in reality a "polytheistic" (syntheistic¹)

1. I will explain this term in a future chapter.

system. The so-called archangels of each sphere of the Tree of Life are exact correlates to the deities in other traditions. In fact, most of them were taken directly from Canaanite sources. Long before the formation of Israel, "El" (Al) was the generic name for the deity in Canaan. We thus find the term combined with others to denote the various aspects of God; AngEl, ArchangEl, MichaEl, RaphaEl, HanaEl, Elohim, YsraEl, etc. In order to have a wisdom (esoteric, "mystical") tradition without seeming to be polytheistic, the Hebrews changed the Canaanite/Phoenician deities into so-called "angEls," virtues, heroes (Euhemerism), and "names of God." Shaddai, which was a Canaanite deity, appears as the name of God (incorrectly rendered "almighty") at the 9th sphere of the Tree of Life; RaphaEl (El heals, not the true meaning) appears, incorrectly, as the angel associated to the 6th sphere and so on.

A careful study of the literature of the Kabala, the Old, and New Testament will reveal that the angels depicted perform most of the functions of the "deities" of other so-called polytheistic cultures. Like Elegba of the Yorubas, for example, Raphael, the "airy" angel is a mediator between God and the prophets (mediums). John² L. McKenzie, S.J.² states in his *Dictionary of the Bible* that, *"the conception of the angels in the Gospels does not advance beyond the OT conception, and in some ways is less imaginative. The angel is still primarily a messenger or a member of the heavenly retinue, and there is not always a sharp distinction between the angel as a personal being and as a personification of the divine word or the divine action."* I highlighted the latter because it forms the most important part of the statement. It is of great importance to find a professor of Judeo-Christian divinity referring to the angels as "personifications of the divine word." The "divine word" is of course a reference to the hekau, mantras, and words of power that are used in other traditions to invoke the angels (deities). This fact underscores one of the greatest shortcomings of Hebrew Kabala. While the Hebrew Kabala conceals, and downplays the fact that angels are to be invoked to possess the spirit of the meditator, in the African tradition, the angels (deities) are openly invoked. They possess the spirit and borrow the bodies of the meditators to heal, counsel, admonish, teach the community, and carry out many other functions. Hebrew Kabalists, obviously limited by the need to avoid the image of practicing "polytheism," which they are indeed practicing, have thus

2. McKenzie joined the faculty of the Divinity School at the University of Chicago in 1965, and is presently a professor at DePaul University, Chicago.

limited, and distorted their understanding of Kabala. In place of guiding the student of Kabala to the mystical experience of the deity (angel) itself in order to comprehend the spheres and the principles of the Tree of Life, they engage the student in a host of intellectual speculations regarding the realities of the metaphysical world.

5. In order to understand the true message of the Black founders of civilization, we have to identify the original tradition and separate it from the contemporary hybrid cultures. This can only be done by making correspondences to the cultures of the nations that are the present day survivors of Kamit, Canaan, Sumer, etc. These are the contemporary African, and Black Indian nations.

THE SOURCE OF THE LIGHT OF THE EAST

While in the past decade, a great deal of progress has been made, at least amongst Black scholars, to document the fact that the Kamitians (the people of ancient Egypt),- authors of the great pharaonic civilization, were Blacks, a great deal remains to be done to show that the authors of the great civilizations of India, Sumer, and Canaan/Phoenicia were also Black. Although the facts have been clearly known by white scholars from time immemorial, there has been a conspiracy to hide it from the world. It is the mere product of the inability of Europeans to cope with the fact that the greatest contributions to the establishment of civilization (religion, science, geometry, algebra, astronomy, mathematics, writing, etc.) were made by the same race that they enslaved and dispersed throughout the Americas.

One of the greatest losses that mankind has suffered from this distortion of history, is the inability to truly understand the great spiritual wisdom of antiquity. Scholars have resorted to all sorts of intellectual speculation about spiritual matters that can only be known through direct experience, and practice. "How else, but through speculation can one discover the true meaning of teachings, and beliefs for which there are either no written records, or that has come down to us shrouded in the veil of allegories, and myths?" One may ask, with apparent justification. But, there is an alternative. Once it is realized that the "wisdom of antiquity" was that of the same Blacks who are today still dwelling in India, Sub-saharan Africa, etc., then the alternative will be made clear. Through one to one correspondences, for example, if I note similarities between the West African Yoruba deity Obatala (Oba Tala), and the Dravidian Goddess Tara, whose mantra is Aum, and the Kamitian Deity Ausar, whose name conceals the mantra Aum, I can test my hypothesis with the existing rituals of Obatala, the Goddess Tara, and the surviving material about Ausar. This work has been done extensively for the past sixteen years by the priests and priestesses of the Ausar Auset Society with the results that a syncretism between all Black civilizations, past and present has been achieved.

Very few people realize that the yoga teachings that are being disseminated throughout the world are fundamentally a creation of Africans. Hinduism as we know it today is a blend of prehistoric Western European religion, with many systems extracted from the original African cultural base.

The earliest evidences of yogic practices date back around 3000 B.C. Figurines of men seated in the Lotus pose, and symbols of Shiva and Shakti,- the main symbols of ancient Black Dravidian spiritual culture were found in the excavated ruins of the two oldest centers of civilization in the Indus Valley; Harappa, and Mohenjo Daro. These cities were neatly laid out with rectangular city blocks, streets crossing each other at right angles, brick houses, public baths with steam heating, underground sewer system, etc. --as early as 3000 B.C.! And they were senselessly destroyed by Whites (the Vedantic Aryans) who invaded them, and conquered the area between 1500 - 800 B.C.

In *The History of Ancient India* (Pub. Motilal Banarsidass, 1967), Rama Shankar Tripathi gives the following descriptions of the Dravidians who have been identified as the originators of the esoteric wisdom of India.

The Dravidians, so called from the Sanskrit term Dravida, were one of the earliest cultured races of India . . . Western Asia is, however, generally supposed to have been their original abode, and the similarity of the Dravidian and Sumerian Ethnic types undoubtedly lends some colour to this view . . . The Dravidians were conversant with the use of metals, and their pottery was of improved type. They knew agriculture, and were perhaps the earliest people to build dams across rivers for irrigation purposes. They constructed houses and fortifications . . . As observed by Dr. L. D. Barnett, Dravidian society was "to some extent matriarchal" . . . They worshiped the Mother Goddess¹ and a host of spirits . . . Presumably, the Dravidians were

1. The Mother Goddess is the synthesis of 10 major Goddesses of India-the Dasha Vidyas. Their words of power were later syncretized to the Yogic system. Aum, for example was the word of power of the Goddess Tara long before it was assimilated into the Yogic system as we know it today.

identical with the "Dasas" or "Dasyus" of the Rigveda.

Of great importance in the above quotation is the reference to the ethnic similarity between the Dravidians, the Sumerians, and the Dasas or Dasyus. Since it is well known from the written Vedantic records that the Dasyus were Black people, and that the Dravidians are black skinned (krishna-tvach)², as we know from the fact that they are still in existence, we must conclude that the Sumerians were black. Tripathi informs us that:

the Dasyus were darked skinned and of short stature. Their features were uncouth, being flat nosed (anasah) . . . These characteristics indicate that the Dasyus probably belonged to the Dravidian stock, then occupying the parts over which the Aryans were seeking to establish their domination. . . . Many of the Dasas became slaves of the conquerors, having been admitted into the society as sudras, but others retired into the jungles and mountain fastness, where we still find their descendants living in primitive conditions.

It is of great interest to learn that the creators of one of the greatest civilizations are today living "in primitive conditions" due to the barbaric act of conquest of others.

Regarding the origin of the system of Yoga, Vivian Worthington states the following in *A History of Yoga*:

We shall see how yoga appeared in the Indus Valley at Harappa and Mohenjo Daro . . . It carried on as Sramanism through the Aryan, Brahminical and Vedic periods. Although fiercely contested and often persecuted by the Brahmins, its main writings, the Upanishads, were later adopted by the Brahminical establishment and tagged on at the end of the Vedas thus changing the whole complexion of Hinduism into its modern form known as Vedanta.

2. Krishna means black.

Regarding the nature of the religion practiced by the inhabitants of pre-Aryan India-the Dravidians-, Worthington states the following:

Although tantra received its philosophical basis from the Vajrayana school of Mahayana Buddhism³, its history is much older and takes us back to the early Sramanic stream of Indian thought. In its active aspect it can be looked on as a modern development of very ancient magical and fertility rites . . . In the excavations at Mohenjo Daro and Harappa can be found traces of the worship of the male principle in the form of the lingam (phallus) and of the female principle in the form of the yoni (vulva). From these early practices developed the Siva-Shakti cult which is so prominent a feature of tantrism. These early tantric practices were suppressed by the Aryans.

Of the whites who came later and destroyed the civilization (the Dravidians, Tripathi (see above) states:

The Aryans were tall and fair . . . The general opinion is that the Indo-Aryans, as also the Avestan Iranians, were a branch of the ancient "Indo-Germanic" (Indo-European) peoples or the Wirots, and before their eastward migration . . . they occupied for long a common habitat, which has been variously located in Central Asia (Max Mueller); . . . This belief rests on grounds of the close similarity between the speech as presented in the Rigveda and the Avestan and the Indo-Germanic tongues.

The Whites imposed a rigid caste (apartheid) system in which the priests (Brahmins) held absolute power, followed by the secular leaders,- kings, military men, etc. (Kshatriyas), followed by the Vaisnas who made up the merchant class, and last the Blacks (the sudras), who could only engage in manual labor (cow-herding, agriculture, etc.). Needless to say that the whites were the only ones who could belong to the two higher caste, and Orientals and

It is not true that Tantra received its philosophy from Buddhism, as its philosophy appears in the Upanishads, which preceded Buddhism.

Mulattos belonged to the third. Intercaste marriage was prohibited. Nevertheless, they occurred. M. M. Kunte, in his book *Vicissitudes of Aryan Civilization in India*, relates:

Intermarriages-between the Aryas and the Shudras, Kolis, and other aborigenes-were frequent. The class of what the Americans contemptuously style Mulattoes, quadroons, and octoroons multiplied.

The new masters also outlawed the religion of the Blacks, as they made their religion the official one of the land. This caused the religion of the Blacks which involved Cosmology, meditation, Deity invocation (predominantly Goddesses), hatha yoga, pranayama, mantra yoga, kundalini yoga, yantras, spiritual initiations, talismanic magic, tantric rituals, etc. to break up into separate practices. Lacking the benefit of carrying on their training, and practice in the organized manner that freedom would have allowed, the priests led individual existences in the safety of the forests. They were the Rishis who had to hide and teach in the forests as they were bitterly persecuted by the Brahmins (Aryan priests). As time went on, several "traditions" emerged as these individual priests varying in degrees of knowledge, and ability, colored the material with their individual insight, temperament, opinions, ignorance, etc.

In *A History of Yoga*, Vivian Worthington informs us that:

The Aryan religion was brutal and materialistic. The caste system was rigid and oppressive, and the Brahmins wielded great power.

The Sramanas, as the yogis and other independent thinkers and teachers were known, were tolerated when the priests were not strong enough to eliminate them, but were hunted down and killed, and driven out of the area where the priests had full control.

It is interesting to note how Vivian Worthington sidesteps the reason for the Brahminical persecution of the Sramanas. Instead of stating that they were persecuted because they were Black, as any historian of ancient India must know, she makes it seem as if their persecution was due to their "independent thinking." She knows very well, as shown in her book, that the Sramanas were practitioners of Yoga, Tantra, so-called Mother Goddess worship, etc. I have given

these quotations to show the depth of racism and deception that exists in the western reporting of history.

The Dravidians (Sramanas, rishis, yogis) succeeded, however, in one thing. By around 872 B.C., they wrote down their cosmological knowledge in the first of the Upanishads which dealt a death blow to the religion of the Whites,- the Vedas. It must be noted that the Vedic Aryan tradition has been totally abandoned in India since then, to this day.

These doctrines, which were interpretations of the prehistoric Dravidian religion gave rise to Samkhya philosophy, Gautama's Bhuddism, and Jainism.

Gautama's Buddhism, which was called the Hinayana (Little vehicle), was not able to transform people's being, because it was lacking in the techniques to achieve its lofty philosophy. So after his death, it was in danger of dissolution as it was kept alive in great measure by his charisma. To ensure its survival, his disciples, against his rules, blended his teachings with the tantric traditions of the Blacks. This aspect of Buddhism, which is called Mahayana (the great vehicle) was able to transform people's being as it is based on the causal psycho-physical principles that control Man's behavior and growth⁴. Gautama's Buddhism is based in part on intellectualism, and on the adherence to a code of conduct which is in reality the effect, and not the cause of spirituality. In other words, it failed because 1) Intellectual activity cannot transform behavior, and 2) It is a confusion of category, and ignorance of psychology and spiritual laws to try to make people good by telling them to behave good. You have to engage them in some activity which, without their conscious effort results in the desired behavior. This latter is the foundation of Tantrism (the Religion of the Blacks, and Mahayana Buddhism, which is based on the Tantras).

Incidentally, it must be noted that as the original Bhuddism (Gautama's Hinayana) was against the practices of Deity invocation (mantric chanting), and was also anti-woman, in conformity with its Aryan parentage, its followers, upon merging it with Goddess based Tantrism, took the mantras that corresponded to the Goddesses and syncretized it with their male Dhyani-Buddhas. For example, the mantra Aum which is the word of power used by Blacks from

4. These are the mantras,- words of power.

prehistory in their invocation of the Goddess Tara, the embodiment of Man's divine perfection on earth, became some 2500 years later, the mantra of the Dhyani-Buddha Vairocana. Similarly, the mantra Hum, of the wisdom Goddess Chinnamasta, became the mantra of the Dhyani-Buddha Aksobhya, and so on. In this manner, Buddhism was able to survive as these mantras gave to their adherents the power to achieve the spiritual virtues that these "Dhyani-Buddhas" represented. Before this, their followers would study the philosophy, aspire to realize the virtues, but fail in their aspirations for the lack of the power to achieve. It is not enough to understand. You must have the power of realization. In addition, this syncretism enabled them to convert many of the Blacks who could now worship their deities in the guise of the Dhyani-Buddhas. This is similar to what Blacks did thousands of years later in Brazil, Cuba, Haiti, etc. They syncretized the African deities with the Christian Saints (which were originally Black Deities. Things come back in strange guises!).

Buddhism, once syncretized with the Black religion as its power base was spread throughout India, and Sri Lanka by the Emperor Ashoka (264-227 B.C.). It then spread to China, 65 AD. In 552 AD the Hindu sage Boddhidharma founded the Chan (Zen) aspect of Buddhism in China; in 747 AD the Hindu Sage Padma Sambhava introduced tantric Buddhism to Tibet; in 1191 AD Eisai founded the Rinzai sect in Japan, and in 1300 AD Dogen founded the Soto Zen sect; around 1500 AD, the tantric Black religion was merged with Islam to give rise to Sufism. From China, India, Tibet, and Japan, this tradition spread to the rest of the Orient. Today those who do not know the history of the yogic tradition, nor understand its inner constitution speak of the "Light of the East" when in reality it is a modification of the Light taken by the Blacks from Nubia into the Tigris, and Indus Valley in prehistoric times. Anyone who takes the time to become acquainted with the pre-Aryan religion of India (e.g., See the *Agni Puranam*, published by the Chowkhamba Sanskrit Series, Varanasi, India) will see that it is the parent of all the fragmentary systems in vogue throughout the Orient. And that is the unfortunate truth. In place of the Dravidian integral system of living, and spiritual development, we are being offered its fragments colored by Aryan speculation into the nature of the spiritual dimension. This latter form of Hinduism-the latest reaction against the Tantric Yogic system of the Blacks of India-is known as Vedanta. It is the form that has been introduced into the West.

We must also note that another factor that has hidden the Black origins of the Tantric Yogic system, has been the fact that it has been presented to the world through translations into the Sanskrit language. And to make matters worse, due credit has never been given to the Black people who created the system. What else is new?

COSMOLOGY AND COSMOGONY

Imagine the following scenario: You have come up on a man busily engaged in constructing something with wood, bricks, cement, etc. He is mixing cement in a kitchen blender, digging holes with a spoon, nailing boards with a rock,- he has already shattered 20, and so on. "Hum," might be your first reaction, "What are you doing?" "Building a house. Isn't it obvious?" the familiar salt. "Right" you nod, "what kind of house?" "Don't know" as he picks up some cement with a fork and pours it into the blender. "Shouldn't you be using the right kind of equipment?" you attempt to bring some sanity into the conversation. "Whadya mean. Can't you see that these are working fine?" "And how!" you quip. "Well let me see your blueprint" "A what?! What is that?" he drops everything and transfixes you with an honest quizzical look.

As you are by now begging for this scenario to end, I will end it. But it is not really the end, as it is a good replica of how most people conduct their lives. Don't be too quick to exempt yourself. By chapter 10 you will be thinking very differently. Due to the lack of knowledge of Self, and the purpose of Life, most people in the world are going about the daily business of living with wrong ideas of what is life, what should be their true goals, how to correctly achieve their goals. There is not the slightest awareness that there ought to be, or that there actually exists a blue-print to guide our steps in life to the true fulfillment of our mission on Earth. Such a blueprint is called a Cosmogony.

Cosmology, the study of Cosmogony has two fundamental goals. First, it provides an ordered and unified (synthetical) view of who and what is God, Man, and the forces that administrate and sustain the world. No understanding of a subject can take place without an ordered and unified presentation of its whole and parts. Second, cosmology (like all blueprints and maps) provides a framework that guides thinking and action through the vast array of seemingly unrelated life situations to the successful identification and attainment of the goal of living. It achieves this by showing how all the events in a person's life are integrally related to his/her destiny.

Through it is revealed the spiritual value of each and every event in a person's life.

With a partial view of Man's identity, and worse no knowledge of his origin and destiny, people go on to create innumerable institutions, life goals and undertakings. What if someone offered proof to the world that all things making up the world are integral and inseparable, functional and structural components of one Being? The unity of all things in the world can be understood by the study of biological entities, as they are based on the same cosmogonical structure (blueprint).

The human body, for example, is made up of thousands of different types of cells numbering in the billions. Yet, they are all parts of one entity. They represent one life, and not billions of separate existences. Although each cell has its own individual need,- The nourishment that one cell receives doesn't take care of the others. Yet, we all know too well what happens when even one cell begins to go its own way,- Cancer! In spite of having individual needs, like all other creatures of this Earth, their activities interrelate to maintain the one being which they collectively compose.

But how do we know that all the cells in the body are integral parts of a whole? The answer is simple. Their interdependence, the harmony and order governing their interaction, and the fact that their individual activities can be shown to add up to the life of the whole they compose. Running through all the disciplines studying living things,- Biology, Physiology, Biochemistry, etc.,- as well as all other sciences are the factors of order, interdependence, relationship, and the integration of seemingly separate things into a whole. It is most interesting to note, that the Western world does not have a fully organized science of the shaping factors of order, harmony, etc. that permeates all sciences. Such a science, known in various degrees of sophistication to most Nonwestern nations is known as Cosmology. The term "cosmology" means the study (logy) of order (cosmos, from the Greek Kos, meaning order). It occurs in such words as Cosmetas, an epithet of the Greek god Zeus, meaning "the orderer;" we also find it in "cosmetics" and mathematics- from the Greek mathematikos. It is easy to see the relationship of the meaning of the term with the subject treated in mathematics. The term's antonym is "Chaos." *Webster's New World Dictionary*, Second College edition, defines it thus: the disorder of formless matter and infinite space, supposed to have existed before the ordered universe. --SYN. see confusion. (underlines mine). Although this fairly common definition clearly

establishes its relation to "cosmos," it has a major flaw. How can there be disorder and confusion in a formless medium? The text is clear that there are two states,- one in which matter is formless (incorrectly equated with disorder), and the other, of a later existence, in which there is order (implied is that here matter is formed, ordered). We must go further and note that the term chaos is of very clever coinage. It is composed of "A," the article of indefiniteness, sandwiched into the term Kos (kAos). To appreciate this fully, we must realize that indefiniteness denotes the absence of form. All forms are ordered, or defined states of substance,- hence "kaos" = formless (undefined) matter. In other words, the *indefinite* article "A" denies the existence of order (*definition*) in the term chaos.

Yet, in all truth, we will see that cosmology, the study of order, must start with the study of Kaos, for the ordered realm is a mirror reflection, according to its own laws, of the nonordered realm.

Keeping the above firmly in mind, it will be easy to see that present day Westerners have perverted the meaning of the words that are kin to "Kos." "Cosmos," is generally defined as the world, and universe; "Cosmogony" as the theory of the genesis and development of the world, and universe; "Macrocasm" as the great world, or universe; and "microcosm," anything that is regarded as a world in miniature; mankind, society, man, etc. What is at work here is the Western polarization in "thingish" thinking about a term that represents an abstract reality. Such thinking has kept Westerners from seeing that the so-called "creation" myths of Blacks are "Mythoscientific" expositions of how to bring order into an area where there is none. *The grand theme of the Cosmological mythoscientific literature of the Black spiritual tradition is the absence of order in the early part of the Man's life. Illnesses, social decay, and wars run rampant as a result. As long as this state exists, prayers, words of power, rituals, science . . . all measures are of no avail.* This is the state that all western nations find themselves in, to date. The bringing of order into the situation is the first prerequisite for the correction of the ills.

The value of these mythoscientific expositions resides in their appeal to the right side of the brain, which uses them as means of creating order in all other situations in our life. This is due to its synthetical ability.

THE TWO GREAT REALMS OF BEING

All potters know that the clay they work with has two fundamental states; its original unformed or unordered state, and the other, which is formed, or ordered into things (pots, frogs, jars, and what have you). The same is true of Reality. All that is real falls into one of two fundamental divisions. By fundamental is meant that there is no possibility of further division. One division corresponds to a mode of reality that is lacking in form, objectivity, definition, etc. We will call this division of "kaos," the Subjective Realm. The other division corresponds to the mode of reality in which energy/matter has been ordered into forms, objects. This division is called the Objective Realm, due to the fact that it is in it that objects (thoughts, emotions, physical things) are found.

The Being that is the synthesis of Life in both realms, is called Neter in the Kamitic tradition. Its conceptualization goes beyond the concept of the Supreme God-head that is used by most spiritual traditions to represent the Supreme Being. All manifestations of itself, through which it creates, and maintains the world, including the God-head (Neb er Tcher, - Lord of the World), are called the Neteru. It is easy to see that this term is the origin of the Latin terms "natura," "neutral," "eternitas (eternity)," etc. Unfortunately, more space cannot be devoted to the subject, but discerning readers will see in the Kamitic notion about the Supreme Being, a deeper understanding than is to be found in other traditions, who limit It to the Subjective Realm.

For our purpose, a useful synonym for the world is "the Objective Realm." In this book the term "Objective" when referring to the World, manifested reality, etc. will always appear capitalized to distinguish our usage from one of its popular denotation, - "impartial, impersonal, unconditioned view, etc." The term, kin to "object," from the prefix "ob," refers to all that has form, and therefore denotes all that is perceptible (mentally, or physically). In the same manner we will qualify the term "Subjective." Excluded is the denotation of "partiality, conditioned view, personal, etc." The term, kin to such terms as "submerged, substrata, substance, etc.," from the prefix "sub," refers to all that is under, therefore, incapable of being perceived.

So, we have two fundamental divisions in the Realm of Being. One which is "submerged," i.e., imperceptible, and the other, perceptible. The imperceptibility of the Subjective Realm is based on the fact that in it, there are no objects. The derivation of the name Objective Realm from the fact that it is the place of objects is obvious. The importance of these concepts will be realized from the consideration of the fact that most people limit their acknowledgement of reality to what is perceptible. Yet, not only is reality not limited to the perceptible (Objective) region, it originates beyond it (in the Subjective Realm).

THE SUBJECTIVE REALM

If there are no things in the Subjective Realm, what then is there? It must be comprehended, first of all, that all the objects making up the world are modifications of an eternally "subsisting" energy/matter. As the term "exists" refers to objectified reality, the term "subsists" must be used to refer to Subjective elements in a homogeneous and unmodified state in the Subjective Realm. It must be understood that where there is absolutely no differentiation, there cannot be perception.

Contrary to the characteristics of Western "scientific" thinking, the modification of this universal underlying substance (Subjective energy/matter) into the set of related things we call the world, does not occur by chance. It is the result of conscious intelligent action. Although imperceptible, lacking form, the Consciousness and Will of Being (Neter) also reside in the Subjective Realm. With full consciousness of itself as Infinite Potential of expression, Neter wills its energy/matter to modify itself as the infinitude of forms manifesting in/as the world (the Objective Realm). Let's note, therefore, that the Creative elements of Being are imperceptible.

Soph and Aur are the Canaanite names given to the "unmanifested undifferentiated energy/matter" in the Subjective Realm. While Soph corresponds to the undifferentiated feminine polarity we designate as matter, Aur (root of aura = light), is the undifferentiated masculine polarity we designate as energy. They are the substance and energy underlying all forms and activities in the world. In the Kamitian tradition the matter side of the Subjective Realm is referred to as "Nu," and the energy polarity, Ra (pronounced Rau, hence aur, aura, radiation, etc.). In the Kamitic

Book of Knowing the Manifestations of Ra, written around 2500 B.C. (although the doctrine is much older), we have:

The words of Nebertcher (Lord of the World) which he spoke after coming into being; I am he who came into being in the form of the "infinite power of manifestation (Khepera)." I became the creator of what came into being. After my coming into being, many were the things which came into being, coming forth from my mouth [words of power]. Not existed heaven (the noumenal division of the Objective Realm), not existed earth (the phenomenal division of the Objective Realm), not had been created the things of the earth, and creeping things in that place. I raised them out of Nu, from the state of inactivity (of energy). Not found I a place to stand wherein. I radiated words of power with my will, I laid a foundation in the law (Maau), and I made all attributes. *I was alone*, for not had I spit out the form of Shu (the thermal, yang principle of the world), not had I emitted Tefnut (the moisture, hydrogenoid, yin principle of the world), not existed another who worked with me. I made a foundation by means of my will, and there came into being the multitude of things . . . I became from God one, Gods three, that is from out of myself . . .

The text continues with the creation of men, and other things in the world through the interaction of Shu (yang) and Tefnut (yin). Besides corroborating what has been said thus far in this chapter, it introduces a very important point that cannot be passed up. Here we have a written confirmation that monotheism existed in ancient Egypt much earlier than the birth of Abraham, and over 1000 years before Akhenaten, and Moses.

In the Bantu (the South African nations) tradition, Subjective matter is "Ntu," in the Yoruba, it is Oladumare, in the Akan of West Africa, it is Nyame, etc.

Let's paraphrase the above by noting that all that was, is, and can ever be, are all modifications of the undifferentiated

energy/matter, and unconditioned consciousness/will of Subjective Being. Therefore all that we have been, now are, and can ever be, are modifications of this original Subjective Being.

We can therefore make the following conclusions about our selves:

1. As the energy/matter, like unmolded clay is undifferentiated (i.e., not restricted to a particular form) it can assume any shape. It's power of attainment is omnipotent. If the energy/matter making up our being is rooted in this energy/matter, we also partake of its omnipotence,- of course, in kind, but not magnitude.
2. As the consciousness/will of Subjective Being is not conditioned by any limitations of energy/matter, as there are no forms there to do so, its potential to will is unlimited. It is therefore omniscient. As our consciousness/will is rooted in the consciousness/will of Subjective Being we also partake in its quality.
3. As there are no limitations of time and space in the Subjective Realm, Being is therefore eternal, and infinite. I.e., omnipresent. We also partake in this quality.

This may seem to fly in the face of experience. But objections are soon dealt with by noting the fact that there are many people with spiritual abilities that are out of the ordinary. And this is one of the chief roles of a cosmogony. It enables you to know what is ahead in the field of human growth. Like a map it guides you to where you haven't been. It keeps you from defining (delimiting, crystallizing) yourself around the present level of mankind's evolutionary attainment, or your growth to date. The defining of Man in terms of the common faculties that mankind has thus far evolved is the chief impediment to further growth.

THE OBJECTIVE REALM

It is not enough to know that the world (Objective reality) is a modification of Subjective Being (Unconditioned consciousness, and undifferentiated energy/matter). We cannot understand our Being, the purpose of Life, and how we should live, unless we have a clear understanding of how and why the Subjective Being creates the world (Objective reality).

Let's begin by recalling the notion that energy/matter in the Subjective Realm is not differentiated into forms (the world).

and that if there are no things to be perceived, then consciousness can only be conscious of being conscious. This state of consciousness can be achieved, and has been achieved by humans, and is called in the Kamitian meditation system, the "Deity" "Tem," "Temu" (negative being), and in the Indus Valley system, samprajnata Sarvikalpa Nirvana (Pure consciousness without objects of consciousness). An indepth look at the subject will show that in the Subjective Realm there can only be one Being. *For there be others, there must be differentiations of the energy/matter into bodies which serve as the means of separating each being from the other.* Infinite and eternal (unwalled by a body) this Being is all one. It is one without a second. As a thought is a differentiation of the energy matter, it isn't even thinking. It has not even the thought "I am conscious." No-things. No needs, no identity. In the Kamitian tradition, Being, on this level, is called the Deity "Amen." Meditate on your being conscious and you will get a glimpse of the fact that what in you is conscious, is itself imperceptible, and concealed." The Subjective Realm, therefore, is the hidden plane of reality where Being dwells. All manifestations are the differentiations of the energy/matter of this level,- the objectification of the substantive basis of all forms.

The reason, therefore, for the creation of the world,- the differentiation of the original energy/matter into things- is to give being experience. The Subjective Realm is Life, the Objective is living. Being vs. Doing. The slightest thought, the faintest feeling already an objectification of energy/matter,- a world in itself.

All alone, without thoughts, without experience,- no me, and you and it . . . Subjective Being creates,- differentiates its energy/matter into-- the world that it may have experience. I like to use the following metaphor although it is crude, and somewhat inaccurate. Imagine yourself all alone suspended somewhere (nowhere?) in a dark bottomless, and surfaceless expanse of water. Drowned to death aren't you? One day you realize that your body is composed of billions of cells. So you transfer your consciousness to several millions of your cells, and suddenly you are no longer alone, and the adventure begins. And suppose you forgot that you are not really the cells. And the drama begins, and goes on until you have been knocked around pretty good by some bacteria, and viruses. And the spiritualization begins.

Yes. All alone without thoughts, feelings, or a second with whom to interact, Subjective Being differentiates a portion of its

infinite energy/matter into an enclosed circle. Within it, it differentiates its energy/matter (Nu/Ra, Soph/Aur) into billions of galaxies, with their trillions of stars, and how many Earths? In many of the latter it fills with people, and transfers it's consciousness into them and . . . the adventure begins. Temporarily, perhaps for a short period of billions of years, the embodied (incarnated) consciousness forgets that it is not really these things within which it dwells on these Earths. Then it tires of the knocks, and the journey back begins. Not until, of course, every single ray of incarnated consciousness has been liberated from its Earthly tomb. Men who have found the way back, and stopped at "the edge," in the Kamitian tradition are called Ausar, in the Indus Valley tradition Boddhisattvas, -they are the only ones who truly deserve the title, Sage.

The mapping of the way down and back is the function of a cosmogony.

The transition from absolute undifferentiation in the Subjective Realm to earthly existence does not proceed in one step. It is a graduated progression designed to maintain a connection- at each and every step- between the qualities of Subjective Being, and the purpose of creating the world. That is to say, that each step¹ toward the manifestation of earthly existence is qualified to maintain an equilibrium between Being, and Doing, Life and Living, the No-thingness of Subjective Being, and the infinite numbers of things of the earthly plane, the infiniteness and eternalness of the Subjective Realm, and the finiteness in time and space of the Objective Realm.

THE COSMOGENESIS OF THE OBJECTIVE REALM

The dual nature of the Subjective Realm (Consciousness/Will and Energy/matter) is the main organizing principle of the Objective Realm, which is divided into two main planes; the Noumenal, and the Phenomenal.

The Noumenal Plane

In this plane is found all metaphysical Objective reality. The spirits of things, thoughts, images, and those metaphysical beings called angels, spirits, etc.

1. Each of these steps is carried out by a Deity.

The Phenomenal Plane

This is the well known plane of physical energy/matter. From gluons to galaxies.

Each of these planes are in turn subdivided.

The Divisions of the Noumenal Plane

1. ATZILUTH: When the undifferentiated energy/matter of the Subjective Realm is acted upon by the divine will, its first manifestation is an objectification of a portion of its substance which maintains its undifferentiated quality. This state of Objective energy/matter is called Atziluth in the Canaanite Kabalistical tradition. In the Kamitic tradition, this plane is under the dominion of the Goddess Nut. Incidentally, Nut is not the "sky Goddess, or Heaven" as held by Egyptologists. "Sky and Heaven" are used as metaphors to convey the fact that what is referred to is not differentiated in space or time. Where does the sky begin? Where does it end? The sky is the emblem of the infinite, the boundless, the eternal. This holds true for all the so called "sky Gods." The fact is that the realities here described, Nu and Nut, can only be contacted by going into the "recesses of the mind." Close your eyes now. Didn't you find yourself looking into what resembles the night sky? Dark and endless. Think about going deeper into it! We will be talking a great deal more about this in the chapters on meditation.

As energy/matter on this plane (Atziluth) is undifferentiated, that is, there is only one "building element" it can give rise to only one entity. This entity is the one vehicle within which dwells all things in the world. It is the World Soul, the "Ba" of the Kamitians, the Yechidah of the Canaanites, the Honhom of the Akan, the first aspect of the Utiwetongo of the Bantu, and the Anandamaya Kosha of Hinduism.

The deity that resides in this division of the spirit is the first manifestation of the Supreme Being. Ausar of the Kamitians, Obatala of the Yorubas, Nyakonpon of the Akan, Tara, and Shiva of Indus Kush etc. The sphere of the Tree of Life is Kether. It is important to realize the connections between the functions of Unification represented by these deities, and the fact that their environment is composed of a single building "element" and that there is only one body, one Being at this level. We will later see that

it is to this plane, and in this body that people's consciousness "ascends" to when experiencing those highest manifestations of trance called samadhi in Hinduism. Because there is only one Being on this plane, it is here that the unity between all things is inherently experienced,- I.e., one experiences that all things and events in the world are one, as one experiences that all of our bodily members are parts of our body.

2. **BRIAH** is the Canaanite name given to the second level of energy/matter densification. Here there are two "building elements" which allow for the creation of two bodies. The universal Spirit, Ba, in the level above, dualizes itself to give rise to two universal spirits within itself. One is the organ system through which it wills manifestations to be. This part of the spirit is called the Khu by the Kamitians, and Chiah by the Canaanites. Herein dwells Chokmah, the second sphere of the Tree, and the Wisdom Deities, Tehuti of the Kamitians, Ifa of the Yoruba, Odomankoma of the Akan, Chinnamasta of Indus Kush, etc.

The other spiritual vehicle is the organ system wherein resides the "seeds" of the individual forces that are responsible for the actualization of the types of things that are willed to be manifested by the second sphere. This part of the spirit is called the Shekem by the Kamitians, and Shekinah by the Canaanites. Herein resides Binah, the third sphere of the Tree of Life, and the Deities Seker(t) of the Kamitians, Kali of Indus Kush, Babalu Aye of the Yorubas, Kalunga of the Bantus, etc.

These two, the second and third divisions of the Spirit (in the World, as in Man), the Will, and the Power part of the spirit interact with each other in the manner of "creative organs" to bring into manifestation, and to affect all things, and events in/as the world. Together with the first division of the spirit, the Ba, they form the great Divine Trinity, which in the Kabalistical tradition of Canaan is called the Neshamah.

The Great Divine Trinity:

1 **The Ba (Yechidah):** The World Soul in which all things dwell as integral parts of the One Divine Being.

2 **The Khu (Chiah):** The Universal Divine Will which initiates the manifestation of each thing, and event. It appoints to each thing its place in time and space.

3 **The Shekhem (Shekinah):** The Universal Power which carries to physical manifestation the dictates of the Universal Divine Will through its 50 units of power,- the Beni Alohim, or the 50 Gates of Binah, as they are called in the Canaanite Kabbalistical tradition; and the 50 Oarsmen of the boat of Ausar in the Sirius star, as they are called in the Kamitian system; or the 50 Garlands, or skulls of the necklace of Kali as they are called in Indus Kush; or the 50 matrikas (wombs, little mothers) of the body of the Great Mother Kundalini, or Kundala.

3. **THE UPPER YETZIRAH** is the third level in the graduated densification of energy/matter toward physical manifestation. Each of the two "building elements" of the preceding stratum, Briah, divide themselves to create four "building elements," which enable the manifestations of *four great spiritual bodies*. Although they are all referred by one common name, they are the *spirits of the four great kingdoms on earth*,- the Mineral, Vegetal, Animal, and Human. Each of these spiritual vehicles serves as the unifying body for all of its members. When a person is able to bring his/her consciousness to this level, the experience of oneness with all other humans is achieved, for the fact that we are all integral parts of the Whole represented by the spirit of the Human Kingdom in the plane of Yetzirah. The division of the spirit at this level is called the Ab by the Kamitians, Upper Ruach by the Canaanites, Okra or Nkra by the Akans, Utiwemuntu by the Bantu, etc. In addition, this part of the spirit links the "thinking principles" in Man with the "four-fold" organizing principles in the world, serving thus as an intuitive means of discovering the four-fold organizations in nature.

Herein reside the fourth, fifth, and sixth spheres of the Tree with their respective Deities. Because of their presence, this part of the spirit provides order in the manifestation of events in the world.

4. **THE LOWER YETZIRAH** is the Canaanite name for the fourth stratum of energy/matter differentiation of the Objective plane. Herein dwells the 7th sphere of the Tree, in relation to which the four building "elements" of the preceding plane are divided into eight building elements, and spiritual vehicles which serve as the "Families" classification set of species. These, in relation to the species creating sphere,- Hod, are further divided into 16, 32, 64,

and 256 sets of spiritual vehicles². These latter "elements" contain the programs, or patterns, upon which are based the species of things or events in the world. Also found here is the ninth sphere in relation to which is generated the vehicle that defines each thing, or event as an individuated spiritual existence. This individuated spirit is called a "Ka" in the Kamitian tradition. The division of the spirit that contains all of these spheres (7th, 8th, and 9th) with their respective Deities is called the Sahu by the Kamitians, the Lower Ruach by the Canaanites, the Amandhla by the Bantu, and the Iye by the Yoruba.

The Phenomenal Plane

5. ASHIAH is the name given to the fifth and lower stratum of the organization of the Objective plane. At its densest point, it involves the physical molecules, and on the subtlest, it is made up of energies and substances that have to be classed as physical, yet are subtler than anything thus found by western scientists. This subtle aspect of Ashiah is called in the occult tradition of Europe the Astral Light. In the Astral division of Ashiah dwells the sixth division of the spirit which was called the Khaibit by the Kamitians, the Nephesh by the Canaanites, the Ojiji by the Yorubas, the Sumsum by the Akans, the Pranayama Kosha, or Linga Sarira by the Hindus, the Isitunsi by the Bantu, and the Astral body, or etheric double of European occultism. This part of the spirit is the "life vehicle" of the physical body. It is that which makes a person "live" on Earth. It is the seat of all physical forces, sensations, desires, emotions, and motivations of the person. I.e., all psychical and physical movement. It is that which breathes and lives on oxygen within the physical existences. Without this part of the spirit, physical bodies are nothing but lifeless shells. The Astral division of the spirit is under the jurisdiction of the Deities Ra, and Geb of the Kamitian tradition, and the Kundalini force of Indus Kush.

In the lower half of Ashiah, where we find the atomic, and molecular organization of physical matter. The part of the spirit dwelling on this plane is the well known physical body, which is called the Khab by the Kamitians, and Guph by the Canaanites. It must be noted that in traditional African metaphysics there is no distinction made between the physical, and Man's higher bodies.

2. These organizing factors are the basis of the units composing oracles.

I.e., the physical body is considered an integral part of the spirit, - its densest component.

The failure to realize that Man has seven, and not one body, and that all things have a spirit, is one of the major causes of people's stagnation, and errors - both in thought and action. An integral summary of the above will further elucidate the purpose of each division of the spirit, and their relation to each other and the whole.

1st division of the spirit: The *seat of Consciousness and Identity*. The true ego of Being.

2nd and 3rd divisions: The *creative organs of Being*. The Will, and the Spiritual realization power, respectively. Note that while the Will is the faculty of potential action, the Spiritual Power is the vehicle for the actualization of the actions.

4th division: The *administrative organs of Being*. Once the manifestations are set in motion by the three preceding faculties, the fourth division of the spirit programs them with the "laws" that will enable them to achieve their respective goals without violating each other's sphere of interest, as all manifestations occur for the sake of the One Being of which they are parts, and not for, and of themselves.

5th division: The *specializing organs of Being*. It is here that manifestations acquire the spiritual qualities that will distinguish them into families, and separate existences.

6th division: The *motive power of Being*. It is here that each manifested thing receives its breath of life (if "living"), or electromagnetic motive force (if "non-living") to enable it to act upon the physical plane.

7th division: It is here that each manifestation is finally segregated into an *individual existence*. This is achieved by receiving a physical body which separates each thing in time and space.

THE STEP BY STEP MANIFESTATION OF SUBJECTIVE BEING

The First Manifestation

The very first differentiation of energy/matter which in the Subjective Realm subsists as a homogeneous and undifferentiated vibration-'ng(K)'-is carried out by Neter's projection of the sound 'Au' into it. It creates the first manifestation, in which

consciousness looks back into the Subjective Realm and becomes aware of its original and true essential qualities; that it is eternal and infinite, i.e., temporally and spatially unlimited. In popular literature, this quality of Subjective Being is called "Omnipresence." It must be noted that the "Om" in the word is derived from the heka (mantra, word of power) "Aung" that was formed when Subjective Being projected the sound "Au" into the midst of the undifferentiated energy/matter vibrating as the homogeneous sound "ng(k)." This sound incidentally, is hieroglyphically represented by the so called Aunk cross. This sound, in the Indus Valley tradition is called "Nada," which is kin to the Spanish term "nada" which holds the same meaning,- "nothing." I write it "ng(k)" to signal that it could be rendered either as "ng," or "nk" because "k," and "g" are variant sounds of the same diction principle. Where "k" is used in one language, "g" takes it place in cognate terms. E.g., the English "know," the Greek "Gnosis," and the Sanskrit "Gnana" (variant of Jnana, Ajna).

The Second Manifestation

Neter projects the sound "Hu" into the undifferentiated "ng(K)" and gives rise to the second manifestation. It too looks back to the Subjective Realm, and becomes aware of another of its essential qualities. Here Subjective Being, dwelling in the Objective Realm becomes aware of the fact that as its energy/matter is essentially unconditioned, and undifferentiated it (Being) can will it to assume any conceivable form. This aspect of the knowledge of Self is the basis of Omniscience (infinite knowledge,- Omni, infinite, science, to know).

The Third Manifestation

Neter projects the sound "Kri" into the undifferentiated "ng(k)" and gives rise to the third manifestation. It too looks back into the Subjective Realm and becomes aware of another of its essential qualities. It becomes aware that as its energy/matter is essentially unconditioned and undifferentiated, it (the energy/matter) can realize anything that is willed for it to become. Thus Subjective Being realizes that it is unlimited power of creativity. I.e., it is Omnipotent.

Thus the first three objectifications of Subjective Being is the awareness of its true nature. These three objectifications of the essential attributes of Subjective Being forms the first three spheres of a cosmogonical diagram known as the Tree of Life.

Subjective Being acts through the second and third manifestations,- the infinite Will, and the Unlimited creative power to give rise to the next set of three manifestations. We must note that up to this point, all that has been brought forth is the knowledge of Self, and the creative vehicles of Neter.

The fourth Manifestation

Neter projects the sound 'Shri' into the Nada ("ng(k)") to give rise to the fourth manifestation. For the first time, Neter turns its attention to the things that are to be made. In respect to the making of things, its first act is to look, again into the Subjective Realm, the source of its Being, from which it realizes that all things will be modifications of the One Being, -the one consciousness, and the one energy/matter rooted in the Subjective Realm. This first thought about things, will therefore be the ruling principle of their existence. This fact is later elaborated into the principles of Law, Order, and Love (Maat),- the guarantors of Oneness in the lower world.

The Fifth Manifestation

Neter projects the sound 'Hlri' into the Nada to give rise to the fifth manifestation. Thoughts are once more about things. This time, for the first time, Neter looks outward to the world to come, and focuses on the requirements for experience. Where there is Oneness, there is aloneness, and no experience. No living. Thus, in order to live, the one Being must be "broken" into myriads of beings. The underlying substance of all forms, which sounded to the homogeneous "Ng," of "Nk," must scintillate in all colors of the sound

spectrum. So, Neter becomes aware of the fact that the existence of the world depends on their being differences and opposition. It here guarantees them.

The Sixth Manifestation

Neter projects the sound 'Hri' into the Nada to give rise to the sixth manifestation. Neter looks, first back into the Subjective Realm, and next, outward, and becomes aware that a balance must exist between, the principle of oneness of the fourth manifestation, and that of opposition of the fifth. It realizes that to live safely and effectively it must be in the world, but not of it. Or, Be of the Subjective, but not in it. This is the foundation of the Law of Equilibrium.

What has now been brought forth are the Laws that will govern the earthly manifestations of Neter. Three more spheres have now been added to the Tree of Life.

Acting through its creative vehicles, the second and third spheres, according to the laws carried out through the fourth to sixth manifestations, Neter creates the next set of three manifestations.

The Seventh Manifestation

Neter projects the sound 'Kli' into the infinite ocean of undifferentiated energy/matter to give rise to the seventh manifestation. Looking backward at the Subjective Realm, through the fourth, and previous manifestations it realizes that beyond the external differences between things there must be an emphasis of their interdependence, and relation,- i.e., a recognition of their oneness in the midst of their differences. This fact is later elaborated into the grouping of things by families. It gives rise to metaphor and harmony.

The Eighth Manifestation

Neter projects the sound 'Ai' into the infinite no-thingness to give rise to the eighth manifestation. Like the fifth, it looks forward into the world emphasizing the differences between things by focusing on their external differences. The groupings of the preceding sphere are broken into pieces. Here are created the species of things.

The Ninth Manifestation

Neter projects the sound 'Va' into the infinite (surfaceless, bottomless) Waters of Life,- "Ng(k)," Nada, undifferentiated energy/matter to give rise to the ninth manifestation. Acting on 'Ngk', "Va" creates a mirror-like watery manifestation that captures (reflects) all that is exposed to it. It thus integrates all of the preceding manifestations that they may each play their respective role in the generation of individual physical existences. The ninth manifestation is known as the "Mother of all Living things." It gathers the physical elements and forces, and coordinates the forces of the other eight manifestations to give rise to physical things. Although the physical plane is considered the tenth manifestation, the Kamitian Tree of Life, correctly, limits the spheres to nine, as the 10th sphere is an effect, while the preceding nine are parts of the causative mechanism. The Tree of Life, in the Kamitian tradition is considered under various headings. One of them is the Paut Neteru.

Thus does the Subjective Being proceed from No-thingness to physical thingness. Nine emanations integrate its sphere of Being, "0," with its sphere of Living, "10."

THE PAUT NETERU (TREE OF LIFE)

(0)

The greatest error that can be made at this point is to interpret the above diagram as an arbitrarily created conceptual, or theoretical explanation of the ordering system underlying physical reality. It represents the nine emanations that are the shaping factors of all physical structures, and events. They underlie, direct, and integrate all physical realities,- from the subtlest sub-electronic forces, to the complex of galaxies, to the organ systems making up the physical body of Man . . . from the most primitive instinct of a slime mold to the most divine manifestation in the spirit of Man. They are what the Kamitians called the Neteru; Yorubas call, the Orishas, and Westerners have translated as deities, Archangels, angels, etc.

It is very important to understand, that contrary to popular opinion, cosmology does not attempt to explain how physical things, on the atomic and molecular levels, come into being. It concentrates on the coming into being of the metaphysical factors that will function as the vehicles through which the physical things will come into existence, as well as the means of regulating their structural and functional components, hence external behavior. In other words, a cosmogony deals with the "generation" (from "gonus") of a "system." Properly understood, the terms "System" and "Cosmos" are synonymous; an assemblage, or combination of things, or parts working in unity, as a whole, cooperating to carry out the same function, to achieve the same goal, etc.

It was said that the emanations, one to nine, are the parts of a "system" through which Subjective Being, - represented by zero (the absence of things, but not of Being) creates, and administrates physical reality, "10." These nine "DEITIES" - The PAUT NETERU- compose the "organs systems" making up the spiritual bodies of all physical things. They link them with their source of being and subsistence, and direct their functions. African religion, better comprehended as a Way of Life, is based on the understanding of the functioning of these nine metaphysical vessels of creation, and administration. As they are shaping and governing functions, their activities carry the force of law. For example, you wouldn't attempt to feed on hay because the functions that govern your digestive mechanism can't digest it. It is in this manner that the attributes of the Deities (Neteru, Orishas, etc.) represent the laws governing our lives on Earth. Observance of these laws, allows them to fully bring forth their powers through our being. According to our chronological, age, state of health, and level of spiritual development, the manifestation of these "powers" will range from our basest urges, to the commonly evolved "mental abilities," to the psychical abilities held by a few, to the attainment of divine perfection, i.e., Man-Godhood on Earth.

Now we can fully take up the question of Monotheism versus Polytheism. for the longest time Westerners have held 1) that Monotheism -the belief that there is only one God- is superior to Polytheism -the belief in more than one God. 2) that Monotheism first appeared in the world with the Hebrews, and that 3) Monotheism represents a higher evolutionary understanding of divine reality than Polytheism. The latter was explicitly, or implicitly

cited as evidence for the supposed low level of evolutionary attainment of Blacks. If you read between the lines, you will see that all that in historical, anthropological, and other literature is referred to as "modern, progressive, evolved, etc.," correspond to Western cultural expressions. And what is referred to as "primitive, unevolved, etc.," correspond to Nonwestern cultural expressions.

First of all, the above shows clearly that the religion of Blacks cannot be classified as polytheistic, nor as monotheistic, as these terms are commonly understood. From the earliest appearance of Western man on the historical scene (2500 B.C.), until the end of the nineteenth century A.D., his thinking and perception of reality for the most part can be described as "linear." That is to say that all manifestations are the result of "single things acting upon single things." As western science took a turn for the better toward the end of the nineteenth century A.D., it began to become more and more apparent that all manifestations in the world were the expression of multiple things coordinating their functions. This "new" insight received the names of Gestalt theory, Field theory, Systems theory, and dethroned the belief, and expectation of finding any thing that was not composed of a multiplicity of co-acting components. It ushered in the host of "fantastic" scientific technologies that make up today's world,- computers, rockets, bioengineering, etc. A study of all of these "new" Systems theories will show that they are all pale versions of the "Systems theories" (Cosmogonies) developed by Nonwesterners in antiquity, and contemporary Africa.

The question is begging. Why did it take Westerners so long -at least 6000 years behind Blacks- to arrive at this realization? In previous chapters we detailed the facts concerning Western man's polarization in the left hemisphere of the brain. Now this part of the brain is only capable of linking sequentially following units. I.e., it is incapable of "Systems thinking." That is a task that belongs to the right side of the brain with its unlimited integrative capability. Western people would look, for example, at seven integrated sets of one to one relationships and see seven separate sets of one to one relationships. On the other hand, Blacks, and Orientals will see one set of seven integrated subsets of one to one relationships. Polarized in the segregative part of the brain, Westerners could not integrate the host of deities of the Black pantheon. They just couldn't see how the many were integral parts of the One. This stuff about co-acting multiple factors shaping and determining each and every physical entity was way beyond them.

So they described our religious practice as "polytheistic." We must reject it for obvious reasons. And since the term Monotheism fails to convey the reality that the One God functions (lives) through a plurality of integral parts, it too must be rejected. In this book, I will use my coinages, "Systheism," and "Syntheism." Both "syn," and "sys" are variants of the same prefix carrying the basic meaning of a "whole compounded of several parts." Sys is the root of System, and syn, that of Synthesis,- both analogous terms.

It was said that the nine emanations direct the behavior of physical things. In the case of humans, this depends on our living in harmony with the laws governing the functioning of the deities. This is due to man's freedom of will to determine the quality of his destiny. Other creatures, not possessing this faculty of free will are obligated to follow. In future chapters we will see how Nonwesterners, in following the laws of these emanations operating within their being, achieve personal and social harmony by living a unitary, or systematic life, while Westerners, in spite of the claim that they believe in one God, live polytheistically, that is, a way of life in which the various personal and social interests are not integrated. *Universal in lip-service, pluriversal in living.*

It must be understood that the greatest evil in life, as understood by Blacks, was the lack of integration in thinking; lack of integration between beliefs, feelings, and actions; between the various social interests, etc. Integration in these areas was achieved through their cosmogony and its application to daily living, and spiritual practices. Our religion had to be integrable with science, government, economics, medicine, education, and every human institution. It had to integrate all areas of our lives. This idea of Unitarianism, extremely important and highly elevated in our culture, was reinterpreted by Westerners (Europeans, and Semites) when they adopted our culture, according to their "thingish" way of thinking. By thingish thinking is meant the reduction of abstract realities to sense perceptions. While "one" denotes "singularity" (one apple, one book, etc.), "Unity" denotes the *abstract tie* between a plurality of things. Thus the belief in, and living as the "Unitarian" God was reduced to the belief in the one God, and the disintegrative way of living. Once more we must see that this "thingish," or materialistic way of thinking belongs to the left side of the brain. Relational thinking, which is needed to understand the Black understanding of God and religion, is the property of the right side of the brain.

Once the true nature, purpose, and functions of a cosmogony is fully understood it will be realized that it is to religion and all life "sciences," what mathematics is to science, and the periodical table of elements is to chemistry,- and more. The great strides in progress made by Western scientists with the appearance of their "Systems theories," which made their prior progress look seemingly slow by comparison, must be equated with the great strides in progress made by Blacks when they were founding civilization, while Westerners at the time were still in the paleolithic situation.

AN ANALYSIS OF THE COSMOGONICAL SYSTEM

THE FIRST ACT OF MANIFESTATION

THE SUPREME BEING BRINGS ITSELF OUT OF THE SUBJECTIVE STATE

Before creation can begin, the Supreme Being must first make objective its qualities of Being ("Sphere" 0). Note that in the Subjective state there cannot even be so much as a single thought. The very first manifestation of a thought is already a process of objectification. The only consciousness that there is, is that of "consciousness being aware that it is conscious." Creation, then is preceded by a process whereby the Supreme Being brings itself into manifestation.

The first act of manifestation, which corresponds to the first sphere of the Tree of Life, Kether, is the Supreme Being's identification with the unlimited potential, and unlimited presence in space (infiniteness), and time (eternalness) of the Subjective Realm. I.e., The Supreme Being brings forth the awareness that its identity is the capability of being whatever it chooses to be, and that it is immortal, and eternal.

THE SECOND ACT OF MANIFESTATION

THE SUPREME BEING BRINGS FORTH ITS CREATIVE FACULTIES

The second act of manifestation is the Supreme Being's bringing forth of its creative faculties. These are the Will, and its Spiritual Power.

The Divine Will, the second sphere of the Tree of Life, is the faculty that indicates what will take place, and is thus the initiator of creative events. At this level, there is the awareness that as the energy/matter from which all things are made is an eternal and

infinite continuum, no part of it can have a separate existence in time or space. Therefore, all things are parts of the whole and are related to, and interdependent upon each other. From another perspective, this states that no thing has a quality in itself. That qualities are the result of a thing's relationship to the whole, and to other things. As we shall see later in this book, that the intuitive and automatic operation of this principle in Man's thinking is the foundation of wisdom. The creative faculty of the Supreme Being at the second sphere is therefore the Divine Wisdom. It is omniscient. It is also realized that the will is infinite in its potential to initiate activities, as the energy/matter which will carry them out is essentially unlimited.

The Spiritual Power, the third Sphere, like the second sphere, looks back to the Subjective Realm, and the essential state of Being and realizes that as the energy/matter that is the basis of all creations is essentially unlimited, there are no limitations to its ability to carry out what is willed by the second sphere. It is the Divine Omnipotence. Note that the Will is the potential, while the spiritual power is the actualizer or producer of the effect in the world.

THE SIX ACTS OF CREATION

Now that the Supreme Being has brought itself and its creative faculties out of the Subjective Realm, the process of creation can begin. But before the physical creatures can be created, there is a need for the creation of a metaphysical system of government or directors, and metaphysical entities that will carry out the work of administering the physical world.

THE CREATION OF THE CELESTIAL GOVERNMENT

THE FIRST ACT OF CREATION

The first act of creation, which corresponds to the 4th sphere of the Tree of Life, is the framing of the laws reflecting the workings of the forces of the third sphere. These forces are deployed through a structure that allocates to all things its place in time, and space for the purpose of maintaining order in the world. The Tree of Life, the canons of Divine Laws, the Cosmogonies,

Mandalas etc. are all representations of this grand structure. It corresponds to the fourth sphere of the Tree.

It is important to realize that "order" is not merely "a fixed plan," or "a regular series," or "a law of arrangement," etc. Where there is no more than one entity there can be no order. And where a number of things are not related or interdependent, there is, implicitly no order, or the possibility thereof. *"Order" is essentially dependent on the existence of the interdependence (oneness) between things.* It is the means of safeguarding their mutual dependence. The full import of this will be realized when full consideration is given to the fact that the goal of creation is the division of a whole (the one energy/matter) into an infinitude of parts (things).

THE SECOND ACT OF CREATION

Next is created the means of enforcing Order (the 5th sphere). No thing can encroach upon another. Yet, although things are protected, the chief interest is the preservation of the whole.

THE THIRD ACT OF CREATION

Next is created the faculty through which the metaphysical workers will be coordinated in their activities to bring forth and administrate the physical creatures. This is the work of the 6th sphere. The work of coordination is based upon the Canon of the 4th sphere. Its application to specific situations is communicated to the 6th sphere by the second sphere.

THE CREATION OF THE CELESTIAL WORKERS

Now that the means of establishing and maintaining order are in place the Supreme Being proceeds to create the faculties/Deities that are directly in charge of the work of creating the physical entities.

THE FOURTH ACT OF CREATION

Next is created the faculty through which the designs of the various species of beings will take place. What is actually achieved at this point, the 7th sphere, is an image of the type of thing that is to be created. E.g., the species tiger. The emphasis of our

understanding must be placed on the "ordering" function of images. When we imagine something, although we may not realize it, we are organizing the shaping forces of things, or events to a defined objective. The imaginative faculty takes the set of forces governing a particular set of events or things and organizes it into a concrete objective (image). It is the great "celestial designer", inventor, artist, Goddess of beauty, harmony, etc.

THE FIFTH ACT OF CREATION

In the preceding stage, we arrived at the design of the species of things. But as we know, species are broken down into individual existences. This faculty, the 8th sphere, has the task of making the distinctions that will distinguish each member of a species from another, by creating variations amongst the parts of things, and events.

THE SIXTH ACT OF CREATION

The next faculty created, the 9th sphere, uses all of the preceding shaping factors to make a vehicle that will serve to coordinate physical energy matter into the physical thing or event. This vehicle is the soul of the individual thing or event. In the Kamitic tradition it is called the "Ka," and in the Hindu tradition, the "Jivan Atma." Because this faculty is directly in charge of the organization of physical energy/matter into the creature, it is referred to as "the Mother Goddess creator of all the living, and of the Earth" (Auset, Yemaya, Nana Esse etc.).

The preceding exposition of the creative process is one of the best examples of the claim by kabalists that the mythologies and religious scriptures of nations cannot be fully understood without the knowledge of Kabala. The above six acts, or stages of creation correspond to the original and true understanding that was misrepresented by the biblical version, as the *"six days of creation."* We must also note that in mythological symbolism, the will (2nd sphere) is personified as a male, and the spiritual power (3rd sphere), as a female. This is to be understood by the fact that we are free to express our will to do something at anytime in the same manner that a male is always ready to impregnate a female. Our spiritual power, however, is only receptive to being impregnated at fixed recurring points in a cycle. E.g., women can only be

impregnated at the midpoint between menstruations. Thus we can paraphrase the second act of manifestation-the Supreme Being's bringing forth of its creative faculties- as the Supreme Being's bringing forth of its 'generative organs'. And because Man is made in the creative likeness of God, (Genesis 1:26), i.e., with the same creative faculties, Genesis 1:27 informs us that "God created man in his own image, in the image of God he created him; *male and female* he created them" (emphasis mine). There are many factors that prove that the "male and female" correspond to the Divine Will (2nd sphere), and the Divine spiritual power (sphere 3).

In the original Hebraic version of the bible, the word translated as God is "ALHM" ("Elohim"). This word is composed of "El," the Canaanite name for God, and "Him," a suffix indicating plurality. This is why the God speaking at Genesis 1:26 says "let *us* make Man in *our* image, in *our* likeness." The author of this text has simply personified the two creative faculties of God.

AN ANALYSIS OF THE PROCESS OF CREATION

The Creative Activity of the fourth sphere

According to the Tree of Life cosmogonical system, the act of creation is carried out by the first sphere, using its two creative faculties (spheres 2 and 3). The first act of creation, which occurs at the fourth sphere, is the framing of the law embodying the activities of the set of metaphysical forces of the third sphere, which act as the structural framework upon which is built the physical world and each thing in the world. It would be appropriate, according to the demands of the order for presenting the details of cosmology, to embark at this point upon an explanation of the blueprint of the entire physical realm. Such a task requires certain supportive information that cannot be given at this time in the discourse. I will therefore explain the blueprint of creation through one of its minor applications. Let's consider the creation of the animal kingdom.

Animals, like all other members of the world-spirits, deities, humans, vegetables, and minerals- are modifications of the universal energy/matter and pure consciousness of the Subjective Realm. This oneness of origin, we said earlier, is the basis of order. According to the cosmogonical forces operating in the third sphere, and framed into law at the fourth sphere, all animals are parts of a circle of manifestation that encompasses all modes of forces making up living beings. When the universal Subjective energy/matter

differentiates itself to bring forth living things, it dualizes itself into two modes of energy. For the sake of simplicity I will for now simplify the explanation by skipping certain steps and details, and state that one of the forces is the source of the thermal (heat) factor (Shu) that determines the level of biochemical activities. The other force is the source of the hydration (water) factor (Tefnut) which represents the universal medium in which all living things dwell¹. The upper and lower boundaries of the thermal factor for specific living forms are relatively denoted as "hot," and "cold." The upper and lower boundaries of the hydration of bodies are denoted as "moist," and "dry." Meditation on the subject will show that all biological activities can be reduced and explained by these two modalities². The interaction of these two factors produces the four modalities underlying all manifestations in the world. They have been symbolized as the four elements of Alchemy.

1. Water is cold and moist; Water accumulates in bodies as they cool down.
2. As bodies begin to heat up, and have not yet lost their humidity, they are metaphorized as "air" (hot & moist).
3. When the temperature rises to the upper range, and bodies lose their humidity, they are metaphorized as "fire" (hot & dry).
4. When they begin to cool down, but have not yet regained their moisture, they are metaphorized as "earth" (cold & dry).

All bodies go through these changes daily with the rise and fall of temperature that follows the sun. The same happens during the course of the year. Besides being applicable to the cyclical changes that life forms go through, these four "elements" are also used as classification sets for the four fundamental types of all

-
1. The life dwelling in each cell making up all living things actually lives in water.
 2. This is the basis of Chinese medical theory.

manifestations. Thus there are four fundamental types or "temperaments (temperature types)" of animals, vegetables, minerals, and humans. Applied to the types of animals we get the following:

Ferocious

Predators: Fiery (hot/dry); tigers, lions, etc. Carnivores.

Non-predators: Airy (hot/moist); rhinoceros, elephants, etc.

Vegetarians.

Non-ferocious

Passive: Watery (cold/moist); sheep, doves, etc. vegetarians.

Non-passive: Earthy (cold/dry); hyenas, jackals, buzzards.

Scavengers, Omnivores.

To summarize, in the creation of animals, what is achieved at the fourth sphere is the creation of the four "temperaments" of the animal kingdom. As each of these symbols of temperaments (the elements) ties a vast number of types of beings together, across lines of genre and kingdoms, the activity of the 4th sphere is of a *synthetical* and *analogical* nature.

The Creative Activities of the Fifth Sphere

The next step in the creative process, which occurs in the fifth sphere, is the separation of the beings of each temperamental set. As they are held together through the "*analogs*" of the 4th sphere, their separation (lysis) is called "*analysis*." We will later have a full discussion on the incorrect views that are popularly held about this mental process, as well as its opposite- synthesis. Here at the 5th sphere, fiery animals are analyzed into the various genre of predators (feline - the general class for all types of cats; canine, etc.). The same is done for the other temperaments.

The Creative Activity of the Seventh Sphere

We must pay particular attention to the fact that the creative acts of the 4th and 5th spheres are on the abstract plane. Images cannot be formed of "fiery" or "earthy" animals, or plants, etc. Neither can they be formed of "felines" or "bovines." It is at the 7th sphere that we arrive at the images of the members of the

general sets of creatures. In place of felines, for example, now we have tigers, angoras, leopards, etc.

The Creative Activity of the Eighth Sphere

In the 8th sphere, dogs, horses, tigers, etc. are distinguished into specific dogs, etc. Here we get the distinctions that set Lassie apart from the collie matrix created in the 7th sphere.

We can summarize the process of creation in a most far reaching manner which will greatly reward the reader's efforts to memorize and understand:

Sphere Cosmogonical Correspondence

0	According to my unlimited potential of Being (unlimited resources)
1	<i>I, God, (or Man, the likeness of God!)</i>
2	<i>Will</i>
3	<i>Make (with my spiritual power)</i>
4	According to the divine blueprint (Laws)
5	which will be enforced
6	assisted by a centrally located coordinator
7	assisted by a designer (imagery)
8	assisted by a technician
9	<i>through my divine womb</i>
10	<i>a world, worldly events, etc.</i>

And

0	The infinite
1	Manifests its Self, and
2,3	its creative faculties, and
4,5,6	Makes a celestial government, to administrate
7,8,9	the celestial workers which will shape
10	the world.

And

0	No things, which implies
1	Unity
2,3	makes

- 10 an infinitude of things
- which are in unity
- 4 through a set of reciprocal, and interdependent
- factors.
- 5 Which relations are enforced
- 6 and maintained through coordination of
- 7,8,9 the celestial workers.

THE DUALITY PRINCIPLE IN COSMOGONY

Let's recall the fact that the entire expanse of reality can be divided into two all-comprehensive divisions: the Subjective and the Objective Realms. The Subjective Realm corresponds to the Supreme Being's essential or unmodified nature, while the Objective corresponds to its conditioned or modified nature. I.e., the infinite, eternal source of all things, versus the infinite, time conditioned plane wherein things dwell. Whatever was, is, and shall be must fall into one of these two, all-comprehensive categories. Thus, at the most fundamental level of classification, we find an indivisible duality of Being. By indivisible duality (usually contracted to "individuality"), it is obviously meant that the two modes of being are complementary halves.

This duality manifests itself in all areas, and on all levels of being as a major organizing force. In order to understand God, ourselves, the world, and life, we must be able to identify, understand, and live in harmony with the dualizing shaping forces of Life.

In the Subjective Realm the duality manifests itself, on one hand, as Consciousness/Will (two polarities of the same reality), and on the other, as energy/matter. The former is referred to in the Kabalistical tradition as Ain, and Amen in the Kamitian. The latter

is Soph, and Nu/Nut in the Kabalistical, and the Kamitian traditions respectively.

The Dualization of Subjective Being

Consciousness
Will
Ain
Amen

Matter
Energy
Soph
Nu/Nut

The Dualization of Objective Being

In the Objective Realm we also have two fundamental divisions. The noumenal or metaphysical planes wherein dwell the Deities (spheres 1 - 9), on one hand, and on the other, the phenomenal or physical realm (sphere 10).

In order to make this information useful in our daily lives we must first note that both the Subjective and Objective Realms are *indivisible halves* of Absolute Being. We saw that without the Objective Realm, with all of its limitations, the Supreme Being cannot have experience. This enables us to reject such pseudo spiritual teachings that deny the validity of objective existence, with its phenomenal manifestations. They are there to give the Supreme Being experience.

What is important, missed by the pseudo sages, is the maintenance of the equilibrium between the dualities on their respective levels. The *Doctrine of Equilibrium*, we will see, is the major theme of cosmology, The Tree of Life, and of Living. These two fundamental divisions of our Being, the Subjective and Objective factors reside in our being as primordial driving forces. The failure to satisfy either of them, as the Subjective is denied in the West, and the Objective, by Hinduism (Aryanized yogic philosophy), leads to serious problems in life.

THE COMPLEMENTARY DUALITIES ON THE TREE OF LIFE

In order to use the Tree of Life as a means of ordering our thinking and our living, it is necessary to understand the complementary relations between certain sets of spheres.

The 0 - 10 Complementary Relation

0 and sphere 10 obviously represent the two extreme polarities of the expanse of reality. They stand in relation to each other as

<u>SOURCE</u>	<u>GOAL</u>
infinite potential	infinite beings
explicit oneness	implicit oneness
freedom	limitation
NU	Geb

The 1- 9 Complementary Relation

While sphere 1 looks back to the Subjective Realm and identifies with the infinite potential of being of the unstructured energy/matter, sphere 9, as the soul of the individual physical creations identifies with each physical being. We shall later see that this duality is the basis of individuation of human consciousness into Self and Person, or Higher and lower Selves, or Alter Ego and Ego, Selflessness and selfishness that has not escaped the attention of many spiritualists, and psychologists. In the Kamitic tradition, it is the well known complement of Ausar and Auset (Osiris and Isis).

The 2 - 8 Complementary Relation

While sphere 2 (the wisdom faculty) is concerned with the interdependence and relationships (unity) between things, and their place in time and space, sphere 8 (the linear logical faculty) is concerned with creating differentiations (disunity) between members of the same species, by varying their parts. The former is integrative while the latter is segregative. In addition, the thought processes of sphere 2 are purely abstract, while that of sphere 8 is concrete.

The 3 - 7 Complementary Relation

The subtle particles (atoms, electrons, etc.) making up all things are in a state of constant vibration, western science informs us. And all vibrations generate sound waves in one medium or another. We can paraphrase the foregoing by stating that sound waves underlie the structure of all things and events. This has been known by African spiritual scientists since prehistoric times, who have taught that the third sphere is the vehicle from where is generated the sound waves that underlie (create, maintain, and destroy) the structure of all things and events in the world. These sounds are the words of power (mantras, hekau, etc.) of spiritual cultures. Words of power have a special relationship with the faculty of imagination (the 7th sphere). As anyone who has successfully worked on mantras knows, chanting them results in the filling of the sphere of awareness with a certain set of images that are specific to each mantra. In other words, before these special sound waves can effect their desired objectives, they must be translated into the images that literally serve as matrices for the physical manifestations. This relationship between the 3rd and 7th spheres, has led dabblers into the esoteric to mistakenly believe that the imagination, unaided by words of power, can effect changes in the physical plane. "Nurture a clear image of what you want with faith, and in time you will have it," many books have told us. The half truth in this belief is the reason it works only some of the time. The truth regarding magic, success, and failure is a very simple one. *All events, talents, etc. in a person's life are created by the sound waves (mantras, hekau, words of power) that are in an active state.* Where these sound wave forms are in a latent state, then there will be the absence of the talents that they govern. The nurturing of an image without awakening its associated sound wave, is like trying to incubate an unfertilized egg. The subject is a rich one, and we will return to it many times in the course of this book.

The 4 - 6 Complementary Relation

We have seen that the fourth sphere corresponds to the blueprint upon which the world and all physical events are built. The sixth sphere corresponds to the faculty that governs the metaphysical beings (spheres 7, 8, and 9) that are in charge of creating physical reality, and maintaining order within it, according to the blueprint of the fourth sphere.

The 5th Sphere

The Tree of Life shows that the creative process of the world is based on a plan in which all the things in the world are modifications of one and the same material substance and Being. Although they are different in their needs, mode of existence, and appearance, they are all parts of *One Whole*. The equilibrium between this oneness at the top and difference on the bottom, must be maintained. This is the function of the fifth sphere. In order to carry out this mediating role, the 5th sphere must be unrelated to all others. It is thus posited at the exact center of the entire span of reality (0,1,2,3,4) 5 (6,7,8,9,10).

THE COSMOLOGICAL VIEW OF MAN

OR

THE SPIRITUAL ANATOMY OF MAN

Everything stated thus far regarding cosmology is of no value, unless it can be translated into a means of giving Man an understanding of Self and serve as a guide to correct living. "Self Knowledge," it will be seen, is the beginning and end of all knowledge.

Who and what is man can only be understood by reference to the purpose of the creation of the world. Earlier we learned that the essential state of the Supreme Being is one in which Its energy/matter is not differentiated into things. Hence, God lacks experience in Its essential state. God modifies Its essence into the World as the means through which to have experience. *Although there is an infinitude of creatures making up the world, only one of them was created for the express purpose of serving as the vehicle through which God can transfer Its consciousness into, and realize the fullness of its Being. This creature is Man.* The knowledge of this spiritual fact has been expressed in many of the scriptures of the world. In the Kamitian (Ancient Egyptian) scripture, *The Book of Knowing the Manifestations of Ra* (about 2800 B.C.), we come across the following statements regarding Ausar, who is the symbol of the man, or woman who has completed his/her spiritual growth, enabling God to manifest Itself in the world through him, or her:

I produced myself from primeval matter. My name is Ausars, (from) the primeval matter of primeval matter. I have succeeded in all that I have willed on earth . . . I was alone, not born were they. Not had I spit, in the form of Shu, not had I emitted Tefnut. I brought through my mouth, my own name, that is to say a word of power, and I, even I, came into being in the forms of the infinite power of being (Khepera) . . .

The same awareness is expressed in *Genesis* 1:26, which states that God makes Man in *their* own likeness. Or, as was earlier stated in this book;

The Supreme Being (and Man). 0
through Its creative organs. 1 - 9 (Paut Neteru, Deities)
creates physical realities. 10th sphere.

While the above makes a great deal of sense from a spiritual philosophical standpoint, it flies in the face of Man's common experience. If Man is made in the likeness of God, then why is this fact not evident in our daily experience? The answer is a simple one. Mankind as a whole has not completed its evolution (growth). In the same way that a three year old has the faculties of an adult in a latent state, so do the majority of people today, have their divine faculties in a dormant state. The various stages, and goal of our evolution (growth process) are shown by the Tree of Life.

We are born with spheres 10 (our physical body with its animating spirit) and 9 (the personality division of our spirit, and learning faculty) in an awakened state, and we develop from the bottom up. All of the other faculties, represented by spheres 8 to 1 are in a dormant state. In the same way that the development of our physical faculties is cued to our chronological age, so is the development of our spiritual faculties. The first 28 years of our life is spent awakening and developing the 8th and 7th spheres. These are our syllogistic logical and inventive/artistic faculties respectively. The 8th and 7th spheres, which as we saw in previous chapters, correspond to the "celestial workers," and are, therefore, the faculties that we utilize primarily in making a living (Sphere 8 = technologies, commerce, etc. Sphere 7 = scientific, and artistic invention). If the social order is enlightened, the following 21 years are devoted to the awakening of our moral and mental abstractive faculties. It will seem strange to most people to hear that the moral faculties in Man are not developed until after the 28th year of life. Yet, this is supported by conventional wisdom. What do you think will happen if the police and the armed forces in America or most nations were to be disbanded? The answer can be inferred from previous riot situations in which many otherwise "law abiding" persons have been seen, always to their dismay, in the act of stealing and vandalism. Unfortunately, most societies lack the knowledge of how to spiritually cultivate their citizens, so that the majority fails to

develop the moral part of their spirit (spheres 6, 5, and 4). We will later see that there are a great number of behavioral expressions of an immoral nature that the majority of people in the world is incapable of recognizing as such. Take for instance, the act of smoking tobacco in public which forces others to inhale gases that are well known poisons. Before the discovery of DDT, tobacco was one of the major insecticides. While you would not be permitted to even slap strangers, you are permitted to poison them in socially acceptable ways. This is one of innumerable examples of the inability of the majority of people to think on an abstract level (spheres 4, 5, & 6). They only recognize as immoral those specific examples of immorality that have been pointed out to them. On their own they cannot see that forcing others, children even, to inhale tobacco smoke is even more immoral than, let's say, slapping a stranger. If an individual is able to develop these moral faculties (spheres 4, 5, and 6), he becomes a candidate to develop the divine faculties. When an individual develops the faculty of the 3rd sphere he/she has the ability to influence events in the environment through the use of words of power. I.e., the person shares in the omnipotence of the Supreme Being, although not in the same magnitude. The second sphere faculty enables the person to intuitively understand all of life's situations. This is wisdom or omniscience. The development of the first sphere enables Man to experience the fact that his person, and that of all others, are parts of one Being. For example: Although a person's physical body is made up of billions of cells (individual creatures), it is experienced as one creature. This experience of oneness is beyond the intellectual understanding of oneness that most people hold in common. Before we can embark on a full explanation of the differences between the various stages of Man's development, we must have a full understanding of the faculties making up his spirit.

THE TREE OF LIFE AS A GUIDE TO MAN'S SPIRIT OR "MIND"

We have seen that mankind (certainly 99% of the people) has not completed its evolution. We cannot therefore understand Man by merely studying the behavior of Man through the ages. It is like arriving at conclusions about adults through the study of children. In the same way that we know that there are potentials residing in children waiting to be awakened, at the time appointed by the biological growth process, by studying adults, we know that there

are potentials in mankind, and what they are by the study of people who have evolved beyond the present level of human evolution (Sages). We also know of others, although not more evolved, who have revealed faculties not yet awakened in the majority of people (mediums, psychics, etc.). To understand Man, we must therefore begin by analyzing the faculties and behavior of those people -Sages- who have completed their evolution. We will see that all of Man's faculties can be catalogued in one of the spheres of the Tree of Life.

SPHERE FACULTY OF MAN'S SPIRIT

0 It has already been said that Man's true essential and original Being is composed of an energy/matter that is devoid of limitations. Hence, the cipher "0" symbolizes the absence of conditionings, and limitations characterizing the essential state of energy/matter, which can neither be created nor destroyed, as we know well from western science.

1 The first sphere corresponds to Man's *Self-identity*. As we are speaking of the perfected (fully evolved) Man, Her identity is with "0" (with the fact that the root, and essence of Her Being is unconditioned, and unlimited in its creative capacity). In other words, there is no identification with any personality complex that is characterized by specific human preferences (likes, dislikes, inclinations), abilities or inabilities, etc. At this level the Self-identity rises beyond sexual class, race, occupation, nationality, etc. There are no conditioned reflex patterns in the spirit that can force the individual to respond in a determined manner. In everyday life this means that the person will not be controlled by conditioned responses. He will be totally free of the control by likes, dislikes, loves, hatreds, fear, anger, and the whole host of emotions, and desires. As each personality type is a pattern of conditioned ways of thinking and emotional responses to given situations, the individual who has attained to the realization of her essential nature (0, and sphere 1) is able to change personalities as changing situations demand. Here, the Self identifies with the unstructured state of Subjective energy/matter composing the spirit at the 1st sphere level--the Ba. In the Kamitic tradition, an individual who has attained to this level of development is called an Ausar.

The ability to manifest any personality is of utmost importance. An individual succeeds when the demands and challenges of life are to be met by his *natal personality* traits. A fiery person will carry the moment if a situation demands courage, zeal, rashness, etc. But life's challenges will not always come to the fiery person through a fiery window. What would such a person do when challenges demand patience, calmness, following, etc? If the person identifies not with his natal fiery personality, but with the evolved higher *Ausarian nature*, then he will be able to assume the personality type that can best meet the situation of the moment. In other words, the individual will go through life without any limitations imposed on his Self image. This is the state of *The Great Liberation* sought by all sojourners on the spiritual path. It is obvious that what most people in the world identify as their self is not the first sphere of the Tree of Life.

- 2 The second sphere of the Tree of Life corresponds to the Will of God and of the evolved Man. In Chapter 6 we learned that all of creation is the differentiation of one and the same eternal and infinite energy/matter. Even Man's Being is an individualization of the Being of God. It follows then, that as all things are integral parts of one Being encompassing the world, *everything that a person wills to achieve must be in harmony with the Will of the whole (God). The ability to intuit the Will of God is, according to spiritual tradition, Wisdom.* We will have a great deal more to say about this. What is important here is to understand that with the fully evolved individual, what is willed is not based on personal needs or wants. The person will intuit from God the what, when, how, and why of events that are to take place in people's lives. It is the only way in which all human actions can be in harmony with each other, leading thus to peace, and prosperity. The other implication of the unlimited potential of the energy/matter that is the source of all things, is the fact that as there is no limit to what it can bring forth, there is no limit to what Man can will. One of the greatest causes of human failure is the imposition of limitations on what we can achieve in the world.
3. The third sphere of the Tree of Life corresponds to the spiritual power of God, and of the evolved Man. This is the vehicle that carries out all that is willed at the second

sphere. We must recall the fact that *the will* is nothing more than what the word denotes in everyday speech. When a person says "I will do so and so," she is expressing a possibility. Its realization depends on the means, or the power to carry the potential into actuality. We will later see how the common error of taking the will for a faculty of power is a major cause of people's failures in life. The actualizer of what is possible is the third sphere of the Tree. Residing in this sphere are 50 creative forces that are in charge of all manifestations in the world. Each one of these forces has its own specific vibratory wave and rate, and can be evoked (literally "called out") into creative activity by chanting in a state of trance. They are the "matrikas" (matrices) or "little mothers" of the Kundalini Tantric Yoga tradition of Indus Kush; the 50 oarsmen who propel the boat of Ausar; the 50 gates of life and death of Binah, -the third sphere of the Tree; the 50 Beni Aelohim (Sons of God(s) which reside in the third sphere; the 50 skulls making up the necklace of the Great Black Mother, or Kundala of the Indus Kush; and most revealing, it corresponds to the 50 single sound units making up the Kundalini (Life-Force, Ra) body in God and Man. They are the basis of all mantras or hekau (words of power). We shall see later that they are the divine forces that western historians and theologians have translated as "the Gods" of the various religions of Black people. Arthur Avalon in the *Serpent Power* states:

Each man is Shiva (a deity,-Ausar), and can attain his power to the degree of his ability to consciously realize himself as such. For various purposes the Devata (deities) are invoked. Mantra (a word of power) and Devata are one and the same . . . By practice (japa) with the mantra the presence of the Devata is invoked. Japa or repetition of the mantra is compared to the action of a man shaking a sleeper to wake him up.

The biblical claim that "Man is made in the likeness of God," is substantiated by the fact that these 50 powers, which are the sources of all events and things in the world, are shared by both God and Man. The latter, of course,

expresses these powers to a much lesser degree. As I said earlier, God and Man, like the Ocean and a drop of water, have the same creative qualities (forces), but differ quantitatively in the expression of these qualities. It must be kept in mind, however, that for the majority of people in the world this faculty with its vast powers is dormant. Its awakening is the subject of Kundalini Yoga, the 12 Hours of the Night initiation ritual of the Ra theology of Kamit, etc.

4. The fourth sphere of the Tree of Life corresponds to the seat of Man's intuitive sense of law and order. To fully understand Man's behavior *we must abandon the belief that law and order in the human world is dependent on the framing, and enforcement of rules by men.* It takes little to see that there are natural forces regulating all natural events in the world, as well as in Man's biological makeup. These forces have their seat in the fourth sphere (in the 4th division of the spirit of God and Man--the Ab) of the Tree of Life. When an individual evolves to this level, its ordering influence is extended to the mental operations of the individual. The result is instinctive emotional order (moral behavior) and intuitive cosmologically ordered thinking. Cosmo-logical thinking, which is beyond and superior to syllogistic logic, is based on the ability to intuitively perceive the abstract general class (whole) to which the specific issues of life belong. Let's illustrate this principle. As the majority of people in the world have not yet evolved this faculty, they are unable to intuit (learn from within) all of the specific manifestations of the general class "morality." All of their moral notions are extutied (learned from the outside- i.e., from others). Such a person, for example, may believe himself to be moral because he would not steal, beat up on others, or even pour a non-lethal dose of arsenic into someone's drink. Yet, he fails to see the immorality of poisoning the body of those he smokes around, making others pay for his medical bills (medicaid, and medicare) for illnesses induced by such purposeless and irresponsible acts as smoking, or self poisoning by eating artificially colored, preserved, and flavored foods, etc. Able to think only on a concrete level, such people can only identify specific instances of immorality that have been pointed out to them by their instructors and society. It is easy to see how the majority of the problems in the world

arise. A government claims that the citizens don't have the right over their bodies, when it comes to taking unproven medicines for deadly illnesses (laetrile for cancer, etc.), yet it gives the citizens the right to poison themselves with tobacco, devastate themselves and each other through alcohol, and so forth. There is a very far reaching and subtle principle at work here. The ability to perceive abstractions enables an individual to connect and unify events and things that may differ widely in form and external appearance. It enables the person, as shown above, to see that the introduction of non-fatal amounts of tobacco into another's body is no different from lacing someone's food with non-fatal doses of arsenic. In both cases the deadly cumulative effect is the same. As this faculty enables us to see through the differences between people, it is the intuitive intellectual basis of Love. This faculty in Man's spirit is symbolized in the Kamitic tradition by the Goddess of Law and Order, Maat. As the foundation of Love, which is the source of wealth, it is the Goddess Lakshmi, or Shri Deva of Indus Kush. Wealth, according to spiritual tradition results from the pooling of human resources in a harmonious, peaceful and cooperative manner. That this faculty is not developed in the majority of people in the world should be clear from the above examples. If anyone takes exception to the statement that the majority of the people cannot yet intuit moral principles, let him ponder on what would happen if the police in any major western nation were to be abolished. Would anyone be surprised to find that many people hitherto thought of as moral would be engaged in criminal activities? Have we not seen this exact type of event take place every time there was a riot, natural disaster, etc.? The mental application that ties *externally unrelated species* through an abstraction is called "*synthesis*." It must be noted that the popular use of the term synthesis is incorrect. There is a common misunderstanding of the mental application that the term denotes.

5. The fifth sphere of the Tree of Life is the seat of Man's analytical faculty. As with "synthesis" the popular conception of the meaning of the term "analysis" is mistaken. In an earlier chapter it was observed that the term was literally composed of "analog" + "lysis." I.e., to separate (lysis) through analogs, which are abstractions. It

is the opposite of synthesis. Analysis separates, through abstractions, 1) things which on a concrete level may be members of the same species, or 2) establishes abstract differences between even more abstract categories. We must recall the example given in which the 5th sphere separates the abstract category "ferocious predators" into the lower abstract categories "feline," "canine," etc. We shall have occasion to see how the definitions of synthesis, and analysis that are given in this book are the only means of distinguishing such sciences as Chinese or African medicine from western medicine.

One of the most important principles that the Tree of Life has provided to Sages is the fact that the ability of an individual to be just depends on the faculties of analysis and synthesis as they have been explained in this book. On one hand, individuals cannot truly be held morally accountable for their deeds, until they have evolved the 4th (synthetical) sphere within their spirit, as this is the seat for intuiting moral behavior. Now the 5th sphere is the faculty through which Man is able to intuitively understand and apply the correct application of the principles of *Justice*. *It is essentially based on the individual's capacity to separate his Self from his person, thus making it possible to invoke upon his person the punishments, constraints, and regulations that he would place on others.* It does not take much to see that all over the world these are applied unequally. This inequality is the major cause of wars and conflicts in society. In a future chapter when we deal with the astrological symbolisms of the Tree, we will see and understand why the 5th sphere corresponds to the planet of violence and war - Mars. The fact that the greatest threat to the flourishing and survival of mankind is war, is proof of the fact that this faculty is not awakened in the majority of people, including those in leading positions.

6. The sixth sphere of the Tree of Life is the most important of all the spheres. It is the faculty where the *equilibrium* of Man's being is established. All references to the *Golden Mean, to being centered, of being in the world but not of it*, refer to this sphere. When we consider the fact that the Supreme Being in Its essential state, has no other beings with which to interact, then we can understand why It must create the world, which is a diversification of Its Being. Life

on Earth, then, is a process in which *unity* governs the internal and higher levels of *organization*, and *diversity* governs the external and lower levels of *expression*. When our consciousness is established in the 6th sphere, we are able to maintain the equilibrium between the forces that unite us internally to the world and each other, and the forces that separate us externally. It also enables us to maintain the equilibrium between our higher true Self and our lower personality that unevolved people mistake as their self (identity). There are many factors in the world that demand this ability.

Most people are caught in the quandary of knowing, on one hand, that all men are integral parts of one whole, yet on the other hand, do not know how to acknowledge that oneness in action, because of their need to defend themselves against others whose attitudes to life are in violation of the oneness of life. The 6th sphere intuitively (teaches from within) Man how to accomplish this task in all of its manifestations. *As most men have not yet completed their evolution, there cannot be total expression of unity amongst them.* It is important to realize that people are not going to manifest behavior without the necessary intuitive guidance from their spirit. The shaping forces of unity in Man's spirit (spheres 4 and up) are still dormant. Their awakening and functioning are in mankind's evolutionary future.

In the same manner, the way people live must reflect an equilibrium between their current level of growth, and the spiritual goal they are seeking (and are being pulled toward! More on this later). It's a question of genuinely acknowledging our limitations as a temporary point in our growth, as opposed to a finite and essential quality of our spirit. Accepting our temporary limitations within the process of growing toward our divine essential nature, will keep us from such pitiful acts like those made by many who felt that their innate divine nature would protect them while picking up rattle snakes, etc. On the other hand, it will keep us from defining ourselves around our failures in life.

The failure to understand this principle of equilibrium is the reason for the erroneous beliefs held by many Aryanized Yogis (Vedantins) to the effect that life on Earth is without merit. Like the Western crass materialists, who reject all

that is not of the physical plane, many Yogis have erred, but in the opposite direction. Since many problems in the world can be traced to the absence of this faculty, it is safe to conclude that most people in the world have not yet evolved it.

7. The 7th sphere of the Tree of Life corresponds to the faculty of imagination. At last we are on familiar ground. Although it is not fully evolved, as we shall see, most people in the world have developed it to a high degree. The role played by the imagination in artistic creativity is well known, as well as its role in the coordination of details into a whole. While this latter function might seem to overlap with the synthetical function of the 4th sphere, we must take note of the fact that while synthesis deals with abstractions, the 7th sphere deals with concrete thoughts. It is "*congregative*" rather than synthetical. Art, as well as scientific invention, over which it has dominion involves the coordination, and special arrangement of forms based on their external components. Whereas synthesis uses a symbol, "fire" for example, to bring together all specifics that share in its expansive, violent, centrifugal, and rising nature, the congregative thinking of the artistic faculty seeks to bring together fiery things with watery, with earthy, etc. into an aesthetic and harmonious arrangement. Put more familiarly, its function is to coordinate different forms, different tones, and harmonies into musical compositions; different shapes and colors into paintings, etc. In other words, while synthesis *groups* together species that are different outwardly, but similar inwardly, congregative thinking *assembles a whole* by *coordinating* species that are outwardly, and perhaps inwardly different. While synthesis classifies, thus giving order to thinking, Congregative thinking builds wholes out of parts.

The highest function of the imaginative faculty is to be seen in its, not so well known, control over our physiological and psychological processes. Western science has extensively documented the use of the imagination in the cure of diseases, the cultivation of behavior, and performance. Many athletes and artists have perfected their performances through imagery. Its power can be extended beyond our own persons to influence other people, and to help shape events as well. But we must recall what was said in an

earlier chapter. Such uses of the imagination are limited to coordinating the activities that have already been initiated in the third sphere of the Tree of Life. Failing to understand that the imagination is a coordinator of subtle physical forces, and not a "creative faculty," despite its popular reputation as such, many so-called experts in esoteric matters have erroneously recommended its use for the solution of all problems in life. We shall later see the great role it plays in life as part of the team of spheres that are in charge of the creative process.

- 8 The 8th sphere of the Tree of Life is the exact opposite of the 7th. While the latter coordinates parts to build wholes, the 8th sphere separates wholes into their parts. To illustrate: The 7th sphere takes the different components of language (nouns, verbs, adjectives, etc.) and assembles them into meaningful units (sentences, paragraphs, stories, etc.). Oppositely, the 8th sphere will focus on each component, the nouns, the verbs, etc. in isolation from each other, and the whole, in order to study some aspect of them (definition, part of speech, etc.). While the 7th sphere deals with how each component works with the others to create a workable and meaningful whole, the 8th sphere deals with *the specific identifying characteristic of each member of a species.*

These two faculties make very important contributions to the nature of society. The 7th sphere is not only responsible for people's ability to work harmoniously, it recognizes the fact that the creation of complex wholes cannot be achieved without the element of differences between the parts. You can't have a painting with one type of shape and one color, or a musical composition with one type of tone and one type of rhythm. In the same way, the world requires the vast diversity of ethnic, and cultural elements in order to achieve prosperity. On the other hand, the 8th sphere focuses on the external and superficial differences between people (racial, ethnic, sex, age, etc.) and things, and segregates them accordingly. Although there is a legitimate function for the segregative thinking of the 8th sphere, we will see that due to the lack of input into peoples' thinking from the higher faculties (spheres 6 to 0), the 8th sphere is the chief architect of Man's social ills.

9. The ninth sphere is the faculty that governs Man's learning during the early part of life. As this sphere is part of the lower divisions of Man's spirit, it corresponds to His spiritual infancy. A person's learning, therefore, comes from the outside, i.e., from other people and creatures. All acts of learning involve imitation and following. And given the immaturity of this level of being, such imitation is indiscriminate. This applies to all educational experiences, from the cradle to post-graduate; from the streets to the academic halls; secular or spiritual. It is *indiscriminate imitation* that makes professional scientists swear by the "scientific facts" of their days that are later on proven to be no more than false theories. Peoples' adherence to traditions and customs, whether these are secular, "scientific," religious, cultural, etc. comes about in the same way. The danger inherent in this mode of learning is clear, yet it cannot be avoided.

This sphere is also the seat of memory, which is essential to learning. There are two very important facts concerning memory that must be understood. One is the fact that nothing that has been experienced is ever forgotten, no matter how out of view, or difficult to recall it may be. The other is that, many of our stored memories, especially, those that are difficult to recall, because of psychological suppression, exert powerful influences in shaping our beliefs and behavior. Given the fact that these types of memories (patterns for imitation) are stored in the infancy of our spirituality, they are illogical, and irrational in their makeup. Contributing to this irrationality is the characteristic mode of functioning of this faculty. Not only does it store experiences, it associates them on the basis of external qualities. Unfortunately, external qualities which serve well for identity tagging purposes (naming, definitions, etc.) do not contribute much to meaning. However, when we are trying to understand, memory (the 9th sphere) throws up associated items linked through their external qualities. As a result, most people misunderstand more than they understand. We will later see the full implications of this concept when we deal with the fact that the majority of people who, due to the fact that the faculty of Self-identity - the first sphere- is unevolved (dormant), assemble their self-identity out of the memories of experiences that are stored

in the 9th sphere. It amounts to "I am these failures, and successes as my memory informs me."

10 The tenth sphere corresponds to two sets of principles in Man. Her sensory and physical bodies.

10a The sensory body is the seat of our faculties of perception, sensual cravings and expression (sexual desire, appetite, seeing, hearing, emotions, etc.). A study of human behavior based on the principles of spiritual science will reveal that there is *a qualitative connection* between the types of desires, types of emotions, and modes of perception dominating an individual's personality. These patterns of sensory mechanisms are integrated in the conception of "temperamental classes." The various sets reflect the order established in the 4th sphere of the Tree of Life. Thus, humans are classified as "fiery," "watery," "earthy," and "airy." These are metaphors for the various types of human classes according to their metabolic differences. "Fiery" people are "hot and dry" -that is to say- of a high catabolic activity, which places their body heat in the higher ranges. This increases the rate of their physical and psychological activities. They are lively, impatient, easy to anger, zealous, prone to acute illnesses, etc. "Watery" people are just the opposite. They are "cold and moist." We will detail this principle of temperamental ("temperature") classifications later on.

10b The lower part of the 10th sphere corresponds to the physical body, which is the vehicle that allows Man, who as we have seen, is a metaphysical being, to communicate with, and act in the physical world. It is also the means through which the attainment of the illusion of being separate existences takes place. All things are differentiations and structuralizations of one infinite continuum of energy/matter. While their essential unity is maintained in the higher metaphysical regions, their sense of separateness is effected through the physical state of energy/matter.

A COMPARATIVE ANALYSIS OF MAN'S COMPLEMENTARY FACULTIES

In order to use the Tree of Life as a means of ordering our thinking and our living, it is necessary to understand the complementary relationships between certain sets of spheres. We

will recall that in chapter 6, the spheres of the Tree were arranged in sets of complementary spheres; 0-10, 1-9; 2-8; 3-7; 4-6; and 5 by itself. A function of this *a priori* duality principle is that it holds the key to how people substitute the higher principles for the lower ones during the early part of their evolution. In place of 0 and 1, they identify with 10 and 9, etc. The best way to understand these principles is to view them within the perspective of *the five principles governing Man's life*. Correlating to the Tree we get the following:

The Five Principles Governing Man's Life

	Prin- ciples	Spheres	Meaning
1.	Peace	0,10	The ultimate <i>Why</i> behind all actions. The emotional/pleasure factor in life.
2.	Self	1,9	<i>What</i> Man thinks He is.
3.	Will	2,8	<i>What</i> Man thinks He can achieve.
4.	Power	3,7	<i>How</i> Man achieves Her goals.
5.	Laws	4,6,5	Man's relationship to God, other men and the world.

The Why Behind Man's Actions

"0," Our Essential Nature vs. the 10th Sphere

In whatever way they have defined it, whether they have articulated their view of it or not, underlying all human endeavors is the quest for *happiness*. But what is it? While philosophers and psychologists have vexed themselves for ages seeking an answer, the Tree of Life, with its marvelous thought ordering functions guides us swiftly and easily to the answer. All things and events originate from the primordial energy/matter (the Subjective Realm, "0") which we know by now, is a substance devoid of forms, structures, etc. This is due to the fact that its energy is in a state of perfect stability or serenity. *Movement comes into being at the demand of Time*. Time is the ordered (rhythmic) apportioning of things, their place for manifesting and expressing themselves, given the fact that no two things can occupy the same space at the same time. As matter in the Subjective Realm has not been structured into things, there is no

need or justification for time. This state of serenity or peace is the master and primordial energetic configuration of our spirit. In the Kamitic tradition it was called *Hetep*. What we want and need most is peace. To achieve it we must return the focus of our consciousness to "0"--the Subjective Realm. This condition is the highest goal of meditation. It is the state of *Hetep* of the Kamitic tradition; *Samadhi Sarvikalpa Nirvana*, in the Hindu; *Satori*, in the Zen Buddhist, and so forth. It is not a serenity that depends on outward conditions, such as the amount of money, weapons, the state of our love life, etc. Neither is it the "fleeing" from the cares and troubles of the world. Granted that returning consciousness to the Subjective Realm, its original level, enables Man to go through life with an unassailable and independent calmness. But along with this achievement there is the knowledge that one has also contacted the root of all divine power. Implicit in people's quest for happiness is not only the urge for emotional gratification, there is also an urge for security. *And there is nothing that can give one more security than the acquisition of divine power.*

But as shown earlier, the return of consciousness to "0" is the last step in our evolution. We are born with only the 9th and 10th spheres active. That the 10th sphere is complementary to "0" means that they are the ultimate motivators of our actions. As 0 is dormant in the infancy of our spiritual evolution, there is no intuitive or instinctive influence urging the person to attain peace by the withdrawal of consciousness into the higher part of being. All urges in people's lives at this point in evolution originate from the 10th sphere, which we learned is the seat of desires, passions, emotions, etc. As this sphere is also our vehicle for communicating with the physical world, all emotions, and desires are stimulated by information streaming in from the external world. Gratifying desires, and emotional drives depend then on externals which are under very limited control of the individual at this point in his evolution. Happiness to people at this stage of growth, then, is the gratification of emotions, and desires which are dependent on achieving, or manipulating externals. Getting a job, having someone's love or acceptance, having wealth, fulfilling the necessities of life, indulging the cravings for food, sex, etc. All emotions and desires are in reality states of tension and disequilibrium of the energies of the spirit. All responses to our emotions and desires are attempts to resolve the tensions that they represent. Unevolved Man strives to return these energies to their original state of balance and serenity by gratifying the external stimuli that activated them. One

day we will all, like Sages have done, realize that the spirit's energies can only attain their equilibrium and serenity by being elevated to their original primordial level of being in the Subjective Realm. While the gratification of emotions and desires can bring only temporary joy, elevating our consciousness to the highest part of our being gives eternal peace. This is true happiness. The value of this reality can be appreciated when we recall to mind the individuals who, in spite of having acquired great wealth and fame, ended by destroying their lives, either through an overt suicidal act, or indirectly through living a very self destructive life. The reason for this is that the 10th sphere is the animal division of Man's spirit. It is called the Khaibit in the Kamitic spiritual tradition; Nephesh and Nachash in the Canaanite Kabalistical; Umzimba, in the Zulu; Ojiji, in the Yoruba; and Pranayama Kosha and Linga Sarira, in the Hindu. It is the blind principle that tempted the woman Aisha, who in turn tempted the man Aish¹ and caused, according to the Hebraic tradition, the "Fall of Man." It is unfortunate that so many bible scholars have debated for centuries whether serpents at one time or another were able to speak to people. The fact is that in the Kamitic spiritual system, which is the source of most of the Hebraic tradition, the hieroglyphic symbol for this part of the spirit is a serpent (Apep, Nak, from whence Nachash,- the "serpent" that spoke to the woman in the Garden of Eden). This part of the spirit is composed of subtle electromagnetic energies that have the function of animating Man's life, especially the physical body. Hence, the name "animal spirit," or "anima and animus," as it was called in the Latin spiritual tradition. Our modern use of the term "animal" to denote the creatures that are thus identified is an example of muddled thinking. All things in this world are infused with this animating spirit. This agrees with the law of physics which states that all things are in a state of motion. The creatures that we call animals are simply those that allow the greatest expression to this universal principle. But it is of utmost importance to know that all things, minerals, vegetals, and humans are ensouled by this animal, or animating spirit. To follow one's feelings, and desires . . . to do it because you like it, and so on, is to identify with the animal part of being. And as anyone would expect, to allow oneself to be led by an animal can lead only to disastrous

1. Few readers of the bible know that according to the original Hebraic version of the bible, the characters that took part in the Fall of Man scene were not Eve, and Adam, but Aisha, and Aish. A study of Kabala reveals that the so-called woman, and man were in reality symbols of parts (the intellectual) of Man's spirit.

results. One's emotions, cravings, and desires can never be guides to living, and to what is correct. This explains the violence and irrationality that so controls the life of the majority of people in the world. *The goal of spiritual culture is to lead Man to the realization that the happiness -resolution of spiritual tensions- that He seeks through worldly achievements, or direct sensual indulgence can only be satisfied by returning consciousness to the level of being that is the only and legitimate place of equipoise of the energies of His being.* Life on earth is by necessity an unending ebb and flow of tension and relaxation. It is an expression of movement, rhythm, and music. But we cannot let the blind tensions be our guides. We can never abolish them, but we need not allow our consciousness, the essence of our Self, to dwell in their place of manifestation. It is to eat very low off the Tree.

Man's Self-Identity

The First Sphere vs the Ninth Sphere

Our Self vs Our Person

We have already seen that Man's identity belongs at the first sphere. When an individual says "I am so and so," this "so and so" must equate with *"the likeness of God,"* which according to the Old Testament, Man has been made. As this sphere identifies with the unstructured primordial energy/matter which can thus become anything, so is Man's potential of becoming unlimited.

Yet we must remember that the purpose of manifested Life is to bring about a reality of *unity in the midst of diversity.* One essence appearing to be an infinitude of separate beings. Thus Man, like God, and all of creation is an *individual.* The term is made up of "indivisible + dual," therefore denoting a reality which contains elements that are separate yet cannot be separated. Thus, properly understood, the term "individual" cannot be confined to denoting Man, but must be applied to God, and all things in/as the world. These dual elements making up Man's being are the results of the unifying action of 0 and the 1st sphere, and the separating action of the 10th and 9th spheres. In this book we will establish the convention of equating the higher part of our being, our true identity with the term "Self," and the lower part of our being, where we establish a temporary identity reference point, with the term "person."

We are born with only the 9th and 10th spheres in an awakened state. It will be a long time before we evolve to the point where the faculty of our 1st sphere will inform us intuitively of our true Self. Thus we begin life equating the information acquired through our 9th sphere with our self. The 9th sphere, which is the seat of learning of the lower part of the spirit, learns from the 10th sphere only of our separateness from other beings. This is in direct opposition to what the 1st sphere intuitus us. It also identifies with the specific pattern of emotional (energy) inclinations (fiery or earthy temperament, etc.) that the animal spirit of each person accentuates. Thus the person believes that he or she is a shy or brave person, and so on. It also stores the memories of our experiences, and through its associative (but arational) function, assembles a "belief system" of our capabilities and limitations. These *three* fundamental factors- our sense of separateness, identification with a limited expression of our emotional capability (i.e., with our temperament), and with the history of our accomplishments and failures- are the major building elements of what most people falsely call their Self. As this lower part of being is a legitimate point in our evolutionary process, it must have an appropriate label. This is the term "person." It is derived from two Latin words. "Per" which means "through," and "sona," which means "sound." It literally denotes something "*through* which a *sound* is made." The understanding of this point is to be found in the science of mantras. Anyone who has worked extensively with mantras may have verified the fact that what we call personalities are effects of sound complexes. For example, the sound (mantra) "Kling," taken into trance often and long enough will generate an artistic, peaceful, and amative personality in an individual of a different personality. The sound "Hring" will transform a shy, yielding, follower into a courageous and fearless leader. In future chapters we will also see that these words of power are also the forces of nature that Westerners have translated as "deities." Correlating this with the previous observation leads to the understanding of why in many African traditions, many people claim to be the incarnation of a Deity. We will later see that each of the spheres of the Tree of Life represents one of nine personalities ("Deities") that Man must learn to invoke at any given moment to meet the changing demands of life. In addition, they are each the "steps" of our evolutionary ladder.

It is important to realize that Man's placement of His identity in the 9th sphere, thus equating Himself with a lower part of his being, is the second master cause of all of mankind's problems

(the first master cause is his being controlled by his animal spirit). The unity that must exist between people in order for there to be peace and prosperity for all, can only come about by the leadership of the world resting in the hands of people who have evolved the first sphere, which is the natural faculty of unity.

The Will

The Second Sphere vs the Eighth Sphere

The will is the faculty through which we express our future undertakings and actions. What we will to achieve is ultimately determined by our self-identity. We saw that our true self-identity belongs at the 1st sphere, and shares the same qualities of the Supreme Being. In reality, Man's true self is one with God, qualitatively. Similarly, Man's will belongs to God. It shares thus in the omniscience of the will of God. The principal underlying determinant of success is not "having a firm will" or "thinking positively," as "mind experts" will have us believe. It comes from Man's ability to intuit God's will. The ability to do so resides in the 2nd sphere of the Tree of Life. An individual who has evolved to this level of being is able to unite her personal will with that of God. In other words, the person seeks to be guided by God's will in all undertakings in life. Since all of the person's actions is guided by God, success is always the outcome². In addition, all actions are always in harmony with all other events in the world, given the fact that God's will is a reflection of its Self-identity, which is the sphere of unity (sphere one). This is the opposite to the common experience in which people's actions and attempts to solve problems, result in new and even worse problems (the Hydra serpent of Greek mythology that sprouted two heads for each one that was severed³). But the faculty of the second sphere belongs to the higher division of Man's spirit and, therefore, to the evolutionary future of the majority of people in the world. It has only been manifested by a few Sages.

When most people express their will to achieve a particular goal, lacking the input from the 2nd sphere, they take their cue from

2. From the spiritual standpoint, success is not in reality the accomplishment of one's goal, but the spiritual upliftment,- increase in knowledge, and power- derived from the undertaking.

3. This is a symbol of Sebek, the 8th sphere.

the 9th and the 8th spheres. The 9th sphere, the seat of their personality, informs them, basically, that they are limited in their potential of being and separate from all other beings. The superficial and segregative thinking of the 8th sphere hides the connection between the things that people think about. This results in a limited view of what can be achieved, and causes most undertakings to end in conflict with other events in the world. Meditation on the subject will reveal that most of what people achieve in the world is at the expense of something else in their life or that of others. This is the master source of all the personal and group conflicts in the world. In the same manner that the lower principle that unevolved Man identifies with as his self (the 9th sphere) is not his true self, neither is the 8th sphere Man's true will. What most people call their will are really their desires, hopes, and wishes masquerading as such.

Man's Power

The Third Sphere vs. the Seventh Sphere

We learned earlier that when an individual develops the faculty of the 3rd sphere, she has the ability to influence events in the environment through the use of words of power. I.e., the person shares in the omnipotence of the Supreme Being, although not in the same magnitude. The difference between this faculty and the seventh sphere, which is the faculty of the imagination, is that while the 3rd sphere is able to create effects in the environment even when the materials and circumstances to enable them do not yet exist, are in opposition to it, the 7th sphere can only coordinate the shaping forces that already exist, and are not in opposition to it. Unfortunately, the "gurus" of the "achieve your goals through creative 'imaging'" school do not know this fact. "All that you have to do is to imagine your goals. See yourself the way you want to be. Doing the things you want to achieve, etc., and you will achieve your goal." This process works only by reorganizing and coordinating the wayward shaping forces of a particular event.

The 4th Sphere vs. the 8th Sphere

The next major determinant of the quality of Man's life depends on *what He believes is real*. Whether they have articulated it or not, everyone operates from certain ideas regarding what is real and what isn't. The exposition of Cosmology in this book has shown us that reality encompasses a range of states of energy/matter from the unformed, hence imperceptible, to the finite and restrictive physical matter that we are well acquainted with. And all things are none other than divisions within this infinite and eternal substance, hence, essentially one in being. And that *all "beings" are in reality the percolation of one original consciousness through each separate form in the world*. Imagine sunlight flowing through glasses of different colors. The same colorless light will come out yellow, through one, red through the other, and so on. In each case it will have different qualities and limitations, yet they are all separate expressions of the same entity. In addition, it is important to realize that there is no separation, cannot be any separation between the whole (holy!) light entering the glass and the light fragment (of a particular color, wave length, etc.) leaving the glass on the other side. This is the message, stripped of poetry, of the Tree of Life. The message originates in the second sphere, and is codified in the fourth. People who have evolved to the 4th sphere are able to intuit the cosmological principles that give order to existence. They are thus able to create systems to integrate the lives of people with each other, the environment and God (i.e., religion, morality, etc.); systems or ways of life that integrate the various affectors of health, etc. This integrative (synthetical) ability, we must remember, depends on the 4th sphere faculty's capacity to think abstractly. Unfortunately, this faculty is also in the evolutionary future of most people.

Unevolved people are therefore forced to process their information about life through the surface thinking, and external form-limited faculty of the 8th sphere. They cannot, therefore, avoid segregating things that belong together. This faculty is the author of biases and segregation by race, religion, sex, age, etc. It separates medicine from nutritional science, religion from science, government from religion, etc.

In addition, whereas the 4th sphere is informed from within and above (i.e., the divine omniscience), the 8th sphere is informed from the physical plane. It is limited then to 1/10th of the Objective

Realm and is totally excluded from the Subjective. Thus limited, the unevolved Man, regardless of how well educated, whether in science, morality, health, religion, etc. is not truly able to apply the higher teachings efficiently in life. He can only see the external and lower side of religion. To Him, it is a system of worship and adoration of God. Morality is limited to the specific acts that have been pointed out to be immoral or those acts that are not condemned by enough people in a society. So limited is his thinking to surface and external appearances that he cannot see that there is no biological or physiological or spiritual support for homosexual sex, for example. We can go on.

Fundamentally related to the functions of the 4th sphere are those of the 6th, which is the seat of our ability to live according to the principles of cosmogony (innate order) residing in our spirit. This faculty which is also in the evolutionary future of most people enables people to intuitively and instinctively live according to divine laws, as opposed to the tyrannical influence that the 10th sphere (seat of emotions, etc.) exerts upon the 9th sphere (Man's person). The same is true of the 5th sphere. It is the source of a Judicial system based on the divine laws codified in the 4th sphere. Its acts of punishment are for the reestablishment of equilibrium in the world, as opposed to the disorder spreading acts of revenge that the 10th sphere motivates.

Chapter 8

A COSMOLOGICAL GUIDE TO THE THREE TYPES OF MEN

INTRODUCTION

That there are in this world, people of widely differing mental, moral, and spiritual abilities we must all agree. We will see that the similarities and differences between people, when sorted, arrange themselves into three fundamental types of Men. In the Taoist tradition of China, for example, we find that people are classified as the masses, superior men, and Sages.

The division of people into three types, is based on the various stages in human evolution. In an earlier chapter it was said that Man's spirit is not a single body. It consists of seven divisions or levels, which include the physical body as its lowest and densest portion.

A brief look at the subject, from this perspective, will reveal the following outline of the various types of people.

1. People who are controlled by their emotional and sensuous being (10th sphere). And who only "know" what they are taught by others (spheres 7 - 9), and whose mental perception is limited to the external and concrete side of things. Because of this their lives are full of contradictions. I.e., they are devoid of "understanding." As this type of Man has not risen above the 5th division of the spirit (the Sahu),- counting from the bottom-we shall refer to him as "Sahu Man." Recall that the Sahu is the 5th division of the spirit. The "masses" or "inferior men" of Chinese Taoism correspond to this level.
2. People who are able to rise above the influence of their emotional and sensuous being. And although their "knowledge" is only limited to what they are taught, they are able to understand-think abstractly about-the subjects that are taught to them. This is due to the fact that their mental faculties (spheres 4 - 6) are able to perceive the abstractions that underlie physical events. This enables them to avoid the contradictions (falsities) that beset the previous type of man. As the soul qualities of this type of Man originates in the Ab part of the spirit, we shall refer to him as the "Ab

Man." They correspond to the "superior men" of Chinese Taoism.

3. People who are able to intuit the knowledge needed to avoid and solve all the problems that can face Man. They also possess the ability to achieve such goals (influence physical events) by manipulating their spiritual power through the use of hekau and visualization. As this type of Man has completed his/her evolution we shall refer to him as "an Ausar."

Each of these three types of people represents a stage in Man's evolution. Let's take a more detailed look at the subject.

The most important factor that determines a person's behavior is his level of consciousness. It will determine her level of perception, which in turn will determine what she knows or believes, and her attitude toward her emotions and sensual appetites.

When our consciousness is focused in the Sahu part of the spirit and below (the animal spirit--Khaibit) our mental perception is limited to the external side of things. We are able to recognize concrete specifics but not the abstract principles from which they are generated. For example, the abstract perceptive ability of an Ausar Man (fully evolved person) reveals that there is no such thing as "a medicine" or "a poison." All substances can be used medicinally or toxically according to their dosage. There is a level above which arsenic will poison, and below which, it will heal. Although we all know this from our experiences with vaccines, very few people are able to arrive at the above conclusion regarding "medicines" and "poisons." The point to be emphasized here is that there are no concrete realities called "medicines" or "poisons." There exist "medicinal relations" and "toxic relations." But, Sahu people are not able to properly understand such abstract entities, so they lower them to their level of perception. They cannot help but think in terms of "this medicine" and "that poison," etc. The result is that they fail to avail themselves of the healing potential of the things in their environment that are intoxicating them¹! I.e., the very pesticide that added to the crops gives us cancer, is the best remedy against the very cancer it causes. Hundreds of examples of this belief in the existence of non-existing realities can be given. It is one of the major causes of problems in the world.

1. Every environmental poison can be antidoted by homoeopathically preparing them into a medicine.

A very important question is raised by the foregoing. If Sahu Man believes that there are such things as medicines and poisons, when they don't in fact exist, it cannot be said that he has *knowledge*. What he does have is the *belief* that the information that he has received is factual. When we fully examine this issue and see that this is the rule with Sahu Man, we will arrive at the conclusion that he is incapable of "knowing." There is a general confusion of "knowing" with "believing," and acquiring "knowledge" vs. acquiring "information." Beliefs are what the Sahu Man has. Because the faculties of inner (abstract) perception is dormant in the Sahu man, he is unable to intuit (learn from within his spirit) the nature of things, and must therefore learn from outside of his being. All of his beliefs are shaped by what he has been taught by others or what his senses report to him. He has no way of knowing whether what he has been informed about is true or false, as truth or falsehood can only be determined by the knowledge of the relation between parts with each other and the whole. As a result, he falls into a host of contradictions.

When our consciousness is raised to the Ab level of the spirit, we are able to understand and significantly function with such relations as explained above. All of the contradictions and our vulnerability to falsehoods are thus avoided. At this level, however, we are still not able to intuit for ourselves these abstract relations, although we are able to fully understand them and live accordingly.

The ability to intuit the abstract relations between things, and the whole to which they belong, is a function of the second division of the spirit -the Khu. This mental function is the true constituent of wisdom and knowledge.

These three levels of Man's being are stages in his evolutionary growth. We must therefore look at it from this perspective.

Stage I of Man's Evolution

Sahu Man

Although the Sahu is the 5th division of the spirit, we are here coining the label "Sahu Man" to refer to people who's behavior is dominated by the 6th division of the spirit (the Khaibit, sphere 10) and the 5th division (Sahu--spheres 7, 8, & 9).

When we are born, our consciousness is focused in the 6th division of the spirit, and the 9th sphere of the 5th division of the

spirit. The 6th division (10th sphere of the Tree) is the animal part of the spirit, which is the source of the sensuous behavior that dominates the early part of Man's life (first 28 years) and its entirety unless it is brought under control through spiritual practices (rites of passage, Bar Mitzvah, etc.). The ninth sphere is the faculty that makes it possible for us to learn. As we know well, the early part of Man's learning career is characterized by indiscriminate imitation. This influence comes from the 9th sphere. Rather than "knowing," Man at this level "believes" what is perceived through the senses and the ideas communicated from others. His thinking is limited to the concrete and external side of reality, as the faculties for perceiving the abstractions underlying physical realities are dormant at this stage. Examples of indiscriminate imitation are numerous. Anyone who exercises discrimination in adopting other people's practices would not wear high heel shoes, eat the host of refined foods (white sugar, white flour products, white rice, etc.), or abuse alcohol, smoke tobacco, do drugs, etc.

From the 7th year of life on, the faculties of the 7th and 8th spheres achieve their full state of awakening, although it will take another 21 years to develop them fully. If the person functions more out of the left hemisphere of the brain, the 8th sphere will dominate the mental character of the person. An inclination to the right hemisphere of the brain will result in the predominance of the 7th sphere.

The 8th sphere corresponds to Man's ability to give "concrete verbal" form to his feelings, beliefs and knowledge². It is our faculty for separating things from each other, and parts from the whole to which they belong, through the act of defining, describing and naming. We saw earlier how this faculty, due to its inability to perceive the abstract relations between things and parts and their whole, creates such false "concrete" categories as "medicines" and "poisons." If studies were to be conducted on this premise, they will show that western education is predominantly a process of providing definitions, descriptions and names. The problem is aggravated by the fact that, besides the creation of false distinctions, it thus deludes the person into believing in the existence of things that don't exist. E.g., once we understand the above we will understand that poisons and medicines do not exist. We are forced to think relationally.

2. Therefore, the enlightenment achieved at the second sphere-eight stage of meditation-may be distorted by the person's 8th sphere deficiencies (impoverished conceptual bank, poor vocabulary, inadequate belief system, etc.).

This is the reason, for example, why western societies, which function predominantly through the 8th sphere--the lower portion of the left side of the brain--cannot conceive of a female Pope, a female Rabbi, and are obsessed with segregation in all things. Not only are differences made between the sexes, races and nationalities but in the sciences as well. Until the 1950's psychiatrists knew virtually nothing about the physiology and biochemistry of the brain; physicians to this day know virtually nothing about nutrition and so on. They cannot help confusing the exclusiveness of the definitions of "healing" and "nurturing" with the actual healing and nurturing processes themselves which are never nor cannot ever be separated from each other.

The 7th sphere corresponds to Man's ability to coordinate things based on their external forms. Colors, shapes, rhythms, people, etc. are arranged into aesthetic or functional wholes. This is our faculty for artistic and scientific invention. Although this faculty brings things together based on their differences and makes them work harmoniously together, like the 8th sphere, it is still limited to the perception of externals. As a result, the criterion for the value of its creations is based on their impact on the animal spirit (gratification of the senses). There is no real concern with the healing and consciousness altering functions of music and art³, for example.

As the animal spirit--the Khaibit--is the first and oldest part of the spirit to be awakened, it dominates the Sahu. In learning (9th sphere function), the immature person inclines toward imitating those behaviors that cater to his sensuous and emotional being. The prowess of the 8th or 7th spheres is mostly used to rationalize or gratify the influences from the animal spirit, respectively.

The behavior of Man during the 1st stage of his development can be summed up as one in which he is dominated by 1) the urge to gratify the sensuous (emotions, appetites, desires) part of being, 2) the urge to use the mental faculties to rationalize the gratification of the sensuous expressions, 3) the inability to know. He can only be "informed." And can only "believe" what he is taught or what he can perceive through the senses. 4) His mental perceptions are limited to the concrete and external side of things. As the highest division of the spirit that this person attains to is the Sahu, we refer to him in this book as the "Sahu Man."

3. In the branch of science called Kinesiology is clearly shown how images, musical forms, etc. affect peoples health.

The Ab Man

If the society in which the person lives knows how to spiritually develop its citizens, they will begin to develop the 4th division of their spirit (the Ab) by around the 28th year of life. Unfortunately, this is not the case with the majority of nations in the world. When our consciousness is raised to the Ab part of the spirit, a reversal in the relationship between our intellect and emotions takes place. In opposition to Sahu Man, in whom the intellect is subordinated to serve the sensuous part of being, with the Ab Man the Self uses the intellect to subjugate the sensuous division of the spirit. The faculties of this part of the spirit- spheres 4, 5 and 6- we will remember, correspond to the "Celestial government." The 4th and 5th spheres possess the ability to perceive the abstract principles underlying and uniting things and events in the world. They thus enable the person to transcend the divisive emotions and mental functions of the lower parts of the spirit (spheres 7 - 10). The sixth sphere corresponds to Man's personal will. Although a great deal has been written about the will, we will see that there are a lot of misunderstandings concerning it. The common beliefs held by Sahu men that the will is "the power of choosing the course of one's destiny," that it is the expression of one's wishes or desires, etc. are full of flaws. Since most people's "choices" and wishes are primarily underlaid by their emotions and sensuous feelings, it cannot be argued that their will is at work in such instances. Essential to the definition of the will, therefore, is a choice of action that is on one hand, free of emotional and sensuous motivations, and on the other, based on knowledge or beliefs. The faculty that enables us such an expression resides in the 6th sphere of the Tree. Although it does have the freedom to decide on a destiny course, this is not the major function of the personal will⁴. It is the freedom to choose to live for the gratification of the lower divisions of the spirit, especially the 6th division or according to the divine laws governing the higher/true part of one's being. When the person realizes that he or she does not have to obey the emotional nature, and lives according to truth,

4. If Man is made in the likeness of God, He must therefore possess the same attribute of free will as God. In fact this faculty is what separates Man from all other creatures on earth. It is his ability to step outside of the instinctive automatic reflexes that guides his lower nature.

then the will is being exercised. The true function of the will, then, is to deny the animal division of the spirit (source of our sensual and emotional expressions) its control over the life of the individual.

Another important fact concerning the will is its dependence, not on power, but on abstract intellectual *insight*. In a previous chapter we saw that the sixth sphere corresponds to the Kamitic Deity Heru, whose actions are judged by the 4th sphere, Maat. This translates into the western verbal mode of thinking, by saying that the will (Heru) depends primarily on mental synthesis (Maat). It is very interesting to note that the word Maat is kin to Maa (to see, hence, insight), and it (the 4th sphere) is diagonally opposite the 8th sphere which expresses thoughts in verbal form. In other words, at the 8th sphere, the Self is informed by verbal thoughts, while at the 4th sphere it is informed by thoughts that are seen⁵. To know a definition--8th sphere function--is not to know the thing or event defined. It is "hearsay," when on one hand a dictionary gives us the definition "poison, n 1. a liquid, solid or gaseous substance which has an inherent property that tends to destroy life or impair health," and on the other hand our experience shows us that such substances as arsenic, the venoms of snakes, bees, spiders can be used either to destroy life or to cure illnesses in relationship to their dosage. In the future chapters on meditation we will focus at length on this delusive effect of verbal thoughts. While we can easily be deluded by definitions and names as their contents are heard and not seen, it is the opposite with visual thoughts.

Unable to function through the 4th sphere, Western scholars have always believed that the visual thought--hieroglyphic--system of Kamit communicated mainly, and only, concrete thoughts. In an earlier chapter I showed how the ancients used the image of "fire" as a synthetical symbol to serve as a common category for diverse things and events that share its centrifugal, rising, expansive and exciting qualities. It becomes the common set for classifying and abstractly uniting courageous men, ferocious predators, the summer season, acute febrile diseases, hot and pungent plants (cayenne pepper, mustard, etc.)⁶, etc.. Knowledge of the characteristics of fire or anyone of the analogies will provide insight

5. Images of the Sesh Metut Neter.

6. Unfortunately for the west, Plato and other Greek philosophers could not get beyond the elemental concrete fire that cooks our food. This use of fire as an abstract symbol illustrates the foundation of the Chinese, African, and Homeopathic medical systems.

into the others. This is the essential means through which the Cosmo-logical or Kabalistical system of correspondences yields to the Cosmo-logician's insight into all things. All things are subsumed under one of 4 essential universal categories through the 4th sphere's ability to see analogies. Readers desiring to acquire a magnificent working knowledge of this sphere should study the Taoist and Five Elements principles of Chinese medicine. The synthetical or abstract unifying functions of Kamitic hieroglyphs is thoroughly shown in part 3 of this book in the section dealing with the Metu Neter oracle.

Stage III of Man's Evolution

The Ba Man

Once the faculties of the Ab division of the spirit are perfected, the person is able to move on to raising her consciousness to the divisions of the spirit wherein dwell Man's God-like faculties. The third division of the spirit -the Shekem- enables the person to influence the course of physical events through the use of words of power (mantras, hekau). These powers cannot be used as long as the person is under the control of emotions and appetites, as the words of power work through the latter. When consciousness rises to the Khu division of the spirit, the person acquires wisdom and the power to learn from within his spirit. Again we arrive at a block upon which most men have stumbled. Their definition of wisdom as erudition, sagacity, discernment, insight and so on is either false or tells us nothing about it. The well read student of spiritual science would most likely be acquainted with the common description of meditation as a process of "emptying the mind of thoughts." The reason for this is rooted in what was said of the faculties of the Sahu and the animal division of the spirit. As long as there are thoughts embodying the definitions (hearsay) that we have been taught, supposedly telling us what things are and are not--"Man is a rational animal." "He ascended from the apes." "Foods have nothing to do with healing," etc.--we can never truly arrive at the knowledge of reality. All that we can ever know are the symbols--the verbal or visual thoughts--that interpose themselves between us and the reality we are trying to know. There is a point of adeptship in meditation where we are able to elevate the *focus of our consciousness* above the sphere of thought manifestations. In the absence of thoughts,

consciousness is able then to directly perceive the reality it is trying to know.

In the above diagram, AB corresponds to the perception of the thought-the symbol representing C, i.e., its definition or description. If we do not suppress the "AB" manifestation, everytime we want to know "C," the reality itself, what we get is "B"-a stand in for C. We will always be trapped, as "B" could be false, or if correct, it can never fully embody the reality of C. At best, definitions and descriptions provide no more insight than that received by the three blind men who felt, each, a part of an elephant and concluded-the first, that it was a tree trunk (he felt a leg), the second, that it was a wall (he felt the stomach), and the third, that it was a snake (he felt the trunk). The "AC" line corresponds to the direct perception of the object that enables one to see the reality itself, without symbols (thoughts) interposing themselves and distorting the perception of reality.

Knowledge, then, is achieved by the direct perception of reality. It is an act of understanding without the use of thoughts. The reader should take time out from time to time to engage in the practice of suppressing the process of thought formation. It will be discovered that thinking is a process of giving verbal form to a reality that is already known but lacks verbal form. Of course you are well aware of the countless times in which you knew a fact--a person's name, an answer to a question, a telephone number--but couldn't reclothe it in verbal form. You know it but are not in-formed at the time! These are extremely far-reaching points to be pursued in the chapters on meditation. The ability to suspend thinking, enables the omniscience that Man shares with God--in truth, God's knowledge--to manifest itself through the 2nd sphere. When this knowledge embodies a directive for Man's actions, then it becomes the true will that must be followed.

The focusing of consciousness in the Ba, the highest division of the spirit, enables the person to realize that his Self is one and the same as that dwelling in all things, as well as being one with God. One becomes, then, an Ausar.

We shall now turn our attention to how the three types of men, according to the faculties shaping their behavior express themselves in the areas of self knowledge, religion, government, economics, and education.

Knowledge of Self vs. Beliefs regarding Self

One of the most important teachings to come out of Kamit is that Man must place the utmost importance in the quest of knowing his Self. The unsuspecting might believe that the acquiring of knowledge of Self is a simple act of studying the appropriate literature. But we have already seen in the earlier part of this chapter that the Sahu Man is incapable of acquiring knowledge, which depends on the second division of the spirit, which is awakened and developed in the Ausar Man. Unless we experience our "true self," we can only believe what we are taught. We have already pointed out that although the spiritual traditions of most nations are in agreement that Man is made in the likeness of God--i.e., that God and Man share the same essential qualities of being--there is nothing in the experience of the person who has not evolved above the 4th sphere to give evidence to this "fact." The evolved Man directly experiences--knows--his divinity in the same manner that we all experience our arms, legs, etc. Intellection is neither required or useful. It is obvious then that we cannot teach Self knowledge in this, or any other book. We can only provide information regarding it, and the steps toward its realization. A classical technique for the direct experience of Self has been preserved by the tantric Buddhists of Tibet⁷ in the Great Tar Lam Yoga (Path Without Form), or the Mahamudra Yoga (The Yoga of the Simultaneously-born Great Symbol) as it is known in India⁸. The yogi assumes a cultivated posture that guarantees full relaxation, and the unimpeded flow of energy. He then engages in a special form of deep diaphragmatic breathing--pot shaped breathing--which withdraws the focal point of consciousness from the senses, and induces a state of trance characterized by a state in which the mental wakefulness is as much as 50 times the norm, yet the person is asleep to the physical world or fully detached from it. In this state the

7. It must always be kept in mind that the wisdom tradition of Tibet was taught to them by the Blacks of India--the Dravidians.

8. Tibetan Yoga And Secret Doctrines, Edited by W. Y. Evans-Wentz, Oxford University Press, 1958

meditator assumes an attitude of complete indifference to the thoughts that enter and leave the sphere of awareness. There is no attempt to engage in thinking--organizing thoughts to a meaningful end--or following up thoughts, and ideas that present themselves. This meditation process leads to several experiences.

1. There is the clear experience that:

- a. There is an entity that is conscious of the thoughts. Although this entity can perceive, it cannot be perceived.
- b. The thoughts come and go independent of the entity that is perceiving them. This fact, which we have all experienced is magnified by our inability to suppress thoughts by merely willing it, or by those situations when we are trying to recall well known things to memory and can't.
- c. The realization that the rate at which thoughts manifest, the manner in which they are organized (analytically, synthetically, etc.), and the dependence of their contents (concrete, or abstract thoughts) on the breathing (the spirit!)⁹, leads to the knowledge that thought activity is processed by the spirit ("mind"), and not by the will.

Now, this entity that sees, hears, smells, tastes and feels, yet, cannot itself be perceived, is the Self. And the goal of the Yoga of the Simultaneously-born Great Symbol--the Mahamudra--is to clearly separate the "Seer" from the objects of perception, and the formative basis of objects of perception (the spirit, "mind"). The great problem in life, the great impediment to Self knowledge is the general misperception that one is one's body, feelings, mind, etc. Once it is clear that thoughts rise into one's sphere of awareness independent of oneself, it is then impossible to identify with the host of thoughts that profess to describe, or define our being; "I am shy," "strong," "sick," etc. And once it is clear that thoughts arise from our bodies (various divisions of our spirit), it becomes impossible to identify our spirit as our Self. We realize that that which is conscious cannot be perceived itself because it is immaterial--our Self. These experiences have many implications for our day to day existence.

9. In reality the thoughts themselves do not change. The manipulation of the breath (spirit) causes the focal point of consciousness to be transferred from one division of the spirit to another.

When there is Self-knowledge there is the direct experience that the essence of one's being is unconditioned, therefore, one's true Self lacks predetermined automatic behavioral response patterns. There are no automatic thought and emotional reflexes to impel or compel us to act in predetermined ways, because our consciousness is focused, then, in the Subjective Realm where the energy/matter that is the basis of all creation is undifferentiated, infinite and eternal. This is the foundation of the meaning of the statement that Man is the likeness of God.

When there is knowledge of Self, there is also the direct experience that for one to incarnate to experience earthly life for its own sake, or to enjoy and suffer for the sake of one's person, in the end makes no sense- especially if life is limited to one life-span. The evolved Man ostensibly experiences that his spirit and physical body are not personal properties. Not only is Man made in the likeness of God, but his life belongs to God. Man has been given the same qualities--same kind of powers--because it is God's intention, and sole purpose in making Man, to use his spirit and body in order to enter and live in his creation. This is the true meaning of the "Glory being done on Earth, as it is done in Heaven." These divine powers are not for the purpose of occult, psychic display, or for the magical accomplishment of our earthly desires, but for the furthering of God's divine plan.

If our true self is the likeness of God, then what must we call that part or those parts of our being that in the early part of our evolution we identify with, but are not the likeness of God? The term "person," coined for this purpose, which literally means "through" (per), and "sound" (son, sona), implies that a part of our being serves to convey (per) a sound (sona). This insight, which is totally alien to Westerners, would make full sense to a present day Dravidian¹⁰, or to an ancient Kamitian, as it is a common practice in their religion to teach people how to manifest any personality type through the use of words of power (metaphysical sound technology). Why would a word that is compounded of *sound* + *through* be used to indicate people's "self-image"? Skeptics must ponder this question; see if they can come up with an alternative answer. St John's words are even more provocative. He states in the New Testament of the Christian Bible, that "In the beginning was the Word, and the word was God, and that the word became flesh and came to dwell among Men." Putting aside the argument that this

10. The Dravidians are the Blacks who authored the Yogic, and tantric tradition.

"word" is Jesus, we must ask why is he being equated with "a word that is God, and enters flesh?." As for the word being Jesus, there is nothing that he has done that had not been done and taught by Sages before and after him. In fact others have done more, and have given the world a better spiritual system. That is another story that we must leave alone, for there is no space, nor interest here to go into the questions surrounding the veracity of his existence; the fact that many of the teachings--the Sermon on the Mount, for example--credited to him are thousands of years older than he, and so forth. What is of greatest importance is the fact that in the midst of the attempts to render Jesus a unique individual--the one and only Son of God--the authors slip and make Jesus state that all Men will do greater things, in reference to the miracles which were supposed to be the evidence of his divinity, thus revealing the divinity in all men; the third sphere of the Tree of Life in this case.

John was not the only one, or the first to equate "the word" with "God," a fact that has gone without comment from biblical scholars. Faithful to the tantric tradition of the Blacks of India, in the translation of their sacred scriptures, Arthur Avalon in the *Serpent Power* states:

Each man is Shiva (a deity,-Ausar), and can attain his power to the degree of his ability to consciously realize himself as such. For various purposes the Devata (deities) are invoked. Mantra (a word of power) and Devata are one and the same . . . By practice (japa) with the mantra the presence of the Devata is invoked. Japa or repetition of the mantra is compared to the action of a man shaking a sleeper to wake him up.

When a word of power (deity) is awakened and becomes functional in our "psyche," we manifest the personality expression that belongs to that particular deity/mantra. Along with its personality traits, we gain possession of its talents and occult powers. We shall see in future chapters that each of the so-called human mental functions and talents are in reality the expression of the deities. Once this is understood, then it will be clear that the ancients and Africans do not "anthropomorphize their Gods." It is the other way around. That the Gods resemble Man is because Man is made in the likeness of God and the host of metaphysical intelligences (Gods) that It has created through which to make and administer the world.

That we can take on any of the personality types through the manipulation of mantras (words of power) is the logical conclusion of the fact that we are made in the likeness of God. Our true Self is no-things, hence capable of assuming any personality type, of knowing, and accomplishing all things,--through time. It is of interest to note that while the common western belief that each Man has a personality, the Kamitic tradition states that each Man has, in addition to his Self, seven personalities- Kau (the plural of Ka, the Kamitic word for the person and personality), and must learn to give full expression to all of them; just not the *natal personality* that dominates the early part of our incarnation.

Religion

An analysis of the word "religion" shows that it is composed of the Latin prefix "re," meaning, "again, back" + "ligare," meaning "tie, bind, fasten." From the preceding we have seen that the Sahu man, because he has not evolved above the 7th sphere, is incapable of intuiting the "ties" between things. Thus, he is the Man that is in need of religious instruction to tie, bind, or fasten him back to something with which he had originally been one, and belonged to by natural connectivity. The original oneness is implied by the prefix "re" (back, again). It is important to note that the word "Yoga" also bears a similar meaning--"to yoke," "to unite"-- although it lacks the meaning component of the prefix for "again." The things he has lost his oneness with are the Supreme Being, other men, other creatures, and all other things in/as the world. It also signifies the inability to unite the will with the spirit at will. As he identifies with his physical body (E.g., when it dies he thinks he has died, when it is sick he thinks he is sick, etc.) he believes that he is a separate existence, and thus looks out for himself at the expense of the whole. Just the opposite is true for the Ausar Man. As he has developed the 1st sphere of the Tree of Life he does not need religious instruction, as it is the natural function of this faculty to intuit and establish unity amongst all things in/as the world. He is already "tied, bound, fastened" as a natural essence of his being. What is already tied cannot be, nor need be "re-tied."

The term "religion" is also related to the Indo-European root "leg," meaning "to collect," from whence the Greek "legein," and the Latin "legere," meaning "logic," and "legal (law)." The men who coined the word therefore had in mind that it is a system to "collect, or unite things that belong together by logic, and natural law (hence, it is

scientific)." Once more, it is clear that it is the Sahu Man who is in need of instructions regarding the legitimate and logical ties between things. As the fourth sphere of the Tree is the faculty wherein is understood the laws that govern and connect things and events, Ab men, who have developed this faculty are truly able to practice religion.

Unfortunately, the issue is not confined to the education of Sahu Man in religious matters. As religion is a natural product and function of the higher faculties 0 - 6, it can only be truly practiced by people who have brought forth these faculties. When it is taught to Sahu Men, they cannot help but bring it down to their level of perception. If the first and 4th spheres within one are dormant, the most that one can achieve is the *belief* in the teachings regarding the oneness underlying all events, as opposed to the actual knowledge of it. The experience, and thus the capacity to live according to the shaping forces of unity is lacking. This is the reason for the fact that there are so many bigots, haters, and segregationists in high religious places. They comprehend the doctrine of oneness, but find it impossible to live it, earning thus the smear of hypocrisy. In reality they are not. There is nothing inside of them that can respond to the religious values on their true level. The light shines in the darkness, which fails to comprehend it.

When we consider the fact that the Sahu Man is dominated by mental faculties that cannot perceive the unity between things, then it is easy to see how his attempt to practice religion is full of fatal contradictions. Despite religion's central theme of unity, we find him invoking God to aid him in vanquishing his "enemies;" claiming that God has given him the right to enslave the generations of Ham (Black people); claiming that women cannot hold the highest religious offices, etc.

The fact that Sahu Man is unable to truly understand abstract categories shows up in his misunderstanding of the term "God." To him, the term "God" represents a concrete entity, hence his use of the term as a proper noun. In the African tradition, the term is an abstract relational category. Like the terms "governor," "president," etc., it denotes all that "presides" or has dominion over a sphere of activity. The African scholar, therefore, has no problem in understanding that a Supreme God (presider) can create and administer the world through a number of agencies to whom have been delegated dominion or presidency or governorship or godship over specific spheres of activities. This is no different from the hierarchical administration of the physiological functions of our

bodies, or of the government of a nation, business, etc. Once we understand the categorical relational abstractness of the term "God," then we are in a position to understand how Man and God are of the same category of being, and that *so-called polytheism is in reality a Systheism; that is, a whole (Supreme God) compounded of several integral parts (gods) acting in concert with each other to fulfill the will of the Whole.* But the Sahu faculties (spheres 7 - 9) cannot perceive the connection between things, and fails, thus, to see the unity between "the gods" with each other, and with the Supreme God. As they close their minds at the outset to all teachings that expound the deities, they fail to avail themselves of the assistance that such knowledge can bring to them. Imagine a person who believes that all of his problems must be solved by the Supreme leader--the president--of the country. When Sahu Man sees Ausar men healing and affecting nature through the power of their spirit (3rd sphere) he then talks ignorantly, but fluently of course, about "miracles," "the supernatural," "spiritual gifts," "only Son of God," etc.

If the etymological and semantical structure of the word "religion" shows that the term denotes a system for tying back, reuniting elements that lawfully belong together, then what can we say for Sahu Man's definition of the term. There is nothing in the semantical structure of the word that directly supports its being defined as "an expression of the belief in and reverence for an eternal being that creates and controls the destiny of the world." It cannot be argued that this is a description of an important aspect of religious expression, but it is not the definition of the word itself. History has shown quite well that men have found it extremely easy to profess their faith in the existence and power of God, to feel a great reverence, and devotion to God, while actively nurturing their sense of disunity from other men and other departments of nature. What would the course of history be, had the world religions placed into the foreground the unifying--yogic, yoking, at-onement--principle that is essential to the definition of religion? Let's remember that this unity cannot be achieved by the intellectual assimilation of the appropriate literature, but by the spiritual practices that result in the raising of one's consciousness to the higher divisions of our spirit. Consequently, we must also change our outlook regarding the process of worshiping. While Sahu Man's worship is an act of veneration, love and admiration for the Deity, the Ab and Ba Men add to this, the cultivation of the moral virtues, and spiritual practices that culminate in the elevation of

consciousness to the higher parts of the spirit wherein dwell the faculties that Man shares in common with God. No one can be saved by living a sinful life, breaking the laws of nature, then begging God for forgiveness. Nothing short of living a God-like life will do.

Regarding the scriptures, we are told that they were acquired through the divine inspiration of particular men. Once we have acquired true knowledge of Self, we will know that all Men are capable of intuiting divine wisdom through the agency of the second division of their spirit (the Khu and 2nd sphere), once they have awakened and developed this faculty. But Sahu man lives with the impression that the reception of scriptural information is a phenomenon that is limited to a very few men of the past. Can anything be more absurd? Spiritual guidance is to be found outside of his self, he believes. So he does not strive to contact the source of wisdom within himself. Imagine what the world would be like, if most men, during the past 6000 years, were striving to perfect themselves in order to manifest the wisdom, and spiritual power that lies within them. It is interesting to note that the religion of African people, from ancient Egypt to the present sub-Saharan cultures, is characterized by the practice by priests and priestesses of going into trance to contact the source of wisdom to guide people, and the source of spiritual power in order to assure success in the events of life. We shall have a great deal more to say about this later.

A major theme that we find in some religions revolve around the issue of Man's salvation from "a power of evil." As such religions are essentially aimed at, and are the products of Sahu Man, both, the power of evil that Man must be saved from, and God upon whom the salvation depends, are conceived as being separate from Man. In the African traditions, especially those of Kamit, Indus Kush, and Canaan we find the teaching that Man's failure to control the lower part of his being is the source of all of his problems. His salvation does not depend on claiming belief in a divinity, nor membership in a religious system, nor from the intervention of some entity outside of himself. It depends on his elevation and establishment of his consciousness in the higher part of his spirit which is the likeness of the Supreme Being. Instead of a religion of an essentially sinful, ignorant, and impotent being who cannot transcend these character traits, and must thus remain so and seek the assistance of a divine being, the African tradition encourages the individual to strive daily toward manifesting his higher nature. In the Sahu type religion, the Man must succumb to sinful behavior with the hope that he will be somehow forgiven. His sins are excused as

the work of something separate from and outside of his being--Satan. But research into the subject will reveal that the Satan of the Christian religion is a perversion of the Kamitic symbol "Set" that depicts the expression of the combined behavior of Man's rational and artistic faculties in the service of his sensuous nature. The segregative way of thinking, the perception limited to externals, and the domination by the sensuous nature which characterize the behavior of Sahu Man, are the irreligious factors, verily, that Man must be saved from. All moral decrees are aimed at them. And all fire and brimstone dooms day, waiting in ambush of the wayward soul, as taught by some religions, find their rationale, if not justification, in the fact that Sahu Man only understands the language of the animal part of the spirit. Emotions (affection, kindness, fear, pain, etc.) are, ultimately, the coercers and persuaders of his behavior.

Once we understand the true nature of Man's spirit--that it is made up of seven divisions--it will be plain to see that a true religion can only be a system that aims at raising Man's focus of consciousness to the higher divisions of his spirit to allow him to function in a God-like manner. Not only are the religions aimed at Sahu Man lacking in this perspective, they even lack words for the various parts of the spirit, let alone know that it is a composite entity that contains both the saving and damning parts of Man's being. But things have gotten even worse. With each passing day, we find more and more Sahu people assuming the role of leadership in religious matters and in the world.

Economics

Economics deals with how people can best share the natural resources of the earth, the human resources (labor, skills) for mobilizing the earthly resources, and the rewards of their labor. It is important to note that the Sahu Men, who are today in control of the economy of the world, classify it as a science, as opposed to a system of ethics. When Ab and Ba Men are in control of the economy of a society, the sense of oneness (unity, 'ligion) between men, and between man and nature are the dominant principles. All efforts are made to make sure that the wealth is distributed in proportion to peoples' efforts, skills, and social (spiritual) responsibility. It is not surprising that the western world, which is built around Sahu principles, would invent an economic device that would enable

wealth to be concentrated in the hands of certain individuals in total contravention to the ethics of fairness. This device is the prime use to which money has been put. Basically, it is created out of nothing (simply printed), made available to an elite circle--many of whom control its very creation--who in turn use it to acquire ownership over the lion's share of the natural resources, the means of production and the vehicles of violence, in order to impose their will on others. That it is an extremely efficient and successful means of mobilizing human resources cannot be denied. But the absence of moral restraints, which gives the highest priorities to turning a profit, results in the fouling of the earth, the waste of precious natural resources, the waste of the world's genius and lives, in the extravagant pursuit of trivia. 75% plus of manufactured goods is not only unnecessary, it is waste of natural resources that will be sorely missed in decades to come. All those trivial plastic products, for example, divert materials from which drugs can be manufactured. All the human efforts expended in the mastery of manufacturing, marketing, etc. of these trivial things are at the expense of the time and energy needed for the moral and spiritual development of the citizens of the world. The result is that police states are becoming more and more necessary for the maintenance of order, due to the moral vacuum that has been created.

Government

When consciousness rises to the Ab or higher levels of the spirit, it understands that the purpose of government is to coordinate the various self interests amongst the individuals making up a nation, to promote the equilibrium between the needs of the individual and of the group. The only means of achieving these ends is religion (as the semantics of the term shows, its purpose is to re-unite). It is the working of the segregative mental functions of the faculties of the Sahu and Khaibit (animal spirit) that are responsible for the selfishness (segregativeness) that characterizes the governmental systems of Sahu Men. Their governmental systems are primarily means of securing and protecting the economic advantages, and privileges of the "elite." As this cannot be done in the presence of a true religion, then the latter must be banished from government. Law and order must come, then, from the use of force. Incidentally, this, like all fallacies¹¹, is a lost cause. There will never be enough

11. All evils have their built in self destructive mechanisms!

money, for the hiring of enough law enforcement people, many of whom are crooked themselves, and for the achievement of a significant level of social order. It cannot be policed, nor forced into being. The shaping forces of law and order must emanate from within people's spirit. To separate government from religion is to betray not only the incapacity to govern, but the total ignorance of the meaning of the word and the subject. In the social correspondences of the Tree of Life system, the king is represented by the sixth sphere. It is located in the very center of the Tree in order to carry out its coordinating function. In the Kamitic tradition, it is Heru (Shango, in the Yoruba) who must defeat Set--the creator of a governmental system in which the lower intellect's (spheres 7-9) main function is to rationalize the sensual and emotional gratification of the animal spirit (sphere 10).

Education

The men who coined the term "education" to denote the process of training, had in mind a procedure in which something is being "lead, or drawn out," as the etymology of the word shows; from "educere" <e- out + ducere, to lead, draw, bring>. It is obvious that there is nothing in Sahu Men's common understanding of the term education that relates to the process it symbolizes. Western education does not "draw out," but seeks to put something into the minds of people. In contrast, the Kamitic system of education focused on drawing out of the spirit its dormant talents and spiritual powers. Unlike Western education which seeks to teach people to make better things, the African traditional educational system aims at making better people. This will explain the low interest, hence low output of technological wizardry of Africans. That they are fully capable of rising to the challenge is more than proven by the great contributions that they have made to civilization, especially in laying down its foundations.

The Spiritual Cultivation of Man

At the very beginning, I must call the reader's attention to the fact that I am using the concept of "spiritual cultivation" as an alternative to the concepts of "religion" and "religious systems." This is made necessary by the common misconceptions that surround the two latter terms. Of these, one of the most important misconceptions is the belief that all groups of people have a religious consciousness, and the other, is the belief that under the surface of the differences between religious systems that they are all essentially the same, or at least aspire to the same goal, or ultimately worship the same God. The falsehood of these beliefs will be proven as the material of this chapter and subsequent ones unfold. The key is provided when we consider the fact that we can evaluate all religions, or people's claim of having it, by their degree of spiritual growth.

What is spiritual culture, its chief methods, and goal are defined by the essential nature of Man, which we saw is the "likeness of God." When Man is born, his consciousness is confined to the three lower divisions of his spirit--the physical, animal, and concrete intellectual (Sahu) divisions of the spirit. As these irrational and divisive faculties are the only guides to his consciousness and will, his behavior is subject to error. This is the cause of all that is wrong in the world. Spiritual culture, then, is a system that methodically leads Man's consciousness to the higher parts of his being, wherein dwell those faculties that contain the essence of God's attributes. In short, its goal is to raise his consciousness and spiritual power. The acquirement of wisdom--the intuitive knowledge that frees Man from errors-- and the spiritual power to achieve his will--making criminal acts unnecessary--is the result of achieving the goal of spiritual cultivation. We can already begin to see that not all religions share this understanding and this goal. For some, Man is essentially a sinner--i.e., confined to his animal spirit and concrete intellect--and can therefore only be saved by the intervention of a saviour outside of himself, or can only be kept from doing wrong by threats of a doomsday, or eternal damnation that awaits the sinner. In the traditions of Kamit, Canaan (its Kabalistical teachings), and Black (Dravidian) India, Man's salvation can only be achieved by the elevation of his consciousness to the higher part of his being, and the

increase of his spiritual power that he may be free of the limitations of the physical world. Ignorance and impotence are the father and mother, respectively, of all evils in the world.

The exact manner in which the spiritual cultivation of Man is to be undertaken--the schedule and the method--is shown, once more, by the Tree of Life and the metaphorein (incorrectly called myth) of Ausar, which, incidentally, is the oldest recorded initiation doctrine known to Mankind. I have adapted the Greek term "metapherein" to "metaphorein" to coin a new term to be used in place of the term "myth." The distinction cannot be encapsulated by a mere definition. As you read through the following chapters you will realize that these stories don't fit neatly into the category of allegories, neither do they bear much similarity to the myths of Rome, Greece, the Middle East, etc. When they are related to the Tree of Life, and to its related initiation and meditation systems, they will be seen to be poetically rendered, spiritual, scientific principles. According to the story, in the most ancient of times a Kamitic king named Ausar discovered the method of raising his consciousness to the highest division of his spirit, and increasing his spiritual power to its highest potential (spheres 0, 1, 2, and 3). As a result he was able to bring civilization--a spiritually controlled way of life--to the people, with its accompanying social harmony, peace, and prosperity. The reader must recall what was said in previous chapters regarding the Ba, or Ausar Man. Order in the land was maintained by a system that effectively developed the moral faculties in people, and by allowing only such men and women who had developed their moral faculties (spheres 4, 5, and 6) to hold positions of government.

It wasn't long before his youngest brother, Set--symbol of the dedication of our intellectual faculties (logical and artistic) to the service of the sensuous, and emotional nature--became jealous of all the adulation and homage paid to Ausar. Driven by his lust for power, and the rebelliousness of the animal spirit against the order and laws imposed by Ausar, Set, with the assistance of a confederacy of no-gooders (the Sebau, from Sebek, Deity of the 8th sphere), killed Ausar. They then hacked his body into fourteen pieces, and scattered them all over the land. It is said that a shrine to a Deity emerged at each place where a part of his body fell. Those with understanding will grasp what is implied regarding "polytheism." With Ausar out of the way, Set usurped the Kingship, and proceeded to terrorize the world. He created the first empire--rule of a foreign power over others--and replaced the system of maintaining social

order through moral cultivation with a policing system; as symbolized by the fragmenting of the body of Ausar into pieces, he separated religion from the state, education, separated God from nature, from Man, separated spirit from physical matter, the divine from the mundane--in short, he instituted an insidious system of dividing and segregating all things and people from each other and the whole. In short, he alienated Man from God, the world, and himself. Set's rule, of course, is that of all Sahu men, on the social level, and the rule of the faculties of the animal spirit and Sahu (spheres 7, 8, and 9) parts of the spirit in all men.

Everyone, Deities included, feared him. He was invincible in war and violence, which were his chief means of settling differences, as well as the objects of his worship. No one opposed him. Many even basked in the material pleasures with which he bought them off--all except Ausar's two youngest sisters--Auset and Nebt-Het (9th and 7th spheres, respectively). They searched for, and found the dismembered parts of Ausar's body, reunited them, wrapped the body in white linen (as a mummy), and buried his body at the bottom of the river. They set for his protection, the great serpent Kematef (Kundalini).

Some say that with the words of power given to her by Tehuti, others say that with Ausar's choicest part, she immaculately conceived a son--Heru--to Ausar, who as a legitimate heir to the throne could challenge Set, who had usurped it. And as in the Christian myth, which was copied from the Ausarian metaphorein thousands of years later, Set, hearing about the birth of a king who would challenge his reign and save the kingdom, sent his agents out to find and kill the child. But Auset was able to elude them and raise Heru to manhood.

Grown into full manhood, he engaged Set in a series of battles that lasted for hundreds of years. Victory slipped in and out of the hands of each combatant. But this stalemate was a victory to Set, for as long as morality and spirituality did not rule the world, he was achieving his goal.

Eventually Heru learned of the existence of a Deity that Set could not bother, who remained aloof of the events going on in the world. This Deity, Tehuti, it was written, was the only one that could guide Heru to a sure victory over Set. Heru sought his guidance, and was thus able to defeat Set. It was not accomplished militarily, but in the court of law, where Set was tricked into accepting the very laws that he had devised to enslave others--"maintaining law and order," he called it. As one of Set's strong points was

communication (Sebek--the 8th sphere was his main component), his penalty was to serve as the wind that propels the boat of Ausar--i.e., to disseminate the wisdom of Ausar throughout the worlds.

The kingdom of Neter (God) was now reestablished with Heru as the king, but guided by Ausar, whom he "reawakened," or "resuscitated," from time to time. This can only be understood by taking note of the fact that it describes the foundation of the African system of divine kingship. At prescribed times, rituals are performed by the African kings (Heru) and their royal priesthood to communicate with the spirits of the deceased kings (the Ausars) in order to receive their advice. This type of ritual is incorrectly called by Western scholars "ancestor worship." It must be called *Ancestor communication rituals*.

The meaning of the Ausarian metaphorein has different levels of application.

The Ausarian Metaphorein In the Spiritual Evolution of the Individual

1. Ausar established order, harmony, and prosperity: It is the Ausar--sphere one--within us that unites and harmonizes all of the separate functions in our body, enabling them to work as one. It is this metaphysical nucleus--God manifested within us--that coordinates the development of the human being from the very moment following conception. At the center of all acts of creation, whether they are of a galaxy or of an atom, is the Supreme Being--who/what else? All questions regarding abortion must consider this fact, and can only be resolved by a master of cosmogonical law.

2. Ausar is killed by Set who usurps the Kingdom: Although our divine Self (Ausar) is present at all times of our life, it cannot make its presence felt because we are born with our consciousness focused in the lower part of our being (Spheres 7 - 10). The domination of our lives by our emotions (sphere 10--Khaibit, the animal part of the spirit), and the Sebek faculty (8th sphere) is symbolized by "Set's" usurpation of the Kingdom of Ausar. We dedicate our lives to the gratification of our emotions and desires. What we do, want, how we do it, etc. is dictated by our likes and dislikes. And since our passions and sensual desires are not guides to what is correct, or beneficial, we create a great deal of trouble for ourselves, and others.

3. Ausar's body is cut into fourteen pieces, and spread over the land giving rise to shrines: This corresponds to the loss of the sense of

unity (religion) that accompanies the suppression of our Ausar faculty by the lower parts of the spirit. In past chapters we saw how the domination of our consciousness by the 8th sphere (Sebek) results in our segregation of the whole into unrelated pieces. Doctors separate healing from nutrition, scientists separate God from nature, psychologists separate the spirit from the body, and so on. Later in this chapter we will take a look at the integral system for the spiritual cultivation of Man which has been separated by many cultures (some Africans included) into stand-alone spiritual systems (shrines). The Sebek faculty also creates concepts that lack objective reality; X is "a medicine," Y is "a poison," there is "a devil" fighting for the soul of people, etc.

4. Auset and Nebt-Het collect the pieces of his body and bury it at the bottom of a river, and protect it with the serpent Kematef: This section deals with the beginning of the process of reintegrating Man's consciousness through the functions of mediumistic trance (Auset), and creative visualization (Nebt-Het, Het-Heru) one-pointedly (devotion) directed at reestablishing Ausar as the dominant faculty in our lives. That Ausar is buried at the bottom of a river symbolizes that he is accessible only through trance. His being guarded by the great serpent Kematef (Kundalini) means that the type of trance that will awaken him has to be of the ecstatic modality.

5. Through the use of words of power, Auset immaculately conceives and gives birth to Heru who is heir to the usurped throne of Ausar: Heru, we learned, is the will of Man. It is awakened by taking into ecstatic trance our devotion to reestablishing our divine Self, through the aid of the appropriate words of power (Hri, Hru, Hrau, etc.). It is an immaculate conception because it is a manifestation of our spirit that does not result in ourselves creating or reinforcing conditionings within our spirit. Normally, every goal in our life depends on our creation or reinforcement of a habit (conditioned state of the spirit). This is important from the standpoint that our ultimate goal is to liberate our spirit from the compulsion of all conditionings superimposed upon it.

6. Set sends his agents to look for and kill the boy-king: This symbolizes the antagonistic reaction of our animal spirit, and lower intellect toward our efforts to alter our behavior pattern to reflect the values of our higher divine nature. Most people are comfortable with "spiritual culture" as long as it does not entail giving up their likes and dislikes, following a teacher, living in harmony with cycles, interacting with things in a purposeful manner, etc. This stage

cannot be understood unless we adhere to the definition previously given regarding the true purpose of Man's will. Freedom of choice--the exercise of the will--is not the freedom to chart the course of our destiny, but our ability to embrace truth, or the lower part of our being (opinions, emotions)--to undertake actions that are in or out of harmony with the whole. So at this stage, when the will of Man begins to make its presence felt, either as a result of spiritual instruction or the trance work of the previous stage, he often rebels against the higher values. There is a dichotomy between what he believes or understands, and what he feels.

7. Grown into full manhood Heru engages Set into battle but cannot achieve anymore than a stalemate, which ultimately is failure: This corresponds to the use of the will to fight the lower part of being. Its inability to defeat it--it wins some battles and loses others--is caused by the fact that the will is being guided by the very faculties it is trying to bring under its control. For example, you resist an emotion or desire because you are afraid of getting caught. There is a failure to understand that as long as you are motivated by an emotion (fear of getting caught, of being embarrassed, of dying, of going to jail, etc.), you cannot successfully oppose "undesirable" emotions and desires, because in each case you are being controlled by the emotional part of the spirit.

8. Heru is able to defeat Set with Tehuti's assistance: At this stage, the will is guided by the wisdom of Tehuti--through meditation, counsel from Sages, and oracles--which, as we learned, is the Will of God.

9. Set's penalty: As the core of Set's being is the 8th sphere--Sebek--which is our faculty of communication, Set's penalty is to disseminate the wisdom of Ausar throughout the world.

10. The reestablished kingdom of God: Here the individual realizes his divinity and becomes a Sage. His words and teachings serve to guide others to the life of peace, love and prosperity.

The Metaphorein of Ausar in the Spiritual Evolution of Society

1. Ausar established order, harmony, and prosperity: This is symbolical of the fact that the nations that established civilization were governed by religion and a higher moral code than exist in contemporary--so-called modern--societies. It is interesting to note that imperialism--the subjection of a foreign nation by another--did not occur until the coming of the Semites to Mesopotamia. It started with Sargon I of Akkad. Until then, the great powers Kamit,

Sumer, Kush, Harappa, Mohenjo Daro, and Elam lived in relative peace with one another. Skirmishes and quarrels over routes, etc. existed for sure. But never did they set out to plunder, destroy, or subjugate each other. Neither did they go up to the north to enslave or exploit the militarily weak Caucasian.

2. Ausar is killed by Set who usurps the Kingdom: This corresponds to the period since the coming of the Eurasian to Western Asia (Mesopotamia), India, Africa, the Mediterranean, and later to the rest of the southern and western hemispheres. The conquerors reinterpret the religious teachings and cultural elements of the ancient civilizations in light of their level of understanding, biases, interests, etc. Motivation of human behavior is no longer through moral cultivation, but through fear and violence. Spiritual values are replaced by crass materialism, etc. We know the story well.

3. Ausar's body is cut into fourteen pieces, and is spread over the land giving rise to shrines: This speaks of the dispossession of the people from their land by the conquerors and their dispersion throughout the world. In a more significant manner, it refers to the breaking up of the integral spiritual initiation system into its components, and their being spread over the world as separate "religious systems." We will see later that the great initiation systems of Kamit, and Canaan were composed of 10 major stages and 23 minor (the so-called 33 degrees of Masonry) ones. Once these nations came under attack, signalling the beginning of the end, as their prophets had foretold, they began to send priests with their shrines into different parts of the world in order to preserve the teachings.

4. Auset and Nebt-Het collect the pieces of his body and bury it at the bottom of a river, and protect it with the serpent Kematef: This corresponds to the masses' (Auset) adherence to their religious faith, however unsophisticated, and their undying hope for a world of peace, happiness, and plenty.

5. Auset immaculately conceives and gives birth to Heru who is heir to the usurped throne of Ausar: The preceding stage eventually leads to the birth of revolutionaries.

6. Set sends his agents to look for and kill the boy-king: This symbolizes the typical reaction of conquerors and oppressors to those who revolt against their immoral rule.

7. Grown into full manhood Heru engages Set into battle but cannot achieve anymore than a stalemate, which ultimately is failure: This is the stage of revolutions in the world. But it does not lead to success, as one dies by the sword if one lives by it. Might,

however justified or unavoidable, does not make for right. We are presently at this stage in our social development.

8. Heru is able to defeat Set with Tehuti's assistance: At this stage, moral and legal values are wedded to serve as a basis for adjudicating the international and social conflicts in the world. The blatancy of the hypocrisy of the conquerors will be a major factor in the resolution of these conflicts as they will be shown to be in constant violation of the very laws that they propose for others. For this to take place there must be a philosophical and moral restructuring of the United Nations. The oracles (Ifa, Metu Neter, I Ching, and Dilogun) will play a major background role in the restructuring of the philosophical principles that will dominate in scholarly, religious, and governmental circles.

9. Set's penalty: The entire network of communications media will be used to establish and maintain a world order based on the principles embodied in the Tree of Life.

10. The reestablished Kingdom of God: This is a way of life where all things are in unity with each other. Peace, harmony, and prosperity will prevail. But . . . since we could prophesy into our future, it's because we are reading the past. So, the summit of Ausar will not last forever. Nothing on earth does. All is transitory and ephemeral here. Before long, Set will be back. Do not be oppressed. Keep your spirit like the Sun at midday, forever. "*En Aungk Heh, em Hetep.*"

Chapter 10

THE TREE OF LIFE INITIATION SYSTEM

AN OUTLINE

While metaphoric stories like the Ausarian system explained in the preceding chapter enables us to get an integral understanding of a complex process, they do not lend themselves to giving the details and precision that are necessary for carrying out the process. For this we must go to the Tree of Life.

Sphere 10, Geb, the Khaibit (animal part of the spirit): This part of the spirit sets the foundation of the problem to be overcome. We are born with this part of our spirit already programmed for the preservation of our survival. Its basic program can be reduced to an attraction (likes, cravings, desire) for what gives us pleasure and a repulsion (displeasure, dislike) for what causes aversion or pain. It is a very rudimentary mechanism that can assist us somewhat efficiently against physical dangers, but if not transcended, it becomes the greatest impediment to our spiritual development. Since we can become in love with things that are not good for us, and hate that which is most beneficial, then this part of the spirit cannot be the guide for what is right or wrong. All that threatens to interfere with our pleasures, or cause pain leads to a response of anger or fear--responses that are not capable of solving problems or conflicts. For this understanding is essential.

Sphere 9, Auset, the foundation of the Sahu part of the spirit: Due to its extreme receptivity, this part of the spirit is greatly affected by the Khaibit (animal spirit). We are more inclined to imitate (learn) those ideas that cater to the domination of the emotions, and imitate the behaviors that portray receptivity and impotence in the face of our emotions and sensuous nature. Crying because of pain, displeasure, anger, etc. Manifesting anger because of contradiction, differences, etc. If the adults in the society into which we are born have transcended the expression of this part of the spirit, then we would have just the opposite as examples to imitate!

Sphere 8, Sebek: It is through this faculty that we become informed. We receive names for things and events, definitions, descriptions, and explanations. An unwise society will fail to teach its citizens the difference between "knowing" (experience of a reality), and "believing acquired information." If people, for example, "knew"

what is love, when they said to another "I love you," they could not, for example, manifest anger to another person, for love--an expression of the 4th sphere--is a perpetual expression of joy and optimism that is totally independent of external circumstances. It is giving, not seeking in return. At the 8th sphere, we "know the words," but lack the experience behind the words, so our actions contradict our claims and beliefs. In addition, because the 8th sphere is also receptive to the 10th, and is rooted in the 9th (we imitate the definitions given to us, etc.), we are inclined to accept and incorporate into our belief bag of tricks those ideas that allow us to rationalize ("justify") the dominance of our animal spirit. We go as far as creating a set of complex myths to give power to the animal in us. It is at this point that evil comes into play. All Nonwestern traditions are in agreement that cleverness, deception, and cunning are the fundamental expressions of evil. By evil (deception, etc.) we mean, the invention of names, slogans, concepts, etc. that allow us to gratify and cater to the animal spirit, regardless of the price to our well being, and that of others, and worse, when they, the slogans, etc. are used to exploit and oppress others by manipulating them through the lower part of their being. It is very easy to do in a society that is ignorant of the difference between knowing and believing; that is ignorant of the fact that the possession of information (names, definitions, explanations, and description) is not the possession of knowledge of the reality symbolized by the information. For example, at this level, people receive information (are taught a scripture) regarding God (definition, description, etc.). Because they now confuse the knowledge (experience) of the scripture defining and describing God with the actual knowledge of God they have no qualms about murdering others whom they accuse of paganism, heathenism, etc., because the latter professes a different belief (or experience!) of God. In this book the reader will see all of the challenges that a person must meet before he can qualify himself to have actual knowledge of God, then he can judge for himself. He can take a hint from the fact that this realization takes place at "0" above the Tree of Life!

In short, the disintegrating effect of this part of the human spirit is what enables the person to separate his beliefs from his actions; he worries about his health, yet smokes, and eats junk food (his animal spirit controls him); claims that he is concerned about the health of the public, and its economic well being, yet he spends billions of dollars subsidizing tobacco growers, hospitalization for the cardiac and cancer victims of tobacco, and cancer research, etc.

Deceptions like these, which number in the thousands on all levels are caused by the failure of the individual and the society to transcend this expression of the 8th sphere. This is the one and true Devil. We must remember that the bible defines him as "a deceiver." It is not an arch-enemy of God that is lusting after our souls. It is the immature intellect in man in the service of the emotional and sensuous--the animal--part of the spirit. Earlier we saw that it is called Set in the Kamitic tradition. This is the origin of the Christian Sat-an, even to its color--red.

Sphere 7, Het-Heru: Without knowing it, we integrate the "building blocks" of all that we accomplish through the use of our imagination. This is why we spend a great deal of time visualizing the things we aspire to in life. Unfortunately, what the spiritually uncultivated wants in life, is once more again, dictated by what causes pleasure. Sebek (the 8th sphere) by now has found artful ways--clever words--of smoothing the way; He substitutes "pleasure" for "happiness," "pleasurable" for "spiritually uplifting," "rebellion against spiritual law, and spiritual teachers" for "the pursuit of liberty," etc. But the glitter of Het-Heru's metal which is copper must not be confused with gold.

These four influences, spheres 10 - 7, seal the way to the spiritual development of the individual. They insure that his consciousness remains imprisoned in the lower part of being (the Sahu and Khaibit divisions of the spirit). But now that we have a technical understanding of the problem, we can proceed to solve it. Underlying the problems to be overcome are two principles, which with the four principles underlying the initiation process itself, yield six principles that must be kept in mind in order to properly understand initiation.

The Two Principles Underlying the Problems to be Overcome through Initiation

1. The identification of the individual with the person or the four lower faculties (spheres 7-10), instead of the Self (0-sphere 3). This can be summarized by the following statement, "I am the person." This is the source of all of Man's problems. The use of summarizing statements such as this one, and others to follow will be fully appreciated when applied to meditation.
2. A struggle to overcome the lower part of being that ends in failure. As the individual is identifying with the person, then the

person is fighting with the person¹. This corresponds to the ineffectual struggle of Heru against Set. It can be summarized as, "I deny my person to assert my person."

The Four Principles Underlying Initiation

1. Level 1 of initiation, which is carried out in three stages (spheres 9 to 7), corresponds to the return of the individual's identity, away from the person, to the Self (Ausar, spheres 1 & 0) and its faculties (spheres 3 & 2). In the Ausar story it corresponds to Auset's devotion to finding, and reuniting (re-mem-bering) the parts of Ausar's body. It can be summarized as, "I am Ausar."

2. Level 2 of initiation, which is carried out in three stages (spheres 6-4) corresponds to the successful struggle of the individual in opposing the lower part of being--the person. In the course of the meditation work given in this book, it will be shown that the efficacy of the will is not based on power, although the latter plays an auxiliary role, but on the spiritual liberation of the individual, which is ultimately dependent on his identification with the Self (sphere 1, Ausar). This level can be summarized as, "I deny my person to assert my Self." It corresponds to the success of Heru over Set through following Ausar communicating through Tehuti.

3. Level 3 of initiation, which is carried out in three stages (spheres 3-1), corresponds to the actualization of the ability to live as the Self in the world, once the individual has gained total freedom from the lower part of being,- the person. It can be summarized as, "I live as Ausar." This corresponds to Heru's assimilation of the qualities of Ausar after defeating Set.

4. Level 4 of initiation, which is carried out in one stage (0, the Subjective realm), corresponds to the direct insperience of the essential formlessness of one's Being. Until then, all that we had to go on was the intellectual argument to the effect that "in order for us to transcend a particular habit or conditioning, our spirits must be essentially unformed." Here we come face to face with the reality.

The importance of the above outline cannot be overemphasized. I so often come across individuals claiming to be

1. This is the true explanation for the so-called inner conflicts that lay people, and psychologists speak so much about. They are prevented, and resolved by the identification of the individual, when trying to transcend the (lower) person, with the (higher) Self.

undergoing initiation, yet they are totally unaware of the fact that the source of their problems is their identification with their persons (the habitual complex of ideation and emotional responses to everyday life situations). This is so deeply ingrained that they vehemently resist all attempts to pry them away from this lower complex. The four levels of initiation, then is a process of (1) preparing the individual for the struggle against the lower part of being (Level 1) (2) the struggle itself (level 2) (3) the coming forth of the Self, and its faculties (level 3) and (4) the Realization of the essential nature of the Self as the unconditioned, unformed, eternal, and infinite capacity of actualization (level 4). Let us now proceed to detailing the 10 stages composing the 4 levels of initiation.

THE TEN STAGES OF INITIATION

Preliminary Requirements to Initiation Sphere 10, Geb, The Khaibit

Essentially, spiritual development is a process of raising consciousness from the lower divisions of the spirit (the Khaibit--sphere 10--and Sahu--spheres 7, 8, 9) through the higher ones (spheres 6-1) to its original place, "0" in the Subjective Realm. Once the individual has insperienced the essential unconditionedness of his being, then he can live in the world in total freedom from all objective conditioned reality (not just simply the lower part of being). In addition, the spiritual power that is required to effect the raising of consciousness can also be directed by the will of the individual to affect his physical body, the life of others, and the external environment.

How the ascent of consciousness is achieved can be made clear by a common analogy. Imagine a room with a furnace and a thermometer. By increasing the heat output of the furnace, the mercury is made to rise in the thermometer. Let us now equate 1) the mercury with consciousness, 2) the heat with a specific expression of our life-force (Ra, spiritual power), and the measurements on the thermometer with the spheres of the Tree of Life, and divisions of the spirit. Besides affecting the mercury, the heat will affect other things in the room. The kindling of the heat corresponds to the metaphysical effects of sex, and its increase, to the effects of the austerities imposed on the initiate from the fourth to the 9th stage of initiation.

The Care of the Life Force

The heart of the work to be done at the tenth sphere concerns itself with the replenishment, conservation, free flow, and equilibrium of the modalities of the life-force. This life force is known as Chi in the Chinese tradition, Ki, in the Japanese, Kundalini, in Dravidian India, Ra, in the Kamitic, etc.

Its replenishment is optimized by observing proper dietary principles; by following a very nutritious and wholesome diet.

It is conserved by exercising moderation in eating, drinking, sexual activity, work, emoting, sensual gratification of all kinds, etc.

Its free flow throughout the body is secured by judicious and periodic fasting, the practice of cleansing breathing techniques (Nadhi Shuddi Pranayama, etc.), and a lifestyle that is free of emotional suppression.

This life force has four modes of expressions that can be described through the metaphors of the four elements that we discussed in earlier chapters. It is subject to a cyclical alternation of phases in which it heats and dries the body at one extreme, and cools and moisturizes the body on the other. In between these are phases of cold and dry (following the hot and dry), and hot and moist (following the cold and moist). These four phases are, metaphorically, fire, water, earth, and air, respectively. Over or under generation of any of these modalities result, not only in illness, but in problems in the generation of the special expression of our spiritual power that is needed to raise our consciousness, and to manifest our psychic powers.

The equilibrium of these four modalities of our life-force is achieved by a well balanced diet, not according to the western concept of food components, but according to their effect on, or analogy to the four modalities of the life force. I.e., foods are also classified as "fiery" (hot peppers, garlic, etc.), "watery" (watermelons, lettuce, wheat, etc.). The Dravidians of India have left extensive treatises on this aspect of food classification and utilization in their work entitled the Ayurvedas, which the Aryan (Vedantic) Hindus are now claiming to be their work. As everything that we do depends on, and affects one of these modalities of the life-force, we must also observe moderation in our activities, as well as the time for which certain activities are in harmony with the cyclical manifestation of these forces. We will take a look at these later on.

These are considered outer teachings, and their imparting are not considered part of the initiation itself. In fact, the teacher takes advantage of this stage to determine the level of receptivity, and discipline of the student, for most people, unfortunately, do not make good candidates for initiation.

Level 1 - Stage 1 of Initiation **Sahu division of the Spirit, Sphere 9, Auset**

It is here that the most important step in our spiritual development is taken. Can you imagine setting out on a journey

without a destination in mind? Writing a novel without a theme to give unity to the multiplicity of scenarios and actions? An educational system without a curriculum? Yet, this is the manner in which all men live without a true system of initiation. It is the effect of taking the person as one's identity. This step is the identification with Ausar, sphere 1, as our Self. We will see how this identification becomes the basis of the work that is to be done in each stage (sphere) of initiation. This identification of our Selves with Ausar, which has been equated with the "projection" of the Supreme Being as the core of our being, does not take place as an act of faith. Let's begin with the fact that the immense complexity, yet, order and unity of the functions of Man's body and spirit can only be attributed to a guiding intelligence. While most Western scientists are mute on the point, others, of a more progressive mentality, allege that this intelligence is the so-called sub-conscious mind. A study of the history of psychology will reveal that no one has ever proven the existence of such a "mind." It was merely a concept invented by Western scientists in their atheistic attempt to speak of spiritual processes without seeming to do so. When the true nature of the spirit is understood, from the study of spiritual literature, and verifications through rituals and meditation it will be seen that *the spirit is not the integrator or director of its own functions*. This is evidenced by the fact that the functions of the spirit (hence, the body) can be altered at will through meditation. In its capacity of directing and integrating the operations of the spirit (mental, emotional and psychical functions) and the body, this intelligence dwelling within our being shows that it has, qualitatively, the same capabilities as the Supreme Being. Although smaller in magnitude, the making and running of Man's spiritual body encompass the same degree of intelligence. In fact, this intelligence is an unseparated share or apportionment of the Supreme Being dwelling within Man as Her Self. That is why it knows how to direct the spirit in its functions of transforming a fertilized egg into the billions of cells of many different types that we call the human being. That is why it knows how to direct the body in its functions of digesting and assimilating food, in its functions of healing the body, etc. It stretches intelligence to the breaking point to believe Westerners' claim to scholarship or science regarding their belief that these infinitely complex physiological functions are guided and kept in harmony by the blind mechanical functions of atoms, "bio-feedback mechanisms," etc. This indwelling intelligence is none other than our Self--Ausar, the first sphere of the Tree of Life, the

apportionment of the Supreme Being within our being. It is the concrete validation of Man having been made in the likeness of God. It is the "word" that came to dwell in flesh. It is the concrete validation for the claim that the Kingdom of God is within.

It is with this indwelling divine intelligence that we must identify as our Self. Unlike with Christianity, this is not an act of faith. It is a concrete reality that is amenable to being experienced. And not only must it be experienced, we shall see that in the same way that it plays an active role in directing and unifying our mental and bodily functions, it will play a similar role in our initiation, and all aspects of our lives. Imagine having this indwelling intelligence that knows how to run the machinery of your body, running your career, your education, your marriage, your nation, and so on. At this moment it is limited to running the "involuntary" and subconscious functions of your being. Through initiation, ritual, and meditation you will learn to expand its functions to the external part of your being, as well as to gain voluntary control over the "involuntary" processes. The fact that it dwells within you and can be experienced through "mediumistic" (slumbering) trance is symbolized in the Ausar story by its being buried within an acacia tree (physical body), or at the bottom of a river (innermost recesses of the spirit). Going into mediumistic trance, which is symbolized as being submerged under water¹, is the first spiritual skill that the initiate must acquire. Besides enabling the initiate to experience that his Self is this indwelling intelligence, this form of trance serves a number of other functions at this stage of initiation. It is the key to memory, and unification of experiences. People who have the so-called photographic memory are able to go spontaneously into a mild trance while reading, etc. This is the key to the "mindfulness" that plays a major role in the initiate's quest. Anyone who has made resolutions to change some aspect of his life, has discovered that the main reason for failure is primarily due to forgetting. It is at the fifteenth ounce of that pound of chocolate cake that you remember your dietary resolution. Since the identification with Ausar must underlie the initiate's thoughts and actions throughout his life--i.e., serve as the theme of the initiation and life--it must be firmly impressed through mediumistic trance upon the spirit. The perseverance in maintaining one's identification with Ausar is symbolized in the Ausarian story as Auset's devotion to him. We

1. Many religions have mistaken the symbol for the actuality and subject their new converts to various sorts of dunking. We of course know this as "baptism."

also learn in the metaphoreisis of Ausar that she (along with Nebt-Het) re-collects all the parts of his body which Set had broken into fourteen pieces, and reconstructed (re-membered) it. The breaking up of Ausar's body is symbolical of the segregative nature of the 8th sphere (Sebek) dominated mentality of people before initiation (Sahu Man). This process of re-member-ing symbolizes the dynamizing effect that trance has upon our thinking. It helps to link up and bring to our awareness the host of associated ideas that have stood separated in our memory bank. This process exposes contradictions within our being, and creates new revelations. Incidentally, this slumbering (mediumistic, hypnotic) trance is a major significance of the lunar correspondence to this sphere, and to Auset, as it is most pronounced at the full moon, and analogous times (winter, midnight, etc.).

As we saw in an earlier chapter, the word of power that corresponds to Ausar is "Aung(k)," and to Auset, "Dhung and Vang." It is by working with these mantras that the initiate is able to accelerate and guarantee success in the work of this stage. There is another very important event that is initiated as a result of the work that is undertaken in this stage of initiation, but we will discuss it in stage four.

Level 1 - Stage 2 of Initiation **Sahu division of the Spirit, Sphere 8, Sebek**

At this stage the teacher provides the initiate with a new set of definitions, descriptions, and explanations for what is life, what are emotions, etc. In short, the teacher redefines the basic ideas operating in the life of the student. Before this, all of the individual's beliefs are based on the identification with the person. We have already seen that up to this point the individual has been victimized by the host of illusions, segregative thinking and rationalizations of emotions due to the operation of the lower faculties making up the person. Now his beliefs must be redefined using the Ausarian Self-identity as their basis.

The reshaping of one's belief system in light of the identification with the indwelling intelligence that is at the center of all our mental and bodily processes, is called the *Opening of the Way*. It is important to understand that in reality we don't learn how to grow spiritually. We learn how to remove the impediments to the

coming to the foreground of our submerged divine Self. I.e., wrong ideas close the door to the full operation of the Self in the life of the individual. One cannot overstate the fact that the indwelling intelligence was not intended to be limited to operating your background mental process, and involuntary bodily functions. And as it is omniscient, it cannot be taught. The reformed Sebekian faculty reflecting rationalizations based on one's true self (Ausar) is called Ap-Uat (the Opener of the Way). The "way" is a symbol for our beliefs and ideas as conduits of the course of our lives. As we believe, so we act. As we act, so goes our destiny. According to our unreformed Sebekian faculty--Set--we are in the habit of rationalizing our actions according to our identification with our person. We would, for example, firmly believe that we could not help doing so, and so because of the way we felt (emotional influence), or didn't feel, etc. Can you imagine the indwelling Self running the body according to whims and feelings? Surely, its functions must be based on divine law and order (Maat, the 4th Sphere).

This process of redefining the belief system of the student is made very difficult by the use of our everyday language. Most African societies of initiates² possess "secret" languages for such purposes. One of the reasons for this is that such languages create order in the thinking of the person through their semantical structures. We get glimpses of this in some of the South African languages in which the categorical word for God-"Muntu"-is the same for Man. As a result of using such languages for our thinking, we are able, without conscious effort (a very important principle), to keep in our awareness the facts of our true nature. If your language constantly reminds you that your self shares the same qualities as God, by using the same term for both, if it reminds you of the difference between being informed and knowing, by using clearly distinct terms for each, it facilitates the process of spiritual development. If we use our everyday language we have to rely on personal definitions of the terms that we use. I have found it necessary in this book to establish such special usages of terms like "person" for the lower part of being (spheres 7 - 10) and Self for the higher part of being (spheres 0 - 3), and so on. Another benefit of

2. For example, the Bundu, Ampora, and Poro of Sierra Leone; the Ogboni, Egbo, Eluku, and Orisha of Nigeria; the Homowo, and Oyenl of the Gold Coast, and several hundred other "masonic" initiation societies that can be found throughout Africa.

such languages is to be found in their close relationship to the "language" of words of power. These languages use many devices, some of which are known as gematria, notaricon, temura, etc. in order to hide the words of power in the body of other words, and to serve as a mnemonic device to the initiate. Take for example the name of the deity of wisdom, Tehuti. It conceals the mantra "Hu." The Kamitic cosmology states that the God of the senses is Hu. Now it is well known that the highest goals of meditation cannot be achieved unless thinking is stilled. So this hekau (word of power) is used to quiet the senses as their operation stimulates thought activity. This fact will constantly remind the initiate that wisdom is achieved by stilling the thinking process to enable our omniscience to come to the foreground. Similarly, the Kamitic phrase for "I am" is "anuk," which is a transposition of the hekau "aunk" (aung). Each and every time that the Kamitic initiate says "I am" he is reminded that this I am is the same, qualitatively, as the Supreme Being. Although the classical Latin and Greek that are used for saying mass lack the same degree of cogency, and have no relation to words of power, it is on the basis of these principles that the Catholic church has reserved them for their masses and litanies.

In the same manner that mediumistic or hypnotic trance was used in the preceding stage to reestablish the proper Self identity, so must it be used to establish these new definitions as operatives in the spirit (mind) of the individual. Comprehending them is not enough. This is why people find themselves doing things that they are convinced they should not do. It is why the mere reading of scriptures, and hearing of sermons is not enough to do much to alter people's behavior. The inculcation of this new set of values into the spirit serves additional functions. Ideas and beliefs only have power to influence our lives when they have been charged with emotional force. Expertise in meditation will reveal that emotions are primarily states of mediumistic trance. In this state, independent thinking and the will are to a large degree paralyzed, and consciousness is withdrawn from the external plane. The idea or image in the sphere of awareness becomes the reality of the moment. That is why people who, in reality, know better cannot at the moment of a powerful emotion rescue themselves. Why do some people lose control at the sight of a picture of a serpent, spider, etc? Why do most people lose their common sense during emotional moments? How about the profusion of wise thoughts that visit you only when you are dealing with other people's problems? The mediumistic trance, of which emotions represent a variety, is

akin to the state of dreaming and death. And the guide of our behavior at such times is the idea or belief associated with the emotional complex. For example, what we call "anger" is a negative mediumistic trance in which the guiding factor is the image of our person carrying out some anti-social act, perhaps the idea that we are angry, etc. These negative thought/energy complexes are symbolized as Set, and Aupep in the Kamitian tradition. The positive thoughts (rationalizations of our actions based on our identity with Ausar) are symbolized by the deity Anpu (Anubis), the *Guide of the Dead*. I.e., it corresponds to the positive thoughts that must guide us when we are in the grips of an emotion. Since the will, and independent thinking will be by degrees paralyzed, according to the strength of the emotion, our only guide at such moments are the thoughts reprogrammed into our behavioral patterns. Once the work of this stage of initiation is completed (which takes place at the 8th stage, sphere 2, Tehuti), the initiate will be impervious to the visitation of any emotion, craving or temptation. This is why it is said that Anpu (Anubis) is the embalmer of Ausar. I.e., he renders him incorruptible. During the 4th stage of initiation we will see how this process truly unfolds.

Level 1 - Stage 3 of Initiation **Sahu Division of the Spirit, Sphere 7, Het-Heru**

Once the initiate's belief system has been brought into harmony with truth, he is then ready for the intensification of the life-force or spiritual power in order to raise the consciousness to the higher parts of the spirit. This power which is called Kundalini by the Blacks of India, Ra, by the Kamitians, Shekinah by the Canaanites, Eros, by the Greeks (though misunderstood), libido, by the psychoanalysts (though misunderstood) is none other than our life-force. The arousal of Ra--our life-force--to the point of manifesting psychic phenomena (prophecy, clairvoyance, psychic healing, etc.), and raising consciousness to the higher parts of the spirit can take place when we are experiencing intense pleasure; extreme joy, heightened sexual excitement, orgasm, ecstatic trance, etc. It is of great importance to note that of all the intense pleasures that Man can experience, only two--orgasm and ecstatic trance--can be deliberately induced. This explains the fundamental nature of Black religious practices (as well as shamanism) which are centered around ecstatic trance. It also explains the sex-based ritual systems

(tantra³, etc.) that are widely disseminated throughout the so-called pagan religions of the world⁴. It also explains the heavy use of music and festivities--all Het-Heru (venusian) correspondences--in religious ceremonies and meditation. The reader must recall that this stage of initiation belongs to Het-Heru, the venusian⁵ deity--Goddess of art, festivities, joy, etc.--of Kamit. While in the first stage of initiation the initiate's trance is dedicated to establishing devotion to realizing Ausar as the embodiment of his Self, and in the second stage his trance is dedicated to impregnating into the spirit a belief system that is in harmony with truth, *in this stage, the trance is dedicated to manifesting an intense joy for those earthly goals that are in harmony with the new belief system implanted during the second stage.*

A clue to the function of emotions is provided by its etymological structure (e = out, external + motion, the power to move, etc.). It is the energy, or moving principle, or work-capable factor that has the power to overcome the resistance of physical (external) matter. A law of nature is that all activities require energy. There is no achievement of the will without energy, and no extraordinary achievement of the will without an intensification of

3. Most books on tantra deal with it starting from the time that it gained social acceptance in Hindu society (circa 400 A.D.), in order to make Vedantism, the religion of the Aryans much older. The fact is that the tantric practices date back to the earliest time of India as a chief element of the religions of the Blacks of India (Dravidians, Austric, etc.). This is, of course, pre-historic to the Nordic Aryans who had not yet appeared on the historical scene. We must also note, that tantrism as known to the world, is already a mixture of elements of the Black religions that originated it, and the Aryan which modified it to harmonize it with their Brahmic principles. We thus find it reflecting a male chauvinistic and patriarchal bias by its primary concern with the initiation of males, while women are used primarily as their support.

4. What can be more pagan than the host of Western irreligious sexual practices; homosexuality, oral sex, prostitution, pornography, etc?

5. It is a very curious fact that the Jews prohibit all kind of work, and pleasurable "nonreligious" acts on the Sabbath. Yet, sex is not only allowed, but encouraged. When we note that the sexual engagement is to take place on Friday night, ruled by Venus, which is the beginning of the Sabbath, it all falls into place. Of course, Jews will never admit this openly. But as they have adopted many of the esoteric beliefs and practices of the Blacks of Canaan, we find them reiterating that the Shekinah,--the spiritual power--hovers over the nuptial chamber on the Sabbath.

the power of the nervous system⁶, or without intense emotional pleasure. There is a very important story in one of the chief scriptures--the *Rudrayamala*--based on the religion of the Blacks of India. It tells of how the great yogi Vashista, who was very skilled in the orthodox teachings of Yoga, who after 6000 - 10,000 years (about 70 - 125 incarnations) of yogic exercises, fasting, and asceticism had been unable to bring forth his spiritual power--kundalini--into full manifestation. He was about to give up and curse the Goddess declaring that it was all a hoax, when Tara (the Goddess of the mantra Aum) appeared to him and told him that he could not manifest the Mother in her full glory because he was practicing in the wrong manner. He should go to Mahacina and learn the correct method. When he got there he found the God Vishnu intoxicated, and in ecstatic embrace with a beautiful maiden. Forgetting that it was the Deity itself that he was speaking to, Vashista criticized Vishnu for engaging in practices that went against the "sacred teachings." Vishnu challenged Vashista to prove how, and why sex was not sacred. After Vashista was not able to prove his point, Vishnu explained to him that during the sexual act, he and his yogini were involved in intense visualization aimed at preserving the world from extinction, while the "sexual energy" provided the motive force to achieve the goal of the visualization. He then initiated Vashista into the great Kula Yoga Ritual of the Blacks of India, thus enabling him to achieve his goal in bringing forth the Goddess, fully effulgent as 10,000 suns. This is the basis of the Tantric Yoga System of the Blacks who gave India, and the world the yogic teachings.

In his book *Reflections On the Tantras*, Sudhakar Chattopadhyaya, p. 13, states "*Then the sadakha (initiate) should worship the Goddess in her (the female partner) private parts according to the prescribed manner. The worshipper should then resort to pranayama (breathing practices) and remain ever calm in mind thinking that the Mother Goddess is there.*" Although all teachers of yoga in the west have remained silent on the subject, all such procedures as pressing the heels against the pubic area and the perineum during pranayama (breathing practices), and the Bandhas are, primarily, measures to help suppress ejaculation. All pranayamas that have as their objective the raising of the kundalini must be practiced during the sexual ritual. Most of what appears as separate practices of yoga (mudras, bhandas, pranayamas, asanas)

6. For this purpose, such hypnagogic/aphrodisiac herbs as Yohimbe, Damiana, Ginseng, etc. are expertly used.

are in reality segregated parts of an integral system. The Aryan ignorance and contempt for certain aspects of Yoga--a Black creation--was the cause of their acts of selection and rejection of parts from the system that were in harmony with their thinking. Imagine having functional parts of a television set, but the parts are not hooked up together. This is the state of the world practice of yoga.

While engaging in sexual intercourse, the couple concentrates on visualizing a goal, success in the career of the husband, or the wife, or both, for example. Before and during the ceremony, judicious use will be made of certain foods and drinks with aphrodisiac properties in order to realize the greatest ecstasy possible. The association of the image of the objective with the sexual ecstasy serves to keep the image constantly in one's awareness, and endow it with great power to attract to the individual in an occult manner, the resources to achieve the goal. Do not pleasurable experiences keep reflecting themselves in our awareness, motivating us to renew the experience? This is the great secret for maintaining oneself motivated, which is a major key to success in any undertaking. It is this principle that advertising experts are using when they advertise a car with a beautiful half clad woman, or pictures of political candidates with the word "sex" embedded in such a manner that it is not visible to normal vision (subliminal seduction), etc. We "pagans" would rather meditate on transcending our lower nature and manifest our divinity during sex, than dwell on the physical sensation of the act, let alone use it to sell candidates, crackers and cars. Is not the latter truly prostitution . . . of the spirit? An experience that is so alien to Westerners is the breaking out of a person having sex (most often the woman) into trance possession by a deity or an ancestor. Instead of the usual "I love you," "how sweet you are," etc. the person, now possessed with the deity engages in psychic healing, prophecy, moral admonitions, counselling, warnings, giving guidance relating to the meditation goal, or some heavy theological abstractions. If they only knew who, in reality, is the pagan.

Once this part of the spirit has been developed through repetitions of this Kula Yoga Ritual, the initiate finds himself spontaneously, and readily manifesting ecstasy regarding revelations that occur to him throughout the normal course of living. This development accentuates the importance of the two preceding initiation stages. Had his belief system not changed in the preceding stage, he would find himself becoming ecstatic about wrong ideas.

And if he had not placed himself humbly under his teacher's guidance in the first stage of initiation he would not have been receptive to the reformulation of his belief system in stage two. The result would be, that once he learned how to empower his imagination through ritual sex and other means of arousing the life-force, he would find himself giving power to all kinds of false beliefs. The outcome is predictable.

Our spiritual power is defined in the Kamitic and Black Indian traditions as an expression of the solar force (Ra and Kundalini, respectively). And like the solar force it nurtures all that is within us. It does not discriminate between harmful and beneficial beliefs. This is the chief danger that Kundalini Yogis warn students in relationship to the arousal of Kundalini. One is going nowhere spiritually without arousing Ra, and one is courting all kinds of problems--persistent obsession with false ideas (insanity)--if one attempts to arouse it without a teacher.

We must take note of the fact that the ritualistic use of sex is not the only means of arousing one's spiritual power (manifesting ecstatic trance). It can be done with the mere repetition of words of power, through the use of drugs (Anamita, Peyote, Marijuana--called Bhang in India where it is used extensively for this purpose--etc.), and through the employment of hatha yogic sexual self stimulation; this is asvini mudra in which the perineum is contracted and relaxed throughout the visualization, coordinated with breathing. This is the muscle that we contract when we want to stop our urine in mid-stream. It also undergoes automatic contractions during sexual excitement and orgasm. Achievement of the goal by meditating with words of power by themselves requires so much time, and so many meditations that it is not practical for the majority of people. Yet, when such methods are combined with Kula Yoga, success is attained in a short time. As for the use of drugs to aid in the achievement of ecstatic trance, the price of damage to one's health and social status makes this a poor option. Not only does the sexual ritual approach leads to a speedier success, it also helps to emancipate the practitioners from the physical side of sex, as their attention never dwells on the sexual act itself. For example, the *Kamakhhyatantra* instructs that the practitioner must not allow himself to lose his semen. Throughout the ritual which usually lasts for 72 hours, in which the participants must remain in sexual embrace, they must concentrate on chanting the words of power and

perform the dhyana (visualization of the meditation objective)⁷. Furthermore, the woman must be seen as the embodiment of the female aspect of God and the man as the masculine.

Students of Hinduism--the Aryan biased mixture of Indo-European religion with that of the Blacks of India--might protest, claiming that the extinction of desires and emotions (asceticism) is the true means of achieving spiritual liberation. But this is pure spiritual philosophical and scientific ignorance. Our emotions are none other than the expression of the activity of our spiritual energy. Not only is it impossible to extinguish it, but its suppression results in a diminution of our libido and overall ability to meet the demands of the world. Physicians are very well aware of the detrimental effects that suppression of pleasure has upon the endocrine organs, especially the gonads. In fact, the gonads are the organs represented by Het-Heru. Her name literally means, House (Het) of Heru (the libido, erotic force, sexual vitality that supports the will). The proper care of the gonads (prostate in the man, ovaries in the woman) and the judicious cultivation of pleasure builds up our libido (the power behind our will, ambition, psychic power, etc.). Unlike the Aryan religions, which in typical Sebekian fashion, segregate pleasure from the divine, Black religions have always understood that spiritual liberation depends on assigning the proper place to each thing in the world. The quest for pleasure must not lead us. Pleasurable acts are to be allowed only after they have been investigated and found to be in conformity with truth, and always in due measure. Can you imagine the effect on a people's consciousness and spirituality if every time they engaged in sex, their attention was directed to the achievement of a spiritual goal? What if they thought of themselves as engaging, not in a mere carnal act, but as divine beings using the energies of the lower part of their spirit to bring forth the higher? Do you know now why there are so many neuroses and sexual perversions in western societies? We are not dealing here with "schools of thought." Our "sexual energy" which is the driving force for all of our accomplishments--spiritual and mundane--is an expression of the universal creative power of nature/God. Misunderstand it, misuse it, suppress it if you want. But you will have no say when it avenges itself on you.

Another important skill that is developed in this stage is the creative use of the imagination. We have already described its

7. Reflections On the Tantras, Sudhakar Chattopadhyaya, p. 15. Published by Motilal Bansarsidass, Delhi.

function as the coordinator of the shaping forces of the events in our lives. When we take a belief into a state of trance and elaborate upon it in our imagination, unknown to us, we are manipulating and coordinating the forces that are responsible for shaping the event. This takes place regardless of whether the goal is harmful, undesirable or beneficial to us. The imagination will organize the powers of the spirit to make the goal a reality. This is one of the reasons for the work during the preceding stage. If the initiate increases the creative power of his imaginative faculty without first realigning his belief system with truth (based on the Self as Ausar), his wayward beliefs will direct his imagination to all sorts of harmful ends. Take for instance, the persons who believe that the "falling in love" process is beyond their control (this is one of those myths created by Set). These people, who are the ones who are vulnerable to infidelity while married, are not aware that it is their self-image identified with the person that is the cause of their "falling in love." If a thing like this (and there are so many other manifestations) can happen with the "normal" amount of spiritual power, imagine what would happen to individuals with a great deal of spiritual power, but wrong beliefs.

Success in this initiation stage gives the initiate the ability to achieve all minor undertakings, many of which are not so minor, primarily through the use of his ecstatic trance empowered imagination. This is why Venus, the planetary correspondence to Het-Heru is called the "fortuna minore." The worst thing that the initiate can do is to stop at this point in his work. He will eventually discover that as he arouses his Ra force to greater activity, that it will begin to reawaken the erroneous beliefs and harmful desires that were set aside in the Sebek initiation. Unless he moves on to the next level he will discover that Het-Heru's external beauty conceals a most foul internal corruption.

The third stage of initiation marks the completion of the preparation of the initiate for higher initiation. We must note that thus far the initiate has not been directed to confront his lower nature. In fact, the method around it was one of "persuasion." The initiate entered into mediumistic trance, which has the significant property of silencing thoughts and energies of resistance to change, and was then presented with a new belief system, calculated to replace the false dichotomies and wayward beliefs in his spirit. But this replacement is only temporary, for no spiritual growth has yet taken place. The key to understanding why the lower nature has not

been challenged resides in the fact that the three faculties involved (spheres 9, 8 and 7) are feminine--i.e., receptive to the animal spirit. Their planetary symbols are the moon (Cold/moist), mercury (Cold/dry) and venus (Cold/moist). The cold--yin--quality that they share symbolizes that the heat (sexual passion) of the life-force is not yet strong enough. The next triad of planets that correspond to the spheres wherein the next set of initiations will take place are all hot; Heru, 6th sphere, the sun (Hot/dry); Herukhuti, 5th sphere, mars (Hot/dry); Maat, 4th sphere, jupiter (Hot/moist). This heat makes them masculine--unreceptive to the animal spirit. For consciousness to function through them, the libido must be raised.

The key to understanding why spiritual growth has not taken place, even if there has been a successful replacement of negative behavior, is due to the fact that the initiate has not yet become "awakened." We must again take note of the "coldness" of the three faculties involved. It is no mere metaphor, for as we know, the body (animal spirit) cools down to allow us to sleep, and heats up to allow us to awaken. Changes in our behavior can only be credited toward spiritual growth if we do the work ourselves. So far it was done for us by the initiator, while we were in a state of mediumistic (receptive, hypnotic) trance.

Level 2 - Stage Four of Initiation **Ab division of the Spirit, Sphere 6, Heru**

The initiation at this stage aims at teaching the initiate to establish his will as the master of his behavior. It is amazing that so much ink has flowed in regards to the will, yet so little is known about it. "Willing" is "an action" of the Self⁸, and not of the person. When we will, we are involved in the action of setting into motion functions of the spirit or the body, from the level of the Self. Actions that are set into motion from the level of the person are acts of desiring, wishing, hoping, etc. The fundamental difference is that the will originates from the Self which is unswayed by emotions and sensuousness, while desiring is influenced and dictated by them. This is cleverly embedded in the Ausarian story. Auset mates with the deceased Ausar, and conceives Heru. Het-Heru carries him in

8. As the Self is submerged within, we must go into trance to establish our will. Thus we can make the needed changes in our behavior patterns. I.e., hypnotherapy, etc.

her womb, and gives birth to him⁹. It is a grand metaphor for the union through trance of one's identity with the indwelling Self (Auset mates with Ausar), and the empowerment of this identity through the spiritual power intensification rituals in stage 3 (Het-Heru), which gives birth to the personal will (Heru). It is important to keep in mind that a goal of initiation is to attain to the point where one is able to set the so-called subconscious (the spirit) or involuntary functions into motion at will. Not only does the indwelling intelligence control the "involuntary" functions of the body, it also controls all phases of our behavior, and is the major shaping force of everything that happens in our lives. I.e., it influences the course of our career, marriage, safety, and so on to our destiny. As the chief director of the spirit (subconscious), Ausar, is free of emotional influences, so must be the will, which it gives rise to. This is to say, that the will is the child of the Self, as desire is born of the person.

The initiate also learns that the freedom of his personal will is not for the purpose of choosing and determining the various undertakings in his life; careers, marriage, etc. Such a concept must be alarming to Westerners (Whites and Blacks!). But Africans have a long standing tradition of consulting oracles in such matters to discover if the want is in harmony with the divine will, and if it is, which part of the spirit (as symbolized by a "deity") is in control of the undertaking. This subject raises the question regarding predestination in people's lives. As this is a false concept we need not entertain it. The practice of consulting an oracle to see if the proposed undertaking is in harmony with the divine will is based on the fact that, like all intelligent undertakings, all lives are planned. Do you plan before you undertake something important? Do you believe that your life is a haphazard, hence, accidental sequence of events? Where there is no planning, there is no intelligence. The plan of each person's life is revealed by the second division of their spirit. This plan and parts of it can be made known through such oracles as Ifa, Afa, Dilogun, I Ching, the Metu Neter (the oracle revealed in this book), by initiates who have awakened their 2nd sphere/Tehuti faculty, and in some cases, by mediums. What then is the function of the personal will?

9. It is interesting to note that this is the story upon which Egyptologists base their allegation that Kamitic people advocated marriages between brothers, and sisters. It is supposedly proven because Auset and Ausar are sister, and brother.

The function of Man's will is to allow him the freedom to choose between good and evil. What is good, and what is evil? We go to the Tree of Life for our answer. The first and highest manifestation of divinity (sphere 1) is the unity of all opposites, which is the good. The lowest manifestation, the 10th sphere is the source of our emotional behavior, which makes our life irrational if we allowed it control over our lives. This is the evil. Heru's job--the will--is to keep the lower part of being--emotions and the Sahu--from directing our lives, in deference to the higher.

Beyond the importance of insuring that all of our undertakings are in harmony with each other, the use of oracles involves a set of one of the most important rituals in our lives. In many cases we will find that the direction of the oracle is at odds with our desires and conditionings. Complying with the oracular pronouncement in most such cases involves the individual in a pitched battle against the lower part of being. This is the manner in which the Deities--metaphysical intelligences--reveal to us which conditionings are to be overcome in relation to a specific undertaking. I.e., we are informed of the spiritual significance of a specific worldly undertaking. A person might be told by the oracle that in order to succeed in the marriage, rituals must be done to Sebek. It means that this person's marriage is a vehicle for the development of this spiritual faculty. A set of key oracular readings serves to map out a fully personalized spiritual curriculum for the individual, while the success in carrying out the directions provides an objective way of measuring the degree of spiritual development. Anyone who has tried to measure objectively and accurately his/her spiritual progress will be able to appreciate this fully.

The ecstatic trance rituals performed in the preceding stage, and certain breathing practices introduced in this stage, result in the "awakening" of the initiate. A chief distinction between the states of sleep, and wakefulness, is that in sleep our will does not function, while it does when we are awake. And since most people are for the most part unable to successfully use their will, we are justified in concluding that they are not fully awake during their "waking state." A "waking trance" induction method is therefore introduced at this stage. It is based on a special way of breathing that is characterized by the decrease of the rate of breathing and the increase of the volume of air breathed in. This method of breathing, which is called Dhumo or Gtummo (Fire breathing) leads to a state of wakefulness that is many times more intense than "normal." The waking trance

(opposite to mediumistic/hypnotic) is the subject of one of the greatest books ever to come out of Kamit. Known as the *"Egyptian Book of the Dead"*, a name given it by Arab grave robbers because they found copies of the book buried with the corpses, it is really the, *Pert em Heru* (book of *Becoming Awake*; "Pert em" means "Becoming," and "Heru," which means "day," "sun," and by extension, "the day consciousness (wakefulness).") In this state of trance, the senses are fully asleep. There is little, to no awareness of the external world or the body, while the person is in a state of full mental wakefulness.

The wakefulness enables the meditator to see the falsehoods and contradictions in the beliefs that were cultivated in the early part of life.

Related to the initiation at this stage is the beginning of a spiritual responsibility that serves as the determinant of the effectuation of spiritual growth. In other words, when do we know that the living of truth has led to spiritual growth? Can you say that growth takes place when the observance of a virtue does not involve a challenge? While exercising at a heart rate of 140 beats per minute signals improvement for someone whose peak exercising rate was lower, it does not for someone already there or beyond. Similarly, spiritual growth only takes place when we are challenged to embrace a truth or directive of the oracle (the wisdom part of our spirit) and it runs into opposition from our conditioning. Your mind is set on doing something, and the oracle or spiritual law reveals to you that you will achieve your goal at the expense of someone else. Doing the right thing will--from the narrow view--cause you losses. These types of scenarios which are called "crossroad" situations, have given rise to the belief that the best place to make offerings and do rituals are at crossroads.

Success in the living of truth at such crucial moments is made possible by the Heru/sexual power that is generated in the gonads (house/Het of sex/Heru) and a great meditation system entitled *Men Ab em Aungh em Maat*. We will detail it in future chapters.

In conclusion it must be noted that the opposition to the living of truth by our conditionings demands that we summon extra spiritual power. Spiritual power, kundalini, Ra can only be aroused to its greatest heights by the genuine challenges in life. Thus, it takes power to get power. It is hoped that the reader will begin to understand that discipline cannot be achieved by meditating on the

abstraction "discipline." All sermons to such effects or hypnotic autosuggestions like "I am disciplined," etc. must fail.

Level 2 - Stage 5 of Initiation

The Ab division of the Spirit, the 5th Sphere, Herukhuti

Herukhuti is the dispenser of divine justice. It is the faculty that protects us from our enemies. It is the spiritual mechanism behind our physical and spiritual immunity¹⁰, and our ability to overcome the resistances of the physical environment.

In the same manner that our physical immunity cannot protect us if we violate the laws of our body (eat incorrectly, indulge in excesses, etc.), this part of our spirit cannot protect us from the injustices of others and from psychic invasion if we violate its law.

In conformity with the law that you reap what you sow, the initiate at this stage meditates on being just with others, and makes a commitment to confess to his peers and kin (not enemies) any injustice that has been done to another. The spiritual strength that must be raised to carry this out awakens this faculty to its role of providing psychical protection. If only the major political and religious leaders of nations were to know the reality behind the word "justice." Can you see how much the knowledge of the definition, but not the reality itself is costing us? Can you imagine what would happen to an oppressor if all the individuals in a nation of oppressed people got together and made a commitment to give justice to everyone, as well as a commitment to confess all transgressions against each other? Did the thought heat you up? If it did, congratulations. You have just verified for yourself the basis of the Ra ritual system of Kamit and the Kundalini Yoga of the Dravidians¹¹.

But where would one find the strength to live up to the demands of this sphere? We must once more draw upon the fact that our Self-the indwelling intelligence at the center of our being-is not swayed by emotions. The ability to carry out the demands of this sphere is merely a natural outgrowth of identifying with Ausar. What about the fear (the Pachad that Jewish kabalism attaches to this sphere) that one must surely suffer in this situation? Once more again we must realize that identification with Ausar (Kether)

10. As the faculty of spiritual immunity, Herukhuti protects us against psychic attack (witchcraft, dark deceased beings, etc.)

11. Psychic heat thus raised is called Tapas in the yogic system.

involves the realization that the spirit is essentially unconditioned. That is to say that we are free to revert to the original state of our spirit in which there are no predetermined inclinations or response patterns.

Level 2 - Stage 6 of Initiation The Ab division of the Spirit, Sphere 4, Maat

In an earlier chapter we saw that as the functional needs of the world are varied--hence, the cycles of food, water, oxygen, etc.--the existence of different types of beings is required. If any one of them were to "evolve" from their station and function, the world would cease to function. What would make food if plants were to evolve into animals? How would plants make protein if the nitrogen fixing bacteria were to evolve into some higher form of life? It is time to rid the world of the "inter-species evolutionary theory," whose main function is to serve racist policies. In the same manner that the various cells in our body have been made with different degrees of structural and functional complexity in order to carry out the functions specific to them, so are the various creatures in the world. As much as some people may want to trace their ancestry to cockroaches or apes, the fact is that creatures do not evolve (progress) above their appointed function in the cycles that sustain earthly life--unlike obsequious civil servants--to become other types of creatures. When we speak of spiritual evolution, we are referring to the graduated coming into being of the hierarchy of faculties of the individual or the species.

Similarly, the human kingdom is made up of different racial temperaments. Each one is to make its contribution to the unfoldment of the divine drama. The lesson that the initiate has to learn here is that while his personality or that of his group might be "watery," he must share with, and let the "fiery" type live. This is not to say that one must acquiesce in evil or sleep in bed with the "enemy." Fire cannot mix with water, but they must both recognize that the whole, and therefore themselves cannot exist without each other.

For many people, the oppressed especially, this is more difficult to carry out than the initiation demands of the preceding stage. Some people would sooner kill themselves than, recognize a place in the scheme of things for their enemies and oppressors. Once more again, we see how the genuine living situation demands

that the initiate summon a great deal of power in order to carry out the laws of the initiation. In each of the three last initiations we can see that there is a progressive moving away from an identification with our natal personality and earlier conditioned behavior pattern. We must also appreciate the fact, that unlike all other spiritual traditions and scriptures, this Tree of Life based initiation system lays down a careful, graduated set of challenges. It is at the fourth sphere (stage 6 of initiation) that the initiate is asked to "turn the other cheek." Christianity and many spiritual traditions do violence to people by making spiritual demands that have not been properly prepared for. Once you analyze the matter you will see that the various virtues require different levels of intellectual abilities and spiritual power.

The planetary correspondence of the fourth sphere, Maat, is Jupiter, which astrologers tell us is the major fortune (major success). It comes not simply from the act of sharing (giving, therefore receiving), but from the spiritual power generated by the ability to forgive and to work with one's "enemies." The sign that this power is fully developed is given evidence by the initiate's ability to maintain a sense of joy and optimism in the face of opposition--even when facing death. Woe unto him who fails to realize that this is the greatest "occult secret" for generating the spiritual power to achieve earthly objectives.

Level 3 - Stage 7 of Initiation **The Shekem Division of the Spirit, Sphere 3, Seker**

This is the first of three initiation stages that involve a total break with worldly interests. We must never lose sight of the fact that such an attitude to life, with proper understanding, and life-force generation rituals serve to increase the spiritual power to its highest levels of manifestation. This individual has already gone through initiations that have revealed the fact that psychic power increases in direct relationship to the individual's living of truth in genuine life situations (at the crossroads), and not from the mere performance of spiritual exercises (meditation, rituals, etc.). As this sphere is the center of the 50 sound units of power that are the basis of all physical manifestations, we must realize that they cannot be utilized for purposes that are predominantly personal. During the 4th stage of initiation (sphere 6) it was said that the objectives in Man's life are indicated by the oracular (2nd sphere) faculty. One of the results of the practice of consulting oracles is the unification our

undertakings with the Divine historical plan. When we get a reading indicating, for example, that the success of our marriage depends on the development of our spiritual faculty represented by the Deity Sebek¹², success in the undertaking goes beyond the marriage itself. In the same way that the "normal" Sebek talents (communications skills, etc.) are now available for other areas of life, so are the psychic powers of the deity developed in the course of the ritual. The difference is that we must use these powers for the benefit of the world.

The ecstasy that must be cultivated at this sphere is not for the mundane objective, but for manifesting the personalities of the Deities and their powers in our life for the benefit of the world. For this to be, we must "die" to the personal mundane goals. The world must cease to hold wonders and pleasures for us. Our pleasure is in manifesting the likeness of God in whose image we have been made. When it is said that Seker is the God of the dead, a double sense is intended. The "dead" are both the deceased and the initiates who have died to the interests and pleasures of the world¹³. This is easy to understand when we keep in mind that *the initiate is here trading off earthly pleasures for divine power*.

Level 3 - Stage 8 of Initiation, The Khu Division of the Spirit, Sphere 2, Tehuti

Earlier it was said that Man's will must be directed by God. Up to this point this was achieved through the use of oracles, which are means of communicating with the spiritual faculty of the second sphere--Tehuti. In this stage of the initiation, the person learns how to still the thinking mechanism in order to allow this faculty to manifest its omniscience. One of the most important accomplishments resulting from this initiation is the ability to intuit what divine intelligences--Deities--are responsible for the various events in the world. This is the kernel of the true meaning of wisdom. In other words, the initiate becomes a Sage, i.e., a living

12. This might be phrased in another tradition as "success will come from making sacrifices to Deity X."

13. We must distinguish "the dead" when referring to Seker, as opposed to when referring to Anpu (a form of Sebek)--so called Anubis--as "guide to the dead." In this sense, "the dead" refers to trance mediums. We will explain this in the chapters on meditation.

oracle. These are the individuals that authored the great oracles that are now in the world.

Level 3 - Stage 9 of Initiation, The Ba Division of the Spirit, Sphere 1, Ausar

Here the initiate experiences that her Self is the One and only Self dwelling in all things in/as the world. Thus all oppositions are transcended and unity with all creatures is achieved. The initiate becomes an Ausar. The greatest challenge for the initiate here is to refrain from taking sides in the seeming conflicts of life. All adversities exist for the sake of making demands upon the individual to reach into the depths of his spirit to awaken the spiritual power to overcome them. One cannot push--exert force--if there is no opposition. There can be no manifestation of spiritual power without adversity. All is peace--Hetep.

Level 4 - Stage 10 of Initiation, Body and Spirit Transcended, 0, Amen, Nu

Here it is finally realized that all that has been transcended was made possible by the fact that the energy/matter that makes up our spirit is essentially unconditioned and unformed, otherwise the transcendence could not have taken place. This is the realization of "Sunyatta (the Void)" of Buddhism. It is Amen--the immanent aspect of God--in the Kamitic tradition. Ritualistically, the initiate becomes established in the ability to still all thought activity, and raise consciousness beyond the spirit even (remember that the Ba--the spiritual vehicle of the 1st sphere--is the highest manifestation of Man's spirit). Now that Man's consciousness is in the Subjective Realm, and there are no things to occupy consciousness, the Self can only be conscious of being conscious. It becomes aware that it is an immaterial reality. In the Kamitic tradition this is symbolized as "the God Amen." The Jewish kabala calls it Ain, the "negative existence."

Chapter 12

MEDITATION AND RITUAL

The Means of Realizing Spiritual Growth

The Principles of Meditation

In chapters 9 and 10, we learned that the goal of initiation is the liberation of the Self by raising consciousness from below the faculty of the 6th sphere (Ab division of the spirit) to the highest part of being, the development and right use of the "personal will," and the raising of the spiritual force to the level of being able to affect physical phenomena. Meditation is a catch word for the set of practices to the realization of these ends.

The Fundamental Components of Man's Being

In the past two chapters, we saw that spiritual development aims at allowing the indwelling intelligence that directs our involuntary mental and physiological functions to extend its sphere of operation to the social events in our lives (career, marriage, education, performances, etc.). The benefits to our lives can be appreciated when we consider the omniscience that the indwelling intelligence shows that it possesses in its handling of the infinite complexity of our physiological processes. What then can we expect from its handling of the affairs of our lives, which are simpler?

The comprehension of the processes of meditation and ritual as means of extending the operation of the indwelling intelligence to the external part of our lives depends on a clear understanding of the fundamental components of Man's being.

1. We are all aware of the fact that the major part of our physiological and mental processes occur independently of our will. This automaton or spirit or life-force, which has been mislabelled "the subconscious mind"¹ provides the matrices or molds or "programs" that guide the physical functions of our bodies and events in the world. It is important to realize that this principle is not conscious, nor

1. If the mind is the conscious faculty (an incorrect definition, by the way), how can there be a consciousness below consciousness?

does it initiate or program its activities. Its direction and programming are the property of the indwelling intelligence. Health, success and happiness are the results of the direction of the life-force by the true Self, which bases its functions on divine (cosmogonical) law. Unfortunately, the spirit is also receptive to man's will, which is, as we know, nowhere as wise or capable as the indwelling intelligence. It is also receptive to the ideas we assimilate and to the impressions streaming in from our blood stream and the external environment (colors, odors, shapes, electromagnetic currents, etc.). As the influence that these agents exert upon the spirit are not ordered by laws, as it is with the indwelling intelligence, their influences, if unchecked, create illness, unhappiness and failure.

2. The second major component of our being is the inner intelligence and source of consciousness. It is Ausar, the first sphere, our Self, which from here on, will at times be referred to as our "true self"- although redundant.
3. The third major component of our being is the outer intelligence and *focal point of externalized consciousness*. It is Heru, the sixth sphere, our will, that is in charge of our voluntary mental and physical actions. It is the external point where consciousness grasps (perceives) and manipulates objective reality.
4. The fourth major component of our being is the faculty that houses the spiritual matrices that govern the conception of the events of the physical body and environment. This is Auset, the ninth sphere. This is one of the reasons why she is called the Mother of all living things.

Stages in the Process of Meditation

We have seen that if the Self-the indwelling intelligence-is unobstructed it will maintain the physical organism in good health and extend its functions to running the social aspects of our lives as well. The first source of interference to it comes from the failure to regulate the emotional and sensual activities of the animal part of the spirit. The second source of interference originates from our will when it is directed by our earthly education as opposed to our inner intelligence. These interferences, which cause physical and social disharmony are symbolized in the Ausarian metaphorein as

the usurpation of the kingdom by Set, and the stalemate (failure) of Heru's battle with Set, respectively. The essence of meditation and ritual then, lies in the harmonization of the will with the inner intelligence. This is symbolized as Ausar and Auset giving birth to Heru, and the latter directed to victory by Tehuti, the mouthpiece of Ausar. The function of the will, therefore, is to check the influences of the lower parts of the spirit, to enable the Self to direct the spirit according to the cosmogonical (divine) law and order (Tehuti/Maat).

The Process of Meditation

Thus far we have been speaking of an indwelling intelligence that is in charge of directing all of the involuntary mental and physiological functions. We have been saying that it is our true self. And you may have been wondering, quite correctly, why then you have not been able to "sense," to "feel" or to be conscious in some form of the existence of this intelligence. The answer is a simple one. Consciousness resembles a stream of light, in that it has a source of origin (inner), a path of propagation and a point where it makes contact (outer) with, and grasps the objects of perception. In our habitual mode of consciousness, whether we are dreaming or are awake, our consciousness is mostly "focused" at the point of contact with the objects of perception. You will recall, however, that there are times when as a result of being so absorbed in your thoughts, you find that your awareness of yourself, your surroundings and your thoughts are just returning to you from a moment in which you are at a lost for what you were thinking about. Some people call this being "spaced out," "absent minded," etc. What has really taken place? At such moments the focal point of consciousness has been withdrawn from the external point where it grasps objects (thoughts, feelings, the external environment), and it has been returned to its source within our being. Because of the immateriality of the Self and the manner in which the consciousness was withdrawn to it during such spontaneous occurrences, it is not possible to insperience the indwelling intelligence. The result is that we are only conscious of forms that consciousness perceives (our thoughts, feelings which we sum up as our persons, the environment, etc.), and not of the source of consciousness-that which is consciousness itself. The ultimate and highest aim of meditation is, therefore, the withdrawal of the *focus of consciousness* from the objects of perception-the goal of consciousness-and its return to its source.

When this is realized, we have no consciousness of objects (our thoughts, feelings, body and the environment). *Freed from objects of consciousness, we are conscious only of being conscious.* It is then that we are able to "sense," "feel" or insperience our inner true self. We will have much to say about this. We must first examine all of the possible manners in which consciousness can be altered.

The "normal" waking state is characterized by the tendency of the will to impose itself over the mental functions and its command over the voluntary physical functions. In this state the will is primarily engaged in determining what ideas should be associated according to the sense of logic and reference to the person's belief system, and what actions are to be allowed in the person's life.

The "normal" dreaming state is characterized by the dormancy of the will, which gives the spirit full control over the body and thought associations. The spirit's activities are of course determined by its programs, the condition of the blood, environmental influences, etc.

In both states, the "normal" waking and dreaming, the focus of consciousness is located in the external, lower part of being. A very important characteristic that they both share is their distractibility or the shortness of the concentration span. The inability to keep the attention on one object or train of thought for very long, during "normal" waking and dreaming is very well known.

Mediumistic or hypnotic (dream) trance, a state of meditation, is very much like the "normal" dream state with the fundamental difference that consciousness is fully undistracted. It becomes totally focused on an object or stream of thoughts. This hyperconcentrated state of the focus of consciousness is the key to impressing upon the spirit the programs that will determine its activities. For example, a thought to heal ourselves, expressed in the "normal" waking or dream states will fail simply because it was not held long enough in the sphere of awareness. In the mediumistic trance it can be held long enough to be strongly impressed upon the spirit. There are, of course, other variables to this procedure which will be considered in the later chapters on meditation. As the will is dormant, the contents of the awareness and the behavior of the person are directed by the spirit's program or by whatever else is influencing its activities (environmental forces, the will of the initiator, the hypnotist, contents of the blood, etc.). The full concentration of the focus of consciousness on a personality archetype (a deity) or a fragment of a personality (a "spirit," "demon," etc.) is known as "possession," as the behavior of the

person takes on the full characteristics of the elements of the personality in question. Because the spirit, and not the will, is directing the person's voluntary physical vehicle during this state, possessed individuals experience either a diminution or enhancement of their physical capabilities. Its full concentration on an idea, e.g., a virtue, which in turn directs its activities, is called an "obsession." This form of at-onement of our focus of consciousness with objects of perception is called in the Yogic system *Samprajnata Samadhi* (Samadhi = full concentration; Samprajnata = object of consciousness). Although it is very powerful and useful, it does not confer wisdom and Self knowledge, and when not directed by a wise teacher, it can lead to deep spiritual bondage. In fact, it is the mechanism that binds us (as the One Self) to one of the seven personality types. Although we are all the same one Self, we are each born in Samprajnata Samadhi (possessed) by one of the seven personality types modified by individuated physical circumstances.

The waking trance is a state of inner hyperwakefulness, and it exhibits two modalities. The first of these is similar to the "normal" waking state, with the differences that its degree of wakefulness is greater, it is confined to the mental sphere (the meditator's physical body is partially or fully asleep), and the focus of consciousness is fully concentrated on its objective. In the second of these modalities, the focus of consciousness is withdrawn from the objects of consciousness and returned to the source of consciousness-the indwelling intelligence. Here, the Self, which is immaterial, beholds itself; consciousness grasps consciousness. The yogic tradition calls it *Asamprajnata Samadhi*; At-onement of the focus of consciousness (Samadhi) without objects in the sphere of awareness. In his *Yoga Sutras*, Patanjali defines yoga as follows: "*Yoga (union) is attained from the inhibition of the mental energy/matter (citta). Then the Seer is clothed in his essential nature.*" The things that are united (yoked, yoga), a question that has plagued yogis for the longest, are the *focus of consciousness* and the *source of consciousness*. The inhibition of the mental energy/matter (*citta vrtti-nirodhah*) is attained by the deactivation of the will (ignoring of thoughts, letting them come and go without expressing interest in them or directing them). When this happens during the hyperwakeful state of waking trance, there comes a point where the sphere of awareness becomes free of thoughts, allowing the consciousness to "sense" "That" which is conscious. When this happens during the "normal" waking or dream states, it leads to the non-REM (non-rapid eye movement) state. This is why we do not

achieve consciousness of Self when we "space out" or enter into non-REM during sleep. It must be clear to the reader that our dreamming, and non-REM experience are not confined to sleeping. In fact, the thought drift activity that we experience during the waking state is in reality a different degree of the dream activity during sleep. The key, therefore, to attaining to the point of insperienicing, "feeling" our Self as the indwelling intelligence, as "that which is conscious" depends on the full awakening of ourselves, and the inhibition of the will's function of grasping and directing thoughts. This is the theme, incidentally, of the oldest religious text in the world. The *Pert Em Heru* (Coming Forth By Day (Awakened)), which is known, incorrectly, as the *Egyptian Book of the Dead*. This latter name originated from the Arab grave robbers who first discovered copies of it buried with the deceased.

The Components of a Meditation

Since the essential objectives of meditation--the raising of consciousness and the supporting of the will--depend on the raising of spiritual power there are certain health principles that must be observed before undertaking a course of meditation. These aim at the life-force (Ra, Kundalini): purifying its channels, equilibrating its modalities, nourishing it and optimizing the body's ability to relax. Tension impedes meditation by blocking the flow of the Ra (Life) force. These involve special dietary observances, yogic exercises, breathing practices, living in harmony with the cycles of the body, etc. The principle involved is no different from the preparation for an athletic contest.

The first set of meditations (9th sphere) involves going into a mediumistic trance with the objective of identifying with Ausar, for it is only through this action that we can *lay the foundation* for transcending our conditionings. We have already seen the importance of this procedure.

The second set of meditations (8th sphere) involves going into mediumistic trance with the beliefs that are to replace those incorrect beliefs that may block the way to achieving our goal. It is here that we "Open the Way" to allow the indwelling intelligence to extend its functions beyond the internal mental and physiological functions to the social aspects of our lives.

The third set of meditations (7th sphere) involves going into mediumistic trance with the image of our person as the deity governing the situation achieving and enjoying the goal that we are seeking.

The fourth set of meditations (6th sphere) aims at going into waking trance in order to oppose the conditionings that are opposed to the goal that we are seeking to achieve. We may find it necessary to repeat the first set of meditations once more again. The reason for this will be given later.

The fifth set of meditations (5th sphere) aims at going into waking trance to protect one's goal from outside obstructions. This is achieved by making a commitment to achieving one's goal without transgressions against others, or by being willing to face the consequences amongst our peers if this has been done.

The sixth set of meditations (4th sphere) aims at going into waking trance with the commitments to share the fruits of our accomplishments with others, regardless of our differences from them, and to maintain optimism in the face of "setbacks" and difficulties. It is here that the mundane goal is achieved. As it is said, "It was done in 6 days, and on the 7th, He rested."

But in reality, it is not time to rest. During the first set of meditations, we invoked the spiritual powers for the sake of our mundane objectives. It is now time to realize that the demands of earthly life exist for the sake of forcing Man to develop his spiritual powers.

The seventh set of meditations (sphere 3) aims at developing our spiritual power to the highest level that we are capable.

The eighth set of meditations (2nd sphere) aims at intuiting the true significance of the mundane objective that we achieved at the 6th stage.

The ninth set of meditations (1st sphere) aims at fusing the realizations of the past meditations into the realization of our Self as Ausar.

The tenth set of meditations (0 above the Tree) aims at realizing that the success of the meditations--fundamentally involving manipulations of our spirit--is due to the fact that our spirit is essentially unconditioned ("no things").

These ten components of a meditation are the substance of the traditional Kabalistical statement to the effect that all ten spheres or Deities must contribute to all of our undertakings in order for them to be of spiritual significance to us.

The Importance of Trance

We have seen that trance is an essential component of spiritual transcendence. The possession of the ability to go into trance at will, and to function in the state is a skill that all people must possess. Many people are now experimenting with so-called techniques of accelerated learning, which when understood are all based on the induction of a mild state of trance. They have discovered that by studying in a mild state of trance, learning can be sped up 2 to 50 times. The political, economic and military significance of this has not been lost to many nations that are secretly funding the development of these educational techniques. Imagine turning out a 20 year old Ph.D. in the most advanced concepts of nuclear physics, who at 30 would have the education and experience of a 60 year old. Incidentally, it was through the use of such "super" or "accelerated" learning techniques, and more, that enabled the ancient Black nations to forge in civilization, way ahead of the Western, and Eastern nations².

The studious reader would have noticed that the segregative functions of the left side of the brain correspond to spheres 2, 5 and 8, while the integrative functions of the right side of the brain correspond to spheres 3, 4 and 7. Sphere 9 unifies 7 and 8; 6 unifies 4 and 5, and 1 unifies 2 and 3³. The 6th sphere also unifies all spheres of the Tree. Of greatest importance to us at this point is the fact that while the left hemisphere of the brain is more concerned with the extroversion of consciousness, the right hemisphere is the introverter. Meditation, which is a process of introversion, relies heavily, then, on things that stimulate the right hemisphere to greater activity and deactivate the left hemisphere. This is achieved by concentrating on images and sensations, which are processed by the right side of the brain, while engaging the left side with the chanting of words of power. Since the left side of the brain deals with verbal thinking, it can be deactivated by engaging it with words of power, because the latter lack meaning (they are power holders, and not message holders). Repeating the word, prevents the process of verbal thinking which depends on the

2. Contemporary Black nations have fallen behind because they have been subjected to unrelenting warfare from the North for the past 4000 years, as well as the Western invention of that most Sebekian of tools,—money.

3. In reality, spheres one to three work out of a unified brain state.

stringing together of different words. In addition to this, the word of power contributes to the realization of the meditation objective.

The failure to understand this principle has been the cause for one of the greatest stigmas placed upon Black people for thousands of years. The use of images in thinking and meditating, in order to exalt the functions of the right side of the brain and thus introvert consciousness to bring about trance, is the basis of the religious use of "idols" and hieroglyphs. It is the reason Kamit (ancient Egypt) never abandoned the use of hieroglyphs for its religious and literary writings, while all of its civil records (inventories, bills, contracts, etc.) were written in phonetic script (hieratic and demotic). The well known concept that a picture is worth a thousand words is an allusion to the synthetical power of pictorial symbols. It is because of this that the kamitic initiates called the hieroglyphic script the "*Sesh Metut Neter*" (Sacred Writing). Its sacredness is due to its use in meditation and ritual. If for example, I want to heal myself through meditation, instead of going into trance with a thought such as "I am Ausar, the power to heal myself," I can chant the heka of Ausar "Aung," while visualizing my person holding a Uas staff (see Appendix A), which symbolizes well being and happiness. The string of meaningful words in the first example stimulates the left side of the brain, which by its very nature fights the internalization of consciousness. In the latter example, the right side of the brain is stimulated, therefore taking consciousness into the deeper recesses of consciousness, wherein reside the shaping forces of our behavior and physiological functions. This special use of the hieroglyphs has escaped all Egyptologists who have treated hieroglyphs in the only way that their limited understanding has allowed them. Westerners, who cannot help interpreting the Kamitic hieroglyphic script on the basis of their use of language, can do no better than to make the racist claim that it represents a primitive form of writing⁴. The hieroglyphic script is made up of 1) a set of alphabetical symbols representing vowels and consonants. 2) a set of non-alphabetical symbols that have been all lumped indiscriminately into a class Egyptologists call "determinatives" (some indicate that the word represents a deity, others, a person, etc.). While some of these symbols clearly function in this capacity, many of them are parts of what can be called the *Kamitic right side*

4. This is not a strong charge since Western scholars know very well that the Kamitians invented the script in use by the West. Do they call themselves primitive for not having even invented a script of their own? ♦

of the brain symbol set. With the use of these symbols, which I have compiled and explained in Appendix A, all ideas that can be put into words for meditation purposes can instead be expressed pictorially, i.e., acted out in the spirit. Not only does this facilitate meditation, it eventually helps to unify the thinking of the initiate by providing him with a wealth of synthetical symbols for the use of his fourth sphere faculty. This esoteric or symbolic function of hieroglyphs is under the dominion of the Goddess of wisdom Seshat (also Seshait), also known as Sefkhit Aubut (related to the seven "liberal arts"), a female aspect of Tehuti. Tyros in Kamitic esotericism will be able to see the connection to "magic."

Level 1, First Three Stages of the Meditation Process

Care of the Life-force

As the raising of our consciousness to the higher parts of the spirit and the achievement of our will cannot take place without a strong life-force, care of the life-force is the most important preliminary requirement to success in life and meditation. It is this force that is the energetic and substantive basis from which our physical bodies and higher parts of our spirit are made. It is also the basis of our metaphysical faculties that we call "deities." These are the spiritual complexes that are in charge of the operation of the host of physiological and mental functions. Het-Heru, for example, is in charge of the gonadal, gestational, artistic, imaginative functions, and so on; Sebek is in charge of the cerebro-spinal, verbalizing, sequential logical functions, and so on. It is for this reason that the life-force was called by the Kamitians Ra, the "father of the Gods and of all living things." It is not "the sun god," it is the solar force, which is the substantive and energetic basis of all things on earth¹. While the Kamitians knew this fact over 6000 years ago, Western scientists have just recognized it in the past 100 years.

The observances that must be upheld to keep our life-force strong involve proper diet, conservation, moderation in our activities (mental and physical work, sex, eating, etc.), and living in harmony with the cycles and modalities of this life-force.

The Four Principles Underlying the Process of Meditation

The Fundamental Principles of Meditation

1. Level 1 of meditation, which is carried out in three stages (spheres 9 - 7), aims at a) positioning the Self (the inner guiding intelligence of our being) as the performer of the meditation and the undertaking, in place of our person. It is important to realize that our person is a limited, conditioned and defined entity-i.e., it is

1. Ultimately, food is transformed sunlight. Plants absorb it through their chlorophyll, and transform it into all of the substantive, and energetic material of the animal kingdom.

composed of a portfolio of capabilities, incapacabilities, sensual and emotional orientations. As such, it is not capable of functioning outside of its portfolio. A martial personality cannot achieve a goal that requires mercurial, or venusian talents, but our Self-the indwelling intelligence guiding all of our spiritual (subconscious) and physiological activities can.

It must be realized that we are not merely positioning our Self as the executor of the meditation. Ultimately all meditations have as their purpose the realization of our true Self-Ausar, the inner guiding intelligence-as our identity. It is this that is meant by the archaic phrases, "achieving spiritual liberation," "attaining to nirvana," "Yoga is the union of the self (they mean person) with God," and so on. These nominal definitions, however, do not work for the student. What are needed are procedural definitions. To wit: Meditation has as its purpose, the uniting (yoga) of the will of the individual (Heru) with the indwelling intelligence (Ausar/Self), which is responsible for directing and unifying all physiological and spiritual functions. This union enables the individual's conscious needs-what is willed (for health, wealth, security, marital success, wisdom, etc.)- to be accepted and carried out by the indwelling intelligence². This inner intelligence is always ready to do so, but the union between it and the personal will is interfered with, in most cases, by the set of disunited, conflicting, and contradictory ideas (the person/Set) that make up the belief systems guiding the actions of people.

2. Level 2 of Meditation, which is carried out in three stages (spheres 6-4), corresponds to the exertion of our will to establish the domination of the law of God-Cosmology, Maat Tehuti-over our thinking, feelings and actions. It is the living of this law that gives substance to our identification with Ausar as our Self. What are the "laws," or shaping forces, that govern your personality? Are they not a set of "I can do so and so," "I can't do so and so," "I like or don't like so and so, hence I do it or don't," and so on? What would happen if the indwelling intelligence running your body functioned in such a manner? "Well today I don't feel like directing the manufacturing of blood sugar, and I will not detoxify the body. I don't like doing that kind of work. It is so repugnant, etc." Shall we not thank God that it functions according to divine law? Yet, what it

2. In the metaphorein of Ausar, this corresponds to the making of Heru king of the world of the living, and Ausar, king of the underworld, as well as the resuscitation of the latter by the former.

does for your body and "subconscious mental activities" it can do for your marriage, career, etc. But it is not a simple process of imagining what you want with a strong desire. You must identify yourself as the indwelling intelligence, which is to think, feel and live according to divine law (Maat and Tehuti).

3. Level 3 of meditation, which is carried out in three stages (spheres 3 - 1), corresponds to the ability to utilize the divine powers, and omniscience of the spirit as a result of having established the law of God as the guide for living. It is important to distinguish these powers from those obtained through the "occult" (subtle physics) use of herbs, gems, blood, and so on. While the latter functions through the lower part of the spirit, requiring no spiritual transformation in the practitioner, the powers of the higher parts of the spirit (spheres 1-3) work primarily through divine law and words of power.

4. Level 4 of meditation corresponds to the realization that as our Self is inseparable from God, and shares in the same qualities of God, it is God that is ultimately responsible for all of the good things in our lives.

The 10 Stages of the Meditation Process

We will illustrate the meditation process with two scenarios. In the first, we have a woman who is having difficulties with her reproductive organs, and as a result, cannot become pregnant. All medications (allopathic, homeopathic, acupuncture, etc.) have failed. She consulted the oracle in the latter part of this book and was told that Het-Heru, the venusian deity will help her. The reason for this reading is that she has been too "hot" in her daily activities. The "fire" generated by the intensity with which she carries out her job (she is a boss lady), and the sharpness with which she deals with her subordinates are taking a toll on a reproductive system that was already congenitally weak, and harmed by earlier abortions. In the second scenario, we have a man who was told by the oracles that his career will be advanced by Maat. He came to the diviner because he could not understand how and why his acquaintances with significantly less talent, were steadily making progress, while he was stagnating, in spite of well planned and calculated career moves. Maat's prosperity generating force was choked off in his life because he failed to share with others. He was always too busy trying to make a buck, and would not make time to give some of his skills to his community. Although he was a devout church goer, his constant worrying over his financial situation betrayed that he had no

understanding of, or faith in the laws of God. Let's call our woman Nefert-ra, and our man Sehu. They will achieve their goals through the series of meditations. Although the methods (chanting of hekau, breathing, etc.) that they will employ are efficacious, their success will depend on their ability to carry out the instructions.

Level 1 of the Meditation Process, Stage 1, Sphere 9

The first meditation aims at positioning Ausar as the executor of the meditation. Nefert-ra and Sehu will go into mediumistic trance chanting the heka "Aung Ausar Hung" (see Chapter 24), while visualizing themselves wearing the White Crown of Ausar (see Appendix A). Before performing this meditation they would have thoroughly studied the metaphorein of Ausar, and the meaning of Ausar as the indwelling intelligence that is guiding all of their spiritual (subconscious), and physiological functions. All of this information is to be equated with the White Crown of Ausar. As a result, the act of visualizing ourselves wearing this crown symbolizes our identification of ourselves as the embodiment of the ideas associated with Ausar. But more importantly, it enables us to express this act of identification without verbal thinking (left side of the brain activity, which resists the internalization of consciousness). That is to say, it enables us to think with the right hemisphere of the brain, which is in charge of the internalization of consciousness. This is the meaning of the Kamitic teaching to the effect that *"what the house of Neter (the Supreme Being) dislikes is much talking. Pray thou with a loving heart, the utterances of which are all in secret."* The "talking" during prayer (meditation) is the verbalization of our thoughts. The praying, which is uttered "in secret," is conducted through the graphic representation of our thoughts. This can be proven by comparing the attempts to meditate with verbalized thoughts, in comparison to using imagery. The fact that mental chattering is inimical to meditation, and that visualization aids it, is well known to seasoned practitioners of meditation.

Another important reason for bypassing the left side of the brain resides in the fact that it is the seat of our segregative, or disintegrative thinking and behavior. It is dominated by Set, the evil principle within us. It is the origin of the thoughts that delude us.

It is important to realize that the scope of this meditation is limited to initiating the process of identification of the individual with the Self. The realization of this identity, and the struggles to establish it, make up the theme of level 2 of the meditation process.

It is also important not to equate the process of this stage of meditation with western hypnosis. The individual is not being hypnotized into accepting the idea that his true self is Ausar. We must always keep in mind that Ausar is not an idea, but an actual entity³. It is the inner intelligence within our being, to which we are returning our identity. The closest that this meditation comes to hypnosis will be seen in those cases in which a person's ability to perform a particular task at a certain level is restored through hypnotherapy. The person is led to identify with his original capabilities, in place of the faulty performance that has replaced the former. It is not uncommon for athletes and artists to restore their confidence, or bring out their full potential through hypnotherapy. The major differences between the method employed here versus hypnotherapy reside in the fact that here the individual is identifying with the indwelling intelligence as his Self, whereas, in western hypnotherapy he maintains the person (the lower part of being) as his identity. While our method avails itself of the omniscience, omnipotence, and omnipresence of the inner intelligence of our being, western hypnotherapy confines the individual to the limitations of the personality. We must remember that our persons are defined entities. Some are martial, others lunar, others mercurial and so on. Each represents a set of capabilities and limitations.

The second meditation that must be done in this stage involves chanting the heka "Aung Ausar Hung," while visualizing your person wearing the White Crown of Ausar, as you plant a grain of cereal (corn, or barley, etc.). See it grow into a tree full of ears of grain. This is a right side of the brain way of expressing 1) your understanding that your Self-indwelling intelligence- is the source of all prosperity and sustenance in your life. 2) It also states that "from One comes many." This is to remind you that Ausar, your Self, is the one and only Self dwelling in all things. It is also symbolical of the fact that all of people's problems stem from their failure to identify with their true self. They thus invent millions of false causes for man's problems, and, of course, millions of like solutions. While Schu has been blaming his lack of advancement on the inabilities of others to appreciate his true worth, Nefert-ra has been oppressing herself with the belief that life is just not fair. "Why me?" She asks herself over and over again. The truth is that all problems stem from the lack of knowledge of Self, or that the true self is the

3. This is why I coined the term "metaphorein," in place of myth, and allegory.

indwelling intelligence. Once this is known and taken as a base from which to build our thinking, feeling and action patterns, then we will avoid and solve all problems. That is, from one measure comes the solution to all problems. This unitary outlook on life is the true basis of monotheism.

The next set of meditations of the first stage aims at breaking the indiscriminate imitation flaw of the 9th sphere.

The third meditation at this stage involves chanting the heka "Aung Vang Duhung" (see Chapter 24). Once you are in trance, seek to recall one of the earliest times in which you manifested a particular emotional or sensual behavior. You will always discover that their earliest manifestations occurred when you were a child. Make the attempt to relive-just not remember-the situation, and you will notice that you expressed such behavior because you had no other option. You lacked the experience and the intellectual maturity to react rationally and philosophically to the situation, so you had no choice but to follow the emotions that reflected themselves in your awareness. You must therefore proceed to 1) meditate on the fact that now that you are an adult, you now have ideas, in place of emotions, through which to express yourself, 2) if you are going to continue this child-like behavior you must make a commitment to go and seek counsel for your life's problems from a child. You must also take note of the fact that the emotional expressions of anger, sensual craving, fear, shyness, greed, jealousy, etc. are not only common to both man and animals, but are the primary mode of expression of the latter, while man has a superior intelligence through which to alter his behavior. We must ask ourselves then (during the trance state), "How can we claim to be superior to animals, if we allow our emotions and sensualism to direct our thoughts and actions?" We must also identify each of these emotions, which originate in our animal spirit (the Khaibit, sphere 10), with one of the symbols of the Sesh Metut Neter (see Appendix A). Western biologists have just recently discovered that the human brain is in reality a number of brains, some of which are the centers for the traits that we share with animals. This fact was known to Kamitic priests thousands of years ago. They communicated this information through their hieroglyphic constructions of human-headed animals, and animal-headed humans. E.g., Anpu (Anubis), the jackal headed man symbolizing the cunning and cleverness that man shares with the canine species

(also with the baboons⁴, and other apes); the hawk, a trainable bird of prey, was used to symbolize the higher combative and destructive aspects of Man's spirit. These are the Deities Heru, Herukhuti, Seker, etc. An uncontrolled sensualism, for example, was equated with the pig-a correspondence of the "deity" Set-which symbolizes the self-destructive nature of an unbridled strong sensual drive. It is founded on the fact that the pig is known for its greed, which does not stop at even eating its own piglets. One must meditate with the following aims: 1) to realize that, to follow our emotions, is to imitate the animal part of the spirit⁵, and 2) to detach our identity from our emotions. A major source of delusion and spiritual bondage comes from the belief that our emotions are expressions of our Self. People are in the habit of saying, "This is the way I feel . . . this is what I desire . . . I like so and so, etc." The Tree of Life offers us a means of seeing the difference between our Self, which resides at sphere one, with its roots in "0," and our emotions and sensual passions, which reside at sphere 10. We can begin to break these false identifications, by seeing our emotions and cravings for what they are; expressions of the animal part of our spirit (the Khaibit-sphere 10). The ultimate goal of our meditations, is the return of our focus of consciousness to the unprogrammed and unconditioned part of our spirit. Again, I must remind the reader that these meditations are not to be conducted through verbal thinking. The information associated which each symbol of the Sesh Metut Neter (Appendix A) must be thoroughly studied, understood and accurately amplified. While you are in trance, you must see your person with the head or body of the animal symbolizing your emotion or desire, indulging in an emotional situation. Jealous or hateful people might see themselves as serpents, filled with venom (ill will), waiting to ambush others. All negative emotions can be symbolized as worms eating away at one's vital force (Ra). Schu, whose emotional problem is one of selfishness (8th sphere), will see himself as a canine (a jackal, or a dog). Have you noticed how dogs

4. Hence the baboon that is "sacred" to Tehuti. It is in reality a symbol of the 8th sphere that has close association to the 2nd. Yoruba initiates will understand this by analogies to the relationships of Elegba, the trickster, cunning Orisha to Ifa, the God of wisdom.

5. Emotions, and sensual pleasures, it must be understood, are to be allowed expression, only when they are in harmony with the truth. The "truth," though, is to be arrived at either through oracular inquiries, meditations taken sometimes to the 6th stage (sphere 4/Maat), and at other times to the 8th stage (sphere 2/Tehuti).

for the most part do not like to share their food? Nefert-ra will see herself on her job as the Goddess Sekmet--the lion-headed, destructive aspect of the sun's desert and barrenness making power. Please note that the third meditation is subdivided into four components.

The fourth meditation at this stage involves chanting the heka "Aung Vang Duhung." Once you are in trance, seek to recall one of the earliest instances in which you imitated your present emotional expression from someone else. You will notice that in most cases this took place when you were a child. Meditate with the aim of realizing that the emotion that you are presently harboring has its roots in the indiscriminate imitation of others. This is a form of "age regression meditation"

Level 1 of the Meditation Process, Stage 2, Sphere 8

The first set of meditations aims at positioning Ausar as the foundation of the reasons that we give ourselves for our beliefs, ways of feeling, and acting. People are in the habit of basing the rationalizations for their actions on their identification with their persons. In contrast to our indwelling intelligence, which is unconditioned, each person is the embodiment of a set of conditioned behavioral patterns. Fear, anger, sensitivities, shyness, failures, likes, dislikes and other shaping factors of personalities serve to limit an individual's ability to achieve his goals, not just simply from the fact that emotions can make him act irrationally, or paralyze his capacity for action, but more importantly, from the fact that they can interfere with the activity of the indwelling intelligence. This is symbolized as the killing of Ausar by Set. We must therefore realize that it is not a simple matter of "thinking positively," which must in the long run fail as long as the individual continues to identify himself with his person, which is in essence, limited in its capabilities. *A positive thought cannot succeed if it is contradicted by an innate limitation of the personality. We must therefore identify with the free part of ourselves--the indwelling intelligence--in order for our positive thoughts to be successful.*

The chief meditation of this stage is suggested by the function of one of the Deities of this sphere, Anpu (Anubis). He is the embalmer of Ausar, and assists in his mummification. In the Sesh Metut Neter, embalming and mummification symbolize the

incorruptibility of the higher parts of the spirit. The initiate who has elevated his consciousness to this level is beyond the decadent influences of earthly things, which are symbolized by worms (see Appendix A). These earthly things-worms-that corrupt us are the earthborn ideas (the Sebau) that we hold about ourselves and life. As we saw, they originate in the left side of the brain (sphere 8) of Sahu Man. They are the emotion based rationalizations that we give ourselves, to "justify" indulging and following our emotions and sensualism. "I am only human so, naturally, I had to . . . or couldn't, etc." "I didn't live truth, but I am doing my spiritual work." To overcome this way of thinking we must thoroughly study and understand the fact that our true self-Ausar-is beyond the influence of emotions. No matter how often, and how strongly they reflect themselves in our awareness, we can resist and ignore them. What would happen if you didn't respond as an emotion suggested? Make an honest, and determined effort to ignore them the next ten times that they visit you, and you will see that they really don't have power over you. It is for this reason that emotions (Sebau) are called "the children of impotent revolt" in the *Pert Em Heru* (*Egyptian Book of the Dead*). Most people are controlled by their emotions mainly because they believe that they must follow them. Or, because they believe that emotions are the validators and justifiers of their actions. As if emotions were signifiers of truth, most people believe that they cannot do what they don't feel, and must do what they feel. All of the ideas of the Self's-indwelling intelligence's-imperviousness to emotions and sensualism must be equated to the depiction of Ausar as a mummy. Chant the heka "Aung Aing" (see Chapter 24) until you are deep in trance. Once in trance, recall a rationalization that you give yourself for indulging an emotion, while seeing yourself unmoved by it. Visualize yourself as the mummy Ausar⁶. The objective is for you to get in the habit of reasoning that if you identify with your true self, as opposed to your person, you can never use your emotions as justification of your actions. When we get to stage 4 of the meditation process we will see how the rationalizing faculty (8th sphere, Sebek) helps us to become impervious to temptations--i.e., how it embalms us (prevents moral decay). Nefert-ra must reject the belief that she cannot help getting upset by other people's lack of capability. As this fieriness is an intrinsic

6. It is important to appreciate the fact that here the problem is verbalized (stated by the left side of the brain), and the solution is pictured (expressed by the right side of the brain!).

quality of her personality (martial), she cannot become a calm person by simply nourishing positive thoughts to the effect. She must identify with her Self, Ausar, which is able to manifest any behavior, and personality that is required. We will have more to say on this in the third stage. Shu's belief that his goal of achieving financial security can only be reached by devoting all of his time to his personal pursuits, will be transcended by his realization that as his true self is the same Self in others, what he does for others, he does for himself. His true self is not bound by time and energy limitations in the accomplishment of its goals. The indwelling intelligence directs thousands of physiological functions at the same time. By identifying with it as our true self we are able to transcend the limitations of our persons. This identification is the "Opening of the Way." Our rationalizations of what we can and can't do, which are the intrinsic limitations of our personalities, close the way to the working of our indwelling intelligence in the totality of our being. It limits the Self to the task of directing the "subconscious" mental and bodily processes. To sum up, the objective of the meditation at this stage is the realization that as our true self is infinite in its potential to know and do, we must never accept any limiting thought regarding the things that we need to accomplish in life. We must always be ready to say "I can . . .," with the understanding that this "I" is not the complex of capabilities, limitations, and inclinations that we call our personality, but the unconditioned, hence, infinitely capable indwelling intelligence of our being--Ausar.

Level 1 of the Meditation Process, Stage 3, Sphere 7

Now that we have positioned the infinite potential part of our being-the indwelling intelligence-as executor of the meditation (stage 1), and have brought our rationalizations of what we want, in harmony with the Self (stage 2), we are now ready to meditate on achieving the goal. A fundamental principle at work in this stage is based on the fact that our life-force does not make distinctions between the actions that we visualize during trance, and the same actions when they are carried out physically. Western scientists have objectively verified that the visualization of ourselves doing exercises, while in a mild state of trance, effects the same physiological responses as actual exercising. Many athletes and artists are currently improving their performances in this manner with the help of hypnotherapists. The spirit ("sub-conscious") does not distinguish

between a successful performance (singing, playing tennis, typing, lecturing, having sex, etc.) that is carried out in one's imagination during trance, from one that is carried out physically. To wait for success in the physical performance of an act, before you can feel confident of your ability to succeed, is backward and dangerous. In the mediumistic or sleep (hypnotic) mode of trance, the animal spirit with all of its conditioned resistances to change is lulled to sleep⁷. This enables us to carry out perfect performances in our imagination while in trance. On the other hand we might hit or miss our objectives when we physically carry out our actions without such preparations. If an individual were to conduct 100 perfect lectures, or golf swings in the entranced imagination, as far as the spirit is concerned, the individual has, "in actuality," perfectly performed these acts, even though they have never been done physically. When the time comes for these actions to be done physically, the spirit will guide the body to the flawless execution of the acts. This is due to the fact that the spirit (the "sub-conscious") is the executor of all actions.

We are just not simply speaking of some esoteric way of rehearsing. All behaviors, and physical functions are controlled by matrices composed of sub-atomic energy/matter. This energy/matter is the substantial basis of our thoughts. We must realize that the sounds, and images that are perceived as thoughts, must be formed from some type of energy/matter. It is this energy/matter that we manipulate into images to direct and control, not only our physiological and emotional behavior, but events in the social dimension of our lives, as well as the environment, as you will verify from your success in meditation.

Assistance From the Deities

"Seek assistance from deity A," "Deity B will protect you," etc. are expressions that can only be placed in proper perspective through the Tree of Life. While our Self is located at Sphere 1, and is unconditioned and unqualified, personalities are located at sphere 9, and are conditioned by the set of qualities of the 10th sphere. Where the 10th sphere (animal spirit, Khaibit) emphasizes the fiery mode (Aries, Scorpio, Leo, etc.) of the Life-force, the individual's Ka (personality), barring illness, etc., excels at fiery tasks and

7. This is the main reason for employing this type of trance during the first three stages of the meditation process.

challenges. The person is zealous, enterprising, quick in deciding and acting, short tempered, a leader through force of character, etc. But this heat, which makes this type of person successful when challenged to respond in a fiery (hot/dry) manner, will be the cause of failure when challenged to meet a situation that requires the calm reflection, and flexibility of the watery (cold/moist) type of personality, or the persuasive and clever rhetorical skill of the earthy (cold/dry) personality, or when challenged to a long protracted fight that requires the blend of law and power of the airy⁸ (hot/moist) personality type. Thus we can understand the "indivisible duality" between the two components of our being (hence man is called "an individual"); the Self, which is the constitutional component, and the person which is the functional. This is to say that the constitution, or law of our being, which is the Self's infinite capacity of expression, is united at our birth to a finite functional complex--the personality. A fiery person, for example, will not find in his personality portfolio the means of genuinely, convincingly, consistently, and most importantly, satisfying to his nature, being calm and yielding in confrontations. Similarly, the watery person will be afflicted when called upon to be zealous, enterprising, and domineering. In the archaic mode of speaking, each person must seek assistance from the "personality complex"-the deity-that governs the set of behavioral attributes that are outside of our natal personality. Since we are each born in intimate association with only one of these seven personality types, the practice of invoking, or evoking (calling out⁹) the non-natal personalities, seems to the spiritually immature as if beings external to ourselves, were being called upon. We must clarify this point. Although all personalities are latent in our Self, the other six that a person is not born with are outside of her person. Unfortunately, this subtle arrangement--*inside the Self, but outside the person*--has given rise to the widespread belief that the deities are outside of our being.

8. It is important to separate the Kamitic "airy" metaphor which is the hot and moist principle, from the Chinese (Taoist) "air" which corresponds to the Kamitic "earth." Similarly, the latter is not the same as the Chinese "earth" which corresponds to the Kamitic "ether," also known as "akasha," to use the Hindu term.

9. Note that the terms associated with bringing forth the deities, "evocation and invocation" are based on the root, "voc," to call. It hints at the method of bringing out the inner powers. They are called, or chanted out through the use of hekau (words of power, mantras).

To invoke a deity, then, is to call a personality complex out of its latent state within the Self, and actualize it as a temporary substitute to our *natal personality*. The fact that the *non-natal personality complex* that is needed to solve the problem must be called out of its latent state within the Self, underscores the premise of the first stage of meditation. We cannot benefit from the infinite potential of the indwelling intelligence if we do not identify with it as our true self, which transcends all personality qualities. We cannot call out behavior from our personalities that are not intrinsic to them. Calmness cannot come out of fire, zealousness cannot come out of earth, or water, etc. Thus, to the degree that we can identify with Ausar, we can manifest personality qualities that are not natal to us. We find many "*Chapters of transformations (Kheperu)*" in the *Pert em Hru (Egyptian Book of the Dead)*, in which the initiate ("deceased") who has realized himself as Ausar is thus able to transform himself into a hawk of gold (Heru), Ptah, a phoenix, a lotus, Temu, Sobek, etc. We read in plate XXVII, "*Said Ausar, the scribe Ani, justified in peace. I came into being from the unformed matter, I came into existence as Khepere (the principle of transformation). I unfolded into plants, I am hidden in the tortoise. I am the te (atoms, essence) of every deity. I am yesterday as the four, and the uraeus of the seven which came into existence in the East.*" Note that the initiate, the scribe Ani¹⁰ is addressed as Ausar showing that he has achieved this level of being. Unlike western "scholars" who claim that Man evolved from apes, the Kamitic sages taught that Man came from the "unformed matter" (the *paut*). Note that his Self, Ausar, is the "te," the essence, or "atom" of all the deities. The "four of yesterday," correspond to the four fundamental transformations of the life-force (the four elements) underlying the seven personalities, of which the initiate says that he is their "uraeus."

Another important concept to be comprehended, deals with the manner in which changes in our behavior, and life is achieved. An effect of anti-polytheism has been the substitution of abstract ideals for the deities, which we have seen are personality complexes. As a result, people will pray or meditate on getting "courage," or "patience," etc., which are abstractions, instead of meditating on manifesting the entire personality complexes that govern these

10. Although the papyrus was prepared for the deceased scribe Ani, the very nature of the material, and the spiritual tradition of Egypt, leave us to conclude that the lofty spiritual teachings in the "*Pert em Heru*" reflected the teachings of the initiates into the mysteries.

attributes. This takes us back to the Sesh Metut Neter. *The spirit can only react to wholes, concrete thoughts, images, and sensations.* While it cannot react to the abstract word "evil," it can react to the image of something considered so, unless the former gives rise to the latter in the person's mind. In the same way, it cannot react to the *fractional abstraction* "courage," but it can react to the description (a concrete indication) of a personality (a whole) having courage as one of its qualities. Good creative writers know this well. To move their readers (affect their spirits) they know that they must "show," more than they "tell." This is why the Christian tradition promotes the concrete image of the life and suffering of Jesus, above the concepts regarding the Father in heaven. The truth is to be found in the fact that the Father in heaven is just too abstract to serve as a model for affecting the spirit of its followers. The process is better known in Africa, where it is well known, that there are seven distinct personality types (archetypes) which cannot be united into one synthetic archetype, as the Christians have tried to do with the Christ¹¹. Each deity is the archetype, or perfect exemplar for a specific personality type. Heru in Kamit, and Shango (Jakuta) with the Yorubas is the archetype of mature manhood, fatherhood, male leadership and kingship. Auset in Kamit, Yemaya with the Yorubas is the archetype of mature womanhood, motherhood, female leadership, and queen-mothership. Herukhuti in Kamit, Ogun with the Yorubas is the archetype of the enterprising, pioneering, defensive, and aggressive personality type, and so on. So rather than meditate on the fractional abstraction "courage," for example, we bring out of latency the full personality complex (a whole) of either Heru, or Herukhuti. The process is exactly as that encountered in the practice of Homeopathic, or Chinese medicine. We don't prescribe medicines for fractions such as "suppressed menses," or "fever." We consider the entire complex of symptoms, and if needed, all of the personality traits of the patient, and search for a remedy which addresses the entire complex. For example, what will truly cure (just not palliate) the suppressed menses of a fiery woman, will not only fail to help a similar disorder in mild woman, but may even aggravate the condition.

Nefert-ra will therefore meditate on manifesting Het-Heru, as opposed to the fractional abstraction of "becoming a calm

11. I say the Christ, and not Jesus, because the Nazarene from Galilee has been turning in his grave for the past two thousand years over what Paul has done with his Jewish Messianic movement.

person," or on visualizations of her womb healing, etc. She will chant a heka of Het-Heru, "Aung Tang sutch-a-a Het-Hert" (See Chapter 24). Once she is in trance, she will see herself wearing the crown of Het-Heru¹², dressed in yellow and green to enhance the required mood. Visualizing herself thus, she will recall those recurring situations in which she tends to function in a fiery manner, but seeing herself functioning in a sweet, yielding, and mild manner. She will support this meditation by indulging in lively music, keeping herself entertained, surrounding herself with beautiful things, and other correspondences to the deity Het-Heru. As she works more and more with the heka (word of power, mantra), and its energies flow into energize the imagery of the meditation, Nefert-ra will find a growing motivation to function as ritualized. Once she begins to manifest the desired behavior, which will be established at the end of the 4th stage of the meditation process, the avoidance of fiery behavior, and the expression of sweetness in the face of confrontation will result in a lowered metabolic rate which is conducive to the healing of the ovaries, increase in body fat, etc.

Since Sehu was told that Maat will help him achieve his goal, he will enter into trance with the Heka of Maat, "Aung Shring." Crowned with Maat's feather he will see himself giving some of his time and skills to his community. The bringing of balance into his life will be symbolized by the visualization of himself holding a scale with his heart in one pan, and Maat's feather in the other (See the Maat card). It symbolizes the balance between all complementary elements; in this case, the needs of the person, and those of the group.

In the chapter on initiation it was said that this stage also corresponds to the intensification of the life-force. Let's recall the observation that our emotions are the psychical driving force of the spirit. Nothing that is willed can be realized if there is no e-motive force behind it. A mistake that most people make is to think of joy as an effect, or reward for success, when it is the psychic motive force that is needed to succeed. This motive force can be cultivated by a practice known in the yogic tradition as asvini mudra. It consists in the rhythmic contraction and relaxation of the perineal muscle. This is the small annular muscle that is contracted in order to stop the urine in mid stream. It is also the muscle that goes into spasms at the moment of sexual arousal and orgasm. The practice of asvini mudra (as well as mula bandha) throughout the meditation

12. Symbolizing that she has succeeded in acquiring the qualities of the deity.

at this stage generates a feeling of sexual arousal, which the spirit, unlike the rational part of our being, does not distinguish as "sexual excitement." To the spirit, this pleasure is associated with the contents of the mind during trance. As far as the spirit is concerned Sehu is experiencing pleasure from sharing, and Nefert-ra is enjoying being sweet in the face of confrontation. And as we have shown earlier, the sharing, and the sweet behavior carried out in the entranced imagination are as real to the spirit, as the physical undertaking of the actions.

It is important to realize that the method given here for conducting this stage of the meditation process is a mere adaptation of the actual practice which consists of a full blown ritual involving trance induction through chanting, drumming, dancing and the use of many other techniques.

Summary Nomenclature

It is important to pay particular attention to the special manner in which the words "person," "individual," and "self" are being used in this book. While they are generally used synonymously, their etymology shows that they are fundamentally different in meaning.

Person: is compounded of "per" = through + "son" = sound. We have seen that the various personalities are expressions of the deities (words of power, sounds) working through the lower part of the spirit. At times, for the sake of communication, I will sometimes use "lower self" for person. It corresponds to our being at the 9th and 10th sphere levels.

Self: is a term allied to the concept of identity. It is thus reserved in this book for the higher part of being. This will be understood by the capitalization of the term, as Self, or by the construction "true, or higher self." It corresponds to our being at the 1st sphere level, and 0.

Individual: is compounded of "indivisible + dual." It is obvious that this word, like "person," is not the kind of word that accidentally comes into being at the fish market, or the barber shop. It is created by men working on a subject with the precision and discipline that is demanded by chemistry, and mathematics. "Individual," thus denotes the indivisible duality between the higher and lower parts of our being. The Self and the person. It corresponds to being at the 6th sphere; the point of supreme equilibrium on the tree.

Level 2, Second Three Stages of the Meditation Process

The procedure of separating the meditation process into stages, is a strategy that is dictated by the behavior of our life-force (Ra, kundalini). While, on one hand, its arousal is essential to the realization of the meditation objective, on the other hand, its arousal also vitalizes the conditionings, and beliefs that are opposed to the meditation goal. For example, when a person meditates to give up smoking, the arousal of the life-force to realize this objective will also vitalize the habit of smoking. It is clear, then, that something must be done as a safeguard before arousing the life-force. This is the objective of the first two stages of the meditation process. A nonarousal of the life-force mode of meditation (mediumistic trance) is used during the first two stages to impress upon the spirit the goal of the meditation. Once this has been established, a life-force intensifying mode of meditation is used in the third stage to vitalize the objective. If an antagonistic conditioning to the objective, or the virtues that must be cultivated to achieve it exists in the spirit, it will also be vitalized. This will result in a crisis, or several of them, in which we must choose between the new objective, or the new virtues, on one hand, and on the other, the old habits. These crises are called, in the spiritual tradition, "crossroad" situations. This is the theme governing the second level of the meditation process.

Level 2 of the Meditation Process, Stage 4, Sphere 6

This stage corresponds to a set of meditations revolving around man's will. It was said earlier that for an indication of an expected accomplishment to be considered an act of the will, it must be free of emotional or sensuous influence. Otherwise, it is a desire. Since all personalities are indissolubly tied in with emotions, only those expectations arising from an identification with the indwelling intelligence can be considered willed events. There can be no such as a free will where the individual's choices are dictated by emotional or sensuous compulsion. It is important to note that the

failure to distinguish between willing and desiring is a major cause of the failure to grow spiritually, for we fail to transcend our emotionality when we avoid an emotional act, because of another emotion. This is the reason for Heru's initial failure to defeat Set.

We must also recall that the true purpose of our will is not for choosing the path of our destiny, which is determined in the spiritual realm before incarnation. This is why competent astrologers can read a person's destiny from their charts. In most traditional African societies, it is a common practice for the character, and destiny of an individual to be revealed by diviners shortly after birth. The Goddess of destiny, for example, accompanies Tehuti when he makes his appearance at the individual's birth. This can be viewed from another perspective. Every person's destiny is under the control, and direction of the indwelling intelligence. The true purpose of the will is to ensure that the thoughts, feelings and actions that we undertake are in harmony with the plan of our indwelling intelligence. All truly successful people, who have not been guided by diviners, manage to intuitively, or instinctively discover their career, or destiny objective as determined by their true self. Unfortunately, they are in the minority. Most people must discover their earthly mission from their indwelling intelligence through the use of oracles, or in-depth meditation.

In most cases, the effort to live according to the dictates of the Self, which are based on divine law, brings us into opposition with the emotionally dominated personality. These crises, which are intensified by life-force arousal procedures, are symbolized in the Ausarian metaphorein by the battle between Heru and Set, and in other traditions, they are the "crossroads," which are the chief places for conducting rituals, and making offerings to God. These spiritual crises are the most important events in our spiritual development. They are the only events that mark our spiritual growth. It is of utmost importance to understand that spiritual growth does not take place from the studying of scriptures, spiritual literature, doing rituals, meditating, deity or ancestor possession, etc. These are merely means of preparing you to live truth at the crossroad. Unfortunately, about 97% of students of spirituality do not know this truth. They pick and choose when and where they will observe a spiritual teaching, oblivious to the the fact that spirituality is the living of truth, each and every time that one finds oneself in a situation of having to choose between the laws of the higher parts of being, against our feelings, and opinions regarding the situation.

"Crossroad" situations have very marked characteristics. On the side of the lower part of being, we experience strong emotions, and rationalizations to the effect that we will suffer irreparable harm if we give in to the truth, or ignore the emotions. A person who is endeavoring to transcend selfishness will find himself in a critical situation, not of his choosing, in which he is called upon by the circumstances to share with his worse enemy, or to be nice with a most obnoxious person who has humiliated him, and so on. It is then that Sebek, his faculty of rationalization, will provide him with very clever, yet transparent, excuses for not living truth. A careful and objective examination of these rationalizations will reveal that they are made up of all sorts of half-truths, and out and out double talk (forked tongue). Good examples can be found in the arguments given by the American government for subsidizing tobacco growers, while banning tobacco ads from the air waves.

It is only when we transcend the dominance that our emotional and sensual vehicle exerts upon us, that spiritual growth takes place. This is easier said than done, as we all very well know from the trouble that most people encounter in dealing with their bad habits and emotions. Yet, with the proper meditation technique, and spiritual education, it is much easier than is generally believed.

Men Ab em Aung em Maat

The meditation technique for transcending the emotions was called Men Ab em Aung Em Maat (Keeping the Heart stable to live Truth) in the Kamitian tradition, and Satipatthana (Right or stable mindfulness) in esoteric Buddhism. Contrary to popular opinion, the way to successfully deal with emotions, is not by "controlling" them, but by ignoring them. This is the essence, not only for establishing the dominion of the will, but as we will later see, for the experiencing of our Self as the indwelling intelligence.

What would happen if you did not obey an emotion, or sensual craving? Nothing! This thought seems not to have occurred to most people, who believe that they must follow their feelings, and that their feelings are the validators of their will, and their actions. I.e., that unless they have a feeling for doing something, they cannot do it, or that the action is not genuine, and so forth. Most people succumb to this delusion, even though they have already overcome a habit (smoking, alcohol, meat eating, etc.) that should have taught them once and for all the truth. The day you made up your mind to

give up a habit, the craving did not stop. You succeeded by ignoring the craving, and following your knowledge of the facts, even though the latter lacked power to generate feelings of pleasure. In fact, the pleasure was with the habit you were seeking to transcend.

Essentially, the Men Ab meditation process is a practice of ignoring the thoughts, sensations and emotions that motivate you to think, give attention to feelings, and act in opposition to what the truth of the situation demands. A person, for example, experiences emotions that pressure him to withdraw, and to dwell on feelings and thoughts of insecurity and inferiority, whenever his wife declines to become intimate, whether she is justified or not. The Men Ab meditation will consist of 1) ignoring such thoughts, and making every effort to act in a contrary manner, and 2) as you will most likely be visited by a) thoughts of guilt and recrimination for harboring the negative thoughts, and feelings, you must also ignore this set of thoughts and emotions as well. You may also experience a sense of anguish manifesting as an intolerance of the sensations of oppression associated with the emotion of guilt. Rather than allowing yourself to get caught up in hoping to be free of these sensations, and doing things to expedite the deliverance from them, you must learn to accept their presence. In time, the emotions will cease to visit you, as long as you persevere in the above meditation procedure. Incidentally, it must be noted that this meditation technique is practiced, not sitting in a quiet place, but in the thick of our everyday life experiences. It aims at giving us expertise in the management of our thoughts, emotions, and states of consciousness. The governing principle of Men Ab is that *there is never a 'reason' for an emotional reaction*. In other words, the tie between an emotion and what prompts it is not a rational one. It is based on the law of association, which was well explained by the Russian psychologist Pavlov. He would ring a bell each time he fed his dogs. Eventually, the ringing of the bell would by itself elicit the salivation, and flow of digestive juices, as if the food had also been presented to the dogs. *The spirit could not tell the difference between the bell and the food!*¹ All of our emotional and sensual responses are based on this non rational associative mechanism. As Man's spirit is originally, and essentially free of emotional conditioned reflexes, all emotions are superimpositions on Her true nature. Must you become angry in

1. This is the master key of ritual. Once you are experiencing your objective during trance, associate it to a perfume, a heka, etc. The latter will serve as a trigger of the former, and a quick way of empowering the hekau.

order to defend yourself? Have not thousands of years of oriental martial arts practice proven that the calmer the warrior, the better is his performance? Are animal faces, screaming, tensing of the body and shouting obscenities necessary for expressing one's dissatisfaction? Don't they reduce the clarity of our communication of displeasure? "What about suppression?" some people may ask. They may argue that the Men Ab technique involves suppression of the emotions and sensual "needs," and may therefore be harmful. "It is best to let it out," some will argue, ignoring the catastrophic results in many cases; murders, broken marriages, high blood pressure, etc. We must return once more to the truth concerning the original and essential nature of Man's spirit. It is free of all emotional and sensuous conditioning. This is what enables us to remove the pain conditioned reflex, through suggestions given in trance, to allow surgical procedures to be done without anesthetics. The pain mechanism is a protective condition (hence, a conditioned reflex) imposed upon the organism, due to the slowness and corruptibility of the voluntary thought mechanism. If the removal of a part of our physical organism from a harmful source depended on our thinking, we would be in a great deal of trouble (most people freeze up in threatening situations, etc.), thus, the indwelling intelligence has programmed (conditioned) the spirit to react automatically to threatening situations. When, however, we know that we must subject the organism to pain, as with surgery, parturition (labor), etc., we can remove the superimposed pain reflexes. This "fight or flight" mechanism is very primitive. It has its centers in the portion of our brain, which is dominant in the life of animals², and influences us to animalistic behavior. Failing to distinguish between real, imagined and interpreted threats, it automatically prepares us to fight, or flee whenever we believe that we are threatened. If we keep our minds on the fact that the successes experienced by people in overcoming their habits (smoking, alcoholism, etc.) was due to the fact that the cravings and emotional drives to indulge, eventually disappeared, as a result of their being consistently ignored, then there was no suppression at work. In fact, the avoidance of the possibility of suppression is the aim of the second practice of the Men Ab meditation system.

Let's return to our gentleman above, who is visited by emotions pressuring him to withdraw and indulge thoughts of insecurity whenever his wife says to him, "no honey, not tonight. I

2. The R-complex (brain stem), and the mid-brain.

don't feel like it." He has read up to the last paragraph, and tells the author, "Ok. I am with you. I realize that my spirit is originally, and essentially unconditioned, therefore, these emotions are not who I am. I have been ignoring the pressure to withdraw and to dwell on thoughts of self-worthlessness, etc. But the fact is that, even though I make the effort to interact in a normal way with my wife at such moments, I nevertheless feel terrible. The feelings and the thoughts are still there in the background. I really want them to go away." We can all identify with our gentleman friend. Again, the answer is the same. Ignore this second set of thoughts and emotions, for the simple fact that our spirit is essentially and originally free of emotional conditionings, and the aim of spiritual development is the removal of the emotional superimpositions on the spirit. In other words, armed with the knowledge that our true nature is lacking in intrinsic emotional programs we make the effort to ignore the conditioned reflexes pressuring us to accept the thought that we cannot stand the sensations accompanying our emotions. Ignoring these thoughts is not merely our inattention to them. We must not seek ways to rid ourselves of the feeling, nor indulge thoughts to the effect of wishing that the feeling would soon go away ("I will be glad when I stop feeling this way, etc."), nor indulge the thoughts that we are unvirtuous, immature or unspiritual for having such emotions. We must remember that all emotions and sensual cravings are expressions of the lower part of our being-the person-and not our Self-the indwelling intelligence. Identification with our Self-Ausar-involves non-identification with our emotions.

It is interesting to note, that while Western man identifies his emotions as the expressions of his Self, in the Kamitic tradition they are identified with the animal part of our being. The latter is kept uppermost in the understanding of the people through the widespread symbolization of human³ nature as animal-headed people or human-headed animals (E.g., the Deities Heru, Set, Anpu, etc.). This allows us to keep our emotions in their proper place, instead of elevating them, and thus giving them power over our lives, as Westerners have done.

What are emotions anyhow? In all the behaviors so labelled, we will discover that they involve a response in which we become tense, especially in our breathing which gets restrained and focused in the upper chest region at the point beneath the sternum.

3. We must not confuse the "human," with the "man." The term human reflects the understanding that there is an earthly side to man. Human = humus (earth) + man.

Because of this our breathing is shallow (less than 500 ml) and irregular. Stuck in this tense, shallow and irregular breathing state, we are thrown into a negative trance with the belief that 1) some external situation or agent is the cause of our sensation (we give it a meaningless label: anger or shyness or fear, etc.), and that 2) we must follow the behavior suggested by the thought component of our emotion. As emotions occur at the junction of the 9th and 10th spheres, the trance that is experienced is of the mediumistic modality, which means that the will becomes inactive. A characteristic of the mediumistic trance, is that the contents of the sphere of awareness are accepted as reality. This is how emotions exert their power over people's lives. This insight into *emotions*, that they *are mediumistic trances, accompanied with tense abnormal breathing* (painful as well as pleasurable!), gives us the clue for disarming their power to compel us. 1) Do not dwell on the thoughts that accompany them 2) focus your attention on each spot where you feel tense, and will your body to relax itself 3) regulate and harmonize your breathing, by making it deep, slow and rhythmic, and 4) if applicable, do just the opposite of what the thought accompanying the feeling was suggesting. Make a strong effort to carry out the last instruction. When a powerful emotion threatens to overwhelm us, at step number 3, we can zap it by forcibly pulling the lower abdomen in and up. Lift the upper chest, and hold it as you breathe out. Make sure that the lower abdomen is the only place in the body where tension is felt. This cannot be overstated. Follow this outbreath by expanding the lower abdomen as you breathe in. At the end of the inbreath tense the lower abdomen and hold the breath. Repeat the cycle starting with the forcible contraction as shown above. Do this for as long as is needed to defuse the emotion⁴. It should not require many repetitions. Its effectiveness is due to the fact that the forcible contraction of the lower abdomen applies pressure on the pneumogastric nerve, which stabilizes the activity of the heart, and sends a reflex stimulus to the waking center of the brain (the R complex) and the cerebral cortex. This manipulation of the nervous system serves to awaken the person from the mediumistic trance of emotion, as it is the basis for inducing waking trance.

4. This is the great Mahabhandha that male hatha yogins use to forestall an orgasm, in order to arouse the kundalini during tantric rituals. Authors of Hatha Yoga manuals have removed it from its proper context, and teach it as a mere "pranayama" technique.

Another important goal of the Men Ab meditation system is the sharpening of mindfulness. How many times haven't you said to yourself that you will not indulge a particular habit, only to find yourself knee deep in the act before you remembered your pledge. A simple, yet very effective technique, consists in taking away something that you like very much from yourself for each infraction. Another extremely useful exercise that is a must, consists in going for several days without laughing or smiling. Because these emotions are so powerful, the ability to ignore them gives the individual a great deal of skill in handling the negative ones.

Beyond the issue of emotional transcendence, the practice of ignoring our emotions strengthens our awareness of the duality of our nature. Through the Men Ab meditation, we have repeated experiences of the fact that on one hand there is a part of our being saying, "I will not allow my body to follow the impulses to laugh, cry . . .," while there is another part that is generating these impulses independent of our will and consciousness. This is the objective reality behind the term "individual" (indivisible duality).

Pert Em Heru

It was noted at the beginning of this chapter that the first three stages of meditation employ the mediumistic trance technique. It is based on putting the will and the left hemisphere of the brain-our syllogistic and analytical information processor-to sleep⁵. Although this enables the implantation into the spirit of suggestions for changes in behavior, because there can be no opposition from the slumbering segregative and analytical thinking dominated will, the absence of these faculties makes it impossible for us to consolidate our knowledge. We have seen that the latter cannot be attained in the "normal" waking state, as full wakefulness, and concentration is not achieved in this state.

To attain full wakefulness, upon which insight and the efficient use of the will depends, we must triple our oxygen intake, and reduce the flow of the life-force to the voluntary organs (senses, legs, arms, etc.) of the body. The increased supply of oxygen gives us a degree of internal wakefulness far exceeding that of the "normal" waking state. This is why the waking trance was called "Pert em

5. It is this that allows for the spirit to be directed by another's will (hypnotist, initiator, ancestor), or for its own faculties, stimulated by meditation or ritual, to "act on its own"-as in spirit, or deity possession.

Heru" (Becoming Awake, or Coming by day) by the Kamitians. Besides giving us the insight and clarity of perception to transcend the host of false beliefs clouding our understanding, this mode of trance also provides the force and vitality needed for the successful carrying out of our need. This is especially needed at the "crossroad" situations spoken of earlier. It is then that our eighth and tenth spheres overwhelm us with the fear of losses and harms that we will incur if we live according to divine truth. The successful practice of the Men Ab meditation process, and the waking trance are the foundations of the following meditation stages.

The meditation at this stage involves going into trance with the heka "Aung Hring," as we go into trance visualizing ourselves as Heru (see the Heru card) resisting or destroying the animals that symbolize our emotions (see Appendix A).

Level 2 of the Meditation Process, Stage 5, Sphere 5

In this stage we use all of the techniques developed in the preceding stage (Men Ab meditation and waking trance) to establish our sense of justice. The ability to give justice depends on our skill in ignoring fear and anger. I.e., it depends on a skillful and vitalized will. An analysis of all acts of injustice will reveal an underlying fear or anger at work. Thus, we see once more how important is the return of our identity to our true self, which is essentially free of emotional and sensual conditionings.

It must also be noted that to the degree that we can give justice to others, to that degree will we receive spiritual protection from the injustices of others.

The meditation at this stage involves going into waking trance with the heka "Aung Hring" while visualizing ourselves as the Deity Herukhuti in the act of destroying the animals symbolizing our fear or anger. The objective is to rise above the temptations to achieve our goals through transgressions against others, or having observed this law, to succeed against the injustices of others.

Level 2 of the Meditation Process, Stage 6, Sphere 4

While the preceding stage corresponds to our ability to detach ourselves from our person by sacrificing our personal interest for the sake of being just to others, this stage demands an even greater act of detachment. We are here called upon to rise above

our egotism by sharing with others. It is not uncommon at this stage to find ourselves, as a result of rituals and meditations at a crossroad in which the circumstances make a clear and inarguable argument for us to share with our enemies. In fact, this is the highest test of our ability to truly love. I.e., to give not seeking anything in return, but to fulfill a genuine need.

To be able to share, especially in such challenging situations, is not only a revelation of our transcendence of our persons and the understanding of our oneness, it also liberates a great deal of energy which is in turn used by the spirit toward the realization of the meditation objective.

It is important to realize that beginning with the 4th stage (6th sphere) of the meditation process, the detachment of the identification from the person begins to be established. The person, with its characteristic set of emotional and sensual patterns of behavior, is denied in order to assert the unconditioned Self. At stage 5 (sphere 5), the wedge is driven even further by our commitment to be fair with others, even if it means incurring great material losses. At this stage, the call to share with strangers and enemies, alike, drives our identity so far out of our person that we can almost begin to "feel" our true "inner" self. This budding experiencing of the indwelling intelligence takes on the form of a sense of joy and optimism that is independent of externals and success. In fact, as stated earlier, joy is the force that heals and brings success. Unfortunately, the majority of people reverses this relationship, and make joy the result of being healthy and successful.

The meditation at this stage, therefore, consists in going into trance with the heka "Aung Shring⁶" while visualizing yourself holding a scale in which your heart is in one pan, equally balanced by a feather in the other. See the Maat card in the section of the oracle. The scale symbolizes the balance that must exist between all dualities in our lives. For example, between our personal, and our Self interests; between our empirical information, and our spiritual intuitions (a priori knowledge); between our left-brained sequential verbal thinking, and our graphic, spatial and wholistic thinking, and so on. A light heart, i.e., a heart that weighs no more than a feather is a sophisticated symbol of the evidence of living truth (Maat = truth). But what is Truth? It is something to be attained through reading the scriptures, or through dialectical argumentation

6. The heka "Shring" is concealed in the name of the deity *Seshat*, which is an aspect of Maat.

according to Westerners. According to the African tradition, it can only be known through living. Man discovers Truth by living according to the laws of his true nature. It is of interest to note that according to the bible, Man and God share the same qualities of being. This is a theme that is dropped as soon as it is stated. We read in Genesis 1:26, "And God said, let us make man in our own likeness." It does not take much to realize that the likeness of God in which Man is made cannot refer to man's physical image, or to the set of personality qualities (habitual fears, likes, dislikes, etc.). Man, "the likeness of God," must then be a formless, incorporeal immaterial, spiritually unconditioned being. That is why it is said, "Make not graven images of God, thy Lord." The absence of emotional pressure from the immaterial, incorporeal, and unconditioned Self, is symbolized by the weight of the heart (the will) equalling that of a feather. I.e., if there is force motivating our actions, then we are not exerting our will, but our desire. We can illustrate this readily. Your doctor has placed you on a diet. On one hand you have a strong emotional and sensual pressure to indulge in a prohibited article of diet, and on the other, the cold, non-emotional truth embodied in your prescription. If you follow your desire and eat the prohibited food, it can be metaphorized that your heart (will) has been overpowered by a forceful (heavy) cause. If, instead, you follow the truth, which does not elicit any pleasure, which in fact is strongly opposed by your weakness for the banned item, it can be metaphorized that your heart (will) has been influenced by a forceless cause, symbolized by the feather of Maat. The importance of this concept cannot be overstated, as the majority of people believes that unless an idea has emotional or sensual force behind it, it should not, or cannot be carried out. But the crux of living truth is just the opposite. It matters not how unemotional or unpleased you are about the truth. If it is true, you can and must live it. The absence of emotional and sensual support for an idea simply means that our spirit has not yet been conditioned (programmed) to generate such energies for it. Living an idea, with an appreciation for the good it can do, will in time lead to the generation of enjoyment for it.

Last, but not least, the symbolism contained in the heart's weight equalling that of a feather, refers to the will being under the influence of the immaterial, hence weightless and unconditioned Self, as opposed to the very material, hence heavy and conditioned person. It symbolizes, then, that the individual has succeeded in establishing his identity with the indwelling entity (he is Maa kheru).

As this entity is the individual's share in God's essence, his established identification with it, qualifies him to pass on to the highest three spheres of the Tree of Life representing the divine faculties of omnipotence, omniscience and omnipresence which Man shares qualitatively (i.e., not in magnitude) with the Supreme Being. Had his heart weighed more than a feather, we would then have evidence that his actions were motivated by the emotional (animal) part of the spirit. In the Kamitic metaphorein of the "Weighing of the Heart," this failure is followed by the devouring of the heart by the beast Aummaum, which is part crocodile, hippopotamus and lion. It is a symbol of the destructiveness of our emotions.

Levels 3 and 4 of the Meditation Process The Last Four Stages

The successful return of the identity from the person to the indwelling intelligence, symbolized in the passing of the "Weighing of the Heart" test, enables consciousness to rise to the divine parts of the spirit. From another perspective it can be said that the ability to ignore (Men Ab) the behavioral suggestions and compulsions from the lower part of being--the person--has enabled the individual to achieve the ability to fully concentrate on a thought at the exclusion of all others, or to fully ignore all thoughts and sensory stimuli. The ability to concentrate on one thought for as long as required is the essential requirement for the work to be done in the 7th and 8th stages (spheres 3 and 2), and the ability to ignore all thoughts is the essence of the work of the last two stages of meditation.

Level 3 of the Meditation Process, Stage 7, Sphere 3

The third sphere is the seat of the creative units of spiritual power that are responsible for all of the manifestations in the mental and physical realms. These are the 50 gates of Binah through which all life forms come into and leave the world. They are the 50 matrikas (matrices) of the great Goddess Kundalini that function as the seeds (bija) or units composing the host of hekau (words of power). The ability to successfully use these hekau to affect the course of events depends, as stated above, on the ability to exclusively focus our attention on the chanting and associated graphic symbol. This ability can only be developed by the practice of Men Ab in which we must ignore the pressures of our emotions and conditioned beliefs (opinions). It is important to realize that we cannot concentrate for as long as we want, at a sit-down meditation, if we haven't broken the habit of following up the thoughts and emotions that reflex themselves into our awareness in response to the day to day challenges. The bottom line is habit. We must establish the habit of ignoring our mental activities at will. We must further realize, as you will eventually discover, that the realization of this objective is not simply based on the "will to ignore our mental

and emotional activities." It must be underlaid by a genuine detachment from the interests of the lower part of being-the person. In other words, we must die to, transcend the pressures and pleasures that earthly things have upon the person part of our being. This is not to say that joy or enjoyment in life will cease. We must remember, and realize that joy is no longer to be considered the engine that propels us in life. The way of life that we are to embark on at this stage, is one in which we do something because it is the truth, and let the joy for it follow from the appreciation of the good that it does. This is what was meant, but distorted, when Jesus told Satan (Set, the emotional body) to "get behind him (follow)." It is interesting to note that the Deity governing this stage, Seker, Kali, etc., rules over the dead and death.

Turning our backs on the emotionally and sensually energized way of life requires for us to discipline ourselves. But this discipline is not merely for the sake of discipline, but for the sake of coordinating our activities with the laws governing the forces (the hekau) in charge of carrying out events in our lives. As each force, for the sake of order, is assigned a place in time and space the individual must at this stage, live in harmony with the cycles governing the functions of his spirit. It is well known that the ancient Black civilizations knew about and paid strict attention to the intrinsic time for performing all activities. For example, the stomach's natural schedule to secrete digestive acids peaks at around midday, and hits rock bottom at midnight. Along with it runs the cycle for secreting the mucous that coats the stomach to protect it against this acid. When you eat a major meal past midday, especially at night, it causes the stomach to secrete acid in excess of the required amount of mucous to protect the lining of the stomach. Along with other factors, this can create or aggravate an ulcer, and definitely contribute to a host of digestive problems and malassimilation. Beyond the indigestion, all sorts of disorders will reflex themselves to distant but related parts of the body; you may suffer headaches, insomnia, emotional upsets, etc. Similarly, while the time-unconditioned voluntary (yang) part of your body will respond to your will to exercise heavily at anytime of the day, the time-conditioned involuntary portion (yin), which provides the vital support (supplies blood, clears waste, etc.), is only predisposed to handle such activities between sunrise and midday. During this period of the day, the sympathetic division of the nervous system, which is in charge of sending blood to the external organs of the body (arms, legs, etc.), is on the rise, and the body's supply of

glycogen (sugar stored in the muscle and liver) is still available. Exercising during the evening, while convenient because of the economic-industrial mold controlling our lives, harms the body, not only because of the lack of internal vital support, but because it also infringes upon other functions that are naturally scheduled to take place then. It will cut into and interfere with the time allotted to the evening functions of the parasympathetic (assimilation, repair, regeneration, etc.). Then you wonder why in spite of all of your exercising, good wholesome natural diet and wondrous herbal supplements your health still breaks down, and you are still beset with spiritual and emotional problems.

A list of hundreds of facts supporting the rhythmic, and time conditioned flow of bodily functions can be given. It is enough to note a few. Independent of our activities, our temperature, pulse and breathing rates do not remain even throughout the day. They rise with the sunrise, peak at midday, drop below their mean at sunset, and bottom out at midnight. It is well known to Western scientists that all of our activities (physical labor, mental labor, left-brained thinking, right-brained thinking, eating, sleeping, etc.) have their best and worst times of the day, which times are inherently related to the forces governing the rise and fall in temperature, pulse, and the diurnal or circadian "course of the sun." Incidentally, because the people of the ancient Black civilizations synchronized the events in their lives with these cycles, ignorant Westerners accused them of worshipping the sun, the moon and the stars, which are, in reality, means of keeping track of a variety of cycles¹. They were meditated upon, not worshipped, with the aim of understanding how to harmonize the day to day activities of our lives with the cycles they represent. Living in accordance to these cycles place limitations and disciplinary measures upon us. It is interesting to note that cycles, limitations and discipline are all saturnial keywords, and Saturn is the planetary correspondence to the third sphere.

The objective of the first meditation at this stage is to go into trance with the heka Aung Kring², while visualizing yourself as hawk-headed, and holding the Uas scepter, a flail and a crook (See the Seker card). The Uas scepter symbolizes the happiness and well

1. Of course, it is also well known that they are sources of radiations that affect organic, and inorganic processes in the world. But this is another issue.

2. The heka Kring is concealed in the land that is sacred to the deity of the third sphere, Seker. It is called Ta-Sekri.

being resulting from due attention to the flail and the crook. On one level, the flail symbolize the expansive, externalizing hot (yang) portion of the cycle of manifestation, while the crook, the internalizing cool (yin) side. Keeping them in balance leads to well being and success. In addition, the flail symbolizes the harshness with which we must deal with ourselves for violating our pledges of discipline, while the crook corresponds to the gentle meditative and ritualistic methods to the same end. Success with them qualifies us for the roles of governing and ruling others.

The second set of meditations involves the heka and symbols of the deity governing the meditation objective, as indicated by the oracle. While Nefert-Ra invoked Het-Heru during the third stage, emphasizing her enjoyment of the objective sought (she saw herself enjoying the baby she wants to have), here she will go into trance with the Het-Heru heka with the aim of becoming the deity for the sake of spiritual development. I.e., the interest here is not a personal one, as one has died to personal needs. Once one has succeeded in manifesting the deity at this level, one can generate its forces to assist others in need, or to serve as an earthly vehicle (avatar) for the will of God. I.e., the Supreme Being will use your spirit for promoting its plan in the world. With differences regarding levels of spiritual development, the procedure here is similar to the "ritual system of the afflicted" commonly practiced throughout Africa, and initiations into becoming a (living) shrine of a deity. In the ritual of the afflicted, once a person has succeeded in healing herself through the power of a particular deity, she must train to become a shrine of that deity so that she can serve as a healer to others. Hence, the invocation at this stage is to become a "power" (shekem) of the deity for the service of others, while the invocation at the 3rd stage was for the sake of one's personal needs.

Level 3 of the Meditation Process, Stage 8, Sphere 2

The Two Fundamental Actions of the Mind

Thinking vs. Thought Drift

In our "normal" waking state, on one hand, thoughts are constantly streaming into our sphere of awareness telling us what is and what is not, or suggesting what to do and what not to do. We call this "thought drift" (or unwilling thought activity). On the other hand, we are always employing our will to select and arrange these

thoughts into meaningful units, or to veto or sanction the suggestions, or impulses to act according to our innate sense of logic, conditioning and acquired store of information. We call this "thinking" or willed thought activity. Although it does not concern us at this point, it is important to note that most people fail to distinguish between the uncritical acceptance of thought drifts, and the discriminating activity of willed thought activity. Only the latter is thinking proper. Both modes have their problems. It is the uncritical acceptance of thought drifts in the "normal" waking state that we label irrational and illogical behavior. Willed thought activity, on the other hand, is no better than the information that it takes as its premises. You know the old story, logical, but not necessarily true.

Ultimately, it doesn't matter how logical the reasoning is, or how pragmatic the information. All items of information are no more than labels, definitions and descriptions—that is, symbols of objective realities, and not the realities themselves. While they are 100% trustworthy for thinking about closed systems with non variable components (making or fixing machines, electronic appliances, houses, etc.), they have a delusory effect on thinking in situations in which the values of the components are subject to change as the relationship between them changes. As a result, the verbal and graphic symbols which are the foundation of our thought activities, because of their inherent finite nature, cannot cover all aspects of relational eventualities. These relational events are none other than the issues of living itself; economics, spirituality, theoretical sciences, philosophy, psychology, sociology, etc. For example, what or who is man? Is he a "rational animal?" Did he ascend from the apes, or descend from God?

If our thoughts fail to communicate to us the knowledge of reality in the higher realms of life, how then can we arrive at such knowledge? A very important clue can be found in the science of meditation which has been touted as the means to acquiring wisdom. Meditation is a process of "making the mind blank," we are told. And this is the goal that we have been seeking through the preceding 7 stages. to "make the mind blank" is to still the thought process. Thoughts that drift in must be ignored, and the habitual impulse to exert the will in directing thought activity must also be ignored. This leaves us in a state in which we are disinterested spectators to the parade of thoughts, feelings and physical percepts streaming into the sphere of awareness. Kept up long enough, we arrive at a point where the thought drift process comes to a halt. If we had been

ignoring all thoughts save one, we transcend it and gain full insight into the objective reality that it represents, and if we were ignoring all thoughts, then we would arrive at a point in which all that consciousness could be conscious of, is of being conscious. The former is wisdom, and the latter is experience of Self-the indwelling source of consciousness and intelligence.

The meditation at this stage involves going into trance with the heka of Tehuti, "Aung Hung Shring," while visualizing yourself as the deity (See the Tehuti card) holding a pen to a blank sheet of paper, but not writing. Keeping the eyes open and directed toward the center of the forehead at the level of the eye brow will help to keep the attention focused on the meditation objective (this is called "tratakam"). Before meditating you will decide that your meditation objective is to come out of the state of thought free waking trance with insight into a particular subject. In the same manner that people go to sleep with a problem, and awaken with a solution without having gone through the logical sequential thought process of the "normal" waking state, we go into waking trance to still the thought processes and come out of trance with the answer. This is the process of "enlightenment," or "kensho" as it is called in Zen, or Khut as it is called in the Kamitic tradition. Sages and prophets use it to arrive at their knowledge of reality. It transcends studying, researching, thinking, reasoning and all possible forms of using the mind. It is a tapping into the omniscience of the indwelling intelligence, our true self, which is our individuated share in the life of the Supreme Being. Incidentally, all messages from such oracles as the I Ching, Ifa and the Metu Neter oracle given in this book proceed from this part of our spirit. They are the means of tapping into our indwelling omniscience, in lieu of our inability to meet the demands of this stage of meditation, which needless to say, will take a great deal of time, patience and work. Proficiency in this stage of meditation makes the person a living oracle, otherwise known as a sage or a prophet.

Level 3 of the Meditation Process, Stage 9, Sphere 1

In the preceding stage, all thoughts save one (the image of Tehuti, or the object to be known) were ignored during the meditation process. When one comes out of the trance it induces, the expectation of having a revelation is often fulfilled. The meditation at this stage involves going into trance with the heka of Ausar "Aung Ausar Hung." There are no visualizations or

expectations. The attention is focused at the area about an inch beneath the navel to follow the breathing. Tratakam is also employed. Eventually, all thoughts, and awareness of the body, emotions, and environment fall away, leaving our consciousness conscious of being conscious. This is the direct experience (inspiration) of our true (inner) Self, - Ausar.

The more we repeat the experience, the more we find ourselves effortlessly detached from the lower part of our being in our day to day experiences. In other words we become the mummy Ausar; decayless, immovable by emotions, etc.

Level 4 of the Meditation Process, Stage 10, "0"

This is a subtle continuation of the preceding stage. When we attain to the realization of Self, at stage 9, our consciousness of being conscious is characterized by a sense of being focused in the center of the consciousness experience. In this stage the consciousness of being conscious is decentralized, ever expansive, boundless and diffused. Thus we realize Patanjali's definition of Yoga, which "is attained from the inhibition of the mental energy/matter (citta). Then the Seer is clothed in his essential nature." We have pushed our quest of Self to its most hidden inner recess, which in the Kamitic tradition is called Amen³ and Nu. We have thus become Neb er Tcher.

SUMMARY

THE STAGES OF INITIATION AND MEDITATION AND SOCIAL ORGANIZATION

At this point it should already be clear, if it were not yet known, that the principles discussed from chapter 7 to the present embody the fundamental requirements that individuals must meet in order to participate harmoniously in society.

With varying degrees of spiritual understanding, the so-called puberty rites of African nations, are based on the principles of Men Ab. "Becoming of age" is not enough. To qualify for citizenship in a traditional African society, with its rights to marry, bear arms, to claim ownership of land, etc., the individual must achieve a certain degree of proficiency in the ability to ignore emotional pain, sensual temptation, physical deprivation, etc.. He

3. Do you know understand why Christians end all prayers with Amen?

must learn to place the needs of the many above those of the one. He must appreciate the value of accumulated experience through a show of respect for elders and wise men.

Regarding people's participation in the government of the traditional African nation, it is important to fully understand the peculiar governmental system developed in ancient Africa - the Divine Kingship. Central to the system is the concept that it is not the king who leads the people, but the Supreme Being. Even Western spiritualists who acknowledge that the true Self of man is the Supreme Being have not been able to understand this point. The man (and all others- living and deceased!) who will lead the people must be initiated into the ability to serve as a vehicle through which the Supreme Being and its agencies (the Deities) will govern the people. All leaders must, therefore, be masters of divine law, and priests of the shrines of the Deities. I will quote from *Life in Ancient Egypt*, by Adolf Erman, Dover Press, which will prove very enlightening.

On the 14th of Paophi in the 46th year of Ramses II, we find the members of the court consisted of:

"Bechenchons, the first prophet of Amon.

Ueser-mont, the prophet of Amon.

Ram, the prophet of Amon.

The prophet Uennofre of the Temple of Mut.

The prophet Amen-em-'en of the Temple of Chons.

The (holy father?) Amen-em-opet of the Temple of Amon.

Amenhotep, the priest and reader of Amon.

Any, the priest and reader of Amon.

The priest Huy of the Temple of Amon.

The accountant Huy of the court of justice of the town."

In this case therefore we find nine priests and but one layman, i.e., the permanent scribe of the court, who reported the lawsuit.

The author's phrase "In this case" compares this composition of the court to that ~~of~~ a later time (Ramses IX, 20th Dynasty) in which the court was predominantly made up of laymen. When we compare both periods we find that the latter corresponds to the beginning of the end of the Kamitic civilization. A great deal of the administration of the kingdom had fallen into the hands of foreign soldiers who had been brought in as mercenaries to staff the

standing army of the country. Yet, up to the beginning of the 19th Dynasty, we find that the courts and the government of the nation are in the hands of priests-prophets. The reason for this will can be deducted from the following quotation from the same book:

"The laws which guided the king and courts in their decisions are unfortunately unknown to us. Some of them were said to be of divine origin; a deed informs us that the criminal should be condemned to the "great punishment of death, of which the gods say 'do it to him,'" and it expressly states further that this decree of the gods is written in the "writings of the divine words."" Diodorus probably says truly that he was informed that the sacred books of law had been composed by Thoth the god of wisdom.

Here we have it. A book of the "writings of divine words," i.e., the Metu Neter, which was written by Tehuti, for the use of priests-prophets, and the king in their work of administering justice. Erman also states that during the old Empire, which is the period that best represents Kamitic culture;

All the judges belonged to one of the "six great houses," that is, to one of the great law courts, in which "the secret words" were discussed . . . At the head of this court of justice stood the "Chief judge" . . . he would be one of the "high priests of the great gods," . . . the second after the king in the court of the palace." . . . At all ages of Egyptian history this was the most popular position in the kingdom. . . The popular idea was that *earthly governors and chief judges ought to vie in wisdom with their heavenly prototype* . . . He, the chief of the judges, through the words of his mouth, caused brothers to return home in peace; *the writings of Thoth were on his tongue*; and he surpassed in righteousness the little of the balance. *He knew the secrets of every one* . . . (Note: italics were inserted by me).

So what is this book of the writings of Tehuti (Thoth) which enabled the chief judge to "know the secrets of every one," that contained the "secret words" that the judges convened to discuss? I verily say to you, that it is the Metu Neter oracle that I have brought back to the world. Let those in high positions use it to govern and the world will be restored to the state of peace and prosperity known

only in the days of Ausar. Let those in low positions use it, and they will inherit the staff of the lion.

THE ORACLES

On the most general level, oracles are means of communicating with spiritual agencies. On the highest level, such communications take place with the wisdom faculty (sphere 2, Tehuti) of the spirit, through waking trance. This is the skill possessed by prophets and sages. On the second highest level, communications take place with the same part of the spirit through the casting of lots. These "lots" are symbolic representations of the basic categories into which the entire span of reality can be divided. Other oracles are means of communicating with the other Deities, and lower spiritual agencies through mediumistic trance or the casting of lots.

In past chapters, we looked at the process through which the world comes into being, through which order is established and maintained, the stages of initiation and meditation, and so on. Not only did we trace the sequence of unfoldment of events, but we also assigned to each shaping factor a place in time and in the hierarchy (space) of being. Thousands of years ago, Africans discovered that this system of classification and order could be represented through numerical (ordinal or binary) symbols, graphic archetypes, etc.. They further discovered that these representations, when conventionalized and arranged into a synthetical whole, could be used by the indwelling intelligence to communicate with the personality by projecting these symbols in dreams, or by drawing the attention to their physical counterparts at critical moments (omens). They further discovered that if these symbols were casted in such a manner as to allow them to fall freely, or to be gathered in a non-manipulative manner, the indwelling intelligence, acting through the life-force, would manipulate the symbols into a pattern that would communicate its message.

It should not be surprising to find that the abstract symbols used in such oracles as the Ifa of the Yorubas (Afa of the Ewes), and the Tao Te Ching, and with some modifications, the I Ching, are all based on binary mathematical principles, which are the basis of the machine language used by computers (used extensively in forecasting!). The Metu Neter oracle is composed of the combined influences of the five primary binary figures, and 14 archetypes (70

cards) of the shaping forces of all events in/as the world. These archetypes are the 14 pieces created by the dismemberment of the body of Ausar, and are related to the 14 kau of Ra. In fact, it would be correct to think of oracles as spiritual computers. They enable us to discover what shaping factors are the key effectors of a given situation.

All that reasoning, which we must use expertly, can do for us is to indicate plausibilities and probabilities. And for that it must have precedents, or some means of identifying the possible shaping factors in a situation. Oracles enable us to raise plausibilities and possibilities to the level of facts. An oracle can tell you at the moment of birth, that child "X" will grow up to be a leader or a pauper, unless he does exactly so and so. Before you even got to know him, the oracle can tell you what kinds of problems you can expect, what virtues must be cultivated, etc. if you were to get married. It is clear then that those who are against the use of oracles, do not quite understand how and why they are used. In fact, most people do not truly know what they are.

There are a few well known historical instances in the lives of Westerners regarding the oracles. Before the advent of the monarchical period in Israel, a very rudimentary oracle, the Urim and Thummim was consulted. This oracle that could only answer yes or no was the means, according to 1 Samuel 28:6, to consult the Will of Yahweh. In Ezra 2:63 a cultic problem is postponed until a priest of the oracle can be consulted. II Macc. 15, informs us that Hamman secured the deliverance of the Jews exiled in Persia, by casting the lots to choose the day for attacking the Persians. The latter were slaughtered. This event is today commemorated, although with a veil casted over it, in the Jewish feast of Purim (purim means "lots"). Another account of the Jewish use of lots is given in Acts 1:26, where we are shown that Matthias was chosen through the casting of lots over Joseph Barsabbas, to take Judas' (who betrayed Jesus) place. Incidentally, it is important to remember, or note that Jesus, and his disciples never called themselves Christians. The appellation or concept did not even exist in Jesus' time. They were Jews, but that is another story. Back to the oracles. There are many more such references in the Old Testament for those who care to search for them.

Beyond indicating events and occurrences that are "around the corners" from our reasoning faculty, some oracles like Ifa and the Metu Neter are capable of indicating which word of power or

Deity is in charge of the situation at hand. Since the word of power originates, and controls the situation, word-shipping it (awakening and cultivating its power) enables us to work on the situation from the causal level. Otherwise we must work backward from effects to causes.

Chapter 17

THE DEITIES OF THE METU NETER

AMEN

Amen means "concealed." It is the Kamitic counterpart of the term "Subjective" as we have used it in this book. It corresponds to the essential nature of the Supreme Being, which is the same as the essence of Man's being. It is our unmanifested, unmanifestable unconditioned Self-That which is the ultimate source of life and consciousness. It is the unseen and unseeable that looks out into the Objective Realm of spirits, thoughts, feelings, and physical phenomena. We must return our focus of consciousness back to it by the cessation of all thought activity. Once we have established this innermost point as our place of being--i.e., living beyond emotional influences--we will attain to the state of Hetep. This is a state in which we are able to fully ignore all emotions that may rise into our awareness, and thus attain to a peace that cannot be disturbed by any challenge in life. In the Hindu tradition it is called *Parabrahm Sarvikalpa Nirvana*. This state of inner peace is the prime foundation for the functioning of the healing functions of the life-force (Ra), and is the source of all spiritual power.

AUSAR

"And God said, let us make man in our own likeness."

Now, it does not take much to realize that the likeness of God in which man is made, according to Genesis 1:26, cannot be the multitude of human frailties and sinfulness. Neither can it be the corporeal creature of earthly existence, nor the varieties of qualities that make up our personalities. For as it is said, "Make not graven images of God, thy Lord." How then are God and Man similar?

As a drop of water and the ocean are the same qualitatively, but different in magnitude, so are man and God. This fact is expressed in the Bantu's (a major group of Blacks in South Africa) categorical name for both God and Man--"Muntu" (of which Bantu is the plural). It is the same with the name that the Kamitians use for themselves--"Kam-Au." "Kam" means black, and "Au"--the root of

the mantra Aung, Ausar (God/man)--was used to denote themselves.

But this Self of ours which is the likeness of the Supreme Being is, as we have so much spoken of in earlier chapters, the indwelling intelligence guiding all of the functions of our spirit, and through it the "involuntary" vital functions of the body.

We cannot leave this section without throwing some light on the Deity's name. To this date no Egyptologist can explain the meaning of, or origin of its name. The problem has its roots in the fact that the deity's name is not commonly written with alphabetic hieroglyphs, but in a "graphic metaphoric way"; an eye above or beneath a seat, which does not provide much of a clue to the true pronunciation. Although no one has ever given a good explanation, it has been commonly rendered as Asar (pronounced Euh-Sehr). The seat, which is called "ast" (pronounced Eust) is, by "punning derivation" as Budge aptly observes¹, used to represent the female aspect of the Deity. Thus they call her "Ast" (pronounced Eust). But no one can say why is a seat used as a metaphor for her, and if this is the true pronunciation of her name. Let's first deal with the meaning of the symbolism. As the ninth sphere corresponds to the first stage of the work of spiritual development, it is the foundation (Yesod) or throne or seat of spiritual evolution, meditation and initiation. All acts of the will begins with mediumistic trance. When we recall the work to be done in the first stage we will remember that it consists in going into mediumistic trance with the objective of returning our identity to the indwelling intelligence. The seat, then, is symbolic of mediumistic trance, and the eye symbolizes the indwelling intelligence. We must take a clue from the Canaanite Kabalistical tradition, in which the ninth sphere is called Yesod, which means "foundation, seat," yet, the deity of the sphere is called Shaddai El Chai. Similarly, in the Kamitic tradition, the Goddess of the ninth sphere (Isis,- the Greek name) is called a "seat" (Ast), by metaphoric punning. We understand the metaphor, but what is the pun based on? In Budge's Egyptian Hieroglyphic Dictionary, page 36a, we find the word "Aus" (Au is pronounced as the french "Eu," water!), which denotes the 3rd person, singular female. It corresponds to the Coptic "Es," which has the same grammatical role, and is also the root of "Esse," the Coptic name for the deity! On page 36a, we also find one of the few alphabetic spellings of the name: "Aus-t" (pronounced AEuset). On page 36b we find Ausars

1. Gods of the Egyptians, Vol. 2, page 202. Dover Press.

(AEusers). Further confirmation comes from the fact that in the Cosmological system of Annu (Heliopolis) of the Ra priesthood of the Vth Dynasty, the female counterpart of Tem or Temu (corresponding to Ausar) is called Auasasit (AEusausit). We are just not indulging here in scholarly gymnastics. The names Auset and Ausar conceal the heka "Aung," through which they are invoked. We have seen how Tehuti conceals "Hung," Seker (Sekri, Ta-Sekri) conceals the heka "Kri"; Heru (Hru) conceals the heka "Hring," and so on. When we consider the fact that these very same hekau turn up in Dravidian India in association to Goddesses that match the qualities of the Kamitic Deities-point for point, then we must realize that we have unearthed a principle that we must pay a great deal of attention to.

TEHUTI

A collection of data, however factual, is of little use until its elements are arranged according to their relationship with each other and the whole of which they are parts. For example, until Lavoisier (1743-1794), there was no science of chemistry even though there was a vast collection of chemicals in use; sulfuric acid, nitric acid, silver nitrate, chlorine, etc. and the recipes for making them. It was only when Lavoisier discovered that all atoms had a distinct weight and configuration (number of protons, electrons, etc.), and were thus subject to exact measurement, that the science of chemistry was born. *If the collection of divine laws and spiritual counsels could also be subjected to some sort of objective measurement, then the providing of guidelines for living could also be elevated to a science of living.* And such a means of measurement has already been in place in African spirituality for over 10,000 years. In other words, unlike the biblical tradition, the Kamitic spiritual tradition is not composed of a collection of spiritual guidelines; like chemistry and physics, its principles are each assigned to a specific category, which elevates it to a strict science of living. The ability to qualify life's experiences and its spiritual guidelines, through quantification and measurement, is the property of the wisdom faculty Tehuti. One of the most important rituals and spiritual practices of the Kamitic system was called the "Utchau Metut"-the "Weighing of Words."

The name Tehuti is compounded of "Tehu"² which means "to measure" and "ti," which means "dual." This name reveals a very

2. There is a great deal of controversy regarding the correct pronunciation of this Deity's name due to the fact that in most cases the Deity is represented non-phonetically. Phonetically it has been rendered as "Tchehuti," "Djehuti," and Tehuti (this "t" is a soft sort of "d"). First of all we find that the Coptic language (ancient Sahidic) which is the survival of the Ancient Egyptian language does not translate this word with either of the letters "ch" (chei), or "dj" (djandjia), or "tch" (tchima), but with "t" (tau). Dropping the final "i," a common linguistic experience, they named it "Taut," or "Tout," which is what would be expected from "Tehuti." An extensive etymological study reveals the same results. The Bohairic Coptic renders it "Thauout"; the Aramaic, "Thot"; the Babylonian, "Tihut"; and the Greek, and Phoenicians rendered it "Thout." None of them translate it with a "dj," or "tch" even though they had the means of doing so. The spelling "Djehuti" belongs to the Ptolemaic (Greek occupation of Kamit) period. It is a "punning" contraction of "Djed + Tehuti" signifying the stability (cessation) of the thought processes which lead to the manifestation of wisdom. "Tchehuti" (old and middle kingdom) is a contraction of "Tchet + Tehuti" signifying the fact that the word "tchet" (like the Hebrew "DBR") means both "word," and "physical thing" when understood from the perspective of the divine will-Tehuti-whose verbal emanations (hekau) are the causes of material things. It was also used to connect the wisdom of the deity with the serpent "tche-t" which symbolizes the aspect of Ra which is the source of the hekau (see kundalini as source of "vak," the word), as well as eternity. By punning, a prominent feature of African linguistic, they also related "tehu," meaning "to measure" with "tekh," meaning "a weight measure" through "tekhnu," a bird resembling the Ibis, which is the totem of Tehuti. The fact that "Tehu" is integrally tied in with the idea of measurement can be seen from the fact that the root of the name for Maat, which is the "sister" of Tehuti is also related to measurement. The hieroglyphic symbol for "Maa" also represents a cubit (18 inches), which is one of the main units of measurement in the Kamitic canon. We see, therefore, that on one hand, that those who call the deity "Tchehuti," or "Djehuti" do so because they have failed to understand that these terms simply relate the deity to the meditation process underlying its manifestation (Djed), and the life-force (Tchet) which is the source of the word as a vehicle of power, while, on the other hand, the use of the name "Tehuti," which is based on sound *etymological study*, fully summarizes the deity's function. The etymological principles governing the Kamitic language, and all others for that matter, prove that the Deity's name cannot be a compounding of "Tchet + Huti," or "Djed + Huti," as all meanings of "Huti" (officer, fear), or "Hu + Ti," yield fortuitous meanings. They are the types of words created via punning which is so widespread in Africa. The insight thus gained teaches that wherever knowledge, and wisdom is claimed, there must be an objective universal standard by

advance state of scientific sophistication of the Kamitic culture which cannot be doubted from the fact that they had invented the system of quadratic equations which is the foundation of the mathematical underpinning of science (the equations used in chemistry, physics, economics, etc.). That cosmology (Kabala) was related to a system of equations can be deduced from the Arabic name for algebra-"Al Jabar mu Quabalah." The dual factors by which all ideas and concepts are weighed are based on their relative place in time (temporal, cyclical) and space (hierarchic). We come across, for example, in the Chinese oracle of Wisdom, the I Ching, that "such and such" a thing is to be done or not because of its relationship to the time in the cycle (year, month, zenith, etc.). Incidentally, there might have been some cultural exportations of the Kamitic wisdom tradition to China. Let's start with noting the similarity between the root of the Deity's name, "tehu," and the Coptic derivation of the name of Tehuti, "Tout," which are very similar to the Chinese term for their wisdom tradition, the "Tao." The foundation of the Chinese oracle, the I Ching is composed of the eight Pa Kua. Similarly, Tehuti's wisdom system is also based on an ogdad representing the primal powers of the eight cardinal points. The symbol for the nome ("province") of Tehuti in Kamit was represented by four broken lines -- superimposed. I Ching practitioners will immediately recognize the correspondence to the yin lines, and Tao Te Ching diviners will recognize in it the 41st figure, which is the main figure of that oracular system.

The Utchau Metut

Spatial - Hierarchical Dimension

The "Urchau Metut," generally translated as the "Weighing of Words," is best translated as *the evaluation of concepts, ideas, beliefs, behavioral shaping factors, and spiritual practices*. It corresponds to the use of the Tree of Life as a device for

which to measure the claim. This concept found its way into the specialized meaning of the term "science," which is the Latin for "to know" (scire). When we realize that because there were no dictionaries, or encyclopedias in ancient times, the etymological relations between words were kept very tight, thus making them stores of a gold mine of information. They conceal depth meanings, and words of power which was well known to Jewish Kabalists who sought by various devices-gematria, etc. to uncover them in the scriptures.

categorizing and evaluating our beliefs, mental and spiritual functions, etc. By doing for the psychological shaping factors of our life (beliefs, behavioral mechanisms, etc.) what the periodical table of elements does for chemistry, the Tree of Life makes possible the creation of a science of behavior. I.e., it elevates philosophy, spiritual culture, psychology, etc. into the realm of science by providing man with a means of quantifying his ideas and beliefs regarding these subjects. For example:

The arrival at a conclusion or judgement without going through a thinking process, that is, through direct perception of the reality itself instead of manipulating the symbols representing the reality is called wisdom. We classify this mental process at the second sphere. The arrival at a conclusion or judgement through the manipulation of symbols embodying abstract analogies is called synthesis. It is related to the 4th sphere. The arrival at a conclusion or judgement through induction, deduction and inference is called sylogistic logic, and is related to the 8th sphere. Not only has the Tree allowed us to categorize each of these three modes of mental operations, it has also allowed us to assign a value to each. Since the Tree of Life's scale of values flows from 0-the highest, to 10-the lowest, then wisdom is the highest of the three, followed by synthesis, and in last place, sylogistic thinking. We can verify this in life. As a product of sylogistic (Cartesian) logical thinking (8th sphere), western orthodox medicine attempts to establish one to one cause and effect relationships for illnesses. Specific agent X causes specific health disorders Y, therefore, specific remedy Z must be used. Illnesses can be made to appear so specific, that the same disorder will be given different names because it manifests in different parts of the body (E.g., otitis, iritis, nephritis, colitis; lumbago, rheumatism, etc.), and in many cases, treated differently. Because remedies are similarly considered, Western physicians have fallen into the delusory belief in "side effects." Since their logical thinking is done through symbols (definitions, etc.), which can only embody a minor part of the realities they are representing, they fail to realize that the remedies, of themselves, are not limited to the effects that exist in their minds. Neither, are the disorders caused by the single agents that they have identified. This is the primary cause of many of the medical malpractices that is rampant throughout western medicine. Since many disorders can have the same underlying cause, it would make more sense to tie them together through an abstract name, than to separate them as Westerners have done. The former has been done in the Chinese medical system.

All disorders are given the same name, regardless of where they manifest in the body, or of their outer appearances. In harmony with this, the same remedy is given in each case. This unitary approach, which obviously, fosters order in thinking, a greater understanding and accuracy in evaluating and treating illnesses is the synthetical approach of the 4th sphere. The approach of the second sphere is even greater. Without thinking-i.e., manipulating the vast set of medical data-the second sphere is able to arrive at an understanding of the shaping factors contributing to the creation, and healing of an illness.

In addition, as the second, fourth, and eighth spheres correspond to the eighth, sixth, and second stages of initiation, respectively, it is evident that greater spiritual and mental abilities are required for the wisdom approach, and so on.

Every practice in life can be, thus, categorized and evaluated. Regarding "mental dynamics" and behavioral reshaping methods, we can arrive at the following classifications and evaluations.

Classification, and Evaluation (Utchau)
of "Ritual" Methods and Accessories

<u>Method</u>	<u>Sphere(s)</u>
Bach flower therapy	10th
Bhakti Yoga	9th
counselling	8th
Creative	
visualization	9th, 8th, 7th
Dianetics	9th, 8th
herbal "magic"	10th
hypnotherapy	9th, 8th
Jnana Yoga	2nd
Kamitic Initiation	10th - 0
Kula Yoga	10th - 0
mantra yoga*	3rd or 10th*
mediumism	9th
Men Ab	4th - 0
positive thinking	8th
prayer	8th
psychocybernetics	8th, 7th
sermons	8th
working with crystals	10th

*There are two forms of working with the heka (mantra yoga). Small advantages can be achieved by working with words of powers without subjecting oneself to a course of spiritual development. This is the 10th sphere level. The true and full power of hekau can only be attained at the 7th level of initiation (3rd sphere).

Classification, and Evaluation (Utchau) of Life Problems

All of life's problems can be assigned to one of three fundamental levels. The first (and lowest) level does not arise from conditionings that are opposed to our identification with Ausar and the laws of Maat, but to our conditionings that are opposed to the contemplated objective, or from the dormancy of the spiritual power to achieve the goal. They can, thus, be overcome without transcending one's lower being. Success can be achieved by the use of such approaches that involve the use of Bach flower remedies, Bhakti yoga, counselling, creative visualization, Dianetics, herbal magic (esoteric use of herbs), animal sacrificial rituals, hypnotherapy, dianetics, mediumistic invocation of deities and ancestors, prayer, psychocybernetics, positive thinking, sermonizing, crystal working, etc. The second level of problems arises from conditionings that are opposed to our identification with Ausar and the laws of Maat. Even if we have the ability to achieve the goal, success depends on living truth at the crossroads, which is the spiritual mechanism for transcending our anti-spiritual conditionings. This type of problem can only be solved by the application of Men Ab. The third level of problems arises from the dormancy of our higher faculties (spheres 1 - 3). Can you be motivated to develop your spiritual powers for the sake of discovering and aiding God's divine plan for the world? This might require you to die to the vast amount of painfully acquired information, and to the interest accumulated from the heavy investment in your earthly social undertakings. Can you understand why Chinnamasta, the Indus Kush (Dravidian) Goddess of Wisdom, holds her severed head in her left hand, and a sword in the right? And why three streams of blood flow from her headless neck to her lips? A hint: three is Sebek's number.

From the foregoing we can see how the Tree of Life serves as a measuring rod, a slide rule if you will, for the evaluation and classification of our ideas, concepts and practices in life.

Events can also be classified and evaluated according to their relative position in time. In chapter 15 we discussed the

cyclical laws governing the functions of the body and the spirit for the maintenance of order.

In many of the past chapters we discussed the spatial or hierarchical ordering of ideals, spiritual guidelines, behavioral expectations, spiritual training and virtues. It is the absence of these tools for measuring our ideas and values, why societies have become bogged down in a quagmire of opinions and ever increasing social disharmony and conflicts. Who among them is fostering the acquisition of the knowledge of reality by the stilling of the thinking mechanism? Yet, as we saw in past chapters, this is the only way of knowing truth - of arriving at the objective measurement of ideas. Of finding the "categorical imperative" that eluded the great German philosopher Immanuel Kant to the very end of his frustrated life. This categorical imperative, this yardstick of life is none other than the Tree of Life itself. Wisdom is achieved when consciousness, in considering an issue, flows through its 32 paths plus "0" to achieve a judgment.

The heka (word of power) that corresponds to this mental faculty is "Hung," which is concealed in the name Tehuti. Incidentally, the Buddhist borrowed it from the Dravidian wisdom Goddess Chinnamasta and syncretized it to their so-called "Dhyani (celestial) Buddha" Aksobhya.

It is of great importance to focus on the fact that man cannot save himself from the mere employment of his will. It must be guided by Tehuti. This is symbolized by Heru's dependence on Tehuti to defeat Set. In our day to day existence, this translates into our attainment of salvation by perfecting the meditation skill of acquiring knowledge of reality through stilling the thought processes. It is not a process of reasoning and logical manipulation of information acquired through study or observation, but one of reception of the omniscience of the intelligence dwelling within our being (our true self, Ausar) that is in charge of directing all of our physiological and spiritual functions. It is important to realize, that our physiological functions do not originate in our physical organs, but in the life-force-Ra.

It is important to realize that by stilling the thought processes (logical rationalizations, etc.) we can access a power dwelling within our being that is one with the divine entity, that the Kamitians said to have determined the revolution of the celestial bodies, the seasons, and keeps all manifestations in equilibrium. This inner intelligence also enables us to direct, protect and develop

the full potential of our life-force. In this respect Tehuti is called the "mind" and "eye" (utchat) of Ra. It is Tehuti that guides us to the lifestyle and actions that enable us to maintain the equilibrium between the two metabolic (the two combatants Heru/anabolic, and Set/catabolic) processes of the life-force (Ra). Last but not least, we must note that all high oracles-Ifa, I Ching and the Metu Neter-were received by prophets and sages while meditating at the second sphere level.

SEKER

Seker (the 3rd sphere of the Tree of Life) is the divine faculty that is in charge of the life-force (Ra), which is the formative base of all things in the world. Although the source of life is infinite, each entity is allowed to share in its infinity through a series of cycles of births. Each entity is thus allotted a finite portion of this life-force at a time, for its adventure in the world³. This recycling principle governs the cycles of birth, growth, decay, death, rebirth and on. The life-force behaves in this manner in conformity with the divine intention of guiding man to the realization of his divinity. Would most people bother to develop themselves, and exert themselves if they were to be born with full functionality (as many reptiles and lower creatures are), eternal youth and indestructibility? We are thus spurred on to exert ourselves in our youth to provide for the days that will surely come when we will be incapable of doing so, and of course by the ultimate, which is death.

The subjection of the existence of all things to cyclical revolutions, which is governed by the "deity" (divine faculty) Khepere, divides their life term into two fundamental phases. Birth (rebirth)/growth, and decay/death (rebirth into the plane of origin!). Thus we achieve an infinitude of experiences through an infinite chain of finite existences.

The phase of birth (rebirth) is under the dominion of Khepere (Aima⁴, the fertile mother in the Canaanite tradition), while the phase of decay and death is symbolized by the Hennu or

3. This law is taught in Chinese Taoism which states that everyone is born with a fixed amount of prenatal chi. The Taoist yoga exercises aim at preserving, and rejuvenating it, as it is not replenished by merely eating.

4. Aima is the same as Maya, the goddess who weaves the illusion that we call the world. It also conceals the heka Aing. In tantric Yoga, "Ing" is called Maya bija.

Af (dead flesh) boat in which travels the "aged Ra" (Ama, the dreaded sterile mother, and Kali).

Khepere or Aima brings all things into manifestation through the 50 sound units of power residing in the 3rd sphere. These sound units, which are the basis of all hekau, are metaphorized as the eggs of the beetle symbolizing Khepere⁵, the 50 gates of Binah, the 50 skulls strung as the necklace of Kali (the Indus Kush Seker), the 50 oarsmen propelling the boat of Ausar, and they are analogous to the 500,000 or so eggs that every woman is born with. At this level, these spiritual powers do not manifest the things of which they are the germs, but the underlying structure (divine plan⁶) that provides the order governing the harmonious interaction of the forces shaping the formation of things, and their interaction. These structures appoint the places in space and time ordering all manifestations. Incidentally, because its creative function corresponds to the female gender, which the Canaanite tradition supports (the Goddess Aima), this deity often appears (possesses) in its female form when invoked. As such, her name is Sekert.

The male side of the Deity rules over the death process. Seker was the Deity of the necropolis at Sakkara. Allied to it in this function was the "monster" Aum-mit or Aummaum, whose functions was to destroy the Ab (part of the spirit housing the conscience and will) of the deceased who failed to live in harmony with the laws of Maat (divine laws). During life, its activities are felt as the pangs of conscience, guilt, self recriminations, etc. These are warnings that we are on the path to a failed destiny.

This is to be expected as Seker governs our destiny. The Kamitic term for "destiny" is "Skher," and for "plan" is "Sekher," which are clearly etymologically related to "Seker." No two things can occupy the same place at the same time. Divine law, therefore, guarantees all things their day in the sun. Our coming into being, and the unfolding of all events in our life are controlled by the spiritual forces (Ptah) at the Seker level for the sake of maintaining

5. The use of the beetle to symbolize this aspect of the life-force operating at the Seker level is very rich in correspondences. The beetle, which is usually black (Seker's color) with a metallic greenlike sheen, lays a vast number of eggs in a mass of dung (another Sekerian correspondence). The hatching of the larvae by the heat of the sun is symbolical of the arousal of the force that is required in order to awaken the hekau symbolized by Khepere's eggs.

6. Note that the word for "plan" is "Sekher," which is etymologically related to Seker; Sekher Neter = Plan Divine.

order in the world. Destiny, therefore, is nothing more nor less than the expression of the structure, the plan that governs the unfolding of people's lives in order to guarantee them success. It is amazing to see how people are aware of the confusion and disorder that follow from the lack of planning and structure, yet fail to realize that the same would happen in nature and in the world, if the Supreme Being had not laid a plan to guide the lives of men and nations. As above, So below!

When we die or transcend the way of life in which earthly pleasure and personal interests are the motivating factors of our actions and undertakings, we come under the governorship of the Deity Seker. In either case, we have died to the earth-physically or spiritually. The doctrines of Seker, represent then, the *teachings that kill*. We must remember that this does not mean a joyless life. Quite the contrary, it is one, as we will later see, that leads to greater ecstasy. When we keep in mind that the spirit is essentially unconditioned, it will be realized that our spirit is ever receptive to be reprogrammed to express joy and pleasure in response to any situation or stimulus. We can therefore transcend a way of life in which our will is lead by what gives us pleasure, and change over to a way in which pleasure follows our will to live new truths.

Allied with the idea of dying to the things of the world is the host of symbols used to explain the domain of the Deity. In the "*Book of that Which is in the Underworld*," the Fourth Hour which represents the domain of Seker is described as a region in which there are no cultivation fields to be distributed to the faithful followers of Ra. It is full of thick darkness, its floor is covered with sand, and it is lacking in water (hence, barren). This region is called Ta (land 'of') Sekri. Note that the "kri" in the name conceals the heka--Kring--of the Deity.

The truths that we must live at this sphere of the Tree of Life corresponds to the cycles governing natural phenomena. These were discussed in previous chapters. The point to note here is that the times for eating⁷, exercising, having sex, performing certain types

7. This is not limited to the daily time of eating. In the Ayurvedic system of health from India each day is governed by a planetary energy. As foods are also conveyors of these energies, there is also a system in which the corresponding type of food is to be eaten on its planetary day. The Moon's foods (watermelon, lettuce, etc.) are to be eaten on a monday, martial foods on a tuesday, etc. Research will reveal that the name for each day is derived from the planet that governs it.

of work, meditating must not be dictated by our feelings, cravings, social or economic factors, but by the cyclical mechanisms governing nature.

The discipline of adhering to the cycles governing life that this sphere imposes upon us, is for the sake of enabling us to succeed in the use of words of power, as their manifestations are ordered by the law of cycles in order to keep them from conflicting with each other. All hekau (plural of heka) are based on 50 single sound units which are symbolized in the Phoenician Kabalistical system as the 50 gates of Binah, or the Goddess Ama through which all things in the world come into being, and are recycled. In India she appears as Kundala or Kali, the Great Mother who wears the necklace of 50 skulls. As mistress of the words of power, and mother of all living things, she is depicted travelling in the boat of the star Sepdt (Sirius), which is propelled by 50 oarsmen. These sound units are distributed throughout the 14 chakras making up man's subtle body. As this sphere corresponds to the highest manifestation of man's spiritual power it is the dwelling place of the power aspect of his spirit. In the Kamitic tradition it is the Shekem (Sahidic Coptic "Shkum"); in the Kabalistical, the Shekinah; in the Indus tradition, the Shakti. Men who wielded this power were given the title of "Shekem." In fact this is the true title for the Kamitic king of kings⁸. The term found its way into the Arabic where we find that the great royal leaders are called Sheik. In India the kundalini yogis are called shakta, and their counterpart further up north are called shamans. It is important to note that all of these cognate terms all begin with the letter "Sh." Egyptologists commonly render the term as "Sekem," even though many words written with the hieroglyph for "S" appear as "Sh" in the Coptic, Hebraic, and Phoenician. We see the same in the Hindu rendition of many Dravidian words. For example, Shakti, and shakta are also rendered sakti, and sakta.

MAAT

Maat, pronounced "Ma aut," corresponds to the faculty within man wherein is intuited and experienced the urge to live truth

8. The term Pharoah was never used by the Egyptians. It was introduced by the Jews, and denotes the palace of the Kamitic king. Its use is analogous to the "White House."

(according to the laws of the indwelling self). The name and the meaning are derived from the hieroglyph that is the phonetic symbol of "Maa"-the measure of a cubit. The connection of measurement with Truth is one of the most profound achievements of the African mind. We saw that the name of Maat's complement (brother/husband), Tehuti, is also based on the idea of measurement. When something, one side of an equation, is known, it is because we have an objective standard, the other side of the equation, against which to measure it. Hence, the "double measure" or "Tehu-ti," the "utchau metut" (Weighing of Words) and the Weighing of the Heart judgement, etc.

The construction of all things and the unfolding of all events are based on universal patterns underlying the activities of all natural forces. While some of the patterns underlying physical phenomena have been discovered and codified by Western scientists (E.g., chemistry, physics), Africans and other Nonwestern people have discovered and codified the patterns governing our day to day existence and spiritual development. In other words, the quality of life, and the destiny of men and nations are ruled by forces that are as measurable and subject to codification into immutable laws as are the factors governing physical and chemical phenomena. In the esoteric tradition, the branch of study governing these laws is Cosmology. The embodiment of these laws (moral canon), against which the actions and beliefs of Man are weighed/measured, is Maat.

By extension, the term 'maat' has several denotations in the everyday language of the Kamitic people; straight, rule, law, canon by which the lives of men is kept straight, real, unalterable ("it, the law, hath never been altered since the time of Ausar"), upright, righteous and steadfast or consistent. The last correspondence, "steadfast or consistent," is of extreme importance. In the Kamitic tradition, a person cannot claim that he is living truth if he has not been consistent in the observance of the spiritual laws at each an every crossroad situation. This is why it is said, "Today as Yesterday, Tomorrow as Today, is Truth!"

We have seen that the basis of Truth is living by a standard imposed by our essential divine nature. This leads unavoidably to the question of where does man find the strength to rise to a moral standard of which God is the standard of measure. In the Kamitic tradition the answer has been concealed in their metaphoric (so-called mythologic) mode of communicating spiritual scientific information. Maat is the daughter of Ra, we are told. But its

meaning has been clouded by the popular belief that Ra represents the Sun, or the Sun God. "Ra," pronounced Rau, and not Re (hence Aur-light; Aurum-gold, oro; Aura, Aurora, RAdiation, ARdent-fiery, etc.), corresponds to the solar energy or life-force stored in physical bodies. It is the kundalini of the Hindus, the Chi of Chinese metaphysics, Aganyu of the Yorubas, Dambadah Wedo of the Fons, etc.

An abundance of life-force, which is acquired through proper diet, adequate exercise and the avoidance of sensual excesses, is required for developing the strength to live truth. The implications of this fact are that as long as people are kept ignorant of how to cultivate their life-force, and worse, kept indulging in a lifestyle characterized by wrong diet, sexual excesses, etc., they will never intuit, understand, or find the strength to live truth. Society must then be doomed to ever deepening decadence. Salvation, they teach, can supposedly be achieved by asking for God's forgiveness after a life of debauchery.

Maat is generally depicted as a woman holding the Ankh cross, symbol of the heka Aung, in one hand, and the Papyrus scepter, representing the book of the law, in the other. On her head rests the feather--her main symbol--which is the standard against which the will (the heart/ab) of the initiate is weighed. In one pan of the scale is placed the heart, and in the other, the feather, which symbolizes the lightness of truth, that is, the absence of emotional force that characterizes the action of truth. A fact little known to Egyptologists is that in her furrow (a wrinkle in her face) lays concealed the *scepter of flint* which she confers upon the initiate after he has been found to be "true of heart" (to have lived truth). That it is to be used to kindle the fire of Ra, is a hint regarding the life-force (kundalini) arousing power⁹ of living truth. This is the key of the supreme mantra caitanya (mantra awakening) secret that has eluded many yogis for millenniums⁹.

HERUKHUTI

Herukhuti, also called Heru-Behutet, is the divine principle that safeguards our existence from the injustices of others. It works

9. Many believe that mantras can only be aroused by receiving them psychically (Shaktipat) from the Guru.

sternly through the law that states that you reap what you sow. Be consistent in being just with others, and you will be spiritually protected by this divine power.

Its aggressive power is also the foundation of the temperament of natural athletes, warriors, business executives, and so on.

In the Kamitic tradition, it is the form in which Heru fights against Set in order to regain the throne (control over one's life) that the latter usurped. The seeming contradiction that arises from considering Heru-Behutet "a form of Heru" is cleared up when we realize that ultimately there is only one Deity in the world, with different faculties. While Heru corresponds to the steady supply of noradrenalin that enables us to carry out all activities of externalization, Herukhuti (Heru-Behutet) corresponds to the extreme surges of adrenalin that support our aggressive, sexual arousal and immune responses.

HERU

There are a great deal of misunderstandings that have gained permanence in the thinking of the majority of "egyptologists." Leading these is the popular misconception that Heru is the sun god. It is damaging on two counts. For one, it is a perversion of the true meaning of the deity, and for another, it perpetuates the slur that African people worship material things (sun, rivers, lakes, animals, etc.).

In a qualified sense we can say that the sun is used as a metaphor to lead thinking to the understanding of the set of phenomena under the control of the natural force labelled "Heru." Specific to our present consideration is the division of the human metabolism into two phases; one is characterized by the rise of bodily temperature, and the other by its decrease. Each phase has its set of temperature (temperament) dependent or related physiological and psychical functions. Those that are directly related and dependent on the rise in temperature above the mean can be metaphorized as "solar" (the very extreme stages, as martial). The opposite phase is assigned to "the moon," "mercury" and "saturn." The mean between the two extremes is assigned to "venus" and "jupiter." Heru corresponds, therefore, to the "solar" phase of the psycho-physical metabolic cycle, which is mediated by noradrenalin

and other chemicals of the sympathetic nervous system. It enables us to become and remain awake (*Pert em Heru!*), to externalize our focus of consciousness, to reason, pay attention, to carry out our will, to utilize the organs and faculties of external activity (eyes, frontal part of the cerebrum, hands, legs, etc.).

Heru corresponds to our will, which is the freedom to follow or reject divine law, and our emotions. This freedom is the crux of our divinity. Without it, man would be compelled to follow the structural shaping forces of order which manifest in the 10th sphere as the "instincts" that compel all other creatures to obey the law, in which case he could not be held accountable to law, human or divine, let alone be considered the "likeness of God." Hence, spiritual growth occurs only when behavior and actions are initiated independent of emotional impulses (i.e., one ignores them). Many people are ignorant of the intrinsic freedom of their will, or are so habituated to acting out of emotional impulsion, or seeming compulsion, that they voluntarily renounce their intrinsic mastery over their spirit. This defaulting to the emotions is represented by *Heru Khenti an Maati*, or "Heru the Blind."

The other common misconception about the will is the belief that "power" is an attribute of it. The ability to achieve one's will is, therefore, spoken of as "strength of will, etc." But the very factors that make the will intrinsically free of emotional (the power part of our being) influence, also denies it of power as its attribute. A major correspondence of Heru (Shango, the "sun", etc.) is the king (and all people in authority). His function is to command the people and the army to carry out works. He does not have the power to do it himself. Similarly, when we declare our will to achieve a goal or carry out a behavior, we are commanding another part of our being which possesses the attributes of power. This is Ra, our life-force. It is of interest to note that the symbol of Ra is a serpent surmounting the solar disk, and all of its creative functions are carried out through the agency of hekau (words of power). We should not be surprised that the most primitive, hence most powerful part of our brain, the "reptilian brain" or R-complex, is responsive to sound waves and rhythm and not ideas. Perhaps some day, Western psychologists will realize that this part of the brain is the doorway to the root shaping factors of our behavior, as well as the powers of nature. The supreme way, then, of willing events is through the chanting of the heka controlling the physical manifestation. This manner of declaring our will is symbolized by *Heru-Pa-Khart*

(Harpocrates), i.e., "Heru, the child." He is depicted emerging from a lotus wearing the red and white crown, holding the flail and crook (See Appendix A) in one hand, while making the sign of silence and of chanting hekau. The lotus, which is a flower that requires a great deal of sunlight (it closes with the setting sun, opens with its rising) is a symbol of the psychic centers (chakras) wherein manifest the forces represented by the words of power. The "sign of silence and chanting hekau," which is made by pointing the index finger to the mouth, symbolizes *chanting combined with the cessation of ideation as the supreme means of expressing the will.*

Our willingness to carry out our will, as we all know so well, depends greatly on our state of vitality. Heru is assisted in his work of protecting the work of Ausar on our behalf by his four children; Hapi who represents a northern force, and protects the small viscera of the body; Tuamutef represents the eastern, and protects the heart, and the lungs; Amset represents the southern, and protects the stomach and large intestines, and Qebhsennuf represents the western, and protects the liver and gall bladder. There is more than just mere symbolism at work here. But the heart of the teaching is that by observing order, regularity, and the cycles governing the body's functions the health of the vital organs were insured, and thus the vitality. It is thus that we secure and preserve the ability to maintain the clarity of mind that is necessary for the practice of Men Ab, and the sense of vitality that supports our willingness to carry out our will. Compare this with the common belief, even among psychologists, and "mind power experts," that "will power" is developed through "mental exercises."

HET-HERU

All that strikes us as as being "beautiful"-harmoniously juxtaposed forms-in the world is the work of the Deity Het-Heru. In human life this natural intelligence manifests itself as artistic expression, social grace, charm, artistic as well as scientific invention, pleasure seeking, etc.

Het-Heru has its seat in the human body in the gonads. Its Kamitic name is an indication of this fact. Het-Heru literally means "house" (het) of Heru. Heru corresponds to those "solar" metabolic phase factors responsible for the virilization and masculinization of the adult male of the species. I.e., the metaphysical forces behind

the production of androgen. In the Yoruba tradition, Heru is Shango, the patron of kings, who wears pants with exaggerated crotches to show that he "outmans" all other men. With Het-Heru, the emphasis is not on the hot gonadal expression of Heru, but on the cool, peaceful, joyous, refined, charming, sexual arousal and seductive behavior that stimulates the production of estrogen and the female reproductive system.

Concealed from the knowledge of the majority of people, is the fact that sexual arousal is an expression of the arousal of the life-force-Ra. In fact, during the earliest times in Kamitic history, Het-Heru was considered the principal female counterpart of the "deity" Ra, and therefore the mother of the deities. Her dominion over the imagination is the rationale for this association. The sensations of joy and pleasure (or negative feelings) are expressions of the arousal of the life-force, and the images that form the content of the visualization or daydreams (dhyana) are the spiritual moulds (bodies of the deities, and energized thought forms-the "elementals" of European occultism) that guide the physical forces to the realization of their goals.

In her role as the imaginative faculty she is *Nebt-Het*, the Lordess of the House. This house, of course, is the spirit. This can be easily understood from the fact that all spiritual work must be carried out through the concentration on images in a state of trance. *Images + aroused life-force (Ra) + trance (mediumistic or waking) = spiritual realization (mundane or spiritual)*. Whoever remembers this formula, observes Maat, follows Tehuti, identifies with Ausar will achieve all his needs in heaven and on earth.

In her role as imagination she is also the "Eye (utchat) of Heru." That is, the eye of the will, or simply, our ability to visualize what we will to achieve. When the Kamitic texts say that the deities whose bodies were composed of light nourish themselves on the celestial light supplied to them by the Eye of Heru, they are referring to the subtle luminous matter out of which our images are formed.

SEBEK

Sebek is the name given to the planet mercury by the Egyptians during the Greco-Roman time. Earlier it was called "Sebku." In astrology, mercury is styled as "the messenger of the

gods." This is because it corresponds to the language verbalizing centers--Broca, and Wernicke--that are located in the left hemisphere of the cerebrum. We must take note of the fact that all of our other faculties are only able to communicate sensations and images. Verbal thinking is a process of putting into verbal form (informing) what is felt, imaged or already known nonverbally. This will become very clear if you were to practice clipping your thought as soon as they begin to appear. You will realize that even though you suppressed the completion of the sentence or paragraph you are still able to know what the words were going to indicate. This is because the knowledge of what you clothe in thoughts precede the mental verbalization of such knowledge. Sebek translates these nonverbal messages into words. If the names, definitions, and logical activities concerning these nonverbal messages are in harmony with reality then the "way is open for the indwelling intelligence to extend its operations to the outer--career, marriage, etc.--part of our lives." Otherwise, it is closed.

It is important to note that Western psychologists have overrated the value of this faculty, obviously for the fact that it is the foundation of their technological, and commerce oriented culture. Their unqualified statement that it corresponds to language cannot be accepted. To be precise, it corresponds to the verbalizing aspects of language. It does not have the ability to process meaning (to understand) which is the function of the right side of the brain, a fact that suggests how, and why the left side of the brain is the chief source of mischief in the world. Long before Western scientists even suspected about the dualization of the brain, the Kabalistical tradition had an extensive knowledge about it. Quoting from the *Zohar* in *The Kabbalah Unveiled*, S. L. MacGregor Mathers states that:

7. When the inferior man descendeth (into this world), like unto the supernal form (in himself), there are found two spirits. (So that) man is formed from two sides--from the right and from the left.

8. With respect unto the right side he had NShMThA QDISHA, *Neschamotha Qadisha*, the holy intelligences; with respect unto the left side, NPSH ChIH, *Nephesh Chiah*, the animal soul.

9. Man sinned and was expanded on the left side; and then they who are formless were expanded also. (That is those

spirits of matter, who received dominion in the inferior paths of the soul of Adam, whence arouse concupiscence.).

There are few things that can rival the possession of a great deal of information without understanding.

Sebku, Sebek and Sobek are etymologically related to "Seb," from whence "Seba" and "Sebau" are derived. As "Seb" (Geb) is a name for the Earth God, Sebek or Sebku corresponds to information derived from earthly experiences (from outside of our self, as opposed to the spiritually intuited wisdom). We also have "Sba," to educate; "Sbau," school; "Sbat," pupils; and "Sbai," teacher.

Sebek is the faculty that enables us to separate and label parts of a whole, or members of a group on the basis of their external differences. Without this faculty we would look at an event, or thing and not be able to distinguish its parts or phases. Yet, because of it we segregate things, and events that belong together into air tight compartments, based on their superficial external differences, and thus create a host of problems in the world. This is the source of all the hypocritical acts, contradictions, and the failure to transfer what is learned in a situation, to analogous situations. The segregating function of Sebek is chiefly supported by the verbal functions of language; definitions, descriptions and naming. To define a thing is to explain what it is, and is not. I.e., to segregate it from other things. Few people know that verbal thinking, with its definitions, and names, is an obstruction to acquiring the knowledge of reality. When most people look at a thing, or event, they fail to see what is really there because the Sebek faculty interposes the definitions, and formulas that have been fed us via the educational process. Even where the definitions are useful and correct, there is still a process of substituting the symbols representing reality for the reality itself. Thus, to know reality, the thinking process must be stilled.

The Sebau (plural of Seba) are therefore all individuals whose lives are determined by earth-borne information, as opposed to spiritual teachings, and the intuitions from the wisdom faculty, Tehuti. This is why the Sebau were considered the enemies of Ra and of Ausar. i.e., earth-borne information closes the way to the development of our life-force and our spiritual growth.

Sobek corresponds to the side of Sebek as the guardian of the threshold. Sobek symbolized the crocodiles which closed the way to

Arabians attempting to smuggle themselves into Kamit. We find the same throughout Africa where cognate deities like Elegba, etc. are also the guardians at the entrance of shrines, homes, etc.

Anpu-called Anubis by the Greek-and Ap-uat (opener of the way), two aspects of the mercurial principle Sebek, shared the duty of guiding the deceased in the underworld to Maat's Hall of Justice, where the heart (will) is weighed. The deceased in this case are symbols of the person undergoing spiritual initiation, as it results in dying to certain things in the world, as well as to the personality (see Seker). This is why "reformed" Christians say that they are "born again." The "underworld" (tuat, Amenta, etc.) corresponds to the "subconscious," to which the focus of consciousness is transferred during trance.

Anpu and Ap-uat are depicted as canine headed men, because the faculty of cleverness, among others that they represent, is the dominant trait in dogs, foxes, jackals, etc. The ability of canines to learn to respond to a large number of verbal commands is also well known.

AUSET

The Goddess Auset is the embodiment of those intuitive and instinctive faculties that lay deep within our psyche, governing our ability to care for and nurture others. People in whom this faculty is strongly developed are very protective, caring and nurturing. These qualities, amongst the Kamitians and other Africans, were most desirable in mothers and wives.

In traditional African culture, social role models are based on "organic" laws that take in and integrate all aspects of man's being. It is an indisputable fact that women, as a whole, have a lower metabolic rate, and a higher parasympathetic output than men. Among many functions, the parasympathetic nervous system governs reproduction, gestation, and the trance states. These are the principles upon which women's roles in traditional African culture are defined. Activities that overstimulate the sympathetic (military, hunting, those requiring psychic aggressiveness), or diminish the capacity of the parasympathetic functions were discouraged in women. The toll to be paid is in the reduction of the quality of childbearing, social peace and harmony, and spiritual inspiration. The latter is to be understood from the intimate relationship

between the parasympathetic and trance. As religion concerns itself with the inner realm of being, its main means, therefore, is the process of trance. It is a state in which an individual's externalizing faculties are "detached from the will," allowing the focus of consciousness to be internalized. Proficiency in this state of internalized consciousness gives the individual full acquaintance with the metaphysical realm. On one hand, communication becomes possible with the two classes of entities dwelling therein-the "living dead" (ancestors), and the spirits or natural intelligences (angels, deities) that administer the phenomena of the world. On the other hand, first hand knowledge of man's metaphysical vehicles (the deities of the tree of life making up his spiritual being), and his true relation with God, the divine laws, and the world is attained. Participation in African and Oriental rituals will reveal that women in general can enter into the states of trance with greater ease than men. This is why societies that utilize trance working in their religious practices have a greater appreciation and respect for women, and protect their capacity for prophetic inspiration by safeguarding them from such activities as soldiering, policing, etc.

Auset as "Mother of all living things," corresponds to the stage of conception of the will to achieve a specific goal. This conception, the uniting of the will (an image of what is to be achieved) to the life-force (Ra) is achieved through mediumistic trance. It is interesting to note that in the Kamitic language the word "Tut" means "to clothe," "Image," "to beget," etc. Out of ignorance, most of the time that people declare the will to achieve a specific goal they are in a state of externalized consciousness (non-emotional state), or verbalize it, and therefore fail to impress the idea upon the life-force. The same claim, "Mother of the Gods and the living," is made for Het-Heru, but her function deals with the gestation of the impregnated idea (daydreams in which we are enjoying the objective). In our discussion of Ausar above, we discussed the origin and meaning of Auset's name. We must add that her "special name" as Khenemet Aunkhet, also conceals the fact that she is also to be invoked through the heka "Aung" (Aunk-note that g, and k are interchangeable). In this role she shares many of the attributes of the Dravidian White Tara Goddess who combines both the qualities of Ausar, and Auset. This name Khenemet Aunkhet which denotes the "water of life and fertility" is also applied to Het-Heru. As such she corresponds to the Dravidian Green Tara. The healing and fertility giving powers of this heka "Aung

'Tang' has been proven many times in the Auset and Het-Heru shrines of the Ausar Auset Society.

SEB, OR GEB, THE GOD OF THE EARTH

It has just begun to dawn, in the past decade or so, on Western scientists that the manner in which the earth maintains the equilibrium in the fluxes, and utilization of water, heat, carbon dioxide, oxygen, nitrogen, and the myriad of substances necessary to maintain life, resembles so much the picture of the homeostatic functions in living creatures, that the science of geology is best redefined as physiology, and the earth looked at as a living entity. This emerging science, which considers the earth a living being, is called Gaia. Over 6000 years ago, our African ancestors called it Geb.

Not only did they consider the earth to be alive, they noted that it played a major role in man's spiritual development. As Seb, the divine goose, the earth God broods upon the egg within which man's earthly experiences unfold. I.e., our earthly life is the embryonic stage of our spiritual development. The earthly demands, rewards (carrot on the stick!), and pressures of existence prod us toward the awakening of our spiritual talents and powers. Recall what was said about our mortality and vulnerability in the discussion of Seker. In this role as divine oxgoad, Geb is called the Erpau of the Gods. That is, it has inherited the role of the deities as the initiator of man's spiritual evolution. This is important as most people think of the earth in terms of its imprisonment of man's consciousness, without considering the fact that at the same time it provides the stimulus for escaping it. According to the *Pert em Hru* (*The Book Of the Dead*), the righteous were provided with words of power that allowed them to escape the earth, while the wicked (materialists) were held fast by Seb. It must be noted that inherent in the function of the earth as the imprisoner of consciousness, and oxgoad toward spiritual development, is its role as verifier of spiritual development. A proof of spiritual development is the ability to rise above the emotional and sensual influences, which after all, are expressions of the animal (earthly) part of being; the ability to learn independently of externals, i.e., from within; the ability to control, or influence earthly events (in our bodies and environment) through the power of our life-force at the command of our will.

SHEPS & DARK DECEASED

The vast majority of people who contemplate the great architectural wonders of Kamit never realize that the majority of the greatest, and most magnificent structures were built in honor of the ancestors. All traditional African societies possess the knowledge of how to communicate with the deceased. It is very important to note that although western religions believe in the existence of man's spirit, and its survival of the body after death, there are no religious or social institutions for communicating with the dead.

The most important outcome from communicating with the deceased is the realization that man's true being is not only independent of his physical body, but the fact that it precedes, and survives the existence of the body. And, finally, that it is immortal. Ultimately, a people's philosophy of life, and their cultural expression is based on their belief in the mortality or immortality of their essential being. In practice, regardless of claims, Western man lives his life as if it was the only one. Underlying western culture is the belief that life on earth is a one time experience that is to be lived for its own sake.

Spiritual philosophy begins with the understanding of the meaning of life, before and after death, which could only be empirically acquired through communications with the deceased. So great was the empirical revelation of man's immortality, that the greatest architectural wonders of Kamit were dedicated to the honor of the dead.

No less important was the fact that the ability to communicate with ancestors has enabled Africans and Orientals to unite people into kinship groups that transcended the lower and limited ties of blood. Western scientists delight in parading their erudition regarding the fact that all cells in existence today, have been in existence from the beginning of time (this is due to cellular division). Yet, for the most part, Westerners are incapable of establishing firm kinships beyond the immediate family circle of husband, wife and children. In most traditional African societies, millions of people who are, and will remain strangers to each other, are tied, through the ancestors functioning as spiritual clan heads, into a web of responsibilities that would be expected only from the immediate family. It is in this manner, out of a sense of extended

blood kinship, that traditional (i.e., not westernized) African societies with populations numbering in the millions, have been able to maintain law and order without police systems, ideologies, etc.

Although all ancestors have the potential to function as unifiers of the people at different levels, not all of them did so. Only such people who lived up to the standards imposed by Tehuti (Tehuti is the Great Sheps in Khemennu), earned the right, and privilege to become Sheps,-the honored living, or honored dead.

Incidentally, Africans have never worshiped ancestors. Ancestral rituals have always aimed at establishing communication with ancestors to enable them to contribute to the direction of the nation. Thus we must reject the western concept of ancestor worship.

RA

Ra (pronounced Rau, hence Aur/light, aurum (oro)/gold, aura, aurat/ureus, origin, etc.) is the active state of Nu/Nut, the undifferentiated infinite energy/matter from whence all things, living and non-living originate. It is known as Chi or Ki in the oriental tradition, Kundalini in Dravidian India, and the Aur that emanated from the union of Ain and Soph, according to the Kabalistical tradition. Although it is not correct to say that Ra is the "sun god," it is quite correct to relate its functions to the solar energy as the energy/matter basis of all manifestations in our solar system. The planets, including the earth with its life forms, owe their existence to the solar emanations. As the solar energy, then, is the material, and energy basis for the creation, and maintenance of life (physical, and metaphysical), the wisdom traditions of Africa, and the Orient devised ways of manipulating it. No! They never worshiped it. What western scholars have interpreted as sun worship are the many practices for cultivating it, replenishing it, divining its activities (as it works outside the ken of normal waking consciousness), living in harmony with the rhythmic and cyclical manifestations of its modalities ("air (wood)," "fire," "earth (metal)," and "water"). These

are the subjects of pranayama (breath control), Taoist yoga, tantra yoga, so-called "fetishism" or "fakirism," hatha yoga, kundalini yoga, mantra yoga, raja yoga, tai chi, chi kung, akido, homeopathy, radiesthesia (western voodoo!), acupuncture, divination by lots, or dreams, or omens, etc.

The subjects are manifold as you can see. We must restrict ourselves to two of its most important manifestations. Our breath, which is the principal way in which we take in the life-force, is ionized into positive and negative electromagnetic polarities¹⁰ by agents in our nostrils. These two currents of breath, which are analogous to the north and south emanations of magnets, control the two phases of our metabolism.

In his book *"Researches On the Vital Force,"* translated by University Books, Baron Karl Von Reichenbach-1788-1869 (discoverer of kerosene) reports his findings from experiments on the life-force. Slow, downward passes of strong magnets (force of 10 lbs and up) close to the skin but not touching, produced in "sensitives" a sensation of agreeable coolness from one pole, and disagreeable warmth from the other pole. In some cases the energy from either pole was so strong that it caused pain, spasm, nausea, jerking of the body, faintness, etc. The warm current, which is red-orange as seen clairvoyantly, is generated by the southern or electropositive pole of the magnet. It predominates in the left side of the body, in metals, alkaline PH, moonlight, the electropositive elements, the southern node of the moon (Cauda draconis, Ketu, the dragon's tail). The cool current, which is "bluish-gray," is generated by the northern or electronegative pole, and predominates in the right side of the body, metalloids, acid PH, sunlight, light, heat, electronegative elements, the northern node of the moon (caput draconis, the dragon's head, Rahu).

It is important to note that these two currents correspond to the earth's southern, and northern magnetic poles, and hence to the electromagnetic powers flowing along the meridians of the earth. Along with the east/west currents, they play major shaping roles in the electromagnetic processes going on in all atoms, and their chemical and electrophysical activities. In the 1960's Kirlian developed a photographic process that makes it possible to photograph the radiations given off by these currents of energy. See *Psychic Discoveries Behind the Iron Curtain*, for actual photographs.

10. The Ida, and Pingala of Yogic science.

In the Kamitic tradition, the science for manipulating the two magnetic forces which form the essence of all psychic powers was subsumed in the teachings associated with the symbols of the "deities" Nekhebet, and Uatchet. These powers were considered so important that they were made the tutelary "deities" of Kamit. Nekhebet, which corresponds to the electronegative northern pole of the magnet was the chief protectress of Upper (southern) Kamit. She is depicted as a woman wearing the White crown of Upper Egypt, and holding a lotus scepter intertwined by a serpent, which together symbolize the electromagnetic forces (the serpent) of the psychic centers (the lotuses). Uatchet, which corresponds to the electropositive southern pole of the magnet, was the chief protectress of Lower (northern) Kamit. She is depicted as a woman wearing the Red crown of lower Kamit, and holding a papyrus scepter intertwined by a serpent. Their correspondences to the poles of the magnet are revealed in the ceremony for embalming the dead, where the priest says to the mummy, *"The goddess Uatchet comes into you in the form of the living Auaraut (uraeus), to anoint your head with their¹¹ flames. She (the Auraut) rises up on the left side of your head, and she shines from the right side of your temples without speech; they rise up on your head during each and every hour of the day, even as they do for their father Ra, and through them the terror which you inspire in the holy spirit is increased, and because Uatchet, and Nekhebet rise up on your head, and because your brow becomes the portion of your head where they establish themselves, even as they do upon the brow of Ra, and because they never leave you, awe of thee is stricken into the souls which are made perfect."* There are a number of very important correspondences in the above quotation.

1. The auraut (uraeus), which will be explained later, is composed of the conjunction of Uatchet and Nekhebet.
2. The statement, "and she shineth from the right side of the temples without speech," is exceedingly remarkable as it shows that the Kamitians possessed over 6000 years ago the knowledge that the right side of the brain is speechless. We can go further and point out that the Kamitian kings placed the head of the vulture Mut (symbol of motherhood), which corresponds to Nekhebet (the bluish-gray cool

11. Their = Uatchet, and Nekhebet that together make up the Auraut (the uraeus).

electronegative force) on the right side of the forehead, while the head of the cobra representing Uatchet (the warm, reddish-orange electropositive force) was placed on the left side of the forehead. By this, the kings of Kamit signalled that a) psychic power was very important for the protection of the nation, and b) that the acquisitive, cool, agreeable force of Nekhebet and Mut were over the domestic policy of the nation. The southern part of Kamit, well away from the Asiatic desert homelands and nomadic routes was, for the most part, home to the chief capitals of Kamit. The northern part of Kamit was placed under the red crown, and Uatchet as a symbol of the hot offensive front protecting the motherland from the hostility of the Asiatics.

3. The statement, "they rise up on your head during each and every hour of the day, even as they do for their father Ra," is a reference to the planetary hours. A great deal of confusion has arisen from the fact that most researchers into metaphysics have failed to note that most metaphysical references to planets refer, not to the celestial bodies themselves, but to the modalities of the life-force which they symbolize. The moon corresponds to the cooling, hence moisturizing state of the life-force; the sun, to the hot, hence drying state, and so on. These "planetary" modalities dominate each hour of the day. Each day begins at sunrise with the planet that gives it its name and quality. Following the Tree of Life (the planetary spheres: 3 to 9), Saturday begins with saturn ruling the first hour from sunrise, followed for an hour each by jupiter, mars, sun, venus, mercury, the moon, and back to saturn, etc. If we followed the "planets" for 24 hours we will find that the next day, sunday, will begin with the sun governing the first hour from sunrise. It will be followed by venus, mercury, etc. The next sunrise will begin with the moon, followed by saturn, etc. For a detailed look at the subject see Llewellyn George's *"Improved Perpetual Planetary Hour Book."*
4. The auraut or ureaus (the third eye) is none other than the ajna (brow) chakra of kundalini yoga. It is brought into manifestation through the following process: Note that in the following procedure, push your stomach out from the lower abdomen during the inbreath, and contract it during the outbreath.

The heka is as follows:

Breath		held				out	
in							
1	2	3	4 5	6		7, 8	

Aung Hang Kshang | Aung Hang Kshang

1. Having decided the objective of your meditation, focus both eyes (open) on the center of your brow. Breathe in during the first two counts while mentally chanting Aung on the first count, and Hang on the second. From the third to the 6th count, hold the breath and contract the perineum¹². On the third count chant Kshang and hold it through the 4th. On the 5th count chant Aung, on the 6th, Hang, and Kshang on the 7th as you breathe out, and release the perineum.

As you chant "Aung," visualize a brilliant white disk sitting on the center of your forehead. This is the undifferentiated life-force.

As you chant "Hang"¹³ visualize a brilliant white cobra emerging from the left side of the disk. This is Uatchet's highest heka.

As you chant "Kshang" visualize a brilliant white cobra emerging from the right side of the white disk. This is Nekhebet's highest heka.

a) Repeatedly visualize a woman coming toward you dressed in white, holding an open white book with its pages blank. Look at the blank white page. After several repetitions of this scenario, a message will appear on the blank page. This, along with the heka given above, is a key to clairvoyance.

b) or visualize yourself as a woman (men should not worry about this) dressed in dark blue going forth, stepping out with your right foot first (THIS IS VERY IMPORTANT) to acquire a need in life. See yourself enjoying your objective. This is to be done when you get a Nekhebet reading.

12. The perineum is the muscle that enables us to stop our urine in midstream. Do not confuse it with the anal sphincter which is connected with defecation.

13. Hang is originally red, but in the auraut center it is white.

c) or visualize yourself as a woman dressed in red going forth, stepping out with your left foot first, to acquire your objective. This is to be done when you get a Uatchet reading.

The function of the auraut (third eye) is not limited to clairvoyance. It is the center that controls all psychic activities. Next to the crown center it is second in the hierarchy of our spiritual power. The technique given above is to be applied at the 8th stage of the meditation process. Nourishment of the auraut center through daily meditation will give you full control over the psychic influences operating in your life. Its perfection will enable you to withstand all negative psychic influences without the assistance of herbal baths, incenses, sacrifices, rituals, talismans, etc.

In future chapters we will learn about the combination of Nekhebet, and Uatchet with the seven planetary powers governing the seven days of the week. These are the powers behind the fourteen kau of Ra.

The positive, western pole of the east/west electrical current of Ra is symbolized by the Goddess Sekhet. She is depicted as a red clad, lion headed woman who delights in offerings of hard liquor, blood, and meat. She is the violent, scorching aspect of the heat of Ra, which is invoked through the heka "Rang." She works through the solar plexus (manipura) psychic center. In the form of the serpent-goddess Mehenet she emerges from the forehead of Ra pouring out her fire to destroy the enemies of Ra (one's life-force); specifically shame, spiritual ignorance, thirst, jealousy, treachery, fear, delusion, foolishness, and sadness. In the Metu Neter oracle she is represented by combinations of a negative Uatchet card with a negative Het-Heru.

The negative, eastern pole of the current of Ra is symbolized by the Goddess Bast. She is pictured as a green clad,

lion headed woman. She is the warm, fructifying power of the sun that is generated in the womb from sexual passion. She delights in offerings of wine, aphrodisiacs, sweets, vanilla flavored rice cream, cinnamon, honey, etc. She works through the sexual (swadhisthana) psychic center.

Chapter 18

THE METUTU FUNDAMENTAL PRINCIPLES

The Philosophical and Psychological Foundation of the Metu Neter Oracle System

The Fundamental Shaping Factors of Life and Their Interrelation and Interdependence

Preliminary: Each card symbolizing the message from the oracle is called a metu or metut, and their combination is called a metutu. In the Kamitic language the plural is formed by adding a final "u."

Amen:

The Subjective Realm, Amen, is the infinite source of the life-force and spiritual matter (Nut), which are the formative bases of the faculties and talents that enable us to survive, flourish, and succeed in the world. As our talents, and faculties originate in the universal life-force, and universal infinite matter (the Paut), a successful destiny can only be achieved by realizing that our talents are not private property. Amen, therefore, is the higher of the two prime determinants of the nature of the events in our lives. It is the chief stimulus of the forces urging and pushing us to honor the universal interests. It is seemingly directly opposed by the earthly influences of the 10th sphere (Geb), which by clothing our intrinsically indivisible being with physical matter creates the illusion that we are separate beings¹.

It is of utmost importance to realize that as "the universal" is the source of all the individuated existences, its interest cannot be separated from the interests of the persons. This does not, directly or indirectly imply, or support socialistic, or communistic philosophies, as these systems of government, and economic distribution are the products of the faculties of the 7th, 8th, and 9th spheres. Yet, the pursuit of personal interest that is not subordinated

1. This is the meaning of the Amen/Geb metutu.

to the universal influences can be separated from, and can damage the welfare of the whole.

Ausar:

With its roots in Amen, Ausar is the unifying force which obliterates and overcomes all shaping factors of individuated existence. But the unity here is explicit, as there is an implicit disunity concealed in its definition and being. Unification is the coming together of parts of a whole. I.e., all things in the world are modifications of the universal energy/matter (the *paut*). It is the second of the chief stimuli of the forces urging and pushing us to honor the universal interests. It is directly opposed by the focal point of identification with the personality-Auset, the 9th sphere, which is the emotional instigator, and support of our personal interests. Thus we have, in the social sphere, the opposition between the universal good, and the personal good. And in the sphere of the life of the individual, we have the opposition between success in specific pursuits vs. a successful life and destiny; what is far vs. what is near, etc.

Tehuti:

With its roots in Ausar and Amen, Tehuti is the source of the intuition that shows the way to achieve the equilibrium between the interest of the whole, and of the person. It is the third of the chief stimuli of the forces urging and pushing us to honor the universal interests². It is directly opposed by the influences from the 8th sphere, which is the chief provider of the arguments and rationalizations supporting the personal interests³ and point of view.

Seker:

With its roots in Amen and Ausar, Seker guarantees the interest of the whole as well as all individuated existences by providing the structural framework that orders their coming into being, and their development⁴. It is the fourth of the

2. This meaning is brought out by the Amen/Tehuti, and Ausar/Tehuti *metutu*.

3. This meaning is brought out by the Sebek/Auset *metutu*.

4. This meaning is brought out by the Amen/Seker *metutu*.

chief stimuli of the forces urging and pushing us to honor the universal interests. It is opposed by the influences emanating from the organizing and ordering faculty of the person, -Het-Heru⁵, the seventh sphere.

Maat:

Because the supreme law governing man's divinity is centered around his freedom to choose (freedom of will), the knowledge of the law is conveyed to him in such a way that allows him the freedom to follow or reject it⁶. His following it, gives him success in his individual undertakings, and it qualifies and prepares him for crossing the great abyss to partake in the divine powers of the 3rd sphere and higher. It is directly opposed by the influences from the 8th sphere, which is the chief provider of the arguments and rationalizations that support the emotionally motivated behavior of the person-centered way of life⁷.

Herukhuti:

Where there is freedom of choice in an intrinsically law and order based situation, which is the fundamental nature of the world, there is bound to be transgressions. The offensive power of God, thus exists for the sake of protecting the equilibrium between the interests of the whole vs. those of the individuals. If in the exercise of our freedom to choose, we avoid obstructing others, the offensive power of God will remove all obstructions from others from our path. It is directly opposed by the seventh sphere's (Het-Heru's) receptivity to the instincts of self-preservation⁸ originating in the 10th sphere.

Heru:

The possession of our will-the freedom to follow or reject divine law is the basis of our divinity. It is the one thing that clearly separates man from all other creatures on earth. It is the only free element in man's being. This brings us to one of the most important, if not the most important

5. This meaning is brought out by the Het-Heru/Auset metutu.

6. This meaning is brought out by the Maat/Heru metutu.

7. This meaning is brought out by the Sebek/Auset metutu.

8. This meaning is brought out by the Het-Heru/Geb metutu.

principle governing spiritual realization. While "heaven" (spheres 0-3) and "earth" (spheres 7-10) seek to coerce us to follow its mandates through structures, and impulses, respectively, living according to the principle governing the will is characterized by actions taken free of emotional coercion from below, or structural impositions from above. This is so important as most students of spirituality, so dependent on, and habituated to acting from emotional compulsion waste their opportunities for spiritual development, waiting and hoping for an impulse from above to force them to live truth. But how can we attain to freedom without effort, and how can we make the effort if there is no freedom. Yes, No freedom, No effort, and No effort, No freedom.

Het-Heru:

It is also seemingly paradoxical that sex, one of the major destroyers of spiritual careers, and quests for success, is also a major key to success in these very areas. Indulged in moderation, and with our identity transferred to our indwelling intelligence--Ausar--it is the chief means of arousing the life-force (chi, Ra, kundalini) to the level where it will enable us to achieve our goal, predominantly if not solely, through our will and spiritual faculties.

Sebek:

Perhaps the best description of the problems resulting from the use of our syllogistic logical intellectual faculty without the guidance of the synthetical faculty (4th sphere, Maat) is symbolized by the Hydra of Greek mythology. For every head that was cut off from this monster, two grew in its place. This is a very accurate characterization of the majority of proposed logical solutions. Because this faculty can only focus on a part at a time, a proposed solution to a problem creates a number of unforeseen problems in other parts. Such problems are avoided by realizing that we cannot construct wholes from the logical manipulation of species and parts (the Tower of Babel syndrome), and that the syllogistic logical function must be applied only after the whole has been perceived. The perception of concrete wholes is carried out by Het-Heru (the imagination), and the perception of abstract wholes is carried out by Maat,

and Tehuti. The last two faculties are the only sources of solutions to specific problems that do not create problems elsewhere (this is the function of wisdom and divine law). The second step in developing ourselves spiritually, and promoting our ability to succeed in our undertakings and in life, involves the unification of our logical intellect with the divine law.

Auset:

The upliftment of the low by the high, is the principle governing the formula for spiritual development. Auset is the beginning of this process. She is the point of bringing the highest within us-Ausar-into the vehicle of our personality (the ka) to initiate the movement toward the realization of unity within diversity, and the upward movement of our spiritual evolution.

Geb:

It is seemingly paradoxical that earthly influences which are the prime sources of our anti-spiritual behavior, should provide man with the prime impulse to his spiritual development. Without the obstructions and demands of our earthly existence, unevolved man will not stir to awaken and bring forth his spiritual powers.

In order to properly grasp the meaning of each Metut (divination symbol), and to utilize the oracle as a guide to spiritual development and mundane success, it is necessary to establish an overview showing how all the Deities--represented by the Metutu (divination symbols)--work together to bring about success on different levels. The absence of such an overview is the major cause of the failure of such oracles as the Tarot, Geomancy, Cartomancy, etc. to serve as a basis for spiritual initiation.

Shaping Factors of Success

The following principles are the embodiment of the shaping factors for success in all undertakings in life. It is important to realize that success depends on the observance of these principles in regards to content, as well as the order in which they are given. Heru is central to the means of achieving success, which according to the Kamitic philosophy is "the achievement of a mundane

undertaking in such a manner as to preserve, or increase our spirituality." Heru corresponds to the part of the spirit through which we express our freedom of being, and therefore assume responsibility for our destiny. It is our faculty of choosing and deciding what we will believe, do, and how we will do it. The following, then, are the steps that an enlightened will [Heru (+)] follows in order to succeed in an undertaking and in life--i.e., to achieve its mundane goals in such a manner that it will contribute to the realization of the true self.

Amen: Spiritual- An enlightened will [Heru (+)] knows that all things (life, the life-force, the potential to achieve, the materials for success, etc.) come from heaven which is infinite in its potential to give.

Mundane: Same as spiritual.

Ausar: Spiritual- An enlightened will [Heru (+)] knows that all successful undertakings (accomplishments that do not create harm--spiritual or mundane--in other ways) are performed, not by the person, but by the indwelling intelligence--the Self, Ausar.

Mundane: You must intuit the central theme underlying all parts of the undertaking or thing.

Tehuti: Spiritual: An enlightened will [Heru (+)] knows that every choice and decision affecting the course of our lives, must be guided by the wisdom of the Supreme Being. He consults high oracles, and sits humbly at the feet of the Sage.

Mundane: You must intuit how each part fits in with the whole. Its place in time (which phase) and space (its value, the priorities, its scope, etc.).

Seker: Spiritual- An enlightened will [Heru (+)] knows that before taking action on a decision, there must be the knowledge of the underlying structure (the plan) governing what must be done. As the structural framework of all events are laid down by the deities and spirits, one does not, therefore, "make up a plan." Instead, the thought processes are stilled in order to "sense" and intuit the structural framework created by the spiritual agencies. In addition, every step taken in carrying out the undertaking must follow "the plan." Incidentally, the Jewish Kabalists, not understanding that the mental process of this sphere were to be stilled, but knowing from Canaanite sources that it involved some sort

of intuition, named the sphere Binah, "Understanding." As there are mental processes involving the realization of "understanding" at the 4th and 5th spheres as well, the Jewish Kabalistical correspondence must be rejected. Mundane: You must intuit the structure that underlies, hence gives order to the unfolding of the event.

Note:

It is important to remember that the mental process operating from Amen to Seker is one of intuition, which is the ability to correctly learn from within one's own spirit. If you receive one of these Metutu in your readings and you are not able to intuit the information that is required, you must then seek counsel from capable persons represented by the respective Metut. Your meditations with the heka of the Deity will help to attract such persons. In strictly materialistic situations such persons will be, primarily, your top geniuses in science, literature, art, etc., and secondarily, your Ph.D.'s, etc. In matters regarding life, social issues, etc. such persons will be your sages.

Maat: Spiritual- An enlightened will [Heru (+)] is one that has been taught the laws that must be followed in order to receive the beneficent gifts of heaven (Amen-ta). Because of its full understanding of the law of heaven it does not chafe itself in restless rebellion against the constraints suggested by the law. It knows that the law guarantees all things its day in the sun.

Mundane: If I were a newly arrived being from another planet, and were to say to you that I observed people in New York for three months, and therefore concluded that light clothing⁹ is their mode of dress, you would correct me by pointing out that although my thinking was logically correct, my conclusion was not true. Why? Obviously, I have only observed a part of the whole, while you have observed New Yorkers through all the seasons. Maat corresponds, therefore, to the ability to understand the

9. If the example sounds trivial, you ought to look closely around you and take note of the fact that people do not often dress functionally. Some people wear desert type clothing in temperate zones; temperate type clothing in tropical zones, etc. Of course they never know what ails them, when their health breaks down.

interdependence, and interrelationship between the parts and the whole, and with each other (synthesis), through the use of abstract analogies. It is the logical process (Cosmologies) that enables the testing of the truth of a premise. Unlike the Sebek faculty which processes connections in a sequential (serial) fashion, Maat processes them in a synchronistic, parallel mode. While we can only see how things follow each other at the Sebek level, here we can also see how they work simultaneously to carry out the central theme. Through it, we can find our way in and out of the forest, not through specific sign posts (marking certain trees, landmarks, etc.-as with Sebek), but through the ability to orient ourselves through the cardinal points (literally, or symbolically!). If you are lacking the knowledge of the cosmograms (mandalas, Tree of Life, i.e., "symbol-blueprints"), or the ability to synthesize, you must seek counsel from people who meet the criteria. Meditation with the heka of Maat will guide you to act in a manner that reflects the interdependence between all beings. You will thus widen your sphere of acquaintance, influence, and sharing (giving and receiving). As your ability to accumulate grows, your sense of interdependence between all things will prevent you from seeking more than your due.

Herukhuti: Spiritual- An enlightened will [Heru (+)] knows that the true purpose of the offensive power of the Supreme Being is not to punish the offenders of the laws of heaven, but to protect those who uphold it. It secures its objectives against the obstruction by others by treating them according to Maat.

Mundane: When parts and phases are seen from the perspective of the whole, we are able to see their complementary relationship. When they are viewed on the specific level we can only see their antagonistic relationship. For example; the watery (anabolic), and fiery (catabolic) phases of an event are cooperative when seen from the holistic perspective, and antagonistic (they check and destroy each other) when seen on their level. Herukhuti is, therefore, the ability to understand the qualities that separate parts of a whole (analysis, analogical lysis), however integral they are to the latter. It is achieved through the perception of the abstract qualities of things. It enables you to maintain your individuality (or the

individuality of a set) by realizing that although all things are parts of a whole, they have been individuated for the purpose of carrying out a specific set of functions.

Heru: Spiritual- An enlightened will [Heru (+)] knows that all actions and undertakings must begin in the freedom from emotional influences. Ultimately, no sane person is ever compelled to act. He is either ignorant of his intrinsic freedom to choose to follow or reject the impulses from the animal part of the spirit (sensual cravings and emotions), or he chooses not to follow the law of heaven-Maat-which is always applied to him with the gentleness of a feather. He therefore enlightens himself regarding the true nature, and purpose of the will, and the means of effectively using it (Men Ab,-the science of using the will to secure one's goal by allowing the higher values to lead over the emotional forces).

Mundane: It is the ability to understand the abstract, and concrete unifying and separating functions of all spheres, and their coordination for the carrying out of the undertaking. If you are deficient in these abilities you must seek the assistance of one who meets the criteria. As these qualities are cultivated through supervisory and leadership positions, the people who could best assist you are those who are successful in the roles of supervisors, heads of household, bosses, kings, presidents, etc. In all cases, whether you are capable or not, your success depends on receiving counsel from someone above you. It is important, then, to cultivate respect for elders, authorities, and "masters" in particular fields, or of life matters (sages). Meditating on the heka of Heru will attract such persons to you, and assist you in establishing the mode of being receptive to higher counsel, yet, maintaining the freedom to make your own decisions (this receptivity differs from Auset's in the sense that she follows without questioning, or going through a decision process).

Note:

It is important to note that the key, mental ability functioning through spheres 4, 5, and 6 is understanding (literally, "to stand under"). It corresponds to the ability to go into waking trance

and perceive the abstract principles governing specifics, separating them, and unifying them. If you receive any of these Metutu in a reading and you lack the information (abstract blueprint, mandala, cosmograms, etc.), or the ability to think abstractly, you must seek counsel from one who meets the criteria.

Het-Heru: Spiritual- An enlightened will [Heru (+)] knows that there is no such thing as "will power." The realization of the will (what has been decided upon) is carried out by the life-force (Ra, chi, kundalini), which must first be receptive to what is being willed (Auset factor), and then gestated by the Het-Heru faculty. This gestation process consists of "the enjoyment of one's intended objective in the *imagination*." The sensations of joy and pleasure (or negative feelings) are expressions of an aroused life-force, and the images that form the content of the daydream are the spiritual moulds that guide the physical forces to the realization of the goal. As we saw in previous chapters, it is often necessary to step up the level of enjoyment through Kula yoga, "deity invocation" rituals, etc.

Mundane: It is the ability to form a concrete image of the end that you are working toward. This image has the function of organizing all of the subtle electromagnetic forces that will shape the event. On a higher level, it works through such people who have the ability to bring people together for the accomplishment of small objectives. By "small objectives" is meant those undertakings that will not stimulate conflicting conditionings within the spirit of the person(s) involved. When you receive this Metut, it means that you will most likely have to arouse your ability to be sociable, charming, etc. (invoke Het-Heru), or you may have to secure the assistance of such people.

Sebek: Spiritual- An enlightened will [Heru (+)] knows that the true purpose of cleverness (what passes for "intelligence" in the west) and education (knowledge of techniques: details of the steps, and processes of carrying out a task) are for easing the way. I.e., for the purpose of carrying out tasks with a minimum of effort and time, and maximum results.

Mundane: Same as the spiritual. In addition, it is the ability to establish the legal connection between sequential units, and between parts through their outer form. It is important to keep in mind that the reason why syllogistic or Cartesian

logic cannot give insight into the truth of premises is due to the fact that it cannot establish the logical connections between parts and the whole to which they belong, as it only deals with the outer form of things. When you receive this Metut in a reading, it may mean that you may have to secure the assistance of specialists, and technicians in the field (people of "the book").

Auset: Spiritual- An enlightened will [Heru (+)] knows that there is no such thing as "will power." The realization of the will (what has been decided upon) is carried out by the life-force. The impregnation of the life-force by the will does not take place by the mere decision to achieve a goal. The life-force must first be thrown into its receptive state through mediumistic trance. Although we spontaneously and involuntarily enter into this state several times daily, it is imperative to strongly induce it at will in order to insure the conception of our will.

Mundane: it corresponds to your ability to get the support of the power that will carry out the undertaking. On the personal side, it is your life-force (Ra), and on the social side it is the assistance of followers, workers, etc. (note that while Het-Heru denotes partners, Auset denotes followers).

Geb: On one hand, Geb (+) corresponds to the mundane event that has been successfully brought about by the will that has been enlightened by its adherence to the above 10 principles. On the other hand, it corresponds to the physical resources that the life-force needs in order to carry out the undertaking. I.e., we are counselled, when we receive this Metut to adhere to the laws of the earth (health, cycles, etc.) in order to nourish, and maintain the equilibrium of Ra. Or as stated more eloquently in the Metaphoric system, "to protect Ra from the worms, and noxious serpents dwelling in Geb."

Sheps: An enlightened will [Heru (+)] knows that no man is an island. All successes in life are directly or indirectly corporate efforts. He maintains his unity with others by tracing his common ancestry with all humans through the study of history, and invocations of the ancestors.

Nekhebet and Uachet: An enlightened will [Heru (+)] knows that the life-force does not originate in the body of the person, nor can it be contained therein. Like the air, which enters us through our breathing and then leaves to be shared with

others, the life-force circulates through all creatures thus putting them in touch with each other. The enlightened individual, therefore, will always observe the laws that will keep his life-force in perfect equilibrium ("psychic balance") in order to avoid the subtle negative influences of other creatures and the environment, as well as to secure their assistance toward the realization of the objective.

The Shaping Factors of Failure

Failure is just not simply, or always the inability to achieve a mundane undertaking. Whether we achieve a mundane goal or not, we fail if we have jeopardized our spirituality thereby. Central to failing is the negative state of the will, which is characterized by either the ignorance of the principles governing the will, or the unwillingness to follow them. Most people are ignorant of the fact that they are essentially free to ignore all emotional and sensual impulses, and are thus controlled by them by default. Others, pathetically, learn of their essential freedom of will, and even of the excellent means of effectively using it (Men Ab), but choose to follow these impulses just the same. The following principles which result from a negative state of the will [Heru (-)] contribute, individually or together, to failure in undertakings or in life.

Amen: An unenlightened will [Heru (-)] believes that the earthly Realm is the source of all things (life, the life-force, the potential to achieve, the material resources, etc.), and therefore, takes stock of the available material resources to calculate what it can and cannot achieve. It thus limits its potential to achieve, and out of a sense of limitation, lays the foundation for competition and conflict with others.

Ausar: An unenlightened individual [Heru (-)] believes that his natal personality is his identity. As a result he is unable to transcend its characteristics, in order to awaken his infinite potential of being to meet the infinite variety of situations confronting him. Failure comes when life demands that you manifest one of the other six personalities dormant within your spirit, and you can't because you are convinced that you are your natal personae.

Tehuti: An unenlightened individual [Heru (-)] believes that the body of information that he has acquired throughout his

life, and the rationalization therefrom should be the basis of the choices and decisions affecting the course of his life.

Seker: An unenlightened individual [Heru (-)] is ignorant of, or does not believe in (lacks direct experience) the fact that deities and spirits control the course of events, for the purpose of establishing and maintaining order in the world. Thus, his plans are based on concepts for which there are no objective counterparts. He therefore runs into "delays," obstructions, denials, etc.

Maat: An unenlightened individual [Heru (-)] is ignorant of, or does not believe in divine law. His spiritually unlawful behavior brings him thus into conflict with others, and many factors opposing his will.

Herukhuti: An unenlightened individual [Heru (-)] is ignorant of the fact that by being fair to others, even at the cost of personal harm and loss, will secure divine protection. By succumbing to the fallacy that there are times when divine law can, or must be set aside (e.g., for the sake of survival), he sets in motion the pendulum of justice which must in time swing back and visit its wrath upon him.

Heru: See the opening statements to this discourse.

Het-Heru: An unenlightened individual [Heru (-)] is ignorant that all inducers of pleasure are means of arousing the life-force¹⁰. He thus fails to cultivate, or to moderate the indulgence of pleasure, and as a result fails due to a lack of vital force. He then speaks ignorantly of weakness of will, poor health, poor memory, and so on. His failure is compounded by his ignorance of the function of images as moulds (matrices) for physical events. He gives power of realization to unwanted or intolerable events by dwelling on them in emotionally and sensually charged visualizations. In addition, the visualization process at this level is the key for remaining motivated. The pleasure associated with the results we are aiming at serves to carry us through the various stages of the undertaking. Without it, we fail even with the assistance of schedules, day planners, etc.

10. This is the great key to arousing kundalini that most yogis hide from the public. All the techniques of yoga, are in reality means of intensifying the arousal, and of insuring the free flow of the force.

- Sebek:** An unenlightened individual [Heru (-)] believes that the purpose of his cleverness is to ease the way to his goals at the expense of others.
- Auset:** An unenlightened individual [Heru (-)] is ignorant of the fact that spontaneously and involuntarily, he daily goes through mild trances, which unite his will to the conceiving part of the spirit. He is therefore unaware of the fact that he is daily conceiving and reinforcing all sorts of intentions, many of which are contradictory, and in conflict with his will and destiny. He is unaware that his failure to remember what he must do to carry out his will, is an indication that he needs to reinforce the impregnation of his will upon his spirit through repeated inductions of mediumistic trance. It is important to realize that the act of remembering what we must do and the principles we must observe, is an involuntary reflex. We cannot will to remember at a specific moment. It must be automatically thrown into our awareness by the life-force.
- Geb:** Geb (-) corresponds to the failed mundane undertaking, resulting from the violation of the laws of health.
- Dark Deceased:** An unenlightened individual [Heru (-)] who perseveres in folly will throw his destiny away. His after life existence will be filled with misery and want, even if his life on earth was filled with material goods and comforts.
- Nekhebet and Uachet:** An unenlightened individual [Heru (-)] will be ignorant of the need to maintain psychic equilibrium, and the fact that he is spiritually in touch with all things in the world. His psychic disequilibrium will open him to the negative influences from others, and the environment.

Summary

- Heru:** The will is the source of Self (Ausar, unemotionally) initiated acts.
- Seker:** The source of the plans that must guide the steps that we take in carrying out our undertakings, and the patience to accept the limitations of the underlying structure.
- Herukhuti:** The source of the motive power to carry out our undertakings, and the courage to be fair (just) with others in the process.
- Het-Heru:** The faculty for energizing the images embodying the willed events. If the will is negative, these energized images

usurp its place, and thus initiate events (here we are lead by the appeal that things have upon our senses).

Sebek: The faculty for separating the undertaking into manageable steps, thus easing the way. When the will is negative we delude ourselves by thinking that we can reverse the process and piece the whole out of steps, and thus arrive at an understanding of the infinite.

Maat: The divine law that guides the will to success.

The Tree of Life as a Guide to Planning

We will now look at the Tree of Life as a step by step guide to planning. You will see that the ideal way to do so, which will guarantee your success, follows the same pattern that is used by the Supreme Being in its creative activity. It stands to reason, that if Man and God are the same quality of Being, the means and methods of God must be the same for Man. This is the highest expression of the Kamitic precept "*As Above, So Below.*"

Amen: "Zero out," "clear your register." Before beginning a plan, get rid of all preconceived notions, however erudite. Do not start by taking into account material resources (money, equipment, past commitments, overhead, help, time, etc.).

Ausar: Establish or discover the central theme of your undertaking. It is the god of your undertaking. It is that which will control, direct, and unify all stages of your undertaking. It is important to realize that Ra (the life-force, the subconscious) "reads" and bases its transformations (khepera) on the central theme of all that you are doing, whether you have articulated it or not, whether it is clear to you or not, whether it is right or wrong, whether it is harmful or beneficial to you. If in your mind, the central theme is "X, but in actuality it is "Y," it is the latter that will be acted upon by your life-force. You will be in for a nasty surprise. Examples: Is making money the theme of your business (or career), or is it the product or service that you are providing? Are you for democracy and the Constitution, or for "my country, right or wrong?" Is your marriage, chiefly, a vehicle for spiritual development, or did you marry for security or companionship, or out of imitation of social practices, or because you fell in love? Note that I

said "chiefly," for *a body can only have one head. In all undertakings there must and can only be one central theme.* All others must be subordinated. It's not up to you. It is the way the producer within you, Ra, functions. What is the theme of your life? Is it your career, or your marriage, or your spiritual development? What is the theme of your spiritual work? Is it to become a magician, realize Ausar, learn the tools to succeed in all undertakings, become versed in the teachings, and techniques of spirituality? For example, if it is becoming Ausar, then you will live truth at every crossroad, otherwise you will pick and choose when to.

Tehuti: Step #1. Consult the oracle, or the sage, or an expert to gain insight into the central theme of your undertaking, as well as the undertaking itself. The counsel will let you know whether you should be involved in the undertaking; if the theme is correct (high enough in the hierarchy to achieve your goal, in agreement with the goal, etc.); where you stand in relationship to the goal (your "chances" of success); how you should proceed, and so on. A sage, or an oracle such as the Metu Neter, or Ifa will reveal to you the heka(u) governing the situation you have undertaken. Also will be revealed to you, the spiritual meaning and value of your undertaking. You will thus find yourself involved in a deep spiritual quest through an undertaking which by mundane standards might be considered trivial. E.g., a man receives an Ausar Hetep reading on what he must do to become a salesman for a cosmetic company. While he consciously believed that his need for a job brought him to the oracle, it was the combination of the spiritual shaping forces of his life that brought him to the oracle for him to discover his spiritual condition. Instead of pointers on how to be a good salesman, or how to get the job, he received instruction in spiritual development. How he was in violation of Ausar, etc.

Step #2. Identify the means through which to carry out the central theme. Organize them in hierarchical order. The hierarchical arrangement will include the 'Two Truths' (*Maati*). That is, the means are to be classified, not only by rank, but by polarity. One will be yang (forceful, based on externals, left-brained, etc.), the other will be yin

(persuasive, seductive, gentle, subliminal, based on internals, right-brained, etc.).

Seker: If you have been fortunate enough to receive training in the science of hekau, chant the heka of the Deity governing the situation to generate the underlying structure that will guide the undertaking to its completion.

Maat: At this stage you must seek out analogies to your undertaking, and its central theme. The text of the oracle reading is a good place to start. In addition, the aroused heka (Seker stage) will reveal to you the same. The best sources of analogies regarding a behavioral undertaking are the texts of the oracles, and metaphoreins (mythological stories). Similarly, the "hard" sciences have their stock of analogies that can be used. It is obvious that the conclusion that will be arrived at through this process will embody the abstract pattern, microcosmogram, blueprint, etc. of the undertaking. This is the stage of synthesis.

Herukhuti: At this stage you must arrive at the abstract distinction between the pattern of your undertaking, and those that are analogous. This is analysis (analogical-lysis).

Heru: You have now arrived at the transitional point, the crossroad. You must firmly keep in mind your readiness to run your project, and not let it run you. The work of the lower spheres must keep to the specifications of the spheres above. It is so easy, because of emotional and sensual pressures, to abandon the soundest principles, and best laid plans. Use your will. Be the king of your realm.

Het-Heru: You are now ready to visualize the various stages from the beginning to the end of your undertaking. Incidentally, it is from this stage that many people incorrectly start their planning.

Sebek: You are now ready to seek information, technical details, etc. regarding each step, phase, and means of carrying out the project. Incidentally, it is from this stage that many people incorrectly start their planning.

Auset: Once it is clear what must be done at each step, and how, you will begin work on the project. The work at this stage involves mediumistic trance meditation on each process of the undertaking. Depending on the nature of your undertaking, you may have to precede the work with the six stages of meditation.

Geb: This is the stage of physical work, and the realization of your goal.

The above formula can also be used to analyze a subject, or series of events. What is the underlying cause (central theme) of the series of international conflicts that have occurred over the past 200 years? Is it ideological? Political? Economic? Religious? What is the chief method (central theme) used by modern imperialists? Is it racism? Coercing other nations into debt? Military aggression? Diplomacy, and adherence to law? Remember. A body can only have one head. Unless you find *the* main theme of an event, you will never understand it, let alone control it. All other contributing factors must be assigned their proper place in space (hierarchy).

A Place and Time For All Things

The East, Sunrise-9am, Spring (March 21-May 5), Maat:

Your sympathetic system has just begun to put out more than your parasympathetic, just after arriving at the point of equilibrium (equinoctial point!)¹¹. This is the time in the cycle (year, day) when the hot and moist energy is in activity. The body is heating up after being remoistened by the inner, and outer waters of life. It is most auspicious for the undertakings requiring jupiter's energies (the struggle for expanding one's wealth and position). Your optimism, generosity and panoramic view of things manifest themselves most strongly here. Gemmotherapeutics (drainage herbs) for the liver are in harmony with this point in your yearly cycle. At the sunrise and the equinox Nekhebet and Uachet are in equilibrium upon your brow; Aum Ham Kshang!

The South East, around 9am-Noon, May 5-June 21, Heru:

The earth is warming up, your animal spirit is absorbing the heat, and is therefore drying out. Your moderate fire (hot/dry energy) is in activity. This is the most auspicious time to carry out such tasks that require the vitality which nourishes the ability to raise truth above our emotional and

11. The true meaning, and value of the equinox is that it represents the time in the year of psychic, and bodily equilibrium. It is then that the two forces of the Auarat are in equilibrium in the Ajna center.

sensual conditionings. It is the best time to impose your will upon your life-force, as the reduction of your moisture has undermined your Auset and Het-Heru faculties. Power breathing, aerobics, remedies for the cardiovascular system, etc. are in harmony with this point in your biorhythm. The bitter flavor will help your fire to rise and maintain itself. Sweets will dissipate your vitality, and give power to water (emotions).

The South, Noon-3pm, June 21-August 5, Herukhuti, Uatchet:

Your sympathetic is at its height. The earth is in its extreme point of heat absorption, and your body has lost an excessive amount of moisture. Your extreme lack of moisture (emotional factor) has brought you to your point of greatest insensitivity and fearlessness. It is most auspicious for those undertakings that require lack of fear of bodily harm, hard work and zeal. As you lack moisture, make sure that you do not engage at this time in protracted undertakings. Be careful. Do not forget to ask what is right. Do not take the exhaustion of your moisture to the limits. Illness will visit you in the North¹². Watch your blood pressure. June 21st, the summer solstice is the most auspicious time for your Uatchet faculty; read Shakespeare's *Midsummer Night's Dream*, and wile away the 4 days, and 4 nights in sleep, chanting and fasting. Like "Bottoms," you will be able to play any role you chose, and "Puck" will make all of your desires come true¹³. Your parasympathetic has begun to rise, but it is still underground (putting out less than the sympathetic).

The South West, August 5-Sept. 21, 3pm-sunset, Sebek:

Your parasympathetic, although it is still underground, it has cooled down your body, with the assistance of the waning Sun. The cold and dry state of your vehicle makes this point in the cycle most auspicious for those activities that require inflexible pedantry (dry) and dispassion (cold). These are the technological subjects, trading, accounting, etc. Take your nervines, and respiratory system remedies at this point.

12. See the Yellow Emperor Classic of Internal Medicine.

13. Bottoms = Kundalini, Puck = Sebek.

The West, Sept 21-Nov 5, sunset-9pm, Tehuti, Sheps:

Your parasympathetic has just gotten the upper hand, just after being in equilibrium with the sympathetic (Autumnal equinox). As the sun is setting, your body is cold and dry, but your nervous system is in a state of equilibrium. It is the optimum time for querying the oracle, receiving counsel, and studying the ancient wisdom, as the basis for deciding on the course of your actions in the coming cycle. Yes, your day begins at this point, not at sunrise. When the sun rises, your plans for the day must have already been impressed upon your spirit. This is the key to success. Nekhebet and Uachet are again in balance upon your brow; Aung Hang Kshang. Before the arrival of the autumnal equinox, it is auspicious to cleanse the system by fasting with pungent herbs to purge the respiratory and mucous system. Along with reducing your salt intake from this point on to the next equinox, the fast will assist in preventing the respiratory problems (flu, etc.) that tend to break out in the winter months.

The North West, Nov 5-Dec 21, 9pm-midnite, Auset:

You have arrived at the point in your cycle where your body is cool, and has begun to remoisten itself. Your receptivity (ability to respond emotionally to ideas) is at its height. Go into mediumistic trance, renew your commitment to identifying yourself with your true Self--Ausar and meditate on realizing the objectives decided upon in the preceding period. If you have not eaten proteins in the past 3 - 4 hours, sweets will greatly enhance your ability to enter into mediumistic trance¹⁴. Remember that unless you impress your will on your life-force, you will suffer the host of problems that are ignorantly labelled as "lack of will power," "lack of perseverance," "lack of devotion to an objective," and so on. Now that you have impressed your will upon your life-force, it is time to go to sleep and let Khepere do the rest.

The North, Dec, 21-Feb. 5, midnite-3am, Seker, Dark deceased, Nekhebet:

Your parasympathetic has arrived at its extreme point, and your sympathetic has just been reborn! You are in non

¹⁴. Sweets release tryptophane in the system, which plays a major role in inducing sleep, and trance states.

REM sleep, or trance. The focus of your consciousness, as you sleep, has returned to the Subjective Realm, to Amen, that Ra may enter into the secret sea of marrow to be renewed in the waters of Nut. Khepera has taken the seed you sowed in the womb of Auset during the preceding period, and fashioned the egg from which it will be born into the world. In the cycle of the year, this is the winter solstice (12/21-25). This time of the year (and day) is the most auspicious time for your Nekhebet faculty (Aung Hang Kshang). During the 4 days (Dec 21-24 midnight) fast, meditate, and chant to energize the decisions made at the autumnal equinox ritual (see the West). This is definitely not the time to be caught drunk, and filled with domesticated beast in your stomach. Wonder why there has been no peace on earth? Your sympathetic has been reawakened but it is still underground. The seed has been sown, the egg has been fashioned, but the gestation has not yet occurred.

The North East, Feb 5-March 21, 3am-sunrise, Het-Heru:

You are fully remoistened by the inner, and outer waters. Your body is warming up with the gentle fructifying psychic heat of Het-Heru. These are your pleasant dreams. The most important meaning of dreams is in regards to their emotional content. Pleasant, joyful dreams presage success, and turbulent, dark, troubled, dreams are portents of difficulties. Understand that they are the signs of the gestation of the beliefs you have accepted. To control your dreams, and hence what you manifest in your life, take into mediumistic trance every night what you want to see manifesting in your life. It is important, however, to realize that your personal will must be in harmony with the will of your true self (as revealed through the oracle), otherwise you will still have bad dreams. I.e., your true self will try to warn you. To successfully interpret your dreams, review the emotions that you habitually accept throughout your life. Your dreams are their gestation, or messages from your true self, deities, and ancestors regarding the course of your life.

In order to fully benefit from the insight into the cycles provided above, it is imperative to go to bed at about 10 pm and wake up just before sunrise. You must average about 8 hours sleep,

and awaken naturally (not from alarms) when the life-force (Ra) is fully regenerated. A study of the lives of the world's top executives showed that most of them observed pretty much this pattern of sleeping and awakening. You must also eat a good breakfast, after your morning meditation and aerobics. Your main meal should come at about 2 pm (mercury/Sebek = small intestine, digestion). It is important to get your full quota of calories (Maat, success = hot & moist = caloric sustenance, fuel!!). To preserve the equilibrium in your life-force, you must also avoid sleeping during the day (unless ill), exercising after sunset, avoid concentrated sweets in the morning, bitters at night. Avoid excessive fasting, excessive sexual activity, and be moderate in all things. This simple rule of living in harmony with the circadian (daily), and annual cycles of your body is the master key for success. The so called lemniscate, or infinity symbol (a horizontalized 8) above the head of the Magician card of the tarot, is in reality two superimposed sine curves which represent the flux of cycles. The four magical weapons that the magician works with in this card (and in European magic) are the four modes of the life-force. This is why in the older and better tarot decks, the magician is shown juggling these four symbols (keeping them in equilibrium). I.e., the picture states that because he observes the laws of the cycles, he is able to keep the four modes of his life-force (hot/dry=fire, cold/moist=water, etc.) in equilibrium. Therefore, he is successful at magic-the realization of what he wills, primarily through the agency of his life-force.

THE METUTU

Amen

Kamitic: Amen, Nu, Nut

Canaanite: Ain, Soph, El

Kabalistical: Ain, Soph

Yoruba: Olodumare, Olokun

Underlying Principles:

- + The living of the knowledge of the essential and original unconditioned state of our spirit is a fundamental prerequisite for achieving success in all of our undertakings. The realization of this goal is the ability to maintain a state of deep inner peace that cannot be upset by externals. This condition is called Hetep. Realization of this knowledge is the final goal of life.
- Ignorance of the knowledge of our essential state leads to the identification with our conditioned reflexes and behavioral patterns. It is the fundamental cause of all failures and evil in the world.

Keynotes: (+) Knowledge of our essence, the essence of a thing, or undertaking; (-) ignorance of the knowledge of our essence.

Spiritual Counsel

When you receive an Amen reading you are being reminded to renew your insperience of the essence of your being. You are in danger of identifying with the conditioned state of your person, thus limiting your potential to achieve. Understanding the information regarding the knowledge of Self is not enough. You must still your thoughts, and thus enable the focus of your consciousness to return to its source to drink of the Sa en Aungk (essence of Life). Your problems may have been contributed to by a lack of sleep. Most Westerners, as a result of their artificial priorities, suffer from a chronic lack of sleep, which is one of the main causes of illnesses and spiritual stagnation. Nut, which is the female counterpart of Amen is the source of Ra-the life-force. Our storehouse of Ra (prenatal chi) is replenished every night during the non-REM periods of sleep,

as well as through certain sophisticated yogic practices¹. Incidentally, the fact that sleep is a process of returning the focus of consciousness way beyond the physical plane to the Subjective Realm, in order to renew our storehouse of life-force, western scientists-materialists as they are-are unable to discover, to this day, the purpose of sleeping. Get your 8 hours daily, at night!!!

Ausar

Kamitic: Ausar, Tem

Baths: Basil, tuberose, white roses, cotton (leaves), marjoram, sage, fennel, stephanotis (flower).

Oils: basil, lotus, tuberose, fennel, sage, marjoram.

Incense: myrrh, southernwood.

Hekau (mantras, words of power):

Spiritual: Aung

Planetary: none

Spiritual Direction: none

Personality Portfolio:

Emotional traits: beyond the influence of emotions.

Mental traits: the origin of all wisdom.

Social Correspondences: God Men on earth, and in the inner planes.

1. See Taoist Yoga, by Lu Kuan Yu.

Careers, functions: retired from the tumult, and illusions of the world. Sages.

Places & Events: the Sekhet Aaru.

Biological correspondences:

Physiology: none

Pathology: none

Kamitic therapeutics: The healing power of hetep (an inner peace that does not depend on, or cannot be disturbed by any external influence).

Chinese Medicine: Shen strengthening herbs.

Spiritual keynotes:

Underlying Principles:

- + Perseverance in the identification with the indwelling intelligence in thought, speech and action is the substance of Self-knowledge, which is essential for the individual's achievement of unity in her personal and social life. Health and prosperity are achieved thereby.

Keynotes: Self-knowledge and the living of it, or the absence of it. Unity, disunion, the highest principle governing an event.

Spiritual Counsel

When you receive an Ausar reading you are being reminded to renew your experience of your true Self. You are in danger of identifying with the conditioned state of your person, thus limiting your potential to unify yourself with the world. The book knowledge regarding the knowledge of Self is not enough. You must still your thoughts, and thus achieve or renew the experience of your Self as the consciousness that is conscious of being conscious. This will shift the balance point of your being to Heru (which is biased toward the Self!), and allow you to be in the world, but not of it. This equilibrium is a major prerequisite for the manifestation of wise intuitions and spiritual power. You are also reminded that social unity is the source of the greatest power and good in mankind. This unity does not come about through the coming together of people; it results from the resolution of their differences into complementary and supplementary relationships.

Spiritual Direction: South East. This is the direction to face when you are performing your meditations and rituals for spiritual guidance.

Mundane Direction: West. This is the direction to face when you are performing your meditations and rituals for mundane goals.

Biological correspondences

Physiology: See Maat.

Pathology: See Maat.

Kamitic therapeutics: Healing through the powers of hekau (mantras). See also Maat.

Personality traits: See Maat

Mental functions: Stilled

Social correspondences: Sages, prophets, and through the principle of relativity, to judges, very experienced lawyers, theoretical scientists, theoreticians, theologians, bankers, merchants, upper echelon priests and priestesses, fortune hunters, officials, experts in a particular field, teachers at the highest levels.

Spiritual keynotes:

Underlying Principles:

- + Guidance from the Sage, or an expert in the field inquired about, or oracles, or intuition acquired through Jnana Yoga (cessation of all thought activity) is the source of good judgement, and directions that one can place one's faith in.
- Mistaking education and information for knowledge will, more often than not, lead to bad judgements, false sense of knowledge, unfounded optimism.

Keynotes: +) faith, good judgement, intuition, optimism; -) doubts, lack of faith, bad judgements, unfounded optimism.

Spiritual Counsel

When you receive a Tehuti reading, you must stop on your forward movement to achieve your goal, and meditate on the basis of your decision to undertake the present actions or project. The meditation that is required at this level is based on the ability to still the thinking process, which latter, is always based on the manipulation of symbols standing in for the actual reality. We must get them out of the way in order to see directly into reality. Implicit is the fact that you are in danger of undertaking an action that will create a problem somewhere, while solving a specific problem, or achieving a specific goal elsewhere. As most people are unable to still their thought processes, they are counselled to go see a master (most likely an elder) on the subject. By a master is meant, an

individual who is able to intuit knowledge that transcends the commonly known body of information that is available on a particular subject, or the ability to intuitively apply principles to specific situations in the absence of guiding formulas. In regards to life itself, such masters are the sages. If there are no sages in your life, then you must rely on the use of oracles, until you achieve the ability to arrive at answers to problems without going through the sequential thought activity of the lower, syllogistic, Cartesian logical faculty.

On another level, the oracle might be advising you that the attainment of your goal depends primarily on the successful evocation of the powers represented by the hekau.

Seker

Kamitic: Seker, Ptah, Aummit, Khepere

Time of year: Sidereal full moon in capricorn, aquarius.

Esoteric Herbalism:

Baths: *Artemisia vulgaris*, jerusalem tea, bitter broom

Oils: myrrh, cypress

Incense: myrrh, cypress, southernwood leaves.

Hekau (mantras, words of power):

Spiritual: Kring

Planetary: Aung Prang Pring Praung (chant at midnight).

Spiritual Direction: East

Mundane Direction: Southwest

stage of meditation and initiation. The taking of Men Ab to its heights involves the ability to totally ignore all instinctive, emotional and sensual impulses. Hence, we are as one who is dead. This is the basis for Seker's appellation as God of the Dead.

Seker/Het-Heru: We have seen in past chapters that the 3rd sphere, Seker is the complement of the 7th, Het-Heru. They are the complete antithesis of each other. Where Seker is fully introverted, uncaring of sensual pleasures, steady, etc., Het-Heru is extroverted, dependent on sensual pleasures, unsteady, etc. Yet, the arousal of the life-force (Chi, Ra, Kundalini) that is needed to vitalize the will to allow it to succeed in its application of Men Ab, depends on Het-Heru's indulgence in sexual and pleasurable activities. The development of the capacity to concentrate to carry out the functions of Seker is therefore strengthened by moderation in pleasure, and weakened by both the excess or suppression of sensual indulgence.

Seker/Geb: Geb's importance to Seker also revolves around the relationship between the life-force and concentration. Here attention to health in order to nourish the life-force, keeps its channels open, and its forces in harmony with each other.

Key Phrases:

Attention to cycles (E.g., stock market, and economic cycles) promotes success; "Perseverance in," steadfastness, stubbornness; patient, methodical attention to tedious details; Delays, denials, obstructions; Sobriety; Pessimism, caution, inhibition, scruples; Restraint; good organization, and planning (mental not computerized, which is Sebek); abiding by the constitution, by-laws, plan; slow at arriving at a conclusion; by being thoughtful; stop and ponder, meditate.

Biological correspondences

Physiology: the frigid and dry energy of Saturn is the basis of the crystallizing functions that govern the formation of our bony system. It is also the seat of the catabolic processes that govern aging, thus limiting the lifespan of life forms.

Pathology: Where the vitality (solar force), and immunity (marital force) are weak, the Saturnial energy generates disorders characterized by the abnormal deposition of crystallized material (stones, uric acid) in various parts of the body, thus causing gout, gall stones, rheumatoid arthritis. It is also the cause of all chronic, and deep-seated disorders; paralysis, sclerosis, blood impurities.

Kamitic therapeutics: Healing through hekau (words of power), refrigerant, hypnagogic, styptic, astringent, antipyretic.

Chinese Medicine: Spleen meridian; Cold Disease Patterns - Use warming (spleen, liver) herbs (Center Rectifying formula, Liver Warming decoction, Ephedra decoction, Wo T'ou Aconite decoction, etc.); Dryness Patterns - Nourish blood and yin; Phlegm Disease Patterns.

Spiritual Counsel

When you receive a Seker reading, you must stop your forward movement to achieve your goal, and meditate on your objective in order to intuit the structure governing your undertaking, and thus come up with a viable plan. On the level of Seker, the meditation process depends on the ability to still all thought processes ("make the mind blank") in order to "sense" the underlying structure of your undertaking. Although most people will not be able to attain this level of meditation, they should at least try to slow down the thought process in order to fully concentrate on intuiting the plan, drawing from past experiences (this is a compromise). All things considered, elders (56 and up³) will be most successful, as their greater experience, and lower metabolic rate (Seker's catabolic mode!) will provide them with a greater abundance of food for thought and patience. It will be advantageous for young people (under 42) who receive this reading, to seek the advice of capable elders.

On another level, the oracle may be advising you to remember that pleasure is not in the things that are enjoyed but is a manifestation of the spirit of the enjoyer. Thus, for the duration of the undertaking inquired about, you must withdraw your pleasure

3. The age set demarcations must be taken with flexibility. There are people who are old at 35, while others are still youthful, and vigorous in their 70's and more.

from earthly or personal things, and place it in universal and spiritual things. This is a requirement for manifesting the powers of Ra, which have their matrices (the eggs of Khepera, the 50 matrikas, etc.) in Sekert.

Maat

Kamitic: Maat, Seshat (Seshait, Sefkit Aubut).

Canaanite: Tzadki-El

Kabalistical: Gedulah, Chesed

Yoruba: Aje Chagullia

Indus Kush: Lakshmi

Sphere	Planet	Day
4th	Jupiter	Thursday

Color: sky blue for spiritual heka, yellow for the Planetary heka.

Number Gems & Metal

2 yellow sapphire, lapis lazuli, Tin

Time of year: Sidereal full moon in Pisces

Esoteric Herbalism:

Baths: thuja, anis, honeysuckle

Oils: anise, oak moss.

Incense: aloes, anise.

Hekau (mantras, words of power):

Spiritual: Shring

Planetary: Aung, grang, gring, graung

Spiritual Direction: Southeast

Mundane Direction: West

Personality Portfolio: Through its action on the khaibit (the animal spirit) the hot and moist energy of Jupiter has the following effects on the personality (sphere 9):

Emotional traits:

(+): just, equilibrated, holistic, generous, sharing, optimistic, liberal, magnanimous, moral sense, striving for advancement and wealth in a positive manner, religious, successful, "fortunate," law abiding, fair, charitable, deferring to elders, no trafficking with evil, grateful, prudent.

(-): greedy, i.e., negatively expansive (for food, sex, material things, etc.), pleasure seeking, boastful, extravagant, unlawful, materialistic, wasteful, unsocial, unsuccessful "unfortunate," hypocritical regarding religion, and the law; false religious, legal, and scientific tenets.

Mental traits: Synthesis-gaining insight into things by unifying them through the use of abstract analogies; hence well fitted for philosophical, and theoretical scientific, religious pursuits.

Social Correspondences:

Careers, functions: judges, very experienced lawyers, theoretical scientists, theoreticians, theologians, bishops, cardinals, bankers, merchants, upper echelon priests and priestesses, fortune hunters, officials, managers.

Spiritual Portfolio: doctrine of divine law & order; optimism, faith, love, abundance, success in an individual undertaking, spiritual advancement.

Spiritual function: She walks with a papyrus scepter⁴. She achieves abundance. Maat's papyrus scepter fuses divine law with the abundance that follows from living it. Its color, green, symbolizes abundance and fruitfulness, while the papyrus, which was used for writing, symbolizes the book of the law. She realizes that even her enemies are integral parts of the whole, and thus works and shares with them. Seshat raises her consciousness to the hall of the Metu Neter and realizes the ultimate unity of all things. There are no irreconcilable opposites in the world. This is the source of an undaunted optimism, faith, and inner joy which reveal themselves in a peaceful genuine smile and relaxed (Hetep) state of being even in the midst of setbacks and the greatest of external difficulties.

4. See Appendix A for associated meditation.

Maat (the divine law) is the food and drink of Ra (the Life-force). She nourishes her life-force (Ra) with the divine law, and gives endlessly of her love (shares seeking nothing in return). There is no end to her worldly fortune as her giving is answered from the depths of Nut.

Perseverance in adhering to a belief system based on the Cosmological arrangement and synthesis of divine laws, such as achieved through the Tree of Life, leads to success in all undertakings, as the view of the unity that is concealed in the midst of the multiplicities that life presents to us, is never lost.

A collection of wise sayings, and divine laws, however true cannot save us, if they are not arranged into an integral system of guiding us in our day to day existence. We have seen how the abstract analogies presented in this book, especially the symbols of the Tree of Life, serve to unify specifics across general categories. Unless the elements making up our belief system (whether secular, or religious) are unified in this manner, they become enslaving agents of dogma, instead of vehicles of salvation.

Special Correlates:

Maat/Amen: Amen is the major source of the optimism, sharing, and lawfulness of Maat. The source of all things is infinite, and is held by all in common, as we all originate from, and have our being in Amen. There are no personal possessions, nothing can be lost in sharing, and what is not returned by another will come from the depths of the infinite.

Maat/Ausar: Love, which is sharing, which is giving seeking nothing in return, not asking if you deserve, but the fulfilling of a genuine need. It is the day to day expression of the unity of being represented by Ausar, and is the synthesis of all divine laws.

Maat/Tehuti: Maat is the written law that depends on the intuitions of the Sage-Tehuti.

Maat/Seker: While Maat corresponds to the communication of the divine law to man's mind, Seker is the imposition of the law from within. I.e., while we may chose to follow Maat, Seker forces us to follow the law.

Maat/Herukhuti: Without the conception of the means to enforce the law, there can be no conception of the law. See

Heru. Note, that while Seker forces you to follow the law, Herukhuti punishes you for breaking it.

Maat/Heru: As there is no compulsion to observe the law at the Maat stage, as is otherwise with Seker, the ability to live the law depends on the Men Ab work of the Heru stage.

Maat/Sebek: The 4th sphere, Maat, is complementary to the 8th, Sebek. While Maat corresponds to the perception of the abstract analogies that tie events and things sharing the same qualities, although they belong to separate families and species, Sebek is the perception of the concrete definitions, names, etc. that distinguish species, and parts of concrete wholes from one another. Thus, while the unifying function of Maat makes for social harmony, success and prosperity, the segregative function of Sebek is the chief source of social disharmony and difficulties.

Biological correspondences

Physiology: Like Venus, Jupiter is responsible for the conservation⁵, preservation, and expansion of the life-force and spiritual power. It is the establisher of physiological equilibrium and fruitfulness, hence, it is the "fortuna major" (major fortune) and greater healing force of the body. Its action is centered in the liver where it is in charge of the production and storage of blood sugar (glycogenesis), breakdown of protein waste into urea, etc., and the creation and regulation of sex hormones (e.g., the destruction of excess estrogen, etc.). It also exerts a major influence on the arterial circulation and arterial blood itself.

Pathology: Accumulation of proteid, and other waste in the blood; liver derangements; sthenic plethora, or localized swelling; accumulation of adipose tissue; adipose sarcoma; lardaceous, and solanoid cancer of the mammary, pancreatic glands; vascular congestion leading to hemorrhages, apoplexy, epistaxis, etc.; fatty degeneration; sugar in blood (diabetes), illnesses from pleasurable excesses (diet, sex, etc.)

5. This conserving function is also attributed to Vishnu, who also rules the planet Jupiter (guru).

Kamitic Therapeutics: Joy, Analeptic, alterative, nurturing, spermatogenic, emollient, fattening, equilibrating, anabolic promoter (steroids, etc.).

Chinese Medicine: Liver/Gall bladder system; Damp Disease Patterns - Use herbs that clear heat, and disperse dampness (Artemisa Capillaris, Minor Bupleurum, Pulsatilla, Eight Corrections Powder, etc.).

Spiritual Counsel

When you receive a Maat reading you are being counseled to stop on your forward movement to achieve your goal, and to meditate on the abstract principles that will enable you to acquire a broad view of the subject at hand. Since the material from which you must draw upon can only be acquired through many years of study and experience, middle aged individuals (35-56) will be most successful. Although elders are most likely to possess such experiences, their metabolism, which is already on the downswing, may keep them from achieving the great success that Maat's hot and moist energy forecasts.

Herukhuti

Kamitic: Herukhuti

Canaanite: Khama-El

Kabalistical: Geburah

Yoruba: Ogun

Indus Kush: Bagalamukhi

Sphere	Planet	Day
5th	Mars	Tuesday

Color	Number	Gems
blood red, purple	11	red coral, garnet

Time of year: Sidereal full moons in aries, and scorpio.

Esoteric Herbalism:

Baths: Rompe Saraguey, Holly (Quita maldicion), Anamu, pine, Vencedor.

Oils: Pine, cedarwood.

Incense: Pine, tobacco, cedarwood.

Hekau (mantras, words of power):

Spiritual: Hlring

Planetary: Aung krang kring kraung

Spiritual Direction: North

Mundane Direction: Southeast

Personality Portfolio: Through its action on the khaibit (the animal spirit) the hot and dry energy of Mars has the following effects on the personality (sphere 9):

Emotional traits:

(+): Courage manifesting as the lack of fear of bodily harm, energetic, prudent, magnanimous, forceful, enterprising, constructive, muscularly skillful, zealous, passionate; delighted, and motivated by situations involving challenges, or hard, and dangerous but relatively short work.

(-): quarrelsome, antagonistic, pugnacious, arrogant impetuous, rash, choleric, destructive, violent, forceful, excessive, irritable. overzealous, and excessively passionate, inclined to tobacco, alcohol, murder, treason, cruelty, etc..

Mental traits: Analysis-gaining insight into things by separating them or their parts through abstract analogies.

Social Correspondences:

Careers, functions: soldiers, fighters, warriors, executioners, butchers, slaughterers, hunters, people employed in dangerous undertakings, firemen, athletes, mechanics, surgeons, analytical theoreticians, criminal lawyers, prosecutors, policemen, shrewd and driven business executives.

Spiritual Portfolio: justice, detachment, courage, external obstructions.

Spiritual function: Let's remember that underlying all actions is the urge to succeed, which depends on following divine law (Maat). Our protection from all external obstructions is the domain of Herukhuti. But all such obstructions are the external projections of the obstructed condition of our life-force caused by our breaking of the laws of Maat in our

dealings with others. By cutting (no pun intended) our identity off from our persons, and placing it firmly in our Self-the indwelling intelligence-we find the strength to be just with others in all situations. Thus, we receive protection from the Supreme Being. It also gives us the courage to sacrifice our lives for the well being of others. The failure to detach our identity from our persons compromises our sense of justice, and our ability to grow spiritually.

Special Correlates:

Herukhuti/Tehuti: The destructive side of using force is avoided by making sure that it is guided by wisdom (Tehuti).

Herukhuti/Maat: Penalties cannot be justly carried out if the law (Maat) is not clear and fair.

Herukhuti/Heru: Penalties cannot be effectively carried out, or justly applied even if the law is just, when the will is ineffective due to lack of vitality, or lack of Men Ab.

Herukhuti/Het-Heru: The 5th sphere, Herukhuti, and the 7th, Het-Heru, are complementaries. The zeal and drive to achieve of the former, combined with the creative imagination and joy of the latter, work together for the achievement of the "fortuna minore." Such successes, unfortunately, are the accomplishments that conceal future traps and problems, for we succeed at the expense of our spiritual development. We avail ourselves of this means of achievement when it is prescribed by the oracle. Beware of books that prescribe it as the chief way to success.

Herukhuti (-)/Sebek (-): This is the configuration of Set, the archminister of evil. It is the combination of the warmongering, imperialist, cruel, heartless personality traits with deception, scheming, cunning, cleverness, etc.

Key Phrases:

By setting to work; through hard, energetic effort; through zeal, drive, enterprise, initiative; through rashness, hotheadedness, arrogance, impatience, anger, violence, brutality, etc.; being guided by one's sense of power over others, or the situation; the urge to move forward, to advance; by being just, fair, courageous; by being confident, overconfident.

Biological correspondences

Physiology: It is in charge of the immune system, the voluntary musculature, elimination of toxins through the skin, focused heat production, sexual excitement.

Pathology: Acute disorders (fevers, inflammations, eruptive infectious disorders), wounds (especially from guns, knives, etc.), burns, hemorrhage, blood/skin disorders (itching, hot, eczemas, poxes, etc.), ruptures, injuries, accidents.

Kamitic therapeutics: surgery, stimulant, tonic, aphrodisiac, resolvent, caustic, rubefacient, vesicant.

Chinese Medicine: Pericardium/Triple Heater system; Heat and Fire Disease Pattern - Detoxify and drain fire, and enrichen yin (Coptis detoxifying formula, Heart-Draining formula, Great Yin supplementation pills, etc.); Summerheat Disease Pattern - (White Tiger decoction, etc.).

Spiritual Counsel

When you get a Herukhuti reading you are being warned to make sure that your zealous and courageous forward drive is being guided by wise counsel (Tehuti), a plan (Seker), knowledge of the law (Maat), and is being directed by Heru (a decision which has not been influenced by desires or emotions).

Heru

Kamitic: Heru

Canaanite: Micha-El⁶

Kabalistical: Tipareth (Rapha-El???)

Yoruba: Shango, Jakuta

Indus Kush: Bhuvaneshvari

Sphere	Planet	Day
6th	Sun	Sunday

Color	Number	Gems
red & white	6	ruby, garnet

6. The Jewish Kabalists give this sphere to Rapha-El. But a study of the character and metaphors of Micha-El will show that the latter is more appropriate to the sixth sphere, and the former to the 8th.

Time of year: Sidereal full moon in Leo

Esoteric Herbalism:

Baths: poplar leaves, Paraiso, cock's comb, geranium, bay leaves, Rompe Zaragney (Eupatorium Odorata), vencedor.

Oils: olibanum, geranium.

Incense: frankincense (olibanum)

Hekau (mantras, words of power):

Spiritual: Hrim

Planetary: Aung hrang hring, hraung

Spiritual Direction: West

Mundane Direction: Northeast

Personality Portfolio: Through its action on the khaibit (the animal spirit) the hot and dry energy of the Sun has the following effects on the personality (sphere 9):

Emotional traits:

(+): Magnanimous, desirous of power and leadership, full of vitality (hence, "strong willed"), zealous, noble, lofty, proud, ardent, authoritative, humane, reserved, above using underhanded means in the struggle against opponents

(-): arrogant, extravagant, indecisive, overbearing, dictatorial, excessive pride, devitalized (hence, "weak willed"), tyrannical, boastful yet empty, egotistical.

Mental traits: the will, circumspection, insight.

Social Correspondences:

Careers, functions: People in authoritative position (father, mother in a one parent household, king, prince, leaders, lieutenant, deputy, mayor, governor, boss, supervisor, etc.), self employment.

Spiritual Portfolio: the will, Men Ab, the determinant of character, crossroads (transitions, changes, transcending), essence of our divinity.

Spiritual function: The will is the essence of our divinity. In the same manner that we help children develop by allowing them freedom to act within a circle of limitations, the Supreme Being develops man's divinity by allowing him a certain amount of freedom within a ring passnot. The circle that man cannot pass corresponds to Seker's structural lines that keep the world and its events in place. Outside of these, man has the freedom to chose what he wills. But, as we have seen success depends on law and order. As Tehuti and Maat correspond to the communication of the divine law to our mind, and not its imposition, we have the freedom to follow or ignore it. This freedom of the will to follow, or ignore divine law is the basis of our divinity. There is no divinity where there is compulsion.

We saw in past chapters that the Men Ab system of meditation is the means of liberating and perfecting the use of the will. On our perfection of this system depends the upliftment of our character, and our spiritual growth. The only time that spiritual growth, and the transcending of our conditionings take place is when we live truth of our free will in "crossroad situations." These situations are characterized by 1) the appearance that we will lose a great deal (real, imagined, or perceived), which will be opposed to 2) the truth which must be followed and 3) the intuition of clever and seemingly convincing rationalizations for not following the truth. This latter is contributed by Set.

Special Correlates:

Heru/Ausar: There is no act of will unless we are effectively identifying ourselves with the indwelling intelligence, as opposed to our persons.

Heru/Tehuti: Tehuti, the will of God, communicates to Heru, man's will, what is to be done according to the point in the divine order, as determined by Seker. Man may ignore it and face the consequences; delays, obstructions, and failure in life. I.e., not following Tehuti leads to Sekerian repercussions, while, not following Maat leads to Herukhuhutian repercussions.

Heru/Maat: Not only does Maat guide man's will to the successful achievement of his goal, but through ordering his life, it preserves his health and therefore contributes to the

full development of his life-force to enable him to succeed in his earthly and spiritual endeavors.

Heru/Het-Heru: The vitality that is needed to carry out the will, and perfect the Men Ab skill depends on a healthy attitude to the indulgence of pleasure. It is harmed by too much, as well as excessive suppression of the urge to pleasure. The process of willing an act or event must be conducted through visualization (this is the meaning of the Eye (utchat) of Heru), and not through verbal thinking. The Sesh Metut Neter--the great Kamitic system for thinking complete thoughts without verbalizing them--is a major source of success in the use of the will.

Heru/Sebek: Where there is no wisdom (Tehuti) to guide our will, we are the victims of our opinions, etc. See Sebek.

Heru/Auset: The true "strength" of the will--the ability to carry out what we will--depends on taking our goals into mediumistic trance (meditation stages 1 - 3).

Heru/Geb: The vitality that is needed to support the will depends on our adherence to the laws of health.

Summary of Heru's functions: It is the responsibility of Heru to insure that the emotions and thoughts originating from the other faculties do not interfere with the efforts of the indwelling intelligence to expand its sphere of influence to the external part of our life.

Key Phrases:

The effort, urge to rise to prominence, to be independent; urge to freedom; by cultivating expertise in Men Ab; by being "self-reliant," confident; (-) hoping to be compelled to do right, ignorance of the will's freedom from emotional compulsion, ignorance of the will's dependence on wisdom, lack of Men Ab; due to arrogance, anger, impatience; a strong (weak) life-force; through leadership, the urge to lead.

Biological correspondences

Physiology: The "Sun" corresponds to the vital energy that is the basis of our constitution (our overall ability to resist illness and heal ourselves), as well as the gauge of the spiritual force that is required for us to carry out our will. It is also the principle governing our cardiovascular system, especially the heart.

Pathology: cardiac problems, arterial circulatory problems, sthenic but not too high fevers.

Kamitic therapeutics: cardiac, alterative, constitutional homeopathic remedies regardless of organ affinity, tonics.

Chinese Medicine: Heart/Small Intestine system; Heat and Fire Disease Pattern - Detoxify and drain fire, and enrich yin (Coptis detoxifying formula, Heart-Draining formula, Great Yin supplementation pills, etc.).

Spiritual Counsel

When you receive a Heru reading you are being reminded to perfect and utilize your Men Ab meditation skill. As Heru could only defeat Set through the wise counsel of Tehuti, and through adhering to the law of Maat, you are advised to seek counsel from someone in an authoritative, or leadership position. If you are the head person, then make sure to consult the oracle, and see a sage or master of the subject at hand.

From another perspective, you might be counselled to remember that power is not an attribute of the will. Whatever you are not in the habit of performing, or are just setting out to achieve, must be impressed upon your life-force through mediumistic trance (perhaps through hekau), and nourished through enjoyable visualizations.

Het-Heru

Kamitic: Het-Heru, Nebt-Het

Canaanite: Hana-El

Kabalistical: Netzach

Yoruba: Oshun

Indus Kush: Kamalatmika

Sphere	Planet	Day
7th	Venus	Friday

Color	Number	Gems
green,	5	diamond,
yellow		zircon (white,
		rose), white coral

Time of year: Sidereal full moons in Libra, and Taurus.

Esoteric Herbalism:

Baths: yellow roses, honeysuckle, calendula flowers, maiden's hair, parsley, vetiver, spearmint, sandalwood

Oils: rose, sandalwood, honeysuckle, cinnamon.

Incense: same as oils.

Hekau (mantras, words of power):

Spiritual: Kling

Planetary: Aung drang dring draung

Spiritual Direction: Southwest

Mundane Direction: North

Personality Portfolio: Through its action on the khaibit (the animal spirit) the cold and moist energy of Venus has the following effects on the personality (sphere 9):

Emotional traits:

(+): sociable, affectionate, pleasure loving, quiet, harmonious, joyful, sweet, engaging, flexible, sympathetic, graceful, merry, cheerful

(-): Sensually aberrated, shameless, lascivious, timorous, neglectful, lewd, idle, wasteful craving drugs, alcohol; immoral, motivated by fantasies and empty forms (hence illogical, and irrational), spendthrift, fearful, careless, narcissistic.

Mental traits: congregative thinking: the imagination, use of metaphors, myths, metaphoreins, stories to explain.

Social Correspondences:

Careers, functions: Entertainers, artists, young women, the beauty, clothing, pleasure, and adornment industries.

Spiritual Portfolio: joy, pleasure, imagination, visualization.

Spiritual function: The arousal of the life-force (Chi, Ra, Kundalini) through joy and pleasure, especially when ecstatic, provides the motive force for the accomplishment of our minor goals, and vitalization of the will. Unfortunately, most people are ignorant of this fact, and suppress their joyfulness waiting for success or overindulge

their passions, and never know why they have so much difficulty carrying out their will, concentrating, etc. Review the material given for the 3rd stage of meditation and initiation regarding the combination of creative imagery, and life-force arousal (the practice of visualizing the emotionally charged situations related to our goals, combined with special breathing techniques and asvini mudra).

A great deal of problem also arises from the ignorance of the function of the imagination. People allow themselves to indulge in the visualization of emotionally charged imagery (positive, or negative emotions and sensations) without realizing that they are thus giving power of realization to unwanted or untenable situations.

Special Correlates:

Het-Heru/Geb: As the function of the Het-Heru faculty is to organize the subtle forces of the animal spirit that are directly in control of physical phenomena, it is especially susceptible to the influence of the instincts, emotions and sensuous energies.

Key Phrases:

Love for; one is attracted to; failure to control one's attraction to; desire for; love for the external, form side of; reliance on one's beauty, grace, charm; overindulgence in; love of ease; contentment; joyfulness; following likes, and dislikes; effeminate; through creativity, and a fertile imagination; through sociableness, gentleness, cheerfulness, warmth, charm, seduction.

Biological correspondences

Physiology: the cold (warmer than the lunar energy) and moist energy of Venus induces the temperate relaxed physiological state (especially of the pneumo-gastric area; tantien) that is required by the reproductive and gestational organs (gonads, uterus, etc.). It also rules the parotid glands, kidneys, and functions in charge of generating the subtle energies behind our libido (het/house of heru/libido, vitality). It is the minor healing force (fortuna minor).

Pathology: Illnesses of the reproductive organs, mumps, gestational problems (miscarriages), varicosities (legs,

scrotum), hemorrhoids, aneurysms, renal disorders, cysts, venereal illnesses, laxity of fiber, tumors, asthenic plethora, stomach disorders from dietary excesses.

Kamitic therapeutics: Joyful events, emetic, diuretic, demulcent, alterative/detoxifier.

Chinese Medicine: Kidney/Bladder system; Blood and Qi Disease Patterns.

Spiritual Counsel

Whenever you receive a Het-Heru reading you are being reminded that the purpose of indulging pleasurable (or negative) sensations is for the arousal of Ra. When they are combined with your visualizations (daydreams, meditations) of occurrences in your life (past and future), they are given the power to manifest. In the same vein, you are being warned against wasting your life-force through overindulgence, in order to avoid weakening your constitution and the ability to achieve your will.

Sebek

Kamitic: Apuat, Anpu

Canaanite: Rapha-El

Kabalistical: Hod

Yoruba: Elegba, Eshu

Indus Kush: Matangi

Sphere	Planet	Day
8th	Mercury	Wednesday

Color	Number	Gems
Saffron	3	emerald
red and black		

Time of year: Sidereal full moon in gemini, and virgo.

Esoteric Herbalism:

Baths: Abre Camino, Arrasa con todo, Oregano, Lavender, larkspur.

Oils: lavender, lily of the valley.

Incense: lavender, lily of the valley.

Hekau (mantras, words of power):

Spiritual: Aing

Planetary: Aung Brang Bring Braung

Spiritual Direction: Northeast

Mundane Direction: South

Personality Portfolio: Through its action on the khaibit (the animal spirit) the cool and dry energy of Mercury makes the personality (sphere 9):

Emotional traits:

(+): sharp and witty, fond of travel, critical in a positive way (able to separate issues based on externals), loquacious, diplomatic, cold and pedantic (syllogistic logical minded, highly dependent on information), communicative.

Negatively critical, loquacious, busybody, opinionated, inconstant in belief, pretending to know yet ignorant, mischief maker, gossipper, scheming, cunning, argumentative, proud, sly, lying, selfish.

Mental traits: segregative thinking; labelling; defining; the verbal clothing of what is known, felt, and perceived; syllogistic logic; imitation.

Social Correspondences: quick-witted people, good learners from mere observation (even without a teacher).

Careers, functions: So called intellectuals, scholars, academicians, students, teachers, ambassadors, astrologers, mathematicians, clerks, technicians⁷, relatively inexperienced lawyers, preachers, teachers, traders, young men, office workers, printers, schemers, schemes (financial, etc.), thieves, journalists, good speakers, diplomats, politicians, specialists.

Spiritual Portfolio:

Spiritual function: However pragmatic and necessary for the manipulation of physical phenomena, the mastery of definitions, names and descriptions-the fundamental elements of our education-does not constitute knowledge of

7. All "scientists" whose practices do not involve theoretical innovations are in reality technicians. They merely imitate the procedures that have been taught to them.

reality. Proceeding with awareness of this limitation will bring us good fortune.

Proceeding without awareness of this limitation; Misfortune. We speak glibly of the person coming into being in the third month of gestation; of life arising out of the chance coming together of nonliving particles, in the same breath that we give better odds to a random assortment of 800,000 words and definitions on index cards being tossed in the air and falling in alphabetical order. And with pride we call ourselves scientists.

Special Correlates:

Sebek/Tehuti: To remind people that wisdom is not represented by the accumulation of information, the Kamitic men of wisdom used the dog-headed ape (Auaun), a very cunning, and imitative animal, and hence a Sebek type, to symbolize education as the aping (imitation) of wisdom. At best, the most it can do is to inspect the measuring hand of the scale of balance, record the verdicts, and chastise the pig.

Sebek/Maat: Maat is the means of giving order to thinking and provides the "truth premise" that has eluded western logicians from the days of the Greek philosophers.

Sebek/Het-Heru: This is the configuration of the "Hermaphrodite." Verbal thinking that is guided by images (description) gain coherence, unity, and a certain degree of objective reality. While we must experience something in order to describe it, we can easily delude ourselves with definitions, which essentially are "hearsay" (verbal explanations not necessarily associated with experience).

Sebek/Auset: All of the beliefs and rationalizations about life, which are carried out at the 8th sphere level are based on our identification with our persons. However lucid, they are sources of self delusion (maya) as they cannot uplift us.

Key Phrases:

Disunion due to segregative thinking; through the use of clever tactics, clever words, adroitness; by paying attention to details; pride in one's education, logical ability, verbal ability; litigations, arguments; having the facts, data, being informed;

Biological correspondences

Physiology: Mercury governs the functions of the motor, and sensory nerves.

Pathology: Neurasthenia, nervous irritability, asthma, bronchitis, stertorous breathing, neuralgia, speech impediments.

Kamitic therapeutics: nervine, emollient.

Chinese Medicine: Lung/Large Intestine system; Wind Disease Patterns.

Auset

Kamitic: Auset

Canaanite: Gabri-El

Kabalistical: Yesod

Yoruba: Yemaya

Indus Kush: Dhumavati

Sphere	Planet	Day
9th	Moon	Monday

Color	Number	Gems
sea blue	7	pearls, moonstone

Time of year: Sidereal full moon in cancer.

Esoteric Herbalism:

Baths: spearmint, lettuce, wild lettuce, purslane.

Oils: spearmint, jasmine

Incense: jasmine, spearmint

Hekau (mantras, words of power):

Spiritual: Dhum, vam

Planetary: Aug Shrang shring shraung

Spiritual Direction: East

Mundane Direction: Northwest

Personality Portfolio:

Personality traits: Through its action on the khaibit (the animal spirit) the cold and moist energy of the Moon has the following effects on the personality (sphere 9):

Emotional traits:

(+): Caring, motherliness, conservative⁸, benevolent, accommodating, sweet mannered, timorous, fearful, comfort loving; wants security, and to be free of the cares and difficulties of life.

(-): Indolent, daydreaming, uncaring, vacillating, neglectful, careless, impressionable, gullible, fearful, idle, hating work, discontented, inclined to intoxicants, living beggarly, unsteadfast.

Mental traits: Mediumistic trance, imitation ("reflection").

Social Correspondences:

Careers, functions: Mother, wife, domestic life, hereditary factors, midwives, nurses, sailors, vagabonds, the masses, teachers of children, midwives, farmers, servants, menial employment, millers, dealers and workers with liquids.

Spiritual Portfolio: devotion, humility, following, mediumistic trance, receptivity, indiscriminate imitation.

Key Phrases:

Catering to the emotions, preferences, love of ease; negligent, careless, indolent; receptivity, impressionability, gullibility; by following, by being humble; caring, nurturing; sympathetic, indulgent, compassionate; relaxed, peaceful; through mediumistic trance.

Biological correspondences

Physiology: the cold and moist energy of the Moon is the basis of the well being of the reproductive (ovaries, uterus), digestive, assimilative, autonomous nervous systems.

8. We cannot make the blanket statement to the effect that the Moon is changeable. As signifier of women, especially mothers, it is more interested in security which is more easily attained through conservatism.

Pathology: infertility, menstrual problems, digestive problems, catarrhal conditions, chlorosis, anemia, edema, dropsy.

Kamitic therapeutics: alterative, diuretic, nutrient.

Chinese Medicine: Stomach system; Digestate Accumulation Patterns; Disease Patterns of Blood (blood vacuity, etc.); Phlegm Disease Patterns.

Spiritual keynotes: Following, humility, caring.

Underlying Principles:

- + By devoting ourselves to realizing our true Self, the indwelling intelligence, we come to realize that the true Self in all beings is none other than the Supreme Being. Thus we elevate our devotion to uplifting our character, and the caring for others to the highest levels of spirituality.
- The ignorance of the divinity of the inner being constituting our true self, and that of others degenerates our caring for ourselves, and others into permissiveness, thus undermining our spiritual development.

Keynotes:(+) devotion to spiritual development; (-) permissiveness, loving of creature comforts, neglectful, fearful.

Spiritual Counsel

Whenever you receive an Auset reading you are being reminded that every emotional experience is a mediumistic trance induction which creates or reinforces a conditioning.

From another perspective, you may be reminded that as Auset is the point through which you express your devotion to things-emotional identification!-, it reveals to you what you truly worship. Is Ausar, the likeness of God in which you are made, what you identify with-care most for-, or is your person-the complex of conditioned thought, and emotional reactions to situations that you identify with? Do you now know which God you worship?

Geb

Kamitic: Geb (Seb)

Canaanite: Sandalphon

Kabalistical: Malkuth

Indus Kush: Bhairavi

Sphere Planet Day

10th earth all

Hekau (mantras, words of power):

Spiritual: Aush Hrauh (Ra's heka)

Spiritual keynotes:

Underlying Principles:

- + Consistent adherence to the laws of health is absolutely necessary for spiritual development, and success in life.

Spiritual Counsel

When you receive a Geb reading you are reminded of the fact that a major component of your spiritual force is sublimated food, water, and oxygen⁹. Adherence to the laws governing health is an essential requirement for the manifestation of spiritual power. This is an important concept to keep in mind, as most people have been misguided by the mistaken belief to the effect that as the physical plane is the effect of the metaphysical forces, the earthly laws need not be observed as all physical ills can be overcome through spiritual work. There is a dangerous half truth at work here. You can influence physical events through the power of your life-force commanded by your will, only if you adhere to earthly laws.

A Geb reading may also refer to the physical resources (money, labor, capital, energy, friends, etc.) that you have or lack for an undertaking. It is also used by the oracle to symbolize the "health" of an undertaking, as well as of the person inquired about.

9. See Chinese medicine, and cosmology where there is a full theory of the sublimation of the gross energy, "chi (which operates the body)" into "jing (active mental energy)," then into "shen (the peaceful state of mental energy corresponding to the meditation state)," and finally into "wu chi" (the undifferentiated state of energy).

Sheps & Dark Deceased

Kamitic: Sheps

Yoruba: Egungun

Esoteric Herbalism:

Baths: Palo Espanta Muerto, Bitter broom

Oils: Cypress, Myrrh, Olibanum

Incense: same as oils

Spiritual keynotes:

Underlying Principles:

- + By cultivating a high level of spirituality one attracts positive or exalted ancestors for mutual assistance in the work of advancing the human family in its spiritual evolutionary career.
- Lack of consistency in the spiritual work, or trafficking with base things or people undermines the spiritual immunity and opens one to influences from dark deceased beings.

Spiritual Counsel

When you receive a Sheps reading you are reminded of your essential immortality, and your kinship with others beyond your immediate blood circle. From another perspective, the fact that there are many individuals who are in between incarnations, is a reminder that there are not enough resources for everyone to be on earth at the same time. You must therefore be grateful for the great privilege to acquire a body to come on earth to further your spiritual growth. Do not waste your short life in the pursuit of earthly things for their sake. It may also be a reminder that your present condition in life indicates your afterlife state. Earn the honor of others in life, i.e., become a Sheps now, and so will it be after life. Your name will continue to live in the memories of others, and by those who will pour libation to your Ka, to enable you to continue your role in guiding the policies of your social group, long after you have departed from the earth.

When you receive a Dark Deceased reading you are being warned that your failure to fully adhere to some spiritual law (shown by the other card) has weakened your spiritual immunity, and thus

opened you to the inimical forces of an earthbound spirit. It may also be a warning of what may become of your afterlife if you waste your incarnation in foolish pursuits and a dissipating way of life.

Nekhebet

Kamitic: Nekhebet, Rehu

Yoruba: Oya

Indus Kush: Rahu

Color	Gems
Dark blue	Onyx, blue sapphire

Esoteric Herbalism: See Seker

Hekau (mantras, words of power):

Spiritual: Kshang

Planetary: Aung hrang hring hraung

When you receive a Nekhebet, or Uatchet reading you are being reminded that you are always affected, and influenced by the subtle electromagnetic forces of the earth, flowing through all things surrounding you. You must thus protect your vitality, and perfect your Men Ab to avoid being swept along by these subliminal (sublunar) forces.

It is also calling your attention to the presence, or use of subliminal factors in a given situation. These operate on three levels. The lowest level employs embedded messages; E.g., the messages that are broadcasted below the level of normal perception (or played backward, or very fast) in department stores to discourage stealing; the so-called self improvement subliminal tapes, and other approaches. The next level employs the emotions of the practitioner synergized by the subtle radiation given off by animal, vegetable, and mineral substances. The events on this level are generally referred to as psychic phenomena, witchcraft (white & black), roots, radiesthesia, crystal healing, fetishes, etc. Its successful employment does not require spiritual power, moral upliftment, or wisdom. It is no different from mixing chemicals to achieve a mechanical effect. The third level employs all hekau, especially the heka Aung Hang Kshang as a means of uniting the will to the Ra force at the level of the Auraut (Ureus) or Ajna psychic center level.

Success in this method, which is the most powerful, comes at the 8th level of meditation. It thus requires spiritual transcendence and understanding. It is important to realize that the highest spiritual powers cannot be used by the ignorant and undisciplined. This is a divine protective mechanism.

Uatchet

The Meanings of the Combined Metutu

AMEN

Amen/Amen

Amen (+)/Amen(+): Neither gain nor loss. Ultimately, there are no gains nor losses behind successes or failures. Nothing can be added to or subtracted from the substance of your being. Your spirit is essentially unconditioned.

Amen (+)/Amen(-): Striving consistently to ignore one's conditioned emotional, and sensual behavioral patterns liberates the spirit's infinite potential to achieve.

Amen (-)/Amen(+): Same as the preceding.

Amen (-)/Amen(-): Perseverance in the attachment, and receptivity to one's conditioned behavioral patterns is the fundamental cause of all failures in life.

Amen/Ausar

Amen (+)/Ausar (+): Amen and Ausar are complementaries (opposite poles of the same reality). In order to realize your infinite potential to be and to achieve, the essence of your being must be free of all conditionings (patterns of belief, emotional responses, etc.).

Amen (+)/Ausar (-): Same counsel as above.

Amen (-)/Ausar (+): Same counsel as above.

Amen (-)/Ausar (-): Failure through consistent perseverance in maintaining attachment to emotional and sensual conditionings, and the failure to transfer the self identification to the indwelling intelligence guiding all physiological and spiritual functions.

Amen/Tehuti

Amen (+)/Tehuti (+): Living the knowledge that the essential state of your being is unconditioned is the prerequisite for the manifestation of wisdom, and trustworthy intuitions.

Amen (+)/Tehuti (-): Same counsel as above.

Amen (-)/Tehuti (+): The good that can come from good counsel, correct intuitions, optimism, will be reduced by

attachment, and receptivity to one's conditioned behavioral patterns.

Amen (-)/Tehuti (-): Where there is attachment, and receptivity to one's conditioned behavioral patterns, there can be no receptivity to wisdom; do not trust your intuitions.

Amen/Seker

Amen (+)/Seker (+): Living the knowledge that the essential state of your being is unconditioned is the prerequisite for the manifestation of your spiritual power; Khepere rising from the waters of Nu.

Amen (+)/Seker (-): All things are the gifts of heaven. They come in their own time. One must learn to wait in cheerfulness, by cultivating appreciation for the structural spirits that maintain order in the world, although they create limitations, and "delays."

Amen (-)/Seker (+): You have good "planning" ability, but your plans are not rooted in "subjective" reality. What works in finite pragmatic situations (blueprints for machines, houses, etc.) does not work in life. We must get in tune with the spiritual entities that are the shaping forces of the structures governing events.

Amen (-)/Seker (-): attachment, and receptivity to one's conditioned behavioral patterns, combined with the incapacity to sustain deep protracted thinking, and the inability to understand the need for structure and limitations, or the lack of planning. A mean existence.

Amen/Maat

Amen (+)/Maat (+): The knowledge that the essential state of your being is unconditioned is the prerequisite for understanding the laws governing the oneness of life. Good fortune.

Amen (+)/Maat (-): The beneficent influences from heaven that are daily showered upon you will be wasted by ignorance of the law, inability to see the whole, lack of sharing, lack of compassion, etc.

Amen (-)/Maat (+): attachment, and receptivity to one's conditioned behavioral patterns will bring harm despite the possession of a view of the whole, knowledge of the law, optimism, and a sharing attitude.

Amen (-)/Maat (-): attachment, and receptivity to one's conditioned behavioral patterns combined with ignorance of the law, greed, extravagance, inability to see the whole, lack of sharing. Failure.

Amen/Herukhuti

Amen (+)/Herukhuti (+): All things arise from the same energy/matter, to ultimately serve the same purpose. They have a common divine mother and father. Fear not, for he who harms another, harms himself.

Amen (+)/Herukhuti (-): The beneficent influences from heaven that are daily showered upon you will be wasted by hastiness, arrogance, impetuosity, rashness, violence, libertinism, etc.

Amen (-)/Herukhuti (+): attachment and receptivity to one's conditioned behavioral patterns will bring harm despite hard work, zealousness, energetic action, initiative, courage, leadership, and entrepreneurship.

Amen (-)/Herukhuti (-): attachment and receptivity to one's conditioned behavioral combined with, or causing hastiness, arrogance, impetuosity, rashness, violence, libertinism.

Amen/Heru

Amen (+)/Heru (+): Take neither gain nor loss to heart. The ultimate goal of all achievements is the recapturing of the original unconditioned state of the spirit.

Amen (+)/Heru (-): The beneficent influences from heaven that are daily showered upon you will be wasted through arrogance, incorrect use of the will, strongheadedness, dictatorialness, unreceptivity to guidance.

Amen (-)/Heru (+): attachment and receptivity to one's conditioned behavioral patterns will bring harm despite good leadership quality, active will, good character, favors from people in authority, etc.

Amen (-)/Heru (-): attachment and receptivity to one's conditioned behavioral patterns combined with, or causing arrogance, incorrect use of the will, strongheadedness, dictatorialness, unreceptivity to guidance.

Amen/Het-Heru

Amen (+)/Het-Heru (+): To embrace the joy of inner peace and tranquility-unassailable by externals is happiness;

Amen (+)/Het-Heru(-): The beneficent gifts of heaven that are given you daily will be wasted by carelessness, negligence, illusions, addiction to pleasure.

Amen (-)/Het-Heru (+): attachment and receptivity to one's conditioned behavioral patterns will bring harm despite an outgoing joyful expression, a healthy urge to experience pleasure, favors from the many well disposed friends.

Amen (-)/Het-Heru (-): attachment and receptivity to one's conditioned behavioral patterns combined with, or causing deviations in the manner in which joy is expressed, pleasure is sought, and wrong ideas about joy (failing to make it the engine for success, and instead waiting for success to be joyful).

Amen/Sebek

Amen (+)/Sebek (+): His reasons for being, and doing are based on the knowledge of the essential state of his being. Good fortune; A good diviner of lots.

Amen (+)/Sebek (-): The beneficent influences from heaven that are daily showered upon you will be wasted by false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes.

Amen (-)/Sebek (+): attachment and receptivity to one's conditioned behavioral patterns will bring harm despite a good education, good logical thinking, attention to details.

Amen (-)/Sebek (-): attachment and receptivity to one's conditioned behavioral patterns combined with, or causing false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes

Amen/Auset

Amen (+)/Auset (+): Ever fruitfulness. Her receptivity goes back to the unconditioned origin of being. What can't she bring forth? When both Amen, and Auset are negative then there are deep problems as such a configuration represents indepth unreceptivity.

Amen (+)/Auset (-): The beneficent influences from heaven that are daily showered upon you will be wasted by indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness, love of ease.

Amen (-)/Auset (+): attachment and receptivity to one's conditioned behavioral patterns will bring harm despite a good memory, a fertile imagination, caring, sincerity, good trance ability, kindness, tenderness.

Amen (-)/Auset (-): attachment and receptivity to one's conditioned behavioral patterns combined with, or causing indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness.

Amen/Geb: See the section under Geb.

As stress is the mother of most illnesses, thus is Hetep, the deepest state of relaxation and inner peace, the supreme mother of healing. All emotions are conditions (conditionings) superimposed upon our essential and original unconditioned nature. In everyday life, this means that to be moved by the unmovable is the greatest manifestation of power; The infinitude of forms in the world are not individual manifestations in and for themselves. They-their infinitude-represent the infinite potential of manifestation of the Supreme Being, thus $0 = 10$.

Amen/Sheps: See the section under Sheps.

Amen(+)/Sheps(+): Success will be achieved by following the great One who rests in Amenta.

Amen/Dark Deceased: See the section under Dark Deceased.

He was shown the way of heaven, yet he did not heed. Now he rests not in peace.

Amen/Nekhebet: See the section under Nekhebet.

Amen/Uatchet: See the section under Uatchet.

AUSAR

Ausar/Amen: Amen and Ausar are complementaries. Where there is being, but no-things (the subjective realm-Amen, Tem), there is One.

Ausar (+)/Amen (+): Perseverance in living as the indwelling intelligence leads to the realization of the original, unconditioned state of the spirit. What then can be denied one?

Ausar (+)/Amen (-): The way is open for the indwelling intelligence to bring about unity, peace, and prosperity but it is obstructed by the perseverance in the attachment and receptivity to one's conditioned behavioral patterns;

Ausar (-)/Amen (+): disunion, ignorance of Self, or the failure to live according to one's true self will be transcended by consistently persevering in detaching oneself from one's emotional and sensual conditioning.

Ausar (-)/Amen (-): disunion, ignorance of Self, or the failure to live according to one's true self combined with the perseverance in the attachment and receptivity to one's conditioned behavioral patterns will keep one in bondage.

Ausar/Ausar

Ausar (+)/Ausar (+): Perseverance in the identification with the indwelling intelligence is the source of all success, health, and prosperity. It favors to go seek out one who has treaded the way back to the true Self.

Ausar (+)/Ausar (-): If today he is Ausar, and tomorrow he is his person, then he is always his person. WHO will invoke the deities on his behalf?

Ausar (-)/Ausar (+): Same as the preceding.

Ausar (-)/Ausar (-): the failure to transfer the self identification to the indwelling intelligence guiding all physiological and spiritual functions. Thus there is no unity, or purpose in his life.

Ausar/Tehuti

Ausar (+)/Tehuti (+): Living the understanding of the oneness of all life, by transcending the identification with the person, is the foundation of wisdom, wealth, and prosperity.

Ausar (+)/Tehuti (-): The way is open for the indwelling intelligence to bring about unity, peace, and prosperity but it is obstructed by incorrect intuitions, judgements, counsel, lack of faith, etc.

Ausar (-)/Tehuti (+): The failure to transfer the self identification to the indwelling intelligence guiding all physiological and spiritual functions leading to disharmony, and obstructions will be overcome by rituals to Tehuti.

Ausar (-)/Tehuti (-): obstructed by incorrect intuitions, judgements, counsel, lack of faith, etc., and the failure to transfer the self identification to the indwelling intelligence guiding all physiological and spiritual functions leading to disharmony, and obstructions; poverty, legal problems, lack of faith. Seek counsel.

Ausar/Seker

Ausar (+)/Seker (+): Living the understanding of the oneness of all life, by transcending the identification with the person, is the foundation of spiritual power.

Ausar (+)/Seker (-): The way is open for the indwelling intelligence to bring about unity, peace, and prosperity but it is obstructed by the incapacity to sustain deep protracted thinking, and the inability to understand the need for structure and limitations.

Ausar (-)/Seker (+): disunion, ignorance of Self, or the failure to live according to one's true self will subtract from the success that can be achieved through the capacity to sustain deep protracted thinking, good organizational ability, and the appreciation for structure, and limitations.

Ausar (-)/Seker (-): disunion, ignorance of Self, or the failure to live according to one's true self will exacerbate the problems arising from the incapacity to sustain deep protracted thinking, and the inability to understand the need for structure and limitations, or the lack of planning.

Ausar/Maat

Ausar (+)/Maat (+): Living the understanding of the oneness of all life, by transcending the identification with the person, is the prime requirement for understanding and living the law of God; gains through the things governed by Maat.

Ausar (+)/Maat (-): The way is open for the indwelling intelligence to bring about unity, peace, and prosperity but it

is obstructed by ignorance of the law, inability to see the whole, lack of sharing, faithlessness.

Ausar (-)/Maat (+): disunion, ignorance of Self, or the failure to live according to one's true self will subtract from the success that can be achieved through a view of the whole, knowledge of the law, optimism, and a sharing attitude.

Ausar (-)/Maat (-): disunion, ignorance of Self, or the failure to live according to one's true self will exacerbate the problems arising from ignorance of the law, inability to see the whole, lack of sharing.

Ausar/Herukhuti

Ausar (+)/Herukhuti (+): Living the understanding of the oneness of all life, by transcending the identification with the person, is the key for unlocking the strength to invoke the sword of justice upon one's person when one has sinned against Maat. And if you have called justice upon yourself, will not justice answer your calls for help?

Ausar (+)/Herukhuti (-): The way is open for the indwelling intelligence to bring about unity, peace, and prosperity but it is obstructed by hastiness, arrogance, impetuosity, rashness, violence, libertinism

Ausar (-)/Herukhuti (+): disunion, ignorance of Self, or the failure to live according to one's true self will subtract from the success that can be achieved through hard work, zealotry, energetic action, initiative, courage, leadership, and entrepreneurship.

Ausar (-)/Herukhuti (-): disunion, ignorance of Self, or the failure to live according to one's true self will exacerbate the problems arising from hastiness, arrogance, impetuosity, rashness, violence, libertinism.

Ausar/Heru

Ausar (+)/Heru (+): The proper use of the will (Men Ab, following sages, oracles, and not taking the lead) leads to the realization of Self.

Ausar (+)/Heru (-): The way is open for the indwelling intelligence to bring about unity, peace, and prosperity but it is obstructed by ignorance of the law governing the will.

Ausar (-)/Heru (+): disunion, ignorance of Self, or the failure to live according to one's true self can be overcome through Men Ab em Aungkh em Maat.

Ausar (-)/Heru (-): disunion, ignorance of Self, or the failure to live according to one's true self will exacerbate the problems arising from arrogance, incorrect use of the will, strongheadedness, dictatorialness, unreceptivity to guidance.

Ausar/Het-Heru

Ausar (+)/Het-Heru (+): Living the understanding of the knowledge of Self, by transcending the identification with the person, is the foundation of inner joy, happiness, fellowship, peace, and harmony between men.

Ausar (+)/Het-Heru (-): The way is open for the indwelling intelligence to bring about unity, peace, and prosperity but it is obstructed by deviations in the manner in which joy is expressed, pleasure is sought, and wrong ideas about joy (failing to make it the engine for success, and instead waiting for success to be joyful).

Ausar (-)/Het-Heru (+): disunion, ignorance of Self, or the failure to live according to one's true self will subtract from the success that can be achieved through an outgoing joyful expression, a healthy urge to experience pleasure.

Ausar (-)/Het-Heru (-): disunion, ignorance of Self, or the failure to live according to one's true self will exacerbate the problems arising from deviations in the manner in which joy is expressed, pleasure is sought, and wrong ideas about joy (failing to make it the engine for success, and instead waiting for success to be joyful).

Ausar/Sebek

Ausar (+)/Sebek (+): Living the understanding of the oneness of all life, and the knowledge of Self by transcending the identification with the person, is the foundation of a proper belief system.

Ausar (+)/Sebek (-): The way is open for the indwelling intelligence to bring about unity, peace, and prosperity but it is obstructed by a false belief system, pride, selfishness, etc.

Ausar (-)/Sebek (+): disunion, ignorance of Self, or the failure to live according to one's true self will subtract from

the success that can be achieved through a good education, good logical thinking, attention to details.

Ausar (-)/Sebek (-): disunion, ignorance of Self, or the failure to live according to one's true self will exacerbate the problems arising from false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes.

Ausar/Auset

Ausar (+)/Auset (+): The Self and the person are united in a blissful mystic marriage. Good fortune, prosperity, health, and peace.

Ausar (+)/Auset (-): The way is open for the indwelling intelligence to bring about unity, peace, and prosperity but it is obstructed by indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness. Negative mediumism.

Ausar (-)/Auset (+): disunion, ignorance of Self, or the failure to live according to one's true self will subtract from the success that can be achieved through a good memory, a fertile imagination, caring, sincerity, good trance ability, kindness, tenderness.

Ausar (-)/Auset (-): disunion, ignorance of Self, or the failure to live according to one's true self will exacerbate the problems arising from indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness. Negative mediumism.

Ausar/Geb: See the section under Geb.

Ausar (+)/Geb (+): Living the understanding of the oneness of all life, and the knowledge of Self-the indwelling intelligence - by transcending the identification with the person, is the foundation of health, and the attainment of all earthly goals.

Ausar (+)/Geb (-): The way is open for the indwelling intelligence to bring about unity, peace, and prosperity but it is obstructed by poor health, or lack of resources, etc.

Ausar/Sheps: See the section under Sheps.

Success will come from performing an Ausar ritual on behalf of your ancestor.

Ausar/Dark Deceased: See the section under Dark Deceased.

The troubled one will be uplifted by hearing the teachings of the Pert em Heru (Egyptian book of the Dead).

Ausar/Nekhebet: See the section under Nekhebet.

Ausar/Uatchet: See the section under Uatchet.

TEHUTI

Tehuti/Amen

Tehuti (+)/Amen (+): He who knows the way to the sage, and the oracles knows the way to the highest aspect of his being, and Hetep (the eternal inner peace);

Tehuti (+)/Amen (-): The way is open for success if faith, optimism in wise counsel, and correct intuitions are cultivated, but one is obstructed by the self-identification with one's conditioned being-the person.

Tehuti (-)/Amen (+): incorrect intuitions, misjudgments, bad counsel; and lack of faith will be corrected by the self-identification with one's unconditioned essential inner being.

Tehuti (-)/Amen (-): incorrect intuitions, misjudgments, bad counsel; and lack of faith coupled with ignorance of one's essence. One thus loses direction over one's life.

Tehuti/Ausar

Tehuti (+)/Ausar (+): Faith, optimism, and wise counsel complemented by Self knowledge. Good fortune. Dwelling in the inner self, instead of the person is the means of developing the wisdom faculty; trustworthy intuitions.

Tehuti (+)/Ausar (-): Faith, optimism, and wise counsel are obstructed by the lack of self knowledge, or the failure to live according to it.

Tehuti (-)/Ausar (+): Unfounded optimism, doubtfulness, bad judgement, lack of faith, obstructing the positive activities of the indwelling Self.

Tehuti (-)/Ausar (-): Wrong judgement, or bad counsel complicated by ignorance of Self, or the failure to live accordingly. Misfortune.

Tehuti/Tehuti

Tehuti (+)/Tehuti (+): Good counsel, or good judgement doubled. Good fortune.

Tehuti (+)/Tehuti (-): Good judgement, coupled with bad judgement. Seeking guidance in too many places, or failing to give one's head up when seeking counsel will only lead to confusion.

Tehuti (-)/Tehuti (+): Same as the preceding.

Tehuti (-)/Tehuti (-): Doubts, unfounded optimism, bad judgements, lack of faith; untrustworthy intuitions. You must go to counsel.

Tehuti/Seker

Tehuti (+)/Seker (+): Wise counsel, and good judgement coupled with discipline, organizational ability, and the appreciation for structure (limitations) are the skills that lead to success in large, time-consuming, and complex undertakings; Without wisdom there is no spiritual power, nor trustworthy plans.

Tehuti (+)/Seker (-): Although there can be good fortune arising from optimism, wise counsel, and good judgement, the lack of discipline, structure will create delays, or failure. Beware of poverty.

Tehuti (-)/Seker (+): incorrect intuitions, misjudgments, bad counsel, and lack of faith will be corrected by deep meditation, and strict adherence to structural guidelines.

Tehuti (-)/Seker (-): Bad judgement, delays, obstructions. Beware of legal troubles, separations.

Tehuti/Maat

Tehuti (+)/Maat (+): The way is open for a joyful period, contentment, well being, expansion, success.

Tehuti (+)/Maat (-): There is good judgement but a view of the whole is lacking; beware of extravagance, greed, false sense of security from the belief that you know.

Tehuti (-)/Maat (+): the inability to identify the applicable principle in a given situation even though there is a view of the whole, knowledge of the law. Danger from dogmatism, unjust laws.

Tehuti (-)/Maat (-): Bad judgement coupled with ignorance of the law, of cosmologies, etc. Misfortune.

Tehuti/Herukhuti

Tehuti (+)/Herukhuti (+): Wisdom coupled with force. Wise counsel carried out with zealousness. Success. Successful business executives, negotiators.

Tehuti (+)/Herukhuti (-): Hotheadedness, opposition to wise counsel, extravagance, opposition to the law.

Tehuti (-)/Herukhuti (+): incorrect intuitions, misjudgments, bad counsel; and lack of faith serving as the foundation of hard work, zealousness, energetic action.

Tehuti (-)/Herukhuti (-): hastiness, exaggeration, intemperance, disputes, extravagance, anarchy, lack of enterprise.

Tehuti/Heru

Tehuti (+)/Heru (+): The will is successful through maintaining faith, and optimism in wise counsel; He lets the oracle, and the sage guide his decisions. Good fortune.

Tehuti (+)/Heru (-) Arrogance, and unreceptivity to wise counsel. Misfortune. Trouble with officials, the law.

Tehuti (-)/Heru (+): incorrect intuitions, judgements, counsel; lack of faith, etc. guiding the will, decisions, the policy of people in authoritative positions, the head of household, father, etc.

Tehuti (-)/Heru (-): obstructed by arrogance, incorrect use of the will, strongheadedness, incorrect intuitions, judgements, counsel, lack of faith, etc. A very dangerous reading as there is a severe lack of receptivity; beware of extravagance, extremes, greed, overconfidence, overexpansiveness.

Tehuti/Het-Heru

Tehuti (+)/Het-Heru (+): maintaining faith, and optimism in wise counsel coupled with a joyful expression, and healthy sexual attitude leads to success, charming and pleasurable life experiences; a happy marriage, wealth, and health; the

successful arousal of Ra. Good health, power, and good fortune.

Tehuti (+)/Het-Heru (-): The way is open for success if faith, optimism in wise counsel, and correct intuitions are cultivated, but one is obstructed by deviations in the manner in which joy is expressed, pleasure is sought, and wrong ideas about joy (failing to make it the engine for success, and instead waiting for success to be joyful).

Tehuti (-)/Het-Heru (+): incorrect intuitions, judgements, counsel, etc. acting in combination with a joyful expression, and healthy urge for pleasure. Enjoyment and happiness will give way to disappointment, and disillusionment. Hung String Aung heka.

Tehuti (-)/Het-Heru (-): incorrect intuitions, misjudgments, bad counsel; and lack of faith coupled with deviations in the manner in which joy is expressed, pleasure is sought, and wrong ideas about joy (failing to make it the engine for success, and instead waiting for success to be joyful).

Tehuti/Sebek

Tehuti (+)/Sebek (+): When education, beliefs, and rationalizations are in harmony with the oracles, and the counsel from the sage, the way to success is open.

Tehuti (+)/Sebek (-): the success that can be achieved through maintaining faith, and optimism in wise counsel is jeopardized by false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes.

Tehuti (-)/Sebek (+): incorrect intuitions, misjudgments, bad counsel; and lack of faith serving as the premise for reasoning. Grave errors will result.

Tehuti (-)/Sebek (-): incorrect intuitions, misjudgments, bad counsel; and lack of faith coupled with wrong education, faulty logic, pride, selfishness, a trickster mentality; foolhardiness, craziness, insanity. Rituals to Sebek, and Tehuti. Palm oil oleation therapy (see Ayurvedic medicine), nervines, etc. Seek counsel, but be honest, and sincere. You can only trick yourself.

Tehuti/Auset

Tehuti (+)/Auset (+): maintaining faith, and optimism in wise counsel from oracles, and sages, and correct intuitions

coupled with an unswerving devotion to uplifting your character (identifying with Ausar), and the care of others is the foundation for building strong humanistic institutions (family, nation, fraternal organizations, etc.).

Tehuti (+)/Auset (-): The way is open for success if faith, optimism in wise counsel, and correct intuitions are cultivated, but one is obstructed by a lack of receptivity, and self-identification with one's person.

Tehuti (-)/Auset (+): incorrect intuitions, misjudgments, bad counsel, and lack of faith acting as the thought components of well meaning feelings. Problems in spite of sincerity.

Tehuti (-)/Auset (-): incorrect intuitions, misjudgments, bad counsel; and lack of faith coupled with a careless, negligent, "emotionally sensitive," unreceptive attitude. Be humble, allow yourself to be guided.

Tehuti/Geb: See the section under Geb.

Tehuti (+)/Geb (+): A way of life in which faith, and optimism in wise counsel are maintained are keys to maintaining good health, and the successful attainments of earthly needs.

Tehuti (+)/Geb (-): Measures to improve health, and secure the earthly needs will be helped by maintaining faith, and optimism in wise counsel.

Tehuti (-)/Geb (+): incorrect intuitions, misjudgments, bad counsel; and lack of faith will be reversed by improving your health, and conditioning.

Tehuti (-)/Geb (-): incorrect intuitions, misjudgments, bad counsel; and lack of faith influenced by poor health; see the Tehuti physiological data.

Tehuti/Sheps: See the section under Sheps.

Tehuti/Dark Deceased: See the section under Dark Deceased.

Tehuti/Nekhebet: See the section under Nekhebet.

Tehuti/Uatchet: See the section under Uatchet.

SEKER

Seker/Amen

Seker(+)/Amen (+): Great spiritual power (shekhem ur) is achieved through the consistent perseverance in the detachment from one's emotional and sensual conditioning; By living in harmony with the cycles one comes to understand that all things ultimately come from heaven, and in their own time. Patience, and submission to the will of heaven is the way to a successful destiny.

Seker(+)/Amen (-): the success that can be achieved through the capacity to sustain deep protracted thinking, good organizational ability, and the appreciation for structure, and limitations is jeopardized by the perseverance in the attachment and receptivity to one's conditioned behavioral patterns.

Seker(-)/Amen (+): lack of spiritual power, lack of success in working with hekau (words of power), lack of concentration will be corrected by consistently persevering in detaching oneself from one's emotional and sensual conditioning.

Seker(-)/Amen (-): lack of spiritual power, lack of success in working with hekau (words of power), lack of concentration is caused by, or is exacerbated by the perseverance in the attachment and receptivity to one's conditioned behavioral patterns.

Seker/Ausar

Seker(+)/Ausar (+): the capacity to sustain deep protracted thinking, good organizational ability, and the appreciation for structure, and limitations is instrumental in achieving the realization of the true self.

Seker(+)/Ausar (-): the success that can be achieved through the capacity to sustain deep protracted thinking, good organizational ability, and the appreciation for structure, and limitations is jeopardized by disunion, ignorance of Self, or the failure to live according to one's true self.

Seker(-)/Ausar (+): lack of spiritual power, lack of success in working with hekau (words of power), lack of concentration will subtract from the success that can be achieved in spite of self knowledge. The essence of spiritual

development is practice, not mere sermonizing, and studying.

Seker(-)/Ausar (-): lack of spiritual power, lack of success in working with hekau (words of power), lack of concentration will exacerbate the problems arising from disunion, ignorance of Self, or the failure to live according to one's true self.

Seker/Tehuti

Seker(+)/Tehuti (+): He stills the thought processes and intuitively knows the underlying truths leading to Khemennu. His infinite patience, and wisdom makes him an indefatigable teacher. You must go see him; Success in large, and time consuming undertakings.

Seker(+)/Tehuti (-): Despite the ability to provide a good structure, and good organization, delays, or failures will result from incorrect intuitions, misjudgments, bad counsel; and lack of faith.

Seker(-)/Tehuti (+): lack of planning, or the incapacity to sustain deep protracted thinking, and the inability to understand the need for structure and limitations will subtract from the success that can be achieved through maintaining faith, and optimism in wise counsel.

Seker(-)/Tehuti (-): incapacity to sustain deep protracted thinking, and the inability to understand the need for structure and limitations coupled with incorrect intuitions, misjudgments, bad counsel; and lack of faith will lead to failures, delay, poverty, legal problems, temptation to ease the way through antisocial behavior, misanthropy.

Seker/Seker

Seker(+)/Seker(+): the capacity to sustain deep protracted thinking, good organizational ability, and the appreciation for structure, and limitations.

Seker(+)/Seker(-): The success that is promised by good planning is in danger because of pessimism, doubts, worries, etc.

Seker(-)/Seker(+): Same as in the preceding.

Seker(-)/Seker(-): the incapacity to sustain deep protracted thinking, and the inability to understand the need for structure and limitations, or the lack of planning combined with, or causing pessimism, worries, depression, etc.

Seker/Maat

Seker(+)/Maat (+): the capacity to sustain deep protracted thinking, good organizational ability, and the appreciation for structure, and limitations coupled with a view of the whole, or knowledge of the law is the foundation for long lasting success in business, religious, and theoretical sciences; wealth, prosperity, good health.

Seker(+)/Maat (-): the way is open for success through the capacity to sustain deep protracted thinking, good organizational ability, and the appreciation for structure, and limitations, but there is obstruction caused by ignorance of the law, inability to see the whole, lack of sharing, Business failures, financial losses.

Seker (-)/Maat (+): lack of planning, or the incapacity to sustain deep protracted thinking, and the inability to understand the need for structure and limitations will subtract from the success that can be achieved through a view of the whole, knowledge of the law, optimism, and a sharing attitude

Seker(-)/Maat (-): incapacity to sustain deep protracted thinking, and the inability to understand the need for structure and limitations coupled with ignorance of the law, inability to see the whole, lack of sharing, and faithlessness, Deep financial losses, unhappiness, separations, law suits.

Seker/Herukhuti

Seker (+)/Herukhuti (+): the capacity to sustain deep protracted thinking, good organizational ability, and the appreciation for structure, and limitations working combined with zealous, and energetic action. One can overcome great obstructions encountered in large, difficult, complex and even dangerous projects.

Seker (+)/Herukhuti (-): the success that would otherwise come from good organization, structure, and limitations is jeopardized by the lack of enterprise, or hastiness, arrogance, impetuosity, rashness, violence, libertinism disguised as the love for freedom; Reticence, and reserve in speech, and actions will avoid conflict.

Seker (-)/Herukhuti (+): incapacity to sustain deep protracted thinking, and the inability to understand the need for structure and limitations will subtract from the success

that can be achieved through hard, and indefatigable work. Small success after much delay. Wasted effort due to lack of, or the inability to plan. Seek the assistance of elders, or the experienced. One has given too much thought to an issue, act!

Seker(-)/Herukhati (-): Strong inner conflict caused by the opposition between inhibitions, and sensual impulses; between the desire to overcome an opposition and too much thinking about it. Difficulties from rogues; attempts to overcome obstructions, and denials through violence.

Seker/Heru

Seker (+)/Heru (+): the capacity to sustain deep protracted thinking, good organizational ability, and the appreciation for structure, and limitations in associations with an enlightened will, and magnanimity is the foundation of good government, and administration. It will lead to power, honors, appreciation from people in authority, success in litigation. Success in undertakings demanding steadfastness, reliability, slow and steady growth.

Seker (+)/Heru (-): the administrative success that would otherwise be achieved through the capacity to sustain deep protracted thinking, good organizational ability, and the appreciation for structure, and limitations is thrown away through arrogance, dictatorialness, extravagance, lack of vitality.

Seker (-)/Heru (+): the absence of a plan, or the incapacity to sustain deep protracted thinking, will undermine a strong and enlightened will. There will be a lack of staying power and steadfastness.

Seker (-)/Heru (-): severe restrictions, limitations, delays, and obstructions which will not be adequately met due to a lack of vitality, or an ignorant will; officials may be demoted due to gross mismanagement.

Seker/Het-Heru

Seker (+)/Het-Heru (+): A serious attitude towards love, art, and social protocols; a sense of duty in love relations, the taking of life seriously yet joyfully, fully enjoying pleasures yet limiting them, relations with older people, a deep and powerful imagination, clairvoyance.

Seker (+)/Het-Heru (-): the success that can be achieved through the capacity to sustain deep protracted thinking, good organizational ability, and the appreciation for structure, and limitations is jeopardized by carelessness, playfulness, negligence, extravagance.

Seker (-)/Het-Heru (+) inner tension, and conflict caused by inhibitions, or unnatural scruples in opposition to the urge to experience joy, and pleasure.

Seker (-)/Het-Heru (-): jealousy, sexual inhibitions, coldheartedness; separations, aberrant urges.

Seker/Sebek

Seker (+)/Sebek (+): the capacity to sustain deep protracted thinking, good organizational ability, and the appreciation for structure, and limitations coupled with good attention to definitions, descriptions, phases of operation, logics, and details. Success in scholarly, philosophical, and scientific endeavors.

Seker (+)/Sebek (-): the success that can be achieved through a good plan, organization and structure is jeopardized by false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes. A reputation built through many years of hard work is jeopardized by slanderers, mischief workers, gossipers. The young and inexperienced should let the elder, and experienced lead.

Seker (-)/Sebek (+): incapacity to sustain deep protracted thinking, and the inability to understand the need for structure and limitations will be compensated by a good education in the subject inquired about.

Seker (-)/Sebek (-): One is afflicted by the incapacity to sustain deep protracted thinking, and the inability to understand the need for structure and limitations coupled with false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes. Lack of planning coupled with wrong ideas, and illogical thinking. There will be delays, failure, false theories. Beware of misrepresentations; mistrustfulness. Nervines, and rest might prove helpful.

Seker/Auset:

Seker (+)/Auset (+): The capacity for deep concentration combined with trance ability; a successful medium. Steadfast in caring for others, sense of duty, a strong home life, a strong nation; a stern mother.

Seker (+)/Auset (-): The capacity for deep concentration combined with negative, careless, or untrained mediumism, daydreaming; a good plan fails due to carelessness.

Seker (-)/Auset (+): Overthinking (causing brain fog, and confusion), or the incapacity to think deeply will be overcome through rituals to Auset, trance work.

Seker (-)/Auset (-): Overthinking (causing brain fog, and confusion), or the incapacity to think deeply combined with impressionability, daydreaming leading to fearfulness, depression, lack of self-confidence, inhibitions, vacillation, moodiness. Bad effects of excessive sedentary habits; the constant dwelling on morbid thoughts.

Seker/Geb: See the section under Geb.

Seker/Sheps: See the section under Sheps.

Seker/Dark Deceased

Seker/Nekhebet: See the section under Nekhebet.

Seker/Uatchet: See the section under Uatchet.

MAAT

Maat/Amen

Maat (+)/Amen (+): Your wealth ultimately comes from heaven where it is owned in common with all others.

Maat (+)/Amen (-): the success that can come from having a view of the whole, knowledge of the law, optimism, and a sharing attitude will be jeopardized by attachment and receptivity to conditioned behavioral patterns; Material success, but spiritual failure.

Maat (-)/Amen (+): Establish yourself in Hetep, and your "luck" will change for the better.

Maat (-)/Amen (-): A man seeks to accumulate wealth to satisfy his inner emptiness. There will be disappointment, and unhappiness in the midst of plenty.

Maat/Ausar

Maat (+)/Ausar (+): Observing the divine law in our daily lives is the substance of our identification with the divine part of our being; Your greatest wealth is your oneness with others.

Maat (+)/Ausar (-): It matters not how well you know the divine law. If you do not identify with your true self-the indwelling intelligence, there will be evil.

Maat (-)/Ausar (+): ignorance of the law, inability to see the whole, lack of sharing and optimism will be reversed through rituals to Ausar.

Maat (-)/Ausar (-): ignorance of the law, inability to see the whole, lack of sharing, faithlessness combined with ignorance of Self, or the failure to live according to one's true self. There will be much evil, and problems in life.

Maat/Tehuti

Maat (+)/Tehuti (+): The way is open for a joyful period, contentment, well being, expansion, success.

Maat (+)/Tehuti (-): Although there may be a view of the whole, the inability to identify the applicable part will lead to wrong judgements. Problems with the judiciary system.

Maat (-)/Tehuti (+): ignorance of the law, inability to see the whole, lack of sharing, faithlessness. See the sage, expert, teacher, use the oracles consistently.

Maat (-)/Tehuti (-): ignorance of the law, inability to see the whole, lack of sharing combined with incorrect intuitions, misjudgments, bad counsel; and lack of faith. Failure, poverty, misfortune, trouble with the law.

Maat/Seker

Maat (+)/Seker (+): the capacity to sustain deep protracted thinking, good organizational ability, and the appreciation for structure, and limitations coupled with a view of the whole, or knowledge of the law is the foundation for long lasting success in business, religious, and theoretical sciences; wealth, prosperity, good health.

Maat (+)/Seker (-): The success that is readily available through a view of the whole, knowledge of the law, a sharing heart, optimism is jeopardized by incapacity to sustain deep protracted thinking, and the inability to understand the need

for structure and limitations; from lack of or bad planning. Unfounded optimism.

Maat (-)/Seker (+): the capacity to sustain deep protracted thinking, good organizational ability, and the appreciation for structure, and limitations, or good planning will compensate for ignorance of the law, inability to see the whole, lack of sharing, faithlessness. Small success will come from long, hard work, and thoughtful planning. There will be some losses.

Maat (-)/Seker (-): greed, overexpansiveness, false beliefs, ignorance of the law combined with a disregard for structure, and plans; depression, worries, separations, mean behavior, erroneous theories and philosophies; Poverty.

Maat/Maat

Maat (+)/Maat (+): One succeeds, accumulates wealth, friends, position, fame by abiding in the law, and a loving, compassionate, and sharing attitude.

Maat (+)/Maat (-): Only a fool attempts to maintain a book of accounts on the living of truth. It is only truth when it is lived daily. Today as yesterday. Tomorrow as today. Truth!

Maat (-)/Maat (+): Same as in the preceding.

Maat (-)/Maat (-): ignorance of the law, inability to see the whole, lack of sharing, extravagance, greed

Maat/Herukhuti

Maat (+)/Herukhuti (+): The law (spiritual, or mundane) is backed by force. The young spirit will not embrace truth for the love of it. Until maturity is attained, the law must be backed by force. A strong faith in the law wedded to a strong enterprising spirit. Major success.

Maat (+)/Herukhuti (-): the success that can be achieved through a view of the whole, knowledge of the law, sharing is in jeopardy by hastiness, arrogance, impetuosity, rashness, violence, libertinism. Beware of extravagance, overconfidence.

Maat (-)/Herukhuti (+): Fearlessness, zealotry, the capacity for hard work will compensate for the ignorance of the law, inability to see the whole, lack of sharing. Perseverance in this unfortunate way will yield little net returns. One will work hard with little cooperation from

others, without joy. What is made will be lost as quickly as earned.

Maat (-)/Herukhuti (-): extravagance, greed, rashness, extreme sensuality, libertinism, opposition to rules and order. Trouble, and failures. Injustice.

Maat/Heru

Maat (+)/Heru (+): an enlightened will is guided by the view of the whole, knowledge of the law, optimism. Success; good character; a religious individual.

Maat (+)/Heru (-): success can be achieved through a view of the whole, knowledge of the law, optimism, and a sharing attitude, but it is jeopardized by arrogance, incorrect use of the will, strongheadedness; unmerited wealth.

Maat (-)/Heru (+): ignorance of the law, inability to see the whole, lack of sharing, and faithlessness will subtract from the success that can be achieved through a good character, good leadership, and the proper use of the will. Nourish yourself with the teachings of Maat.

Maat (-)/Heru (-): ignorance of the law, inability to see the whole, lack of sharing, greed, faithlessness combined with arrogance, incorrect use of the will, strongheadedness; problems with people in position of authority, the law.

Maat/Het-Heru

Maat (+)/Het-Heru (+): a view of the whole, knowledge of the law, optimism, and a sharing attitude combined with an outgoing joyful expression, a healthy urge to experience pleasure; a happy marriage, success in business, a harmonious partnership, good health; Maat is the food and drink of Ra. An abundant life-force is aroused by living the law in combination with a healthy expression of joy. Great success.

Maat (+)/Het-Heru (-): Wealth and success will be jeopardized by sensual excesses.

Maat (-)/Het-Heru (+): Very much like the following but with better chances of redemption; redemption through rituals to Maat, and study of the law.

Maat (-)/Het-Heru (-): excessive love, and greed for sensual gratification; great dissipation; extreme

carelessness, love of ease, craving for "nice things"; spends millions on artwork, jewelry; profligate.

Maat/Sebek

Maat (+)/Sebek (+): a view of the whole, knowledge of the law, optimism, and a sharing attitude coupled with a correct belief system, and good logical thinking. The ability to relate specifics to their parental general principle. Success.

Maat (+)/Sebek (-): the matter is known generally, but one is unable to identify the related specific examples. For example, a person may know that it is unlawful to poison others even though death, or severe illness does not ensue, but they fail to realize that forcing others to inhale their cigarette smoke is a species of the same general principle. Improperly applied laws, bad rulings.

Maat (-)/Sebek (+): ignorance of the law, inability to see the whole, inability to share are the foundation of the premises upon which the reasonings of the subject are based.

Maat (-)/Sebek (-): ignorance of the law, inability to see the whole, lack of sharing combined with false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes. Very irrational behavior.

Maat/Auset

Maat (+)/Auset (+): One has achieved one's goal through the power of mediumistic trance (the full moon!). There will be good fortune as long as one does not fall into the belief that this is the way, as it does not, by itself, lead to spiritual development.

Maat (+)/Auset (-): the wealth that you have accumulated, or can accumulate through observance of the law, optimism, etc. is jeopardized by indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness, carelessness.

Maat (-)/Auset (+): the negative side of Maat can be overcome through mediumistic trance.

Maat (-)/Auset (-): ignorance of the law, inability to see the whole, lack of sharing, greed, extravagance combined with indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness, carelessness.

Maat/Geb: See the section under Geb.

Maat/Sheps: See the section under Sheps.

Maat/Dark Deceased: See the section under Dark Deceased.

Maat/Nekhebet: See the section under Nekhebet.

Maat/Uatchet: See the section under Uatchet.

HERUKHUTI

Herukhuti/Amen

Herukhuti (+)/Amen (+): true justice is achieved when law enforcers are consistently persevering in detaching themselves from their emotional and sensual conditioning.

Herukhuti (+)/Amen (-): although law enforcers mean well, their attachment to their emotional, and sensual conditioning will lead to injustice (revenge, etc.).

Herukhuti (-)/Amen (+): hastiness, arrogance, impetuousness, rashness, violence, libertinism will be overcome by consistently persevering in detaching oneself from one's emotional and sensual conditionings; Working without seeking credit will avoid conflict.

Herukhuti (-)/Amen (-): hastiness, arrogance, impetuousness, rashness, violence, libertinism will be exacerbated by attachment and receptivity to one's conditioned behavioral patterns.

Herukhuti/Ausar

Herukhuti (+)/Ausar (+): He cuts himself from his person to identify with his Self; the source of true courage.

Herukhuti (+)/Ausar (-): hard work, zealousness, energetic action will be jeopardized by disunion, lack of self knowledge.

Herukhuti (-)/Ausar (+): hastiness, arrogance, impetuousness, rashness, violence, libertinism will subtract from the success that can be achieved by the harmonizing influences of the indwelling intelligence.

Herukhuti (-)/Ausar (-): hastiness, arrogance, impetuousness, rashness, violence, libertinism. The failure to transfer the self identification to the indwelling

intelligence; great danger. Accidents, wars, violent confrontations, brutality, or lack of ambition and enterprise.

Herukhuti/Tehuti

Herukhuti (+)/Tehuti (+): Force must be complemented and guided by wisdom. Good fortune.

Herukhuti (+)/Tehuti (-): Zealous, and energetic action will meet with failure due to bad judgement, or unwise counsel.

Herukhuti (-)/Tehuti (+): hastiness, arrogance, impetuosity, rashness, violence, libertinism will subtract from the success that can be achieved through good counsel, correct intuitions, optimism; The conflict will be resolved by the source of truth that is beyond all question of bias. What other than the oracle is there?

Herukhuti (-)/Tehuti (-): hastiness, arrogance, impetuosity, rashness, violence, libertinism will be exacerbated by incorrect intuitions, misjudgments, bad counsel; and lack of faith.

Herukhuti/Seker

Herukhuti (+)/Seker (+): analytical ability combined with good powers of concentration, and organizing; scientific researchers. Capacity for hard and long sustained work; The army is lead by elders. Good fortune; One goes forward with a plan, organization, and discipline. Good fortune.

Herukhuti (+)/Seker (-): the success that can be achieved through hard work, zealousness, energetic action, initiative, courage, leadership, and entrepreneurship is jeopardized by lack of planning, steadfastness.

Herukhuti (-)/Seker (+): hastiness, arrogance, impetuosity, rashness, violence, libertinism will subtract from the success that can be achieved through the capacity to sustain deep protracted thinking, good organizational ability, and the appreciation for structure, and limitations; One is checked in one's forward movement by the inner forces of order. Submit in humility.

Herukhuti (-)/Seker (-): hastiness, arrogance, impetuosity, rashness, violence, libertinism be exacerbated by the lack of spiritual power, lack of success in

working with hekau (words of power), lack of concentration; Starting, or going forward without a plan will lead you into complications, and obstructions.

Herukhuti/Maat:

Herukhuti (+)/Maat (+): They are supplementaries. Herukhuti receives from Maat the foundation for its execution of justice. Without Herukhuti how many will listen to Maat? Their working together is the preservation of order, and harmony in society; The carrying out of penalties, wars, and the use of force to right or prevent wrongs must be based on divine law.

Herukhuti (+)/Maat (-): the success that can come from hard work, zealotry, energetic action is jeopardized by ignorance of the law, inability to see the whole, lack of sharing.

Herukhuti (-)/Maat (+): hastiness, arrogance, impetuosity, rashness, violence, libertinism will subtract from the success that can be achieved through a view of the whole, knowledge of the law, optimism, and a sharing attitude; Sticks and stones are stronger than words, thus you proceed on the offensive. But as right is not on your side, humiliation. Thus the gentle feather of Maat restrains the strong.

Herukhuti (-)/Maat (-): hastiness, arrogance, impetuosity, rashness, violence, libertinism combined with ignorance of the law, inability to see the whole, lack of sharing; greed, problems with the law and officials.

Herukhuti/Herukhuti

Herukhuti (+)/Herukhuti (+): success through hard work, zealotry, energetic action, initiative, courage, leadership, and entrepreneurship. Maintain awareness of the principles of just treatment of others. It is the source of the divine assistance for the overcoming of the obstructions in your way.

Herukhuti (+)/Herukhuti (-): the success that can be achieved through hard work, zealotry, initiative, courage is in jeopardy by accidents, arrogance, rashness, etc.; beware of fire, weapons, sharp instruments, etc.

Herukhuti (-)/Herukhuti (+): Your opponent's strength is superior to yours. Retreat; curb your rashness, overconfidence.

Herukhuti (-)/Herukhuti (-): hastiness, arrogance, impetuosity, rashness, violence, libertinism; danger from fire, weapons, accidents, mean people, alcoholic indulgence, drugs, tobacco.

Herukhuti/Heru

Herukhuti (+)/Heru (+): the capacity for hard work, zealousness, energetic action, enterprise, initiative, fair play combined with an enlightened will, and magnanimity are qualities that make for powerful leadership, and great accomplishments. Beware of overstrain; The confidence of the warriors will be bolstered if the leader fights with them.

Herukhuti (+)/Heru (-): the success that can be achieved through hard work, zealousness, energetic action, initiative, courage, leadership, and entrepreneurship can be jeopardized by arrogance, incorrect use of the will, strongheadedness, dictatorialness.

Herukhuti (-)/Heru (+): hastiness, arrogance, impetuosity, rashness, violence, libertinism will subtract from the success that can be achieved through good administrative abilities; The conflict, and contention can be resolved by a person who possesses the authority, and impartiality (independence of the will); There are times when a man has no choice but to proceed with a dangerous enterprise. Men Ab is the key for successfully treading on the tail of a tiger, as it is the foundation of caution, and circumspection.

Herukhuti (-)/Heru (-): hastiness, arrogance, impetuosity, rashness, violence, libertinism combined with an ignorant self-willedness; An army without leadership. Mob violence.

Herukhuti/Het-Heru

Herukhuti (+)/Het-Heru (+): inflamed passions, sexual desire; zealousness, energetic action combined with a fertile imagination, the ability to coordinate; small successes.

Herukhuti (+)/Het-Heru (-): the success that can be achieved through hard work, zealousness, energetic action, initiative, courage, leadership, and entrepreneurship is

jeopardized by carelessness, negligence, illusions, addiction to pleasure; surgery of the female organs.

Herukhuti (-)/Het-Heru (+): over exaggerated sensualism and passion, too amorous, hard to satisfy

Herukhuti (-)/Het-Heru (-): immorality, wayward impulses, wanderlust, excessive passion, tactlessness; excessive menstrual flow.

Herukhuti/Sebek

Herukhuti (+)/Sebek (+): analytical ability combined with attention to details are essential for discriminating, and separating issues in a complex situation. Success in litigations, scientific inquiries, difficult negotiations. Championing a cause through the media.

Herukhuti (+)/Sebek (-): Differences are understood generally, and in principle, but there is an inability to identify the specific manifestations associated with them. One is up to the struggle but fails to clearly communicate one's position.

Herukhuti (-)/Sebek (+): Despite the correctness of one's logic, and rationalizations, one is not motivated by truth but by anger, revenge, rash impulses, jealousy, etc.

Herukhuti (-)/Sebek (-): hastiness, arrogance, impetuosity, rashness, violence, libertinism combined with false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes.

Herukhuti/Auset

Herukhuti (+)/Auset (+): the courage to sacrifice for others.

Herukhuti (+)/Auset (-): the success that can be achieved through hard work, jealousy, energetic action, initiative, courage, leadership, and entrepreneurship is jeopardized by indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness.

Herukhuti (-)/Auset (+): excitable behavior, excessive emotionalism, very impulsive.

Herukhuti (-)/Auset (-): very impulsive behavior, exaggerated emotionalism.

Herukhuti/Geb: See the section under Geb.

Herukhuti/Sheps: See the section under Sheps.

Herukhuti/Dark Deceased: See the section under Dark Deceased.

Herukhuti/Nekhebet: See the section under Nekhebet.

Herukhuti/Uatchet: See the section under Uatchet.

HERU

Heru/Amen

Heru (+)/Amen (+): Perseverance in the practice of the Men Ab meditation system will lead to realization of the essence of one's being; striving consistently to ignore one's conditioned emotional, and sensual behavioral patterns will liberate the will from the domination of the animal spirit.

Heru (+)/Amen (-): the success that can be achieved through a "strong will," good administrative skill, and magnanimity is jeopardized by attachment and receptivity to one's conditioned behavioral patterns.

Heru (-)/Amen (+): arrogance, incorrect use of the will, strongheadedness, dictatorialness, unreceptivity to guidance can be overcome through consistent perseverance in maintaining detachment from one's emotional and sensual conditionings.

Heru (-)/Amen (-): arrogance, incorrect use of the will, strongheadedness, dictatorialness, unreceptivity to guidance is exacerbated by attachment and receptivity to one's conditioned behavioral patterns; He gives up because of the difficulties encountered in getting an enterprise started. One must not persevere in such behavior.

Heru/Ausar

Heru (+)/Ausar (+): perseverance in the self-identification with the indwelling intelligence, maintaining a sense of unity with all will liberate the will from the domination of the animal spirit.

Heru (+)/Ausar (-): the success that can come from a strong will is jeopardized by the failure to transfer the self identification to the indwelling intelligence guiding all physiological and spiritual functions leading to disharmony, and obstructions.

Heru (-)/Ausar (+): arrogance, incorrect use of the will, strongheadedness, dictatorialness, unreceptivity to guidance will be corrected through rituals to Ausar.

Heru (-)/Ausar (-): arrogance, incorrect use of the will, strongheadedness, dictatorialness, unreceptivity to guidance combined disunion, ignorance of Self, or the failure to live according to one's true self.

Heru/Tehuti

Heru (+)/Tehuti (+): success results from allowing the will to be guided by wise counsel, optimism. A sharing, magnanimous, joyful attitude; The wise king has made the oracle the first, and final arbiter of all conflicts, and the indicator of all policies in the realm. His nation survives even after all of its citizens have been dispossessed from their homeland and scattered around the globe.

Heru (+)/Tehuti (-): the success that can be achieved through a strong will, and good administrative ability is jeopardized by incorrect intuitions, misjudgments, bad counsel, and lack of faith. In spite of your strong powers of observation, and great intelligence, you will not make it through a strange forest without a guide.

Heru (-)/Tehuti (+): arrogance, incorrect use of the will, strongheadedness, dictatorialness, unreceptivity to guidance will lead to failure unless the individual allows himself to be guided by wise counsel. Beware of extravagance.

Heru (-)/Tehuti (-): arrogance, incorrect use of the will, strongheadedness, dictatorialness, unreceptivity to guidance combined with incorrect intuitions, misjudgments, bad counsel; and lack of faith.

Heru/Seker

Heru (+)/Seker (+): An enlightened individual knows that before taking action on a decision there must be the knowledge of the underlying structure (the plan) governing what must be done. As the structural framework of all events are laid down by the deities, and spirits one, therefore, does not "make up a plan." Instead, the thought processes are stilled in order to "sense," and intuit the structural framework created by the spiritual agencies. In addition, every step taken in carrying out the undertaking must follow "the plan"; The capacity to lead long term, large, and difficult projects; before acting, he pauses and keeps his heart still (Men Ab). Thus he is able to see that

all things are achieved in six stages, which he patiently goes through.

Heru (+)/Seker (-): the success that can be achieved by an enlightened will, and magnanimity is jeopardized by the incapacity to intuit the underlying structure of things; the lack of planning. You must persevere in your Men Ab.

Heru (-)/Seker (+): An unenlightened individual ignorant of, or does not believe in (lacks direct experience of) the fact that deities and spirits control the course of events for the purpose of establishing and maintaining order in the world. Thus, his plans are based on considerations that lack objective reality. He therefore runs into "delay" and obstructions, denials, etc.

Heru (-)/Seker (-): arrogance, incorrect use of the will, strongheadedness, dictatorialness, unreceptivity to guidance combined with the incapacity to sustain deep protracted thinking, and the inability to understand the need for structure and limitations, or the lack of planning.

Heru/Maat

Heru (+)/Maat (+): the successful cultivation of the will is essential for developing the capacity to live truth; a strong effective will combined with optimism, and knowledge of the law. Great fortune. As your will is free, you may choose to continue on the road of amassing wealth, and fame, or you may cross the great abyss and continue on the path of the realization of your true self. Has not your heart been made as light as a feather to facilitate your flight across the great abyss?

Heru (+)/Maat (-): the success that can be achieved through a strong will, and administrative ability is jeopardized by ignorance of the law, inability to see the whole, lack of sharing.

Heru (-)/Maat (+): arrogance, incorrect use of the will, strongheadedness, dictatorialness, unreceptivity to guidance will lead to failure unless a view of the whole, knowledge of the law, optimism, and a sharing attitude are cultivated.

Heru (-)/Maat (-): arrogance, incorrect use of the will, strongheadedness, dictatorialness, unreceptivity to guidance combined with ignorance of the law, inability to see the whole, lack of sharing.

Heru/Herukhuti

Heru (+)/Herukhuti (+): the capacity for hard work, zealousness, energetic action, enterprise, initiative, fair play combined with an enlightened will, and magnanimity are qualities that make for powerful leadership, and great accomplishments. Beware of overstrain.

Heru (+)/Herukhuti (-): hastiness, arrogance, impetuosity, rashness, violence, libertinism will subtract from the success that can be achieved through good administrative abilities.

Heru (-)/Herukhuti (+): the success that can be achieved through hard work, zealousness, energetic action, initiative, courage, leadership, and entrepreneurship can be jeopardized by arrogance, incorrect use of the will, strongheadedness, dictatorialness.

Heru (-)/Herukhuti (-): hastiness, arrogance, impetuosity, rashness, violence, libertinism combined with an ignorant self-willedness.

Heru/Heru

Heru (+)/Heru (+): A man of worth and upright character has set himself up as the leader of his life, or of others by his own judgement. There will be some success, but in the long run there will be failure.

Heru (+)/Heru (-): Stop vacillating, persevere in Men Ab.

Heru (-)/Heru (+): failure will result if arrogance, incorrect use of the will, strongheadedness, dictatorialness, unreceptivity to guidance is persevered in. Fortunately, the subject of this metut (symbol) can change and allow himself to be guided.

Heru (-)/Heru (-): Believing that strength resides in the will itself, and that the freedom of the will is absolute, he does not follow sages, wise teachings, or believe in destiny. He will be crushed by his titanic aspirations.

Heru/Het-Heru

Heru (+)/Het-Heru (+): An enlightened will knows that there is no such thing as "will power." The realization of the will (what has been decided upon) is carried out by the life-force (Ra, chi, kundalini), which must first be receptive to what is being willed (Auset factor), and then gestated by the Het-Heru faculty. This gestation process consists in "the

enjoyment of one's intended objective in the imagination." The sensations of joy, and pleasure (or negative feelings) are expressions of the arousal of the life-force, and the images that form the content of the daydream are the spiritual molds that guide the physical forces to the realization of the goal. As we saw in previous chapters, it is often necessary to step up the level of enjoyment through Kula yoga, "deity invocation" rituals, etc.

Heru (+)/Het-Heru (-): the success that can be achieved through the proper exertion of the will is jeopardized by carelessness, negligence, illusions, addiction to pleasure, etc.

Heru (-)/Het-Heru (+): An unenlightened individual [Heru (-)] is ignorant that all inducers of pleasure are means of arousing the life-force¹. He thus either fails to cultivate, or to moderate the induction of pleasure, thus failing due to a lack of vital force. He then speaks ignorantly of weakness of will, poor health, poor memory, and so on. His failure is compounded by his ignorance of the function of images as molds (matrices) for physical events. He gives power of realization to unwanted or intolerable events by dwelling on them in emotionally, and sensually charged visualizations.

Heru (-)/Het-Heru (-): arrogance, incorrect use of the will, strongheadedness, dictatorialness, unreceptivity to guidance combined with carelessness, negligence, illusions, addiction to pleasure. Addiction to drugs, alcohol, fears.

Heru/Sebek

Heru (+)/Sebek (+): An enlightened individual knows that the true purpose of cleverness (what passes for "intelligence" in the west), and education (knowledge of techniques: details of the steps, and processes of carrying out a task) are for the easing of the way. I.e., for the purpose of carrying out of tasks with the less effort, and time, and maximum results; an enlightened will, and magnanimity combined with attention to details, and good logical ability. Successful middle management. Supervisors; decisive actions further.

1. This is the great key to arousing kundalini that most yogis hide from the public. All the techniques of yoga, are in reality means of intensifying the arousal, and the insuring the free flow of the force.

Heru (+)/Sebek (-): the success that can be achieved through the exertion of the will, good administrative ability is jeopardized by false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes; vacillation, and indecision due to confused thinking, or erroneous facts; Interference with the center of command. Dissension, insubordination..

Heru (-)/Sebek (+): arrogance, incorrect use of the will, strongheadedness, dictatorialness, unreceptivity to guidance will subtract from the success that can be achieved through a good education, good logical thinking.

Heru (-)/Sebek (-): arrogance, incorrect use of the will, strongheadedness, dictatorialness, unreceptivity to guidance combined with false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes; indecision; being led astray by irrelevant issues; biased and prejudiced leadership; Rising to fame, and honor through questionable means.

Heru/Auset

Heru (+)/Auset (+): an enlightened will, and magnanimity, upright character combined with a positive receptivity, caring, patience, kindness, trance ability; A good family life, domestic policy, the foundation of society; Good relations between husband and wife; A calm and sympathetic leader; The will has been conceived, but it is not yet time to act. Continue to nourish the will to achieve your goal and your identity with Ausar through mediumistic trance.

Heru (+)/Auset (-): The exertion of the will achieves nothing if there is no harmony between it and the executive part of the spirit.

Heru (-)/Auset (+): the dominance of the will by the emotional side of life; A calm and sympathetic leader, or person in position of authority, yet unreceptive to opposition; Perfection in mediumistic trance will lead nowhere if we do not cultivate our will.

Heru (-)/Auset (-): an unstable will, inner contradictions, conflicts between what is known, and what is felt; ignorance of the proper use of the will, and of the function of mediumistic trance. Unproductiveness, stagnation; easily led to anger when opposed.

Heru/Geb: See the section under Geb.

Heru/Sheps: See the section under Sheps.

Heru/Dark Deceased: See the section under Dark Deceased.

Heru/Nekhebet: See the section under Nekhebet.

Heru/Uatchet: See the section under Uatchet.

HET HERU

Het-Heru/Amen

Het-Heru (+)/Amen (+): the true source of joy is within. Can you recreate the smell of a rose in your imagination? Of course you can. Then why not persevere in recreating the feeling of peace by merely willing it? Why hold such an important thing as peace (Hetep) ransom to externals over which you have no control?

Het-Heru (+)/Amen (-): the success that can be achieved through an outgoing joyful expression, a healthy urge to experience pleasure is jeopardized by attachment and receptivity to one's conditioned behavioral patterns.

Het-Heru (-)/Amen (+): deviations in the manner in which joy is expressed, pleasure is sought, and wrong ideas about joy (failing to make it the engine for success, and instead waiting for success to be joyful) can be overcome through consistent perseverance in maintaining detachment from one's emotional and sensual conditionings.

Het-Heru (-)/Amen (-): carelessness, negligence, illusion. Addiction to pleasure is exacerbated by attachment, and receptivity to one's conditioned behavioral patterns; A man seeks pleasure in order to escape the boredom which has been caused by his inner emptiness. He will never find satisfaction. He may blame it on others, or the environment, or the situations in his life, and lose his most precious friend.

Het-Heru/Ausar

Het-Heru (+)/Ausar (+): the love for unity, and peace. But little will be achieved as there is the inability to penetrate into the underlying shaping forces of unity; desire for unity, as opposed to the understanding of the factors that bring about true unity; they dedicate their love relationship to their mutual spiritual upliftment. Good fortune, but they must be guided by the sage.

Het-Heru (+)/Ausar (-): the success that can be achieved through an outgoing joyful expression, a healthy urge to experience pleasure is jeopardized by disunion, ignorance of Self, or the failure to live according to one's true self.

Het-Heru (-)/Ausar (+): deviations in the manner in which joy is expressed, pleasure is sought, and wrong ideas about joy (failing to make it the engine for success, and instead waiting for success to be joyful) can be overcome through perseverance in the self-identification with the indwelling intelligence, maintaining a sense of unity with all.

Het-Heru (-)/Ausar (-): carelessness, negligence, illusions, addiction to pleasure is exacerbated by disunion, ignorance of Self, or the failure to live according to one's true self.

Het-Heru/Tehuti

Het-Heru (+)/Tehuti (+): an outgoing joyful expression, a healthy urge to experience pleasure combined with faith and optimism in wise counsel. good fortune.

Het-Heru (+)/Tehuti (-): a joyful expression, and healthy sexual attitude is obstructed by incorrect intuitions, judgements, counsel; lack of faith, etc. Errors in choosing a partner.

Het-Heru (-)/Tehuti (+): deviations in the manner in which joy is expressed, pleasure is sought, and wrong ideas about joy (failing to make it the engine for success, and instead waiting for success to be joyful) can subtract from the success that can be achieved through maintaining faith, and optimism in wise counsel.

Het-Heru (-)/Tehuti (-): carelessness, negligence, illusions, addiction to pleasure, combined with incorrect intuitions, misjudgments, bad counsel; and lack of faith. Errors in choosing a partner.

Het-Heru/Seker

Het-Heru (+)/Seker (+): a powerful, and positive imagination combined with good powers of concentration.

Het-Heru (+)/Seker (-): inner tension, and conflict caused by inhibitions, or unnatural scruples in opposition to the urge to experience joy, and pleasure.

Het-Heru (-)/Seker (+): carelessness, playfulness, negligence, extravagance will subtract from the success that can be achieved through the capacity to sustain deep

protracted thinking, good organizational ability, and the appreciation for structure, and limitations; He does not take life seriously. If discipline is not applied, he will throw his life away.

Het-Heru (-)/Seker (-): jealousy, sexual inhibitions, coldheartedness; separations, aberrant urges, phobias; Worn out, and prematurely aged from sensual excesses.

Het-Heru/Maat

Het-Heru (+)/Maat (+): a view of the whole, knowledge of the law, optimism, and a sharing attitude combined with an outgoing joyful expression, a healthy urge to experience pleasure; a happy marriage, success in business, a harmonious partnership, good health.

Het-Heru (+)/Maat (-): the success that can come from an outgoing joyful expression, a healthy urge to experience pleasure is jeopardized by ignorance of the law, inability to see the whole, lack of sharing.

Het-Heru (-)/Maat (+): carelessness, negligence, illusions, addiction to pleasure will subtract from the success that can be achieved through a view of the whole, knowledge of the law, optimism, and a sharing attitude.

Het-Heru (-)/Maat (-): extravagance, sensual greed, bad judgement; losses.

Het-Heru/Herukhuti

Het-Heru (+)/Herukhuti (+): an energized healthy attraction to pleasure, and imagination. Significant success can be achieved, if one remains aware of the ever lurking danger of overindulgence. Men Ab!; a strong manifestation of the Ra force.

Het-Heru (+)/Herukhuti (-): As above, with the difference that there is greater danger of being carried away.

Het-Heru (-)/Herukhuti (+): As below, but with less drive to indulge.

Het-Heru (-)/Herukhuti (-): immorality, wayward impulses, wanderlust, excessive passion, tactlessness; excessive menstrual flow.

Het-Heru/Heru

Het-Heru (+)/Heru (+): an enlightened will in combination with a vivid imagination. Success will come from vision, inventiveness, flexibility.

Het-Heru (+)/Heru (-): there is danger of excesses, and waywardness in the expression of emotion, romance, the pursuit of pleasure because of "weakness of the will"; extravagance, intemperance.

Het-Heru (-)/Heru (+): the success that can be achieved through an enlightened and "strong" will is jeopardized by carelessness, negligence, illusions, addiction to pleasure.

Het-Heru (-)/Heru (-): arrogance, incorrect use of the will, strongheadedness, dictatorialness, unreceptivity to guidance combined with carelessness, negligence, illusions, addiction to pleasure. Addiction to drugs, alcohol, fears.

Het-Heru/Het-Heru

Het-Heru (+)/Het-Heru (+): an outgoing joyful expression, a healthy urge to experience pleasure will nourish your vitality (Ra) and bring about success in relatively small undertakings.

Het-Heru (+)/Het-Heru (-): Unstable in the expression of affection, joy, and the capacity to enjoy. The source of an unstable will.

Het-Heru (-)/Het-Heru (+): In love with love. Many people are more interested in being in a relationship than the person with whom they are involved. He collects art more for the gratification of the senses, than for a true appreciation of the intrinsic values.

Het-Heru (-)/Het-Heru (-): A fool who will not heed, must be left to learn from his own foolhardiness.

Het-Heru/Sebek (hermaphrodite)

Het-Heru (+)/Sebek (+): a strong and positive imagination combined with attention to details, and good logical thinking; creative writing, charismatic speaker, poetry, inventiveness (scientific, and artistic).

Het-Heru (+)/Sebek (-): illusions: a powerful, and fertile imagination combined with false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes

Het-Heru (-)/Sebek (+): carelessness, negligence, illusions, addiction to pleasure will subtract from the success that can be achieved through a good education, good logical ability.
Het-Heru (-)/Sebek (-): carelessness, negligence, illusions, addiction to pleasure combined with false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes.

Het-Heru/Auset

Het-Heru (+)/Auset (+): Contentment with a peaceful, comfortable situation. Good relations with women. A joyful, pleasurable situation.

Het-Heru (+)/Auset (-): unstable, changeable, unpredictable relationship, social situation.

Het-Heru (-)/Auset (+): Same as in the preceding.

Het-Heru (-)/Auset (-): excessive craving for creature comforts; insecurity, indecisiveness, impressionability, emotionality, delusions.

Het-Heru/Geb: See the section under Geb.

Het-Heru/Sheps: See the section under Sheps.

Het-Heru/Dark Deceased: See the section under Dark Deceased.

Het-Heru/Nekhebet: See the section under Nekhebet.

Het-Heru/Uatchet: See the section under Uatchet.

SEBEK

Sebek/Amen

Sebek (+)/Amen (+): the way is open to Self realization, and great spiritual power by persevering in making our essential unconditioned being the premise for all the reasons we give ourselves for what we do. See the second stage of initiation, and meditation.

Sebek (+)/Amen (-): the success that can be achieved through a good education, good logical thinking, attention to details is jeopardized by attachment, and receptivity to one's conditioned behavioral patterns

Sebek (-)/Amen (+): false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes can be overcome by consistent

perseverance in maintaining detachment from one's emotional and sensual conditionings.

Sebek (-)/Amen (-): false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes is exacerbated by attachment, and receptivity to one's conditioned behavioral patterns.

Sebek/Ausar

Sebek (+)/Ausar (+): a good education, good logical thinking, attention to details combined with perseverance in the self-identification with the indwelling intelligence, maintaining a sense of unity with all.

Sebek (+)/Ausar (-): the success that can be achieved through a good education, good logical thinking, attention to details is jeopardized by disunion, ignorance of Self, or the failure to live according to one's true self

Sebek (-)/Ausar (+): false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes, segregative behavior can be overcome through perseverance in the self-identification with the indwelling intelligence, maintaining a sense of unity with all.

Sebek (-)/Ausar (-): false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes is exacerbated by the failure to transfer the self identification to the indwelling intelligence guiding all physiological and spiritual functions leading to disharmony, and obstructions; beware of trickery, selfishness, con artists.

Sebek/Tehuti

Sebek (+)/Tehuti (+): When education, beliefs, and rationalizations are in harmony with the oracles, and the counsel from the sage, the way to success is open; Despite his good education, he gives his head to the sage. Good fortune.

Sebek (+)/Tehuti (-): in spite of a good education, good logical thinking, attention to details, success is jeopardized by incorrect intuitions, misjudgments, bad counsel; and lack of faith.

Sebek (-)/Tehuti (+): He fails to offer his head to the teacher. Misfortune. The way is open for success if faith, optimism in wise counsel, and correct intuitions are

cultivated, but one is obstructed by the failure to recognize that the possession of an education-knowledge of definitions, and descriptions, and the ability to derive logical permutations from them, does not in itself constitute knowledge of reality; pride; shallow and linear thinking; desire to ease the way through schemes; To repeatedly question the oracle, or the teacher on the same subject because of doubt, mistrust, or argumentativeness will bring humiliation.

Sebek (-)/Tehuti (-): incorrect intuitions, misjudgments, bad counsel; and lack of faith coupled with wrong education, faulty logic, pride, selfishness, a trickster mentality; foolhardiness, craziness, insanity. Rituals to Sebek, and Tehuti. Palm oil oleation therapy (see Ayurvedic medicine), nervines, etc. Seek counsel, but be honest, and sincere. You can only trick yourself.

Sebek/Seker

Sebek (+)/Seker (+): the capacity to sustain deep protracted thinking, good organizational ability, and the appreciation for structure, and limitations coupled with good attention to definitions, descriptions, phases of operation, logics, and details. Success in scholarly, philosophical, and scientific endeavors.

Sebek (+)/Seker (-): the success that can be achieved through a good education, good logical thinking, attention to details is jeopardized by the incapacity to sustain deep protracted thinking, and the inability to understand the need for structure and limitations, or the lack of planning, overthinking.

Sebek (-)/Seker (+): the success that can be achieved through a good plan, organization and structure is jeopardized by false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes. A reputation built through many years of hard work is jeopardized by slanderers, mischief workers, gossipers. The young and inexperienced should let the elder, and experienced lead.

Sebek (-)/Seker (-): One is afflicted by the incapacity to sustain deep protracted thinking, and the inability to understand the need for structure and limitations coupled with false beliefs, illogical thinking, false definitions,

erroneous concepts, the desire to ease the way through schemes. Lack of planning coupled with wrong ideas, and illogical thinking. There will be delays, failure, false theories. Beware of misrepresentations; mistrustfulness. Nervines, and rest might prove helpful.

Sebek/Maat

Sebek (+)/Maat (+): a view of the whole, knowledge of the law, optimism, and a sharing attitude coupled with a correct belief system, and good logical thinking. The ability to relate specifics to their parental general principle. Success.

Sebek (+)/Maat (-): the success that can be achieved through a good education, good logical thinking, attention to details is jeopardized by ignorance of the law, inability to see the whole, lack of sharing.

Sebek (-)/Maat (+): false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes can be overcome through a view of the whole, knowledge of the law, optimism, and a sharing attitude.

Sebek (-)/Maat (-): false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes is exacerbated by ignorance of the law, inability to see the whole, lack of sharing; Inability to unify ideas due to the inability to perceive the whole.

Sebek/Herukhuti

Sebek (+)/Herukhuti (+): a good education, good logical thinking, attention to details combined with hard work, zealousness, energetic action, initiative, courage, leadership, and entrepreneurship; success in litigations, conducting the fight through the media.

Sebek (+)/Herukhuti (-): the success that can be achieved through a good education, good logical thinking, attention to details is jeopardized through hastiness, arrogance, impetuosity, rashness, violence, libertinism; negotiations, and arguments that degenerate into violence.

Sebek (-)/Herukhuti (+): false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes will subtract from the success that can be achieved through hard work, zealousness, energetic action, initiative, courage, leadership, and entrepreneurship.

Sebek (-)/Herukhuti (-): nagging, nervousness, argumentative, a libertine, a busy body, verbal abuse.

Sebek/Heru

Sebek (+)/Heru (+): a good education, good logical thinking, attention to details combined and controlled by an enlightened will, and good administrative skills.

Sebek (+)/Heru (-): the success that can be achieved through a good education, good logical thinking, attention to details is jeopardized by arrogance, incorrect use of the will, strongheadedness, dictatorialness, unreceptivity to guidance.

Sebek (-)/Heru (+): false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes can be overcome by Men Ab; Success through cultivation of sincerity. It is found not in clever words, but in the uprightness of one's character (Men Ab).

Sebek (-)/Heru (-): Argumentative, proud, and disrespectful of people in authoritative positions. As a result unity with others cannot be achieved.

Sebek/Het-Heru

Sebek (+)/Het-Heru (+): a strong and positive imagination combined with attention to details, and good logical thinking; creative writing, charismatic speaker, poetry, inventiveness (scientific, and artistic).

Sebek (+)/Het-Heru (-): the success that can be achieved through a good education, good logical thinking, attention to details is jeopardized by carelessness, negligence, illusions, addiction to pleasure.

Sebek (-)/Het-Heru (+): illusions: a powerful, and fertile imagination combined with false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes.

Sebek (-)/Het-Heru (-): carelessness, negligence, illusions, addiction to pleasure combined with false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes.

Sebek/Sebek

Sebek (+)/Sebek (+): Very good logical ability. Success in finite situations (technological undertakings).

Sebek (+)/Sebek (-): Your intentions are sincere, but everything you say is distorted by others out of mischief; Some people are incapable of discerning the logical from the illogical. They believe that all perspectives are valid, and must be given a chance to play a role in decision making. Misfortune.

Sebek (-)/Sebek (+): Wrong ideas, wrong facts can be corrected by educating oneself on the situation. Check your logic. Remember the chief rule of logic,- "logical but not necessarily true."

Sebek (-)/Sebek (-): In the end, you can only fool yourself.

Sebek/Auset

Sebek (+)/Auset (+): a good memory, a fertile imagination, caring, sincerity, good trance ability, kindness, tenderness combined with a good education, good logical thinking, attention to details; creative writing.

Sebek (+)/Auset (-): the success that can be achieved through a good education, good logical thinking, attention to details is jeopardized by indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness.

Sebek (-)/Auset (+): false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes will subtract from the success that can be achieved through a good memory, a fertile imagination, caring, sincerity, good trance ability, kindness, tenderness.

Sebek (-)/Auset (-): indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness combined with false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes;

Sebek/Geb: See the section under Geb.

Sebek/Sheps: See the section under Sheps.

Sebek/Dark Deceased: See the section under Dark Deceased.

Sebek/Nekhebet: See the section under Nekhebet.

Sebek/Uatchet: See the section under Uatchet.

AUSET

Auset/Amen

Auset (+)/Amen (+): devotion to realizing Self; consistent perseverance in maintaining detachment from one's emotional and sensual conditionings.

Auset (+)/Amen (-): successful trance work will be wasted due to attachment, and receptivity to one's conditioned behavioral patterns.

Auset (-)/Amen (+): indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness will be corrected by consistent perseverance in maintaining detachment from one's emotional and sensual conditionings.

Auset (-)/Amen (-): indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness is exacerbated by attachment, and receptivity to one's conditioned behavioral patterns; negative mediumism.

Auset/Ausar

Auset (+)/Ausar (+): perseverance in the self-identification with the indwelling intelligence, maintaining a sense of unity with all is the foundation of religion, and spiritual development. In every person there is an urge to follow someone, or something. While upright people are the proper role models for us to follow in our youth, we must come to realize eventually that Ausar is our true Self, and the deities are the true models (archetypes) of the personality masks that we must assume in order to meet the various situations in life.

Auset (+)/Ausar (-): the success that can be achieved through a good memory, a fertile imagination, caring, sincerity, good trance ability, kindness, tenderness is jeopardized by disunion, ignorance of Self, or the failure to live according to one's true self.

Auset (-)/Ausar (+): indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness can be corrected by perseverance in the self-identification with the indwelling intelligence, maintaining a sense of unity with all.

Auset (-)/Ausar (-): indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness is

exacerbated by disunion, ignorance of Self, or the failure to live according to one's true self

Auset/Tehuti

Auset (+)/Tehuti (+): a good memory, a fertile imagination, caring, sincerity, good trance ability, kindness, tenderness combined with good counsel, correct intuitions, optimism.

Auset (+)/Tehuti (-): a good memory, a fertile imagination, caring, sincerity, good trance ability, kindness, tenderness combined with incorrect intuitions, misjudgments, bad counsel; and lack of faith.

Auset (-)/Tehuti (+): indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness will subtract from the success that can be achieved through good counsel, correct intuitions, optimism.

Auset (-)/Tehuti (-): incorrect intuitions, misjudgments, bad counsel; and lack of faith combined with indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness

Auset/Seker

Auset (+)/Seker (+): a good memory, a fertile imagination, caring, sincerity, good trance ability, kindness, tenderness combined with the capacity to sustain deep protracted thinking, good organizational ability, and the appreciation for structure, and limitations; deep mediumistic trance; the power to successfully manifest the powers of the hekau;

Auset (+)/Seker (-): the success that can be achieved through good counsel, correct intuitions, optimism is jeopardized by the incapacity to sustain deep protracted thinking, and the inability to understand the need for structure and limitations, or the lack of planning.

Auset (-)/Seker (+): indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness will subtract from the success that can be achieved through good planning, assistance from elders.

Auset (-)/Seker (-): indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness combined with the incapacity to sustain deep protracted thinking, and the inability to understand the need for

structure and limitations, or the lack of planning; are not your excessive love of ease, and receptivity to your creature comforts omens that the winter of your life is just around the corner?; "Street people," vagrants, the homeless, rolling stones.

Auset/Maat

Auset (+)/Maat (+): a good memory, a fertile imagination, caring, sincerity, good trance ability, kindness, tenderness combined with a view of the whole, knowledge of the law, optimism, and a sharing attitude; success through popularity, a joyful caring, patient attitude in dealing with others; a humble follower of the law, but lacking in the understanding of its intricacies. Great success, nevertheless.

Auset (+)/Maat (-): the success that can be achieved through a good memory, a fertile imagination, caring, sincerity, good trance ability, kindness, tenderness is jeopardized by ignorance of the law, inability to see the whole, greed; Sincere, and humble, but following a wrong belief system, ignorant laws.

Auset (-)/Maat (+): indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness will subtract from the success that can be achieved through a view of the whole, knowledge of the law, optimism; unreceptivity to the law due to fears, irrationality, etc.

Auset (-)/Maat (-): indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness combined with ignorance of the law, inability to see the whole, lack of sharing. Needs outside help.

Auset/Herukhuti

Auset (+)/Herukhuti (+): the "courage" to sacrifice for others due to love, and devotion.

Auset (+)/Herukhuti (-): impulsive behavior, exaggerated emotionalism, tendency to violent emotions.

Auset (-)/Herukhuti (+): indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness will subtract from the success that can be achieved through hard work, zealouslyness, energetic action, initiative, courage, leadership; unstable in enterprise.

Auset (-)/Herukhuti (-): very impulsive behavior, exaggerated emotionalism, violent emotions. inner conflict between anger and fear.

Auset/Heru

Auset (+)/Heru (+): a good memory, a fertile imagination, caring, sincerity, good trance ability, kindness, tenderness in combination with an enlightened will, and magnanimity; He takes an upright man as his role model. Although there will be success, in the long run it must be transcended. See Auset/Ausar.

Auset (+)/Heru (-): the success that can be achieved through a good memory, a fertile imagination, good trance ability, is jeopardized by arrogance, incorrect use of the will, strongheadedness, dictatorialness, unreceptivity to guidance.

Auset (-)/Heru (+): Indiscriminate imitation of others, however upright they may be, will only serve to compound the difficulties involved in the quest for Self realization.

Auset (-)/Heru (-): Indiscriminate imitation of the unworthy. This is a common feature in today's society. It is customary to make role models out of people for their talent without regard to their character.

Auset/Het-Heru

Auset (+)/Het-Heru (+): A good memory, and receptivity combined with a joyful disposition, and a fertile imagination. Good potential for psychic, mediumistic, creative, artistic works; a sweet, loving, kind, charming person, or situation. Success in small things; psychic achievements which by themselves will not increase the level of spiritual development.

Auset (+)/Het-Heru (-): the success that can be achieved through a good memory, a fertile imagination, caring, sincerity, good trance ability, kindness, tenderness is jeopardized by carelessness, negligence, illusions, addiction to pleasure.

Auset (-)/Het-Heru (+): indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness will subtract from the success that can be achieved through an outgoing joyful expression, a healthy urge to experience pleasure.

Auset (-)/Het-Heru (-): indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness compounded by carelessness, negligence, illusions, addiction to pleasure, and the bad effects of wasted vitality.

Auset/Sebek

Auset (+)/Sebek (+): a good memory, a fertile imagination, caring, sincerity, good trance ability, kindness, tenderness combined with a good education, good logical thinking, attention to details; creative writing.

Auset (+)/Sebek (-): the success that can be achieved through a good memory, a fertile imagination, caring, sincerity, good trance ability, kindness, tenderness is jeopardized by false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes.

Auset (-)/Sebek (+): indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness will subtract from the success that can be achieved through a good education, good logical thinking, attention to details; interrupted education, an unreliable clerk.

Auset (-)/Sebek (-): indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness combined with false beliefs, illogical thinking, false definitions, erroneous concepts, the desire to ease the way through schemes;

Auset/Auset

Auset (+)/Auset (+): success through a good memory, a fertile imagination, caring, sincerity, good trance ability, kindness, tenderness, messages received through dreams.

Auset (+)/Auset (-): Overdependence on the success achieved through spiritual receptivity, or mediumistic (hypnotic) trance ability. Aware that many of their hunches, dreams, come true (they conveniently ignore those that don't--ok), many people believe that they do not have to exert themselves further in spiritual training, and development. The same is true for many trance mediums who mistake their ability for wisdom, and spiritual power. They are unaware that they have not even taken the 1st of the 10 steps towards the realization of their true self. Emotional instability.

Auset (-)/Auset (+): Same as in the preceding.

Auset (☹)/Auset (☺): failure through an overlaxed state of being manifesting indecisiveness, changeability, impressionability, sensitivity, emotionality, moodiness. Correct it through exercise.

Auset/Geb: See the section under Geb.

Auset/Sheps: See the section under Sheps.

Auset/Dark Deceased: See the section under Dark Deceased.

Auset/Nekhebet: See the section under Nekhebet.

Auset/Uatchet: See the section under Uatchet.

GEB

All of the readings of Geb indicate the interactions between the physical body and the mental/emotional faculties.

Geb as the first card symbolizes the effect that the deity (second card), especially the emotions, and lifestyle has upon the health.

Geb as the second card symbolizes the effect that the physical health has upon the emotions, and thus the mental activities symbolized by the deity.

It is very important to note that often times, the oracle will utilize Geb metutu as metaphors for the state of "health" of an undertaking. Meditate clearly on all readings.

SHEPS

All Sheps readings indicate that a beneficent ancestor will assist in the undertaking under the guidance of the deity indicated in the other half of the reading. Where the deity card is negative, then corrective measures regarding the faculty represented should be taken.

DARK DECEASED

All dark deceased readings indicate that a disturbed ancestor will interfere in the undertaking under the guidance of the deity indicated in the other half of the reading. Uplift the deceased

by invoking the deity represented in the other half of the reading, and meditating on the virtues of the deity.

Dark deceased/Sheps: Invoke Tehuti on behalf of the deceased.

Dark deceased/Dark Deceased: An intractable deceased. Strong methods must be used. See a competent traditional African priest, or priestess.

NEKHEBET

In all of the metutu that follow Nekhebet (+) symbolizes the attainment, protection, etc. through psychic influences, regarding the affairs under the dominion of the respective deity. Nekhebet (-) symbolizes obstructions, and dangers from receptivity to, or generation of negative psychic energies. Review Chapters 18, and 19.

The following formula is to be followed in understanding the various combinations:

Nekhebet/Deity

Nekhebet (+)/Deity (+): Success through psychic forces, in the affairs governed by the deity (E.g.: Heru- promotion, favor from people in authority, etc.; Sebek,- litigation, business, studies, writings, etc.)

Nekhebet (+)/Deity (-): The assistance of psychic influences are nullified by deficits, and negativities represented by the deity.

Nekhebet (-)/Deity (+): Negative psychic influences will interfere with success in spite of the good qualities.

Nekhebet (-)/Deity (-): Negative psychic influences combined with deficiencies in your being.

Nekhebet/Amen

(+): striving consistently to ignore one's conditioned emotional, and sensual behavioral patterns (cultivating Hetep) is the chief means of safely, and effectively developing one's psychic powers, and protecting oneself from negative psychic influences; The power derived from

an offering of Hetep (unassailable inner peace) is superior to the ashe of blood, plants, stones, etc..

(-): the reversal of the above.

Nekhebet/Ausar

(+): perseverance in the self-identification with the indwelling intelligence, maintaining a sense of unity with all is the chief means of safely, and effectively developing one's psychic abilities.

(-): perseverance in the self-identification with the indwelling intelligence, maintaining a sense of unity with all is the chief means of protecting one's person from negative psychic influences (exorcism, hex breaking, etc.).

Nekhebet/Tehuti

(+): Thursday during the two hours of the jupiter, wear white, and blue, face west, chant Ung (oong), and visualize your objective. Offer, and eat rice mixed with cow's or soya milk, and the articles of Tehuti. Better results in the waxing moon.

(-): Beware during the period of 1:30 p.m. - 3:00 p.m.

Nekhebet/Seker

(+): Saturday during the two hours of Saturn, wear indigo, face South, chant Ong, and visualize your objective. Offer the articles of Seker. Better results in the waxing moon.

(-): Beware during the period of 9 a.m. - 10:30 a.m.

Nekhebet/Maat

(+): Thursday during the two hours of the jupiter, wear yellow, face west, chant Ung (oong), and visualize your objective. Offer, and eat rice mixed with cow's or soya milk, and the articles of Maat. Better results in the waxing moon.

(-): Beware during the period of 1:30 p.m. - 3:00 p.m.

Nekhebet/Herukhuti

(+): Tuesday during the two hours of Mars, only if you have been just, wear red, face east, chant Ang, and visualize your objective. Offer red objects (red candle, cloth, etc.), and the articles of Herukhuti. Better results in waxing moon.

(-): Beware of period from 3-4:30 pm, tuesdays.

Nekhebet/Heru

(+): Sunday during the two hours of the Sun, face north, wear red, and white, chant Ang, visualize your objective. Offer the articles of Heru. Better results in the waxing moon.

(-): Beware during the period of 4:30 p.m. - 6:00 p.m.

Nekhebet/Het-Heru

(+): Friday during the two hours of venus, face north, wear yellow and green, chant eng, and visualize your objective. Offer the articles of Het-Heru. Better results in the waxing moon.

(-): Beware during the period of 10:30 a.m. - 12 noon.

Nekhebet/Sebek

(+): Wednesday during the two hours of mercury, face west, wear white, chant iing, and visualize your objective. Offer Sebek's articles. Better results in the waxing moon.

(-): Beware during the period of 12 noon - 1:30 p.m.

Nekhebet/Auset

(+): Monday during the two hours of the moon, face south, wear white, chant eng, and visualize your objective. Offer rice mixed with cow's or soya milk, and Auset's articles. Better results in the waxing moon.

(-): Beware during the period of 7:30 a.m. - 9:00 a.m.

Nekhebet/Geb

(+): Improve your psychic vitality through kundalini yoga breathing practices. Dhumo (Gtummo), Surya Bedhana, Chandra Bhedana, Nadi shuddi, Bhastrika, etc.

(-): Psychic imbalance due to violations of health laws. Clogged psychic channels. Acupuncture, and/or moxa will help.

Nekhebet/Sheps

Beneficent psychic influences acting in concert with a helpful ancestor.

Nekhebet/Dark Deceased

Negative psychic influences acting in concert with a dark deceased. See a competently trained traditional African priest, or priestess.

Nekhebet/Nekhebet

- (+): Positive psychic influences are surrounding you. To the degree that you can maintain your aura pure, and your vitality strong (avoid sex, and dissipating pleasures) you will attain successes in material undertakings, especially from favors of others. Chant Aung Hrang Hring Hraung, offer Heru's articles, and visualize your objective.
- (-): Negative psychic influences are surrounding you. Pay attention to all of the things that will reestablish your vitality. Chant Aung Hrang Hring Hraung, offer Heru's articles, and visualize your objective.

Nekhebet/Uatchet

- (+): Psychic forces responsible for assistance from others, psychic affairs, meetings with spiritualists, etc.; Psychic protection.
- (-): Negative psychic forces inspiring meetings with low minded people, and all sorts of malefic experiences; Psychic disequilibrium. Are you performing psychic, yogic, and Chi practices without proper guidance?

UATCHET

Uatchet/Uatchet

- (+): Psychic influences can aid you in business, and negotiations, contest, etc. making you more shrewd. Be mindful of staying within the boundaries of what is right; Assistance from grandparents, trade with foreign countries, religious pilgrimages, psychic affairs; Psychic protection. Chant Aung shrang shring shraung, offer Auset's articles, and visualize your objective.
- (-): intrigues, hidden enemies, illegal activities, suicide, murder, contagious diseases, etc. inspired through subtle forces. Chant Aung Shrang shring shraung, offer Auset's articles, and visualize your objective. Improve your vitality through aerobics, deep diaphragmatic breathing, etc. You are too lax. Pay attention to what you are receptive to, who, and what you follow.

For all other combinations of Uatchet, read Nekhebet's material.

CONSULTING THE ORACLE

Your Very First Reading

Please read this entire chapter before your first reading.

Because high oracles are means of communicating with the divine part of your spirit (the second sphere), it is very important to establish and maintain a proper relationship with the oracle. Before performing your very first reading you must bathe just before the reading, and put on clean clothes. Spread a new cloth (about 24" X 24"), white, and or blue, on a clean spot, and say the following prayer. It is part of the material inscribed on the back of the cards.

*As Tehuti, semaukheru Ausar er Kefta-f
Hail Tehuti, making victorious Ausar over his enemies.
Kerh pui en auba
On the night that of battle
au en arit saut Sebau
and of making the fettering of the Sebau.
Heru pu en hetem-tu kefta nu Nebertcher.
day that of destroying the enemies of Nebertcher.
Kerh pui en seauha Djed em Djeddjedtu.
Night that of making to stand the Djed in Djeddjedtu.*

this is to be followed by the following which does not appear on the cards.

*Anetch Hrauten Atef-Mut Neter
Salutation of Power Father-Mother Supreme Being
Ita em Tehuti
Who comes as Tehuti
Tua en Metu Neter
Thanks for the Words Divine
Pai-a Ab ani Tu.
My Heart (will/head) belongs to You.
Ab ani Tu.*

From time to time (daily if you want to master divination) you should meditate on the meaning of the prayer. The Sebau correspond to your earth-born stock of information, as opposed to spiritual intuitions. Nebertcher means "Lord of the World." the "djed" is the symbol of the stability of heart achieved through mastery of Men Ab meditation. Ausar is your true self.

This prayer must also be said before your first reading of the day.

A most important observance that women must uphold is to refrain from performing readings, or handling their cards when on their menses, as menstrual blood-which is the ejection of an unfertilized egg-is a very powerful attractor of sublunar forces. She can however, receive readings.

The State of Mind, and Motives For Readings

We must keep uppermost in mind that the purpose of the oracle is to provide such counsel that will lead the querent to spiritual perfection by showing the spiritual meaning of mundane undertakings. You must therefore observe the following rules, and remain aware of the following principles in querying the oracle, otherwise you may get answers that may not be clearly intelligible, or might turn out to have been apparently the wrong counsel.

1. Avoid questions that are purely materialistic.
2. If your question involves a problem with someone, you must keep in mind that the oracle will exhaust all possibilities in favor of restoring peace. You must therefore refrain from going to the oracles to seek an advantage over others out of anger, hurt, sheer competitiveness, selfishness, revenge, and so on. Many people fail to benefit from oracles because they query them seeking confirmation that they are right in an altercation or conflict, instead of seeking a solution to the problem.
3. Meditate on the answer that you receive. Do not repeat your question, especially through rephrasing.
4. Above all refrain from "testing" the oracle. You are communicating with that portion of God that is at the core of your being-your true Self. It will take no more than a few readings for you to realize the accuracy, and high spiritual counsel of the oracle,

especially if you carefully meditate on the answers and are diligent in carrying out the instructions.

5. Do not ask questions that are aimed at finding out if you can get away with an immoral or unlawful act. You might get a rhetorical answer from the oracle and not realize it. By this is meant, an answer which seems to be saying that it is alright to do the act, when in reality, you are being instructed by being shown the example of the correct thing to do in the situation. If you think that such answers are trick answers, you are right. But they are justified by the fact that such questions are asked with the knowledge that what is being contemplated is wrong.

Suggested Questions

1. What is the most important thing that you must learn and master in order to open the way to the realization of the reason for your incarnation (destiny)?
2. What are the principles governing your name? The name (Ren, in the Kamitic tradition) is an integral component of the Sahu part of the spirit. Because they do not know that as an integral part of the spirit, the name plays a shaping role in the life of the person, Westerners treat it as a mere label for the purpose of identification. Our name should summarize, and where possible, carry the energies of the virtues that we must cultivate for the realization of our destiny. If your present name does not reflect these virtues, you should seriously consider changing it, legally if possible. Unlike Westerners, the names of people in many other cultures reflect the person's relationship with the deities, etc.
3. Questions #1 and #2 are the essential requirements for the performance of a naming ceremony for an infant.
4. Questions seeking to discover, not necessarily if you should marry, or marry a certain person, take a job, undertake a career, etc., but how would you fare in the situation, what forces (deities, and the virtues represented by them) will guide you to success, what are the odds against you (according to your state of conditioning). If you get a Herukhuti (-)/Het-Heru (-) reading for a marriage, you are being warned that you might experience many fights, or that the basis of the marriage is sensual. You may marry just the same, and either fail, which is most likely, or you may rise to the heights of spiritual challenge and transcend the problems. The value of the oracle in that situation is in its ability to enable you to enter into the situation with the foreknowledge of what kind of problems you will encounter,

why, and how to confront them. What words of power to use, what gems, herbs, etc. to employ to psychically influence a favorable outcome of the event, as well as to turn the mundane undertaking into a mini spiritual initiation. Or, of course, to decline involving yourself.

5. Understand that the Metu Neter oracle, unlike Tarot, etc., is a spiritual tool; a means of personalizing your spiritual curriculum. Do not treat it as a fortune telling device.
6. Consult the oracle with a mind to finding out "what to do spiritually in order to succeed." Most Westerners are so entrenched in the misconception that all that is required for success in life, is to be properly informed. Information does not do much to alter behavior. How many times have you done the wrong thing, in spite of knowing what to do? Incidentally, this is one of the reasons why in spite of the great teachings that we find in the major western religions, there is so much decadence amongst the children of very religious and God fearing, church going parents. Sermons don't cook the food. Remember, that unless you take in what you will into mediumistic trance, it will not be impressed upon the life-force, which is in charge of carrying out your beliefs. *The Truth AND Spiritual Power will Set You Free.*

How to Consult

Step 1: On a 24" x 24" blue and or white cloth, fan the cards face down so that their faces cannot be seen, after shuffling them (avoid such sophisticated procedures that will unnecessarily reduce the life of your cards, or mark them, etc.). Pick a card and make a note of it (it is best to write it down). If the card picked is of the Hetep suit (see below), your reading is complete. I.e., this one card will make up your reading. Otherwise, proceed to step 2.

Step 2: Return the card to the deck, reshuffle the cards, and pick another card (note that it is possible to choose the first card again). Study the reading according to the rules explained in chapter 22.

Remember, that if the first card picked belongs to the Hetep suit (See below), you do not pick another card. This card, by itself, will make up your reading. Any other suit, will require you to draw

again. In this case, your reading will be composed of two cards. As you returned the first card to the pack, and shuffled it, your reading could be composed of the doubling of the same card. E.g., Sebek tu maat/Sebek tu maat.

Note, that in consulting for another, do not let them touch or handle the cards. Let them point to, or touch the cards with an object that you have selected to serve as a pointer. Something like a chop stick or a fancy one of course, will do. In this way, the cards will not pick up inimical vibrations. For the same reason, it is advised that cards should not be shared, and care must be taken regarding where readings are done, and where the cards are kept when not in use. Keep them wrapped in the cloth described above.

Recording the Cards

The names of each of the 14 cards were given in chapter 1 on. The names of each of the five suits modifying each of the cards are as follow: Note that the first three suits are positive (Tu = yes) while the last two are negative (tem = no).

(+)	(+)	(+)	(-)	(-)
Hetep	Tu Maat	Tu Tchaas	Tem Maat	Tem Tchaas
0	0	0	●	0
0	0	0	●	●
●	0	0	●	●
●	0	●	●	●

Your recordings of the readings will be as follows: Het Heru Tu Maat and Maat Tem Maat (i.e., Het-Heru (+)/Maat (-)). Others are Sebek Hetep; Auset Tem Maat/Tehuti Tu Tchaas, and so on.

INTERPRETING THE ORACLE

Before Your first Attempt at Interpretation

Before attempting your first interpretation, it is imperative that you have a working knowledge of the material from chapter 4 on, especially the stages of initiation, meditation, and the material from chapters 16 - 19. Not only will this aid you in understanding the readings, but more importantly, to frame your question properly. It is with the proper phrasing of questions that the successful comprehension of the reading is secured. If you understand the material taught in the past chapters you will not ask questions that, for example, implicitly or explicitly reflect identification with your person as the essence of your being. E.g., "Given my fear of X, should I do so and so?" As the oracle is a means of communicating with your true Self, you may not comprehend, or be prepared for the answer. From the preceding chapters it is evident that there is a great deal of information to be coordinated in order to arrive at the proper understanding of the reading.

The Preliminary Keynotes of the Reading

- Step #1: Read the meanings (+ and -) denoted by the Deity of each card in chapter 19. Be sure you have a clear comprehension of the mental, emotional, physiological, social, and spiritual correspondences of the Deity or Deities denoting the reading. Details of this step are given below.
- Step #2: If you received two cards (i.e., your first card was not a Hetep suit), read the combined meaning (+ and -) of the cards in chapter 20.
- Step #3: Read the material for the Deities under "shaping factors of success and failure" in chapter 18.
- Step #4: Take note of how the role that the Deity or Deities governing your reading contributes to success or failure (chapter 18).

If you have carefully noted and studied the above material, you are now in possession of the **basic keynotes of the reading**. I.e., what the Oracle is saying about the situation. It is important to

understand that you do not yet have a clear means of extracting from the list of correspondences, the information that would indicate the actual occurrence. This is accomplished by identifying the signifiers of the event, and the key person or persons that will aid in the undertaking. There is an extensive list of correspondences at the end of this chapter to assist you in this process. Examining it will show that Auset is the signifier of the conception and gestation of pregnancy, duties of the wife and mother, etc.; Het-Heru, to the gestation of pregnancy, the sensual expression in marriage, etc.; Herukhuti, to martial activities (the army, police, etc.), athletics, and so on.

Step #5

The Signifiers of the Event and Its Uses

Let's say that a person consults about taking a job as a guard, and receives a Sebek Tu Tchaas/Auset Hetep reading [Sebek (+)/Auset(+)]. According to the list of signifiers, Herukhuti is the signifier of this occupation. By implication, the oracle is stating that this person will not bring the specifically required traits to the job. It then identifies what resources the person has that can be readily adapted to the situation. Thus we have that this person, in order to succeed in this position will have to be creative in his/her thinking, and persuasive and clever, in order to make up for the lack of fieriness which is the ideal requirement for the job. When confronted with danger he will be more successful, on a whole, by talking his way out of the situation than by fighting. However, given the anomaly of the situation, in spite of the positive denotations of the Tu Tchaas (+) of Sebek, and the Hetep (+) of Auset, this person will best utilize his skills in more suitable occupations. If he is forced by circumstances to carry out the task, then it should be temporary, or with help, and with clear awareness of the shortcomings.

Implicit Data and Counsel

From the preceding, we have seen that there are implicit data and counsel in a reading that are derived from the lack of agreement between the signifiers of the event, and the reading received. The oracle will inform you as much by what it tells you, and by what it doesn't.

Adaptation of Resources

We also saw that when the person lacks the capacity, or ought not to transform his/her being to manifest the powers of the signifier of the event, the oracle shows what spiritual resources the person will use to formulate a strategy for handling the situation. This is a widespread practice in life. Many lawyers adapt a Het-Heru strategy in their profession which is governed by Sebek; many creative writers and musicians adapt a dry technological Sebek approach to their profession which is governed by Het-Heru; many athletes (long distance runners, especially) push themselves out of sheer Seker doggedness, to compensate for the lack of Herukhuti, and so on. It goes without saying, that it is best when the reading matches the signifier.

The Signifier of the Subject of the Reading

This step is full of potential problems, and although useful, it must be used either with a grain of salt, or only when you are absolutely sure. When properly used, it can be a tremendous help. It may be skipped in most cases.

It involves classifying the subject into a specific category. This is easy and relatively safe when the subject(s) in the situation has a well defined social position, provided that the latter is relevant to the reading. If the question relates to a promotion, or family, or corporation, then Heru signifies the boss, the father (or mother if she is single), president, or boss, and so on. In previous chapters we saw that certain undertakings were more natural to certain age groups and sex gender because of the energies involved. Thus we can establish a young woman as signified by either Auset, or Het-Heru, a young man by Sebek, or Heru, and so on. But this latter procedure is precisely where we can go wrong because it involves guessing at the internal makeup, and transcendental abilities of the individual. If you use it, treat it as a "what if scenario." You might want to establish other "what if" models. Suppose, let's say that the person who inquired about the guard job was a 60 year old man, or a 25 year old woman, who do you think, is most likely to better carry out the Sebek/Auset strategy? Do you think that the 60 year old man, given the strong Seker energies (scruples, experience, ponderous thoughtfulness, etc.) working through him, might be somewhat more inhibited in his creativity and cleverness than the young woman?

The Suits

The suits are a guide to your likelihood of succeeding or failing through the strategy and faculties you are using in the given situation.

Hetep represents the greatest likelihood of success. You could still fail, however, as it does not predict success without effort. It is like being shackled with a light chain that can be easily slipped off, but you must make the effort. This is why you must always read both the (+) and the (-) correspondences of a metu. Hetep does not mean the absence of negativity. It means that it is relatively easy to transcend it. Whether you are aware of it or not, it means that **the way is open** for "heaven"- the indwelling intelligence -to assist you through the faculties represented by the deity of the reading. I cannot overemphasize the need to take note of the fact that the step of considering the suit comes after the study of the correspondences of the cards, and its comparison with the significator of the situation. In the above example we can see the possible catastrophic results that would occur if prior to step 5 the person concluded that because the Auset card was Hetep, the reading presaged success in the undertaking. Placed in the proper perspective, it indicates that the individual is likely to succeed as a guard by adapting a Sebek/Auset strategy to the situation. We would be more comfortable, however, for the safety of the guard, and the property guarded, if the guard had received a Herukhuti Hetep, or Herukhuti tu Maat, etc.

Tu Maat means that **the way is opening** for the influence of the indwelling intelligence to assist you in your undertaking. You must focus on living (just not knowing) the truths and virtues associated with the deity of the reading. Your meditations and rituals must focus on what must be done in order to carry out the counsel of the oracle.

Tu Tchaas means that **the way is opening** for the influence of the indwelling intelligence to assist you in your undertaking. You must focus on increasing your stock of information regarding the situation, through study and meditation. You

must also meditate on impressing these ideas upon your spirit (first level of the meditation process).

Tem Tchaas means that the way is closing to the indwelling intelligence to assist you in your undertaking, due to your vulnerability to the wrong beliefs denoted by the card.

Tem Maat means that the way is closed to the indwelling intelligence to assist you in your undertaking, due to your vulnerability to the wrong beliefs and emotions denoted by the card.

It is obvious that the lowest suits indicate that there is more work to be done, more obstructions to be overcome, and a greater chance of failing. In most cases, it is advisable to avoid undertakings when the two latter suits are drawn. If they must be done, a great deal of care, meditation, and study must be observed.

Positive Readings

By now it should be clear that positive readings-Hetep, Tu Maat, and Tu Tchaas- simply mean that the way is open or opening. You must still apply yourself to studying, meditating and living truth to succeed. *A positive reading does not necessarily state that the subject is free of negative traits, but that the way is open to transcend them.* It is important then, to study the negative side of the card as well. As it is virtually impossible to measure effort, it would be foolhardy to adapt an attitude of taking it easier than you would, had you received a negative reading. The ultimate purpose of labelling readings as negative is to serve as a means of directing the subject away from certain undertakings. When we must do something, regardless of the reading, we must give it our best.

Negative Readings

If we must engage in an undertaking, the factors that are indicated by the negative readings must be converted into positives. Thus, when a negative reading is received, you must also study the positive correspondences of the card. Obviously you must meditate study, and be consistent in living truth.

Using the Correspondences of Chapter 19

Chapter 19 presents us with an array of correspondences which can singularly, or in combination indicate the outcome of the reading. In some cases, it will be easy to see which apply, but in others, there will be a great deal of work required. In a Seker reading, for example, the key to the meaning of the reading could be the mental trait (good, or poor planning), or the emotional trait (patience, lack of appreciation for limitations, etc.), or the social correspondences (assistance from elders, priests, supreme court judges, etc.), or health problems (depression, arthritis, etc.), or by cultivating the spiritual skills and virtues of the deity.

For example, in a recent case, a couple placed a \$30,000 deposit on a house, and later asked to be reimbursed because the owner failed to tell them that the house was haunted. The judge sided with the seller, and refused the buyers their desire to back out of the deal. The reading that was done to see what was the Metu Neter's commentary on the judge's actions was Maat Tem Maat/Sebek Tem Tchaas [i.e., Maat (-)/Sebek (-)]. Had this reading been done for the couple before they purchased the house, they would have been made aware that they would face problems due to incorrect application of, or ideas concerning the law (Maat -), wrong ideas, lack of facts, deception (Sebek -), contractual problems, and so on. In this reading, the health, personal spirituality, emotional traits of the couples were not the factors, the social correspondences were. Incidentally, as neither Maat nor Sebek is a signifier for purchasing a house, but are signifiers of lawyers, judges, contracts, legal matters, etc., the pointers to the meaning of the reading in this case are easy to figure out.

So far we have only considered the correspondences from chapters 18, 19 and 20. Although the oracle must not be used for trivial matters, there are some situations that are not very critical or so important. The material from these chapters will suffice. Questions regarding very important matters (What must be cultivated in order for this marriage to be successful? What career should I pursue? Etc.) require a deeper understanding of the reading. It is important to fully study the correspondences to your card(s) in chapters 4 - 17. Suppose you receive for a marriage reading, Heru tem tchaas/Tehuti Hetep. Your experience will not just simply be limited to the Men Ab meditations of Heru, and

following a sage, or a marital counsellor, etc. You will find that many of your marital experiences are your personal living examples of the metaphorein (so called myth) of Ausar vs. Set, of sections in the *Pert em Heru* (*Egyptian Book of the Dead*), and so on. By making correspondences to the Yoruba religion, you will find that many of the patakis (metaphoreins) of the Yoruba wisdom system concerning Shango (Heru), and Ifa (Tehuti) are archetypes of the personality qualities that you must cultivate in order to succeed in your marriage. You will see that your bringing of projects into manifestation are microcosmic versions of the creation of the world as shown in chapters 4 - 6. You will find rich material in the spiritual literature to guide your steps. You will experience the reality that true religious stories are not accounts of "historical events," or have their values as such, but are universal archetypes serving as guides to the gamut of life experiences. More importantly, you will grow in your appreciation for the Tree of life because of its ability to serve as a means of cataloguing each archetype, and relating them to the host of human traits and experiences.

The Utchau Metut and Interpretation

The Utchau Metut, which was discussed in chapter 17, is one of the most important elements in the interpretation of readings. High oracles, like the I Ching, Metu Neter and Ifa, do not merely prognosticate. The counsel that they give is based, fundamentally, on the weighing of the shaping factors of an event. All attempts must be made to determine the place in time and space (hierarchy) of the various factors of the reading and the situation, as revealed by the metutu.

Modes and Levels of Interpretation

There are several levels, and modes of interpreting the Metu Neter oracle, according to levels of ability and temperament. The 1st level and mode, which all beginners must go through, is the Sebek mode. It is the process outlined so far. It entails reading, studying, and logical reasoning about the correspondences and suits. Because of the large number of correspondences owned by each deity (mental, emotional, social, etc.), you will never know from this method, exactly how the situation will unfold, although you will know the basic path that it will take. Nevertheless, you will be prepared for the various events as they unfold. A person running for a

political post receives Uatchet (-) on the outlook on his election. It is easy to logically rule in favor of sabotage by spies from the other camp, or treason from members of his campaign, or damage through slander, than to consider the other correspondences; suicide, murder, assassinations, witchcraft, etc. (he did not get the cat's eye talisman, nor did he work with the heka, thus he lost the election, as predicted). The second level and mode involves taking the reading into mediumistic trance, through the heka or hekau of the deity or deities governing the reading. Depending on the skill and psychic equilibrium of the medium, it will be possible to ferret out very out of the way facts. A person gets Uatchet Hetep for the likelihood of getting a bank loan. There is no way that the Sebek approach would have arrived at the realization that the person will witness a hold-up of a bank (a Uatchet correspondence is robbers!), and in assisting the bank officer, secures the latter's good will, and thus gets the loan. And at the time, he had merely gone to the bank to make a routine deposit (the success came from chanting the heka of Uachet over a cat's eye talisman [jewelry]). A good medium, focusing on the question, and guided by the heka of Uatchet can predict such events, days and years in advance, down to the color of the underwear worn by the bank officer, and the caliber of the pistol used by the robber. The danger of the mediumistic approach is that the psychic equilibrium needed for consistent and high accuracy is hard to achieve, and maintain. In addition, many revelations are received in parables, symbols, or fragments. In touching up and interpreting them, the message is often perverted. A medium receives a fragmentary message that there is a conflict between the subject of the reading and another person. Failing to realize that the subject may have been, or will be the wrong doer, warns him that he has "an enemy" that will get him in trouble. If you have this ability well developed, you should use it, but combine it with the Sebek approach as a check. The third mode and level is the Maat approach. Here an attempt is made to take the abstract principles behind the correspondences into waking trance. By seeking to discover analogies to the picture emerging out of the reading, and the abstract principles governing the mental and emotional traits (hot/dry, cold/moist, etc.) you will find other situations in your experiences that were produced by the same forces. Since they have the same underlying structure, the set of events making up the prior occurrence will serve as a basis for "predicting" what will occur in the situation at hand. This is no different from the practice of economists who, for example, were able to predict the coming

recession of the 1990's because it represents the recessionary point in the 60 year economic cycle. The last major recession began at the end of 1929, and hung in for the first half of the 30's. This Maat (synthesizing) mode to interpretation is an excellent and very accurate approach, when used in a state of waking trance. While most people will be more dazzled by the feats of the mediumistic approach, the synthesizing method is superior by its ability to give insight into what will take place, its spiritual meaning, and how to solve the problem. The fourth mode is the Tehuti approach. It entails meditating on the card, or a representative metut (see Appendix A), and the heka of the deity. All thinking about the correspondences of the cards, shaping factors of the situation, etc. must be suppressed to allow the indwelling intelligence to reveal the specific application of the reading to the situation.

Why Should Oracles be Used?

Incidentally, some of the examples of readings given above-the haunted house, and the bank loan-are good supports for the argument in favor of using oracles. Some people argue that the use of oracles detracts from the exercising of one's rational ability¹. But there is no way that reason would have warned the couples of the outcome of their purchase. Neither could one have arrived through reasoning at the manner in which the young man secured his loan. To cap it all, we should note that the greatest Western minds have been employed in putting the Europe 1992 project together. Had they consulted an oracle, they would have spared themselves the humiliation that is waiting for them. Seker Tem Maat/Ausar Tem Maat. The Metu Neter is saying, on the Seker (-) side, that there will be delays due to the lack of planning ability, problems due to the lack of appreciation for structure and limitations, and so on. On the Ausar side, it is saying that, true unity will not be achieved, because there is no spiritual tradition of the essential divinity of man's Self in Western Europe. Imprisoned in their personal and national idiosyncrasies, they will not be able to effectively, and significantly escape the chains of tribalism and parochialism. American business men should take heed, for they are caught up in the greener grass syndrome, and are thus on the verge of throwing away billions of dollars . . . at the expense of the welfare of the have-nots, and have

1. If they were really sincere they will stop drinking alcohol, smoking, and eating junk food. These are the real killers of people's brains.

little of America. It seems that nothing has been learned from the Babel tower metaphorein. A similar reading was received for South Africa for the year 1990. Seker tem maat/Heru tem maat. While the Seker tem maat is to be understood as explained above, the Heru part of the reading shows that there will be problems on the governmental level; dictatorialness, administrative failures, weakness, etc. Black Africa, for the decade, received Het-Heru tu maat/Geb tu maat, which predicts relatively minor prosperity (Het-Heru tu maat) through the exploitation of natural resources (Geb tu maat). The minor success indicated by Het-Heru, if we apply the Utchau Metut, will be caused by the failure to transcend certain fundamental errors in cultural, and political identity. If they were to study this reading and make the necessary corrections, major success can be achieved. The way is implied in the correlates of Het-Heru (Seker), and of Geb (Amen). Seker/Amen will entail a return to their original spiritual science based cultural, and political systems of organization.

Direct and Indirect Responses

The responses from the oracle fit into two categories. The first, which is the direct mode is as the term says of itself. In the example readings that we have looked at so far, the responses identified what was wrong, or what resources were available, and so on. Sometimes, for its own reasons, the oracle responds indirectly. It usually does this when the answer is, or should have been obvious to the querent. If you ask the oracle a question such as "would it be okay for me to use the company's paper to make unauthorized reproductions for personal or community purposes?" you may get an answer such as Maat Hetep. Since Maat denotes strict adherence to divine law, the oracle is not telling you to go ahead and misappropriate the company's property. The reading is reminding you of the law, and the good consequences of upholding it. Or you could have received a Sebek Hetep reading, because you have been very clever in the way you have been going about using the company's property, or because of the persuasive rationalizations you have been employing to assuage your conscience. Thus, the Sebek Hetep is reminding you of the proper use of this faculty. As people do, the Metu Neter oracle will sometimes counsel you by focusing on the negative side, or the positive side of an issue.

An interesting indirect response was received from the oracle to the question as to what were its thoughts in regards to

being introduced to the world. It gave Maat tem maat/Geb tem maat! I immediately went into trance, whereby Maat and Geb informed me that the world at present is not dominated by divine law, and as a result widespread disasters (illness and poverty) will be suffered by rich and poor, high and low through ecological imbalance. None will escape. It has come to establish the throne of Maat upon the earth, and redeem it through the powers of the 750,000 waiting at the threshold of the shrine of Khemenu. This time it shall not be the 42, but the 750,000 that shall deliver the Ab of the Sebau to the jaws of Aum-mit. It is important to note that in answering with Maat tem maat/Geb tem maat, the oracle painted a picture of the present condition of the world. It singled out the greed, waste and extravagance [Maat (-)] of those in control, who are disequilibrating the earth. What can you do? Saturate the earth's electromagnetic field with Maat's heka (Aung Shring), learn-teach the divine law, love one another, and respect the earth and your body. Reject not the cornerstone of the temple not built with hands.

Implications and Greater value of Readings

You do a reading regarding health, or a very mundane quest (buying a house) and receive Maat Tem Tchaas as part of your reading, showing that you lack the knowledge of cosmograms, divine law, or the ability to perceive the whole governing the situation. It could very well be a reflection of how you are living your life in general, or some other area of your life. In addition to receiving insight into your health, or getting a house, you will gain insight into your spirituality, and other areas in your life, as the skills and occult powers that are developed for a specific situation can be utilized in all other areas of life.

The Western Legal System vs. the Kamitic

The Kamitic System

Significators

Judges

Tehuti, Maat

The Western System

Significators

Supreme Court judges
Judges
Lawyers

Tehuti
Maat
Sebek

It is important to note that in the Kamitic system, only Tehuti and Maat--significators of judges--play a role in the judgement of court cases. As we saw in chapter 15, such individuals qualified for these positions through spiritual initiation. As fulfillment of the initiation and meditation requirements of the 6th and 8th stages of spiritual development places the initiate beyond the sway of emotionalism, bias, and narrow mindedness, such initiates were selected for adjudicating court cases. The plaintiff submitted his charges in writing (to avoid biasing the case through oratory rhetoric), and these were read to the defendant. He in turn, submitted his rebuttal in writing, which were then read to the plaintiff. And the cycle was repeated until enough insight was produced. The judges then used their full knowledge of the law of God, and of the land, and their meditation and prophetic skills to render judgement. Why call judges "judges," if they don't render judge-ment? Were they not trained in the science and art of arriving at correct judgement? Why then, in Western society, is the passing of judgement in the most important court cases in the hands of people (Signified by Auset) who are 1) not trained in the science of judgement? 2) Are most likely to be swayed by the clever oratory of Sebek (lawyers)? It is no secret that lawyers decide the outcome of court cases more so than judges. Does this not make the Western legal system a contest of cleverness, as opposed to the administration of justice? Is it that they do not trust their judges? Why are law enforcers so frustrated? Why are most people so afraid to go out of their houses, or even, stay in them? You must keep these points in mind when consulting on legal matters, as the oracle may often slant its counsel toward the truth, while cleverness is the main factor at work in many legal cases. If you receive a reading showing that success is outside of the established law, you may have to prepare yourself for an intense, and protracted set of rituals if you hope to invoke divine assistance to influence the changing of the law. Such procedures are justified, when we have rulings, for example, that allow drug dealers to escape their deserved punishment, people with AIDS to transmit their disease with impunity, because a particular state does not have a specific law on the subject on its books, and so on.

Rituals and the Readings

The most important aspect of the Metu Neter oracle is the fact that even if you are not able to identify how the reading will specifically manifest itself, you can still help yourself, and succeed by meditating and performing rituals based on the words of power. Barring great psychic abilities which very few people will ever possess, hardly anyone would have been able to predict, in the above example regarding the house purchase, that the problem would center around the house being haunted. Successful chanting of the hekau of the Deities governing the reading--Aing and Shring, in this case (Sebek/Maat reading)-would have either forced the truth out in the open in a timely manner, or would have blocked the sale from going through, or would have influenced the judge to rule in favor of the buyers. In another situation, a man who needed a bank loan received Uachet Hetep. He bought himself a Cat's Eye ring, and chanted the planetary heka Aung shring shrang shraung. One day while making a routine deposit at the bank, he found himself in the middle of a Uatchet situation; a bank robbery (Uatchet (-) governs all kinds of low-lives, robbers, criminals, sorcerers, con artists, etc.). As a result of his cooperation-as a witness-with the bank officials, he received the loan, after other banks had previously turned him down because of "inadequate credit." Uachet! Don't leave home without it.

It is important to also note that you are not restricted to the ritual material given in this book. If you are a Yoruba, you may do the rituals of your tradition by making the correspondences of the Yoruba Orishas to the Kamitic Neteru (Deities). The same goes for other traditions (American Indians, Akans, Ewes, etc.).

Rituals and the Significators

One of the most important aspects of spiritual phenomena is the Deities' use of their significators (the things of the world that are under their dominion) as means of communication with people. Once you begin to perform the rituals as they are explained in this manual, you will discover that so many aspects of the unfoldment of the undertaking are significators of the deity that there is no room for attributing them to coincidences. A person involved in a Sebek ritual, for example, finds that the key events happen on a Wednesday, or any day at 3:00 o' clock, on the 3rd, or 13th, or 30th of the month, or in 3 days (Sebek's "mystic" number is 3); involved

will be people wearing red and black, or yellow clothing, or red and black things; critical events will happen at corners, intersections (crossroads), at doorways (Sebek is the opener of the way, and guardian of portals, etc.). Iron clad meeting will be set for 10:00 am to take place on the 8th floor, but "unforeseen" events will force the meeting to begin at 3:00 pm, and be held on the 13th floor, and so on. Person's involved with an Auset ritual will find that the key person involved might be a woman of childbearing age, wearing a blue dress; events will happen mostly on a Monday, or the 7th of the month, or at 7:00 o'clock; water, lettuce, etc. will be involved; your car might be involved in an accident with a blue vehicle, and so on.

This is the manner in which the Deities let you know that you have successfully invoked them, and that they are on the case. That they are in control, and fully in charge of the situation. Such revelations are very important as they help you to keep the faith, and, of greater importance, they serve as one of the best evidence of the existence of the spiritual entities, and the science for dealing with them. When you pray or meditate without awareness of the specific Deity in control of the event, and all events are controlled by some aspect of God, you miss the wealth of "signs" (omens and portents) that the Deity uses to inform you of its presence and the progress of the situation. You have no way of getting feedback of how things are progressing, or what you must do to help the situation along. In preparation for a group healing ritual for women, I dreamed that a beautiful young woman visited my house, and when I asked her what could I offer her, she asked for Pulsatilla soda. As Pulsatilla is one of the major feminine homeopathic remedies, I realized that the woman was Auset. The next day, I happened to pass by a flower shop, and for the first time, after several years of visiting the store, it just "came" to me to inquire about the name of a particular flower that "caught" my eye. It was Pulsatilla. When I placed an order for these flowers for all of the women who were participating in the ritual it came up to \$70.00. 7 is Auset's mystic number. They placed the flowers in pouches and wore them around their womb area, as they went into trance and invoked Auset through the heka Aung Vang Nhung. The next day most of them had their menses, way off schedule, and as the time progressed, many problems, including infertility, painful menses, etc. cleared up without the administration of medicines, or other changes in lifestyle, except the observance of the laws (spiritual counsel material) of the Deity.

When we speak of initiation, we must distinguish between the formal vs. the informal approaches. In the formal approach, the initiate goes through a step by step, stage by stage process of spiritual practices. The observances of each stage are applied to all aspects of life. In the informal approach, a spiritual observance of any of the 10 stages is prescribed by the oracle in relation to the undertaking inquired about. Obviously, the latter approach is the subject of this book. A young woman receives a Maat reading in a situation regarding the guidance of her wayward teenage son. Although she must go through the first 6 meditation stages, and should go through the higher ones, the focus of the experience is the 6th stage of initiation. She has to become the embodiment of Maat in order to succeed. Nefert-Ra, the fictitious character that we discussed in the meditation chapters must become the embodiment of Het-Heru in order to heal her female organs and get pregnant. These "initiations" differ from the formal ones, in that they are "mini-initiations," i.e., the observances of the stages of meditation are somewhat limited to the subject inquired about. This distinction, however, cannot be applied too narrowly. According to the nature of the situation, it is possible to often find that the observances must extend to all areas of life. The ideal of course is to use both approaches simultaneously.

Finally, it is of utmost importance to note that only an abbreviated set of meanings of the oracular combinations has been given. The 3934 ($56 \times 70 + 14$) base combinations have been reduced to about 400, as the full presentation would have added several hundred more pages to this volume. I have reserved a future volume for the full treatment of the combinations, which amount to 55076 (3934×14) combinations when the 14 sets of signifiers are considered.

Underlying Principles of the Practice
of
Meditations and Rituals

Meditation is the science of manipulating our focus of consciousness (the will). Through meditation we are able to internalize it or externalize it at will, and focus it and unfocus (relax) it at will. Ritual deals with the science of manipulating Ra (the life-force), i.e., our so called subconscious, id, etc.

Meditation

We must begin by removing certain major popular misperceptions and misconceptions regarding the states of consciousness before we can fully understand the mechanism of meditation. The greatest impediment to the understanding of meditation and spiritual practices has been the popular division of consciousness into "waking consciousness," and "sleeping consciousness" to identify what we normally call "being awake," and "being asleep," respectively. The observation is as correct as the "self evident truth" that heavier bodies fall at a faster rate than lighter ones. If you keep in mind the following substitutions, you will establish a sound foundation for understanding meditation and ritualistic procedures. The state that we normally call "being awake," in which we are aware of the external environment, is a "modality of the extroverted state of consciousness." And what we normally call "being asleep" is a "modality of the introverted state of consciousness." The gist of the problem resides in the popular miscomprehension of the objective reality behind the words "waking" and "sleeping," although most people will swear that their understanding of the realities behind them is accurate.

Our consciousness has 2 fundamental modes, with 3 sets each, yielding 6 modalities.

A
Introverted

1a focused/awake
active
2a focused/awake
relaxed
3a unfocused/
asleep

B
extroverted

1b focused/awake
active
2b focused/awake
relaxed
3b unfocused/
asleep

What is "normally" called "sleeping" is 3a-the unfocused introverted state. The introversion of consciousness is the cause of the detachment from the environment, and the unfocusing is the cause of the undirected stream of imagery we call dreaming, and the "unconsciousness" experienced during the non-REM period of sleep. Being "awake" is 1b-the focused, and active extroverted state, with minor periods of 2b (daydreaming). This adds up to about 18% of our mental states. When we add to it the 3a state we see that most people are using about 35% of the potential of their states of consciousness. The remaining 65% corresponds to the states of trance, which is the means of accessing the unused portion of the brain (the 80% or so that most people do not use).

State of Trance

Waking Trance States

1a: We can introvert our focus of attention, so that we detach our consciousness from the environment and the body, and yet, remain awake and mentally active. The will in this state is still active, sanctioning, and directing thought associations.

2a: We can introvert our focus of attention, so that we detach our consciousness from the environment and the body, yet remain awake (the will is focused), but mentally passive (the will is relaxed). In this state, the life-force is free to throw up all associated thoughts, and spiritual agencies-deities, ancestors, etc.--are able to enlighten the meditator. We are here dreaming, yet awake. And unlike "sleep dreaming," and the height of mediumistic trance (3b), we are able to clearly remember everything that transpired during trance.

The introversion of consciousness in both of the above states, reduces the receptivity to the distractions from the environment, and the left side of the brain. Thus we can concentrate and avoid the resistance to changing our behavior patterns that stream in from the lower faculties of the left side of the brain.

Mediumistic Trance

When we are extroverted, thus communicating with the environment and the body, but with our will in a passive state, we fall into mediumistic trance. The "person" walks around, dances, talks, etc., but all activities are being guided either by Ra-the life-force (subconscious)-or by the will of another entity (spirit, deity, hypnotist, initiator, etc.). This state is popularly known as one of possession or obsession according to the directing agency. In possession, the direction is coming from a deity or ancestor, and in obsession, the direction is coming from a highly charged passion.

BREATHING THE KEY TO MEDITATION

When you want your car to turn left, you do not exit the car, and turn the wheels to the left, just because they are directly involved in the turning of the car? You know that the wheels are indirectly controlled from the steering wheel. It is the same with the control of mental activities and emotions. The main "switch" is not located in the "mind" but in the body. We must understand the scope of activity allocated to the will. It is like the banks of a river. While it can direct the flow of the water, it cannot stop its flowing.

Most people are under the misconception that thoughts can be controlled through mental effort. If you tried, you will discover that thoughts come and go independent of your will. Even when you attempt to focus your attention on one object or line of thought, it isn't long before you notice that your awareness of your self, and what you were concentrating upon is returning to you. You realize that without realizing when it was happening, your attention drifted off unto something else, which you may or may not be able to recall. You rededicate yourself to the task, only to find the same thing happening all over again. And again, and again. If you were attempting this exercise because you received instructions from one of the hundreds of books on meditation, which direct you to "chose

"X" object or subject and to concentrate upon it, you would be told that "If your attention wanders bring it back, keep it fixed, etc.." It wouldn't be long before you gave up and declared yourself a failure at meditation, and a "weak-willed" person who is incapable of concentrating etc.

The first thing about your Self, and meditation that you must know is that thought control is not under the dominion of the will. It's function is to direct how thoughts come together for making meaningful units in conformity to logical principles, facts, and Truth. The misconception that the will is in charge of controlling the coming and going of thoughts is so easy to form given the fact that it is directly involved with them. This is like believing that the wheels of a car must be turned directly. But the fact, which has been known, and verified for thousands of years is that the manifestation of thoughts, as well as sensations (emotions, etc.) are to be controlled through the manipulation of the diaphragmatic muscles. This is the set of muscles located in the lower abdomen About an inch below the navel. This location is called the Tan Tien in the Chinese tradition, the Tanden in Japanese Zen tradition, the Hara in Japanese martial arts, and is the "guts " from where we derive our physical and moral strength.

We have already experienced, but may not have noticed the thought and emotion restraining power of this center. At the moments when we are bracing ourselves to withstand a blow, or intense cold, or some painful event we may tighten this area. We instinctively summon strength in this manner. What most people fail to notice is that at such moments thought activity stops completely. You can prove it to yourself. Put the book down right now and take a deep breath, push out the lower abdomen and tighten it, while holding the breath and ignoring all thoughts that may tend to rise. Hold your breath for as long as you can and just stare straight ahead. The instruction to "ignore all thoughts that may tend to rise" is for the initial period of the exercise before the force fully sets in. Afterward it will wipe out all thoughts on its own. The holding of the breath and counting to ten to negate emotions is based on the same principle, just that people fail to tighten the lower abdomen, or might draw in the upper chest and hold the breath with catastrophic effects- they are vanquished by the emotion. You may have heard people speak of their courageous acts in critical moments. Underlying all such accounts is the fact that they acted without time

to think. Whenever we act positively and successfully in a critical situation, you can be sure that strength was instinctively thrown in the lower abdomen. Had we stopped to think, not only would we have come up with the wrong plan for action, but we would not have found the strength to succeed, as summoning strength is incompatible with thinking. The two activities operate in opposed psycho-physical settings. This is a crucial point to remember.

Tension Diaphragmatic Breathing

Tension diaphragmatic breathing is the key to concentrating the attention and summoning strength; spiritual, mental or physical. The essence of this form of breathing is in the handling of the outbreath. Just before we breathe out, the lower abdomen must be in a state of expansion (a mild pot belly). As we breathe out, we pull in the abdomen, without releasing the tension. The result is a restrained exhalation in which the lower abdomen is contracted. This is the essence of pranayama.

The restraint of the exhalation in this fashion slows the breath down to the point of stopping it from time to time. The stoppage that occurs when the exhalation is being restrained in this manner is called Kumbhaka in the yogic tradition. In Lesson II, verse 77 of the *Hathapradipika* is stated, "Consciousness should be emptied of objects through kumbhaka." The perfect Raja Yoga state is attained by practicing in this manner. When meditation is conducted with this mode of breathing, eventually the restraining of the breath changes over from willed to automatic activity as the meditator enters into the state of trance. In fact it is in the state of trance that the held breath is truly effective. In the *Hathapradipika*, Lesson II, verse 73: "When siddhi (perfection through/in trance) in Kumbhaka is attained (which is then called Kevale) nothing in the three worlds can be said to be unattainable by the Yogi." The understanding behind this statement is that in Yoga philosophy, the Yogi seeks to carry out all activities in, or through trance as it is the vehicle of perfection. All difficult Asanas (postures) become easy, or are entered into automatically, and spontaneously when the practitioner attains to the trance state. And breath retention is no different. The breath is manipulated in such a manner as to induce the state of trance, in which the cultivated procedure of breathing will continue without direction of the will once the trance is established. Then its power comes into being. The same holds true for the working with words of power. Uttered in the everyday

externalized state of consciousness nothing happens. In trance, their powers come into manifestation. The experience of hypnosis is the same. Mere suggestions, which have no effect on the individual, have the power in trance, to remove pain to the extent that open heart surgery can be conducted without anesthesia, etc.

To summarize, we must fully understand that by the proper restraining of the breath during exhalation, trance, the objective of meditation is attained. And when that form of breath restraint is continued automatically- now directed by the spirit and not the will!- which is called *Kevala Kumbhaka*, the power of the spirit to achieve is fully awakened.

The Physiological Basis of Kumbhaka

Applying tension to the lower abdomen presses against the pneumo-gastric nerve which is the main nerve of the parasympathetic division of the nervous system, stimulating it, thus, to higher activity. As its activity inhibits that of the sympathetic division of the nervous system which is in charge of externalizing consciousness, and preparing us for external action, consciousness is thus withdrawn into the inner plane. In addition, the stimulation of the pneumo-gastric sends nervous impulses to the wakefulness center in the posterior hypothalamic region of the brain, which in turn, excites the cerebral cortexes, contributing thus to the increased activity of these higher brain centers. It is important to realize that all involuntary/autonomous functions of the body have a reflex center from which they can be influenced. Chinese acupuncture is based on this fact. A point on the finger can be stimulated to cause increased activity of the heart, for example. The same is true of the mechanism of thought control. The switch is located, not with the mental faculties, but in the "gut."

BREATHING AND THE INTERNALIZATION OF CONSCIOUSNESS

It is obvious from the preceding material, that if we are restraining the outbreath, the overall rate of breathing will slow down. And it is the rate at which we breathe that controls whether our consciousness is externalized or internalized. When we are concentrating on a thought we automatically hold our breath. This is

an instinctive act to withdraw the consciousness from the external plane to focus it in the mental plane. In addition it helps to slow down thought activity. Marksmen, golf players, basketball players, pitchers instinctively hold their breath as they concentrate on focusing in on the mark. When we find it difficult to stay awake we get fresh air, or walk about to get the lungs working more.

Normally, the adult breathes an average of 18 breaths per minute, when subjected to very light activity or seated at rest. When we are concentrating heavily on a subject our rate of breathing automatically drops to about 9 breaths/min. Now, we may have noticed that usually protracted concentration work readily runs into a state of sleepiness. This is due to the diminished intake of air. Now, to induce trance, the meditator lowers the rate of breathing to 7.5 breaths/min, or 6, or 4.5, or 3. Each rate tunes us into a different level of consciousness. It is important to note that all books on meditation that instruct to breathe slower, betray that the author lacks mastery of the subject.

THE HARMONICS OF BREATHING

All things vibrate, including the human spirit and body. And each thing vibrates to its specific "Key." The vibrating mechanism of the human body is the breathing system. When we are seated at rest, the spirit vibrates (we breathe) at 18 waves per minute. Comparing the cyclical values of our respiratory and circulatory systems with that of the Solar system yields some very revealing facts.

Let's begin with the fact that there is a 1:4 ratio between our breathing and pulse rates (18 breaths to 72 pulses), and the rate of the Earth's rotation and the time it takes to rotate (1 degree every 4 minutes). A good meditation objective would be to see if the 1:4 relationship between our breathing and pulsation rate was determined by the clocking mechanism that controls the Earth's rotation around its axis.

The average rate of 18 breaths per minute equals 25920 breaths a day. This figure, 25920, corresponds to the number of years that it takes the north pole to trace a complete circle in the heavens in its precessional movement. The significance of this relationship has been known for thousands of years, although its true meaning has been lost to all authors since the destruction of the Temple (library) of Luxor.

The knowledge of the harmonics of breathing survives veiled in the Hindu allegory of the Yugas, and Chaldean sacred cycles of the Saros and Naros. According to the Hindu allegory, Man has not always behaved as he currently does. There was a time when all Men were honest and truthful. This was during the first of four ages in which the history of mankind is divided. This age was called the Golden Age or Krita Yuga¹ or Satya Yuga (Satya: truth, honesty), and lasted for 1,728,000 years. It was followed by other ages in which Man's goodness and power degenerated by degrees. Following the Golden Age was the Silver Age, known as Treta Yuga². It lasted 1,296,000. This was followed by the Copper Age, called Dvapara Yuga, and lasted 864,000 years. The last Age, in which we are now living (supposedly started in 3150 B.C. with the death of Lord Krishna) is the Iron Age, which is known as Kali Yuga, and will last for 432,000 years. Together they add up to a great period, or Maha Yuga of 4,320,000 years.

Most books on Hindu culture simply mention this allegory, or unprovable "scientific fact," and leave it at that. Now, if we compare these cycles to those of the solar system we discover some startling correspondences. It was said earlier that the North pole describes a complete circle backward through the zodiac in a period of 25,920 years³. It moves at a rate of 1 degree each 72 years (the number of our pulses/minute, by the way). As there are 30 degrees in a zodiacal sign (or Age) it takes 2160 (72X30) years to span a sign (or an Age). As there are 12 signs in the zodiac, it takes 25,920 years (2160 X 12, or 72 X 360 degrees) to span the 12 signs of the zodiac (or Ages). The key figures here are the period of 25,920 years and the 12 signs of the zodiac. The division of the Period of 25,920 years by the 12 zodiacal signs, and its factors.

1. Krita conceals the heka Krim (Skr, Ta-Sekri), the power of the third sphere of the Tree.

2. As treta means three, how can it be the second age? Clearly there is a blind here. It only makes sense when we understand that it corresponds to the third in a series. We must therefore count from the bottom. But count what, if we are not dealing with the sequence of ages? It is the third level that is reached in the process of the internalization of consciousness as the rate of breathing is reduced. The same holds for the so called third age, "dvapara." Dvapara means two. It is the second level. The first level of internalization is the Japa point which corresponds to the alpha brain wave state.

3. This is due to a wobbling motion of the earth.

We get the following:

25,920 DIVIDED BY	Length of Ages
12 = 2160	
6 = 4320	432,000 Kali Yuga
	4,320,000 Maha Yuga
4 = 6480	
3 = 8640	864,000 Dvapara Yuga
2 = 12960	1,296,000 Treta Yuga
1 = 25920	

The missing Age, Krita is $4 \times 4320 \times 100 = 1,728,000$.

The figures resulting from the Division of 25,920 by 12 and its factors follow the overtone, or harmonics of musical tones. When we strike a tone, although we only hear one tone, it is a synthesis of itself and a series of overtones that it generates. We can chart this as follows:

Let's say that we strike a note that vibrates at the rate of 2160 waves per second. And let's say that the note is "C." Then we get the following:

Note	Vibration	
	Rate	Division
C	2160	1/1
C	4320	1/2
G	6480	1/3
C	8640	1/4
E*	10800*	1/5*
G	12960	1/6
G	25920	1/12

*Note: The 1/5th interval--the third of the triad--introduces the emotional factor in musical harmonics.

In other words, when we strike "C" at 2160 vibrations/second, what we actually hear is a fusion of this C with the C eight notes above (4320), the G above the preceding C, the following C, the following E, the following G, and the G an octave above. There are other overtones that are generated between the 1/6th and the 1/12th divisions, but the principle discussed here is

limited to the tones that define the tone (the unison, third, fifth, and octave).

The third column labeled "division" refers to the subdivisions that every vibrating medium goes through in producing a tone and its overtone. For example: the C at 2160 is produced by the vibration of the full length of the string. Simultaneously, the string is vibrating at 1/2 half its length, twice as fast to produce the C an octave above. It also subdivides itself by thirds to produce the G at 6480 (3 times the rate of the base tone C/2160). Another point to note that the division of the string produces the series of notes $\ast/1$, $\ast/2$, $\ast/3$, $\ast/4$, $\ast/5$, $\ast/6$, and $\ast/12$ (SEVEN IN ALL!). Applying the harmonics to the breath we get the following:

<u>Note</u>	<u>Vibration</u>			
	<u>Rate</u>	<u>Division</u>	<u>Breaths/</u>	<u>Yugas</u>
			<u>minute</u>	
C	2160	1/1	1	Maha
C	4320	1/2	3	Satya
G	6480	1/3	4.5	Treta
C	8640	1/4	6	Dwapa
				ra
E*	10800*	1/5*	7.5	Japa
				point
G	12960	1/6	9	Bala
				Rama
				point
G	25920	1/12	18	Kali
				Yuga
18 breaths--6+6+6--(666) the Beast!, Kali Yuga				

Above I have given the proper allocation of the yugas to the rates of breathing.

From all the above facts we can begin to understand that the periods measuring the yugas are really key ratios in the human breathing cycle. An average of 18 breaths per minute yields 25,920 breaths / day; $9/\text{min.} = 12,960$; $7.5 = 10800$, and so on. Students of spiritual science will recognize all of these numbers as the so called "sacred numbers" spoken of in many texts but never has any practical elucidation about them been given. The data regarding the so-called

qualities of men that lived in each Yuga are allegories for the effect that each rate of breathing, sustained through meditation has upon the person. If we average 1 breath /min. (breathing according to the techniques of meditation, pranayama and kumbhaka) we will make contact with our divine nature. At such a slow rate we would succumb to the grand slumber that Vishnu is said to enjoy in Maha Yuga. At 3 breaths per minute all thought processes stop, and we attain to Satya. That is, the ability to intuit all knowledge. Constant meditation at this pace will heal the body, and prolong life. In addition we will also activate the Kriya power that will enable us to attain whatever we desire in the world. 4.5 breaths per minute will place us in the Treta Yuga state. Although intuition does not function perfectly at this pace, as thoughts can still intrude, understanding of spiritual truths is very high when we are in waking trance at this rate of breathing. This is the characteristic of the men of the silver age. 6 breaths /min. will place us in the Dwapara yuga stage which is excellent for learning material facts. 7.5 breaths per minute is the rate for performing japa (protracted repetition of mantras). In this practice a rosary of 108 beads is used to keep track of the count which is invariably placed at 108, 1080, 10800, etc. This practice is caused by the unfortunate failure to understand the connection of the number 10800 (108, 1080, etc.) with japa. It is the key to the rate of breathing at which japa is effective. Once you are in trance, it matters not if you repeated the mantra once, or 10,000 times. Once trance is achieved, the power of the mantra is awakened. 9 breaths /min. corresponds to the rate at which we must breathe when performing Hatha Yoga asanas. It is excellent for strengthening the body, and correcting certain infirmities. Bala Rama, to which this rate corresponds, is the Hindu Hercules. 18 breaths /min. is the rate at which we are very externalized, and fully subject to the domination of thoughts and emotions. It is therefore the number (rate) at which the *Beast* (animal soul) within us lives, and does its thing. $18 = 666 (6+6+6)$. To control it, and transcend it, all that we have to do is to deny it of its breath. It is as simple as that. Some scholar may, no doubt, take exception to this interpretation of the yugas, but they should ponder the fact that there is nothing in the word "yugas" that means an "age," the true name for which is a "Kalpa." "Yugas" is a variant of "yoga," and clearly has to do with the meditation process. And as far as I know, this is the only valuable information that has ever been given on the Yugas. The author received this insight into the Yugas from one of his ancestors. Otherwise, it has always been introduced as an odd

curiosity. Here we find that it is the key to a most, hitherto unknown, important factor in meditation. We just don't simply breathe slower. Slowing down the breath over an extended period should not be taken lightly, as the respiratory mechanism is at the center of the body's and the spirit's rhythmical equilibrium. We must breathe at a rate at which stability can be maintained. Guided by the harmonic progression we find that breathing will best stabilize itself at the $1/2$, $1/4$, $1/6$, and $1/12$ divisions. These are the tonic, and dominant tones in the harmonic series. We must note that the third (the $1/5$ th division) does not arise when we apply the division by 12 and its factors. The exclusion of the third in this matter will be clearly understood by music theoreticians.

BREATHING AND WAKEFULNESS

We have seen that reducing the rate of breathing brings on sleepiness. We may wonder how then is it that meditation leads to a greater degree of wakefulness. The compensation for the reduced rate of breathing is in the increase in the amount of breath taken in (We must remember that the tension in the lower abdomen is another contributing factor).

From this chart we can see that although the total capacity of the lungs is 5700 ml, we normally take in and expel 500 ml, between 2300 and 2800. We don't take in all the oxygen that we can, and neither do we expel all the carbon dioxide in the lungs. Of course, as we can see, it is impossible to breathe in to the full capacity as there is an upper limit at about 2900 ml. Neither can we expel all of the carbon dioxide as there is a lower limit at 1200 ml. But we can certainly take in more than the 500 ml that we normally

do. This shallow everyday breathing is the cause of our health problems, failure to perform to our mental optimum, and to develop spiritually. When we meditate or exercise vigorously we normally take in up to 1700 ml. between 1200, and 2900 ml. The difference between exercising, and meditating is of course the rate of breathing, and the fact that in meditation, the vast amount of oxygen taken in, goes to energize the spirit, while in exercising it is expended in muscular activity. Meditation is to the spirit, what exercising is to the body. Do you exercise your spirit daily? Do you realize the consequences of not keeping the body in shape? The spirit in shape?

The 1200 ml. of air taken in and expelled above the normal 500 (1700 ml. in all), during meditation has the effect of fully waking us up. And this is one of the most important distinguishing factors of meditation. With meditation proficiency, we will come to realize that our "normal state of being awake" is not one of full wakefulness. In this state, there is a blend of thought direction (willed activity), and the perception and passive following of thought drifts (dreaming). Clear perception will reveal that we dream while we are awake, and while we are asleep. It is this thought drift (dreaming) activity that leads consciousness astray in its attempt to follow a trend of thought to its logical end, or to substitute symbols to stand in for the realities that the Self is trying to gain knowledge of. The combination of the tension exerted at the lower abdomen, with the increased intake, and expulsion of air, fully awakens us, thus putting a stop to the parade of thoughts (dream activity). In other words, the sphere of awareness ("mind") is emptied of thoughts. In this state we can then 1) look directly into the nature of things and reality or 2) think (string thoughts with each other) logically and analogically (synthetical thinking), without losing our concentration or 3) concentrate our attention on words of power and their vessels (images) or 4) insperience the reality of our Self, and the formless, unmanifested reality.

Rituals

While meditation deals with the manipulation of the focus of consciousness so as to effectively put the will in communication with the life-force, ritual deals with the means of effectively directing the life-force to the intended objective, once it has been united to the will. Incidentally, this union of the will with the life-force is the other side of the coin of the definition of yoga. The other side is the

unification of our identity (person) with our true self. Ritual is thus a process of programming (conditioning), or deprogramming the spirit to manifest desirable effects in our lives. *The assumption of responsibility for the conditioned state of our spirit-what we like; what we can do; how we feel; how we spontaneously react to situations, etc.-is the foundation of spiritual work.* Ultimately, if you do not know this, you have no knowledge of spirituality. And if you don't know how to control the conditioned states of your spirit, you are not living spiritually. In spite of your wealth of spiritual information, you would not be in control of your behavior, and the course of your life.

The principles of ritual are based on the reality that Ra, the life-force, does not respond to the meaning of words⁴. It is an energy system, and thus, responds to force and forms. In place of ideas, it is directed through words of power, colors, odors, images, electromagnetic forces, etc. In fact, the specific effect of each color, sound, odor, etc. upon the life-force has been identified, catalogued, and cross-referenced by Black scientists, in very much the same manner as has been done with the chemical elements. For example, the heka "gang," one of the 50 matrices of Khepera, belongs to the heart psychic center, is orange, and excites the life-force to remove obstructions; "tang" belongs to the heart center, is a brilliant yellow, and awakens the healing modality of the life-force; "B-hang" belongs to the navel center, is orange, and awakens Ra's power to destroy evil spirits, and so on. The effects of the electromagnetic radiations of plants, gems, colors, odors, etc. have been similarly catalogued.

In past chapters, the correspondences of the deities to gems, colors, oils, baths, etc. were given. These are to be used in association with the meditations. In carrying out a Het-Heru ritual you should wear green, or green and yellow, use sandalwood incense and oil, or rose, etc. Before the meditation, a bath composed of the infusion of spearmint, yellow roses, culantro, sandalwood oil, and so on will help to change your aura (the electromagnetic radiation from your body) to that of the deity. As the first, eight, and fifteenth hours of Friday (during the waxing moon) are the times of the week when her vibrations are strongest, it is auspicious to do her rituals then. The energy generated during the ritual can be "captured" in a

4. The practice of hypnosis and autosuggestion would seem to contradict this. But it is the key for understanding the so called differences in hypnotic susceptibility between people. The "most susceptible" individuals are better able to translate verbal information into images, and sensations.

gem (ring, bracelet, necklace, etc.) appropriate to the deity (white coral for Het-Heru, Ruby for Heru, etc.), or leaves of associated plants (see Chapter 19) which can be carried somewhere on your person. In this manner, the effect of the meditation is made to last much longer, or is rendered portable.

In relationship to these ritual aids a special comment must be made about oils. If their use is fully restricted to ritual purposes, you will discover in them very potent forces. For example, I restrict the use of honeysuckle oil to a Het-Heru meditation for improving my finances, and to achieve success in my goal. When I find myself in a similar situation in the future, It would not be necessary for me to repeat the entire process. By just putting on the oil, or imagining its scent (and mentally chanting the heka), the forces that were cultivated through the meditation will be aroused even though I am not in trance at the moment. This cannot be done, if you are using the oils non ritualistically. I.e., to "smell good," etc.

HOW TO MEDITATE AND PERFORM A RITUAL

The key to meditation is in the management of the breath. And the key to the management of the breath is in the management of the posture. Proper posture has two aims. It automatically promotes correct breathing, and it prevents the body from distracting and calling the attention outward to the body and the external environment.

POSTURE IN MEDITATION

There are 3 sets of observances to achieve the correct posture:

1. The focal point of the posture in meditation is in the small of the back. It must be slightly tucked in at the waist level (the third lumbar vertebra) so that the back depicts a slight "S" in shape. You will find that this automatically forces you to breathe correctly from the lower abdomen. If, instead, we experimented with the posture in which the abdomen is caved in, and the back depicts a "C" shape, we will see that breathing is automatically focused in the upper chest, and made shallow. This is the wrong way to breathe. It cultivates illness, proneness to emotionality, tension, irrational, and foggy thinking, weakness (physical, mental, moral, and spiritual), etc. Incidentally, the correct posture is to be cultivated, not only in meditation, but at all times. It is incorrect posture that unbalances our breathing, and makes us vulnerable to being controlled by our emotions, reducing our clarity of perception, and activity of the will during the course of the day.
2. Care must be taken to insure that the only tension point in the body is at the lower abdomen, an inch below the navel, where breathing is concentrated. Every other part of the body must be relaxed. Especially the shoulders, which most beginners tend to pull up at the suggestion to keep the back straight. Straightening of the back takes place by pulling in the small of the back at the waist level.

3. When meditation is done in a seated position, the feet must be flat on the ground, hands must be resting palms down (it is preferable to the palms up that is usually recommended) on the lap, the head is to be slightly tilted downward. Meditation can also be conducted lying down, flat on the back, no pillows, and hands resting palms up (Corpse Asana), or lying on the right side, head resting on the right hand, right leg drawn up perpendicular to the body, and bent at the knee. Beginners are recommended to stick with the seated position until proficient, because, in lying they will either fall asleep, or fail to fully awaken themselves. There is this life long association of this position with sleeping, or relaxation of the will, and diffusion of consciousness. For the very proficient, meditation can also be conducted while walking very slowly.

THE PROCEDURE

First of all, note that given the nature of the breathing, this meditation should be done either before eating, or at least 3 to 4 hours after a meal.

PRELIMINARIES

1. Begin by assuming the proper posture. Make sure that the seat is not too high, or low. The deep diaphragmatic breathing must proceed naturally without any difficulties. Most beginners may become fatigued quickly from this posture as they are now using muscles that they have neglected for so long. They will find it helpful to tuck a small pillow or rolled towel between the small of the back and the chair's back rest.
2. Close your eyes. Some books recommend that the eyes should be kept open. Although this is best for advanced work, it is not recommended for beginners, as it leads to distraction.
3. Place the tongue on the gum at the line where it meets the teeth. This unites the negative (Jen Mo), and positive (Tummo) currents of energy in the body. Unfortunately I cannot go into details. Consult books on Chinese Yoga, and Acupuncture for details. Besides, it keeps the tongue from

wandering in the mouth, which produces an excess of saliva, which in turn interferes with keeping the attention inward. Keep the tongue relaxed.

BREATHING (Always through the nostril, and smoothly)

4. Breathe in slowly, pushing out the lower abdomen.
5. Tense the lower abdomen slightly.
6. While maintaining the tension, breathe out very slowly, contracting the lower abdomen. Note that the contraction is being opposed by the tension that is being held. This restrained contraction is the essence of pranayama (prana = breath, yama = restraint).
7. From this point on, the in breath is done in two stages
 - a) At the end of the outbreath, the lower abdomen is fully contracted and mildly tense. Therefore, the first stage of the inhalation is conducted by simply letting go of the abdomen, that it may fall outward by itself. Breathe in at the same time.
 - b) Pause slightly, then deliberately push the stomach out, while taking in more air. This form of in breathing is called "pot belly" breathing by the Tibetan Yogis.
8. Repeat from 5 to 7b for the duration of the meditation.

These steps are to be memorized with 100% accuracy. Any sloppiness might lead to failure or illness.

FUNCTIONING IN THE MEDITATION STAGE

As you begin to meditate, your brain is still generating 50 microvolts in the beta frequency of 13 - 28 Hz., therefore consciousness is still oscillating between the lower half of the 6th, and the lower spheres. It is useless at this point to try to concentrate on something, or to expend efforts to achieve clear, vivid images. This is not the state in which these mental effects manifest naturally. In meditating we must know what mental activities naturally express themselves in what states of consciousness. Attempt to manifest a clear vivid image in the beta state, and all you will get is a fuzzy, grey or impermanent image. In the alpha, and theta stages you will see that the image will be vivid, and will remain in consciousness without effort.

In the course of the meditation you will (must!) begin to feel some of the signs of coming trance. Your eyelids may feel heavy, flutter, become glued to your eyes; your body may feel heavy, like lead, or feel light. You might feel like you are floating away. Or, you may feel detached, a stranger to your body, etc. These off-bodily sensations are the result of the partial withdrawal of consciousness from the 10th sphere; The body might feel as if it would rock from side to side (allow it if you want to achieve mediumistic trance, otherwise ignore the feeling); You may also feel currents of energy travelling through the body, heat, flashes of light, hear sounds, see colors, etc. These are all natural to the state of trance. You will not experience all of them. Neither will you always experience the same ones each time that you meditate. This has no meaning.

The key experience to look for are the points 1) at which your body feels very heavy, or very light and floating. 2) At which you find that there are no thoughts drifting into your awareness. Your "mind" is a blank screen. It is at these points, especially the latter, that you can shift your attention from the lower abdomen to your creative visualization work.

Accompanying these experiences is the feeling that your breathing no longer wants to proceed at the direction of the will. It has been taken over by the life-force. Let the breathing proceed on its own. You will find that it becomes very smooth and fine, slows down, comes to a stand still, and resumes by itself. This is the moment of Kevala Kumbhaka. You have achieved an effective state of trance.

Managing the Sphere of Awareness During Meditation

Throughout the chanting it is important to keep the attention focused on the image that has been chosen for the meditation objective. While chanting the heka of Ausar for the purpose of healing a friend, I visualize myself wearing the white crown (see the Ausar card), passing the Uas staff (symbol of well being, and happiness--see Appendix A). This image and the mantra are the entire contents of the sphere of awareness. There must be no verbalized thoughts about reasons, stages, process of healing, etc. Critical for success in meditation is the unification of the two hemispheres of the brain. This is achieved by giving the left side of the brain a right-brained task. Rhythm, melody, and repetition are intrinsic to the functions of the right side of the brain. When the left

side of the brain is deprived of its "straight line" sequential mental processing, and given right brained processing-circular (repetitive) and rhythmic tasks-it unites itself to the latter. In addition, the circular activity of chanting concentrates the attention to one spot.

Meditating on your Readings

The format to be followed is the same one detailed in chapter 13. Regardless of your reading you must go through the 4 meditations of stage 1, and the meditation of stage 2. In stage 3 you will work on the heka of the deity, or deities of your reading, using the appropriate image (see Appendix A) for your objective. Then continue with the Men Ab practices of stage 4 (Chapter 14), and the meditations of stages 5 and 6. As for the last four stages, you should make a good go at it.

HEKAU OF THE DEITIES

Coordinating the Breathing with the Chanting

Note that the inbreath occurs during the 1st, and 2nd counts. It is held from the 3rd to the 6th, and the outbreath occurs during the 7th, and 8th. The perineum is contracted at the 3rd count and held until the 6th.

The Rate of Breathing

Mediumistic trance induction takes place at 7.5 breaths per minute (each count lasts about a second). The depth of breathing is slightly greater than normal, but not too deep.

Waking trance induction takes place at 4.5 and 3 breaths per minute. At 4.5 breaths per minute each count will last slightly under 2 seconds. At 3 breaths per minute, each breath count will last about 2.5 seconds. The depth of breathing must reach the full capacity.

The following chants are to be done at the three prescribed rates. The 3 breaths per minute should not be attempted until the 4.5 rate can be handled with ease for over an hour.

Following are the instructions for coordinating the breathing with the chant. The chanting must be done mentally. The music score for the hekau has been placed at the end of the book. Cassette recordings of them are available, as well. They can be ordered from the publisher. See the address on the front page of the book.

SESH METUT NETER

The Sesh Metut Neter-the Book (of the) Word (of) God-is the work of the Goddess of wisdom, Seshat. This sister of Maat, hence belonging to the 4th sphere, corresponds to a faculty in the right side of the brain which processes the abstract meanings of images, and aids in the internalization of the focus of consciousness. The term "metut" is a very interesting example of the Kamitic linguistic process. It is a punning derivative of "metu" (word, speech), and "tut" (image, beget, clothe, collect, resemblance, statue). While "metu" primarily, though not exclusively denotes the phonetic, definitive (masculine) side of words, "metut" denotes, in most cases, the graphic, descriptive (feminine) side. As a derivative pun it combines the sound "tu" common to both words, with the related communication and creative functions of phonetic symbols-"metu," and graphic symbols-"tut." The denotations of "tut" can be easily related. "To beget" corresponds to the creative functions of "imagery." We thus find "tut" in such phrases as "Tut Mesheh Neteru," meaning "the image producer of the deities." "To collect" is to be understood in two ways. On one hand it refers to the concentration, or the ingathering of the faculties by focusing it on something. We find the following phrases in the literature, "tut ma" (to concentrate the vision, to gaze intensely on something), "tut ab" (to concentrate the will, to keep the will focused on something. I.e., keeping the attention focused on an image is one of the major keys to keeping the attention focused on the object of meditation). On the other hand, it refers to the synthesizing, and condensing power of images. As it is said, "a picture is worth a thousand words." The last meaning, as seen earlier, is the function of the 4th sphere.

From these we can understand why the Kamitians gave such importance to the hieroglyphic script, and the graphic arts (paintings, and statues). To this day, egyptologists are unable to give an intelligent reason for the fact that the Kamitians never gave up their hieroglyphic script with all its difficulties and cumbersomeness (hundreds of symbols), in spite of having produced the phonetic scripts (demotic, and hieratic) of about 27 symbols which form the basis of the very same script in which this book is written, and which most European, and Semitic people use. The key is to be found in the fact that the hieroglyphic (metut) script was used for most

religious, literary, and wisdom texts, while the phonetic (metu) script, once created, was used for accounting and legal documents. Once today's psychologists and scholars understand that descriptive language (showing), and graphic symbols are superior to phonetic language (telling) for the realization of understanding, then they will understand the Kamitic attitude to hieroglyphs.

The Sesh Metut Neter is a set of symbols tightly woven into the Kamitic cosmology which enables us to think complete and interrelated ideas on all subjects without verbalizing our thoughts. The fundamental principle behind this system resides in the fact that verbal thinking is the property of the left side of the brain which externalizes consciousness and is thus an obstructor of meditation. It is also the seat of our conditioned and earth born beliefs (the Sebau-enemies of Ra and Ausar), and thus the obstructor of our efforts to transcend our lower self. This is the substance of the saying, "Never let your left hand (should be, left side of the brain) know what the right hand is doing." Hypnotherapists may find this very useful, as one of their greatest problems is the depotentiating of resistances in the subject.

Meditation, therefore, relies heavily on the use of concrete and symbolic images. In the Kamitic tradition this was accomplished through the so-called "determinatives" of the hieroglyphic script, and the paintings, and statues of the deities that were so abundantly displayed in Kamitian society. Given the high degree of spiritual, and psychological sophistication behind the use of imagery, we must, from one point of view, forgive the Semitic and European people for their inability to do anything more than invent the concept that Africans were worshipers of idols. How could they understand that they were using a device for minimizing or excluding the involvement of the left side of the brain in their mental processes that were aimed at extracting meaning, or shutting out the verbal thought processes in order to bring to the fore the higher mental faculties?

If Westerners truly understood religion, and the processes of the brain, they would surround themselves with synthesizing images of divine themes, as Africans do, in place of all the "synthesizing images of materialism and hedonism" with which they surround themselves; billboards for tobacco, junk food, sex, alcoholic drinks, gambling, etc.

Following are a few basic symbols that can be used to non-verbally express your intention while meditating. Note that although they are

each associated to one of the stages of the meditation process, they can be used in any stage.

Note: The illustrations for these metutu are given at the end of this book.

1. The Ab: associate with it all information relating to the will, Heru (Shango, Shemesh, etc.), self reliance, confidence, courage to submit to truth, and wise counsel from a sage, etc.. Use it in place of such suggestions as "I follow my will," "my will is strong, and effective," "I have confidence in my Self," "I am self-reliant." To say that you are righteous, or that you follow divine law, see your heart balancing a feather on the scales (see the Maat card). Stage 1 - 4 of meditation.
2. The Aungkh: It is the hieroglyphic representation of the heka "Aung." Use it to symbolize giving, or receiving the life-force. As it corresponds to the undifferentiated life-force, you will have to combine it with other metut (symbols). With the Uas staff for health and happiness; with the Menat for joy; with Khepera for spiritual, or intellectual, or physical fertility, etc. 1st stage of meditation. In stage 1, and 3 of the meditation see a brilliant white aungkh entering your body, or of someone else, as a symbol of healing.
3. Apep: Associate with it all negative emotional, and sensual behavior patterns. In contrast to Westerners, who glorify or categorize these behaviors as human traits, the Kamitians classified them as animal traits. The serpent will remind you of the ambushing, and venomous nature of emotions, and sensuality. As the "serpents" and "worms" were the chief enemies of Ra, using them as symbols of your emotions, will help to keep uppermost in mind that the uncontrolled indulgence of emotions will rob you of your vitality, upon which depends your ability to invoke the deities (i.e., manifest the powers of the hekau), and through them to control the events in your life. See yourself cutting off the heads of the serpents, and stabbing them. 4th stage of meditation.
4. Auset: Associate all ideas of making the realization of your divinity the top priority in your life. First four stages of meditation.
5. The Ba: This is the part of the spirit in which dwells the Ausar faculty. Having realized some of the values of Ausar in your

daily life, chant Aung Hang Kshang, see yourself as the Ba bird wearing the White Crown of Ausar, and astral project to wherever you need to go.

6. The sistrum: Sistrums sound like tambourines without resonance. In Kamit they were used along with Het-Heru chants to drive away the depressive emotions (evil spirits) which drain away the life-force. As you meditate on the Het-Heru chant visualize yourself dancing, and shaking the sistrum. Hear the sound. Use this meditation when depressed in place of dwelling on the thought content of your depression. 3rd stage of meditation.
7. The Benu: This is the so-called phoenix which rises out of the ashes. It is the symbol of succeeding in holding on to the values of Ausar when strongly tempted to function according to the lower self. The ashes are symbolic of having been burned by the heat of Ra (tapas) that is generated in all difficult situations in which we are challenged to live Truth. Rather than verbalizing your thoughts, see yourself as the Benu bird flying away from the situation. Associate all Ausar information with it. 1st - 4th stages of meditation.
8. Bes: Symbol of merriment, and joy. Bes is a "celestial" musician that is in charge of inducing merriment, which is a healing source, especially for the female reproductive system.
9. The Shepherds' Crook: This is a sign of dominion, and leadership through inner force. It is gentleness without, and force within. Use to meditate on a situation that requires working with inner force, as opposed to the outer display of power. This is especially important when you get a Heru/Auset reading, as well as Heru readings dealing with domestic, and family matters. Stages 1 - 3.
10. The Djed: It symbolizes the backbone of Ausar. Associate all ideas about stability, the stilling of thoughts, and so on, with it.
11. The Ausar glyph: Associate all Ausar material with it. Use it to remind yourself of the importance of stage one-the foundation-of the meditation process. Stages 1 - 4.
12. The Flail: This is the sign of dominion, and leadership through the outer show of force. But this is the force of Heru who declares his authority by being an exemplar of strength of character, and the rule of truth, as opposed to Herukhuti's outer display of force through threats of harm. Stages 1 - 4.

13. Heru-Pa-Khart: See Chapter 17 under Heru. Use it to remind yourself (stage 1 - 3) of the role of hekau in the use of your will.
14. The 4 supports of heaven: Associate with it all ideas of the role of order and cycles in your life. The 4 supports of heaven are the cardinal points which as symbols of the 4 basic phases of cycles, and the 4 sources of the electromagnetism influencing all events on earth are used to symbolize the divine order that controls life. Stages 1 - 8.
15. The Heh glyph: It is a symbol of eternity ("the millions of years"). See yourself holding these two branches as a means of indicating that your life, or the life of your enterprise (a business, marriage, etc.) will last a long time. Stages 1 - 3.
16. Arrows of Neith: Visualize it as the insignia of a shield or banner, to symbolize a means of protecting the person (Ka).
17. Khepera: It is a symbol of spiritual and physical fertility. Kamitian women used to eat them-especially the green variety-on the belief that they increased fertility. Stages 1 - 3.
18. Khenemu: This is the symbol of the elemental spirits that carry out the work of the hekau on the level of the animal spirit.
19. The Lotus: The fact that lotuses have their roots in water, and open and close their flowers in relationship to the amount of sunlight they receive, make them apt symbols of the chakras (psychic centers). They too have their roots in the waters (Nut), and require the arousal of Ra in order to become fully active. Use it to remind yourself of the processess that you must use in order to achieve your goals in a spiritual fashion.
20. The Papyrus Scepter: Papyrus was the plant used by the Kamitians to make paper, hence the source of the word itself. The scepter then, is a symbol of the dominant role, or importance of written records in our life, especially, the recordings of divine law,- the scriptures, cosmologies, scientific principles, and data, etc. Use it to meditate on your need to be more informed of laws, scientific principles, and data. Stages 2, and 4 of the meditation process.
21. The Menat: Associate all ideas of joy to it.
22. Min: This Deity represents the attainment of success, through discipline (symbolized by the flail raised overhead), and the cultivation of a high libido, yet moderated sexual indulgence (symbolized by the erect phallus). Min was chiefly depicted

in this form, standing at the top of stairs, where he received the offerings of the first fruits.

- 23a. Left Utchat: Aabit, the left, lunar eye of Ra. It corresponds to the right side of the brain. Associate all ideas regarding the use of visualizations that are aimed at gaining insight, especially when the breath is flowing predominantly through the left nostril. You can tell by placing a mirror under the nostrils to see which one makes a greater fog. This power is also greater during the waxing half of the month, the second half of the day, the second half of the year, etc.
- 23b. Right Utchat: Aakhut, the right, solar eye of Ra. It corresponds to the left side of the brain. Associate all ideas regarding the use of visualizations that are used aggressively or defensively. This eye is more powerful when the breath is flowing predominantly through the right nostril.
- 24. The Uas Scepter: This is the symbol of well being, happiness, and good health.
- 25. The Sa: It corresponds to the mode of energy/matter that the spirit uses to form our sense images (imaging of tastes, smells, etc.).
- 26. The Shekem staff: Use it to represent all ideas regarding the manifestation of power on the third sphere level of being.
- 27. The head of Set: This symbol is used to represent the use of clever rationalizations and force to oppress and control others.
- 28. Tem's Crown: The crown of two plumes is used to identify yourself with Tem, the representative of Ausar in the Ra system.
- 29. The Tet: This symbol, popularly known as "Auset's buckle," in reality, depicts the union of the organs of generation. It is the Kamitic counterpart of the linga-yoni of Dravidian India. Use it to denote the idea of becoming pregnant, or the idea of uniting the will to the spirit, through mediumistic trance.
- 30. Sma Tau: This symbol represents the unity of all dualities. The papyrus plant represents the left side of the brain and all yang correspondences. The lotus plant represents the right side of the brain and all ying correspondences.
- 31. Hetep: Use it to denote the idea of the state of peace that cannot be upset by any externals. As this is the source of power, it can also be extended to denote the idea of the ability to

generate the power to achieve a goal by maintaining an unshakeable inner peace.

These are but a few of the symbols composing the Sesh Metut Neter. If you work consistently with all of them you will establish a sophisticated means of communicating with your life-force. Once programmed into the spirit, the divine intelligences (Deities), and ancestors will use these symbols to communicate with you during dreams, and meditations.

Vol. 1

*The Great Oracle of Tehuti
And the Egyptian System
of Spiritual Cultivation*

The oracles of Ancient Black Civilizations aimed to guide individuals and nations in all areas of life. Through them it was possible to discover the spiritual cause and meaning to earthly events. These great oracles prescribed the words of power and other occult forces that can be manipulated by the initiate in order to control the events in his life.

In this book, a landmark indeed, you will find the hidden keys that have eluded egyptologists for ages. You will learn how to objectively evaluate every belief, method, and spiritual measure that can be taken in a given situation in life.

This book, with its companion oracle cards will allow you to help yourself as well as others through the foreknowledge of upcoming events, and the spiritual causes behind them.

INTRODUCTION.

We take great pleasure in presenting to the attention of students and investigators of the Secret Doctrines this little work based upon the world-old Hermetic Teachings. There has been so little written upon this subject, notwithstanding the countless references to the Teachings in the many works upon occultism, that the many earnest searchers after the Arcane Truths will doubtless welcome the appearance of the present volume.

The purpose of this work is not the enunciation of any special philosophy or doctrine, but rather is to give to the students a statement of the Truth that will serve to reconcile the many bits of occult knowledge that they may have acquired, but which are apparently opposed to each other and which often serve to discourage and disgust the beginner in the study. Our intent is not to erect a new Temple of Knowledge, but rather to place in the hands of the student a Master-Key with which he may open the many inner doors in the Temple of Mystery through the main portals he has already entered.

There is no portion of the occult teachings possessed by the world which have been so closely guarded as the fragments of the Hermetic Teachings which have come down to us over the tens of centuries which have elapsed since the lifetime of its great founder, Hermes Trismegistus, the "scribe of the gods," who dwelt in old Egypt in the days when the present race of men was in its infancy. Contemporary with Abraham, and, if the legends be true, an instructor of that venerable sage, Hermes was, and is, the Great Central Sun of Occultism, whose rays have served to illumine the countless teachings which have been promulgated since his time. All the fundamental and basic teachings embedded in the esoteric teachings of every race may be traced back to Hermes. Even the most ancient teachings of India undoubtedly have their roots in the original Hermetic Teachings.

From the land of the Ganges many advanced occultists wandered to the land of Egypt, and sat at the feet of the Master. From him they obtained the Master-Key which explained and reconciled their divergent views, and thus the Secret Doctrine was firmly established. From other lands also came the learned ones, all of whom regarded Hermes as the Master of Masters, and his influence was so great that in spite of the many wanderings from the path on the part of the centuries of teachers in these different lands, there may still be found a certain basic resemblance and correspondence which underlies the many and often quite divergent theories entertained and taught by the occultists of these different lands today. The student of Comparative Religions will be able to perceive the influence of the Hermetic Teachings in every religion worthy of the name, now known to man, whether it be a dead religion or one in full vigor in our own times. There is always a certain correspondence in spite of the contradictory features, and the Hermetic Teachings act as the Great Reconciler.

The lifework of Hermes seems to have been in the direction of planting the great Seed-Truth which has grown and blossomed in so many strange forms, rather than to establish a school of philosophy which would dominate the world's thought. But, nevertheless, the original truths taught by him have been kept intact in their original purity by a few men in each age, who, refusing great numbers of half-developed students and followers, followed the Hermetic custom and reserved their truth for the few who were ready to comprehend and master it. From lip to ear the truth has been handed down among the few. There have always been a few Initiates in each generation, in the various lands of the earth, who kept alive the sacred flame of the Hermetic Teachings, and such have always been willing to use their lamps to re-light the lesser lamps of the outside world, when the light of truth grew dim, and clouded by reason of neglect, and when the wicks became clogged with foreign matter. There were always a few to tend faithfully the altar of the Truth, upon which was kept alight the Perpetual Lamp of Wisdom. These men devoted their lives to the labor of love which the poet has so well stated in his lines:

"O, let not the flame die out! Cherished age after age in its dark cavern—in its holy temples cherished. Fed by pure ministers of love —let not the flame die out!"

These men have never sought popular approval, nor numbers of followers. They are indifferent to these things, for they know how few there are in each generation who are ready for the truth, or who would recognize it if it were presented to them. They reserve the "strong meat for men," while others furnish the "milk for babes." They reserve their pearls of wisdom for the few elect, who recognize their value and who wear them in their crowns, instead of casting them before the materialistic vulgar swine, who would trample them in the mud and mix them with their disgusting mental food. But still these men have never forgotten or overlooked the original teachings of Hermes, regarding the passing on of the words of truth to those ready to receive it, which teaching is stated in The Kybalion as follows: "Where fall the footsteps of the Master, the ears of those ready for his Teaching open wide." And again: "When the ears of the student are ready to hear, then cometh the lips to fill them with wisdom." But their customary attitude has always been strictly in accordance with the other Hermetic aphorism, also in The Kybalion: "The lips of Wisdom are closed, except to the ears of Understanding."

There are those who have criticised this attitude of the Hermetists, and who have claimed that they did not manifest the proper spirit in their policy of seclusion and reticence. But a moment's glance back over the pages of history will show the wisdom of the Masters, who knew the folly of attempting to teach to the world that which it was neither ready or willing to receive. The Hermetists have never sought to be martyrs, and have, instead, sat silently aside with a pitying smile on their closed lips, while the "heathen raged noisily about them" in their customary amusement of putting to death and torture the honest but misguided enthusiasts who imagined that they could force upon a race of barbarians the truth capable of being understood only by the elect who had advanced along The Path.

And the spirit of persecution has not as yet died out in the land. There are certain Hermetic Teachings, which, if publicly promulgated, would bring down upon the teachers a great cry of scorn and revilement from the multitude, who would again raise the cry of "Crucify! Crucify."

In this little work we have endeavored to give you an idea of the fundamental teachings of The Kybalion, striving to give you the working Principles, leaving you to apply them yourselves, rather than attempting to work out the teaching in detail. If you are a true student, you will be able to work out and apply these Principles—if not, then you must develop yourself into one, for otherwise the Hermetic Teachings will be as "words, words, words" to you.

THE THREE INITIATES.

CHAPTER I

THE HERMETIC PHILOSOPHY.

"The lips of wisdom are closed, except to the ears of Understanding."—*The Kybalion*.

From old Egypt have come the fundamental esoteric and occult teachings which have so strongly influenced the philosophies of all races, nations and peoples, for several thousand years. Egypt, the home of the Pyramids and the Sphinx, was the birthplace of the Hidden Wisdom and Mystic Teachings. From her Secret Doctrine all nations have borrowed. India, Persia, Chaldea, Medea, China, Japan, Assyria, ancient Greece and Rome, and other ancient countries partook liberally at the feast of knowledge which the Hierophants and Masters of the Land of Isis so freely provided for those who came prepared to partake of the great store of Mystic and Occult Lore which the master-minds of that ancient land had gathered together.

In ancient Egypt dwelt the great Adepts and Masters who have never been surpassed, and who seldom have been equaled, during the centuries that have taken their processional flight since the days of the Great Hermes. In Egypt was located the Great Lodge of Lodges of the Mystics. At the doors of her Temples entered the Neophytes who afterward, as Hierophants, Adepts, and Masters, traveled to the four corners of the earth, carrying with them the precious knowledge which they were ready, anxious, and willing to pass on to those who were ready to receive the same. All students of the Occult recognize the debt that they owe to these venerable Masters of that ancient land.

But among these great Masters of Ancient Egypt there once dwelt one of whom Masters hailed as "The Master of Masters." This man, if "man" indeed he was, dwelt in Egypt in the earliest days. He was known as Hermes Trismegistus. He was the father of the Occult Wisdom; the founder of Astrology; the discoverer of Alchemy. The details of his life story are lost to history, owing to the lapse of the years, though several of the ancient countries disputed with each other in their claims to the honor of having furnished his birthplace—and this thousands of years ago. The date of his sojourn in Egypt, in that his last incarnation on this planet, is not now known, but it has been fixed at the early days of the oldest dynasties of Egypt—long before the days of Moses. The best authorities regard him as a contemporary of Abraham, and some of the Jewish traditions go so far as to claim that Abraham acquired a portion of his mystic knowledge from Hermes himself.

As the years rolled by after his passing from this plane of life (tradition recording that he lived three hundred years in the flesh), the Egyptians deified Hermes, and made him one of their gods, under the name of Thoth. Years after, the people of Ancient Greece also made him one of their many gods—calling him "Hermes, the god of Wisdom." The Egyptians revered his memory for many centuries—yes, tens of centuries—calling him "the Scribe of the Gods," and bestowing upon him, distinctively, his ancient title, "Trismegistus," which means "the thrice-great"; "the great-great"; "the greatest-great"; etc. In all the ancient lands, the name of Hermes Trismegistus was revered, the name being synonymous with the "Fount of Wisdom."

Even to this day, we use the term "hermetic" in the sense of "secret"; "sealed so that nothing can escape"; etc., and this by reason of the fact that the followers of Hermes always observed the principle of secrecy in their teachings. They did not believe in "casting pearls before swine," but rather held to the teaching "milk for babes; meat for strong men," both of which maxims are familiar to readers of the Christian scriptures, but both of which had been used by the Egyptians for centuries before the Christian era.

And this policy of careful dissemination of the truth has always characterized the Hermetics, even unto the present day. The Hermetic Teachings are to be found in all lands, among all religions, but never identified with any particular country, nor with any particular religious sect. This because of the warning of the ancient teachers against allowing the

Secret Doctrine to become crystallized into a creed. The wisdom of this caution is apparent to all students of history. The ancient occultism of India and Persia degenerated, and was largely lost, owing to the fact that the teachers became priests, and so mixed theology with the philosophy, the result being that the occultism of India and Persia has been gradually lost amidst the mass of religious superstition, cults, creeds and "gods." So it was with Ancient Greece and Rome. So it was with the Hermetic Teachings of the Gnostics and Early Christians, which were lost at the time of Constantine, whose iron hand smothered philosophy with the blanket of theology, losing to the Christian Church that which was its very essence and spirit, and causing it to grope throughout several centuries before it found the way back to its ancient faith, the indications apparent to all careful observers in this Twentieth Century being that the Church is now struggling to get back to its ancient mystic teachings.

But there were always a few faithful souls who kept alive the Flame, tending it carefully, and not allowing its light to become extinguished. And thanks to these staunch hearts, and fearless minds, we have the truth still with us. But it is not found in books, to any great extent. It has been passed along from Master to Student; from Initiate to Hierophant; from lip to ear. When it was written down at all, its meaning was veiled in terms of alchemy and astrology, so that only those possessing the key could read it aright. This was made necessary in order to avoid the persecutions of the theologians of the Middle Ages, who fought the Secret Doctrine with fire and sword; stake, gibbet and cross. Even to this day there will be found but few reliable books on the Hermetic Philosophy, although there are countless references to it in many books written on various phases of Occultism. And yet, the Hermetic Philosophy is the only Master Key which will open all the doors of the Occult Teachings!

In the early days, there was a compilation of certain Basic Hermetic Doctrines, passed on from teacher to student, which was known as "THE KYBALION," the exact significance and meaning of the term having been lost for several centuries. This teaching, however, is known to many to whom it has descended, from mouth to ear, on and on throughout the centuries. Its precepts have never been written down, or printed, so far as we know. It was merely a collection of maxims, axioms, and precepts, which were non-understandable to outsiders, but which were readily understood by students, after the axioms, maxims, and precepts had been explained and exemplified by the Hermetic Initiates to their Neophytes. These teachings really constituted the basic principles of "The Art of Hermetic Alchemy," which, contrary to the general belief, dealt in the mastery of Mental Forces, rather than Material Elements—the Transmutation of one kind of Mental Vibrations into others. instead of the changing of one kind of metal into another. The legends of the "Philosopher's Stone" which would turn base metal into Gold, was an allegory relating to Hermetic Philosophy, readily understood by all students of true Hermeticism.

In this little book, of which this is the First Lesson, we invite our students to examine into the Hermetic Teachings, as set forth in THE KYBALION, and as explained by ourselves, humble students of the Teachings, who, while bearing the title of Initiates, are still students at the feet of HERMES, the Master. We herein give you many of the maxims, axioms and precepts of THE KYBALION, accompanied by explanations and illustrations which we deem likely to render the teachings more easily comprehended by the modern student, particularly as the original text is purposely veiled in obscure terms.

The original maxims, axioms, and precepts of "THE KYBALION" are printed herein, in quotation marks, the proper credit being given. Our own work is printed in the regular way, in the body of the work. We trust that the many students to whom we now offer this little work will derive as much benefit from the study of its pages as have the many who have gone on before, treading the same Path to Mastery throughout the centuries that have passed since the times of HERMES TRISMEGISTUS—the Master of Masters—the Great-Great. In the words of "THE KYBALION":

“Where fall the footsteps of the Master, the ears of those ready for his Teaching open wide.”—*The Kybalion*.

“When the ears of the student are ready to hear, then cometh the lips to fill them with Wisdom.”—*The Kybalion*.

So that according to the Teachings, the passage of this book to those ready for the instruction will attract the attention of such as are prepared to receive the Teaching. And, likewise, when the pupil is ready to receive the truth, then will this little book come to him, or her. Such is The Law. The Hermetic Principle of Cause and Effect, in its aspect of The Law of Attraction, will bring lips and ear together—pupil and book in company. So mote it be!

CHAPTER II.

THE SEVEN HERMETIC PRINCIPLES.

"The Principles of Truth are Seven; he who knows these, understandingly, possesses the Magic Key before whose touch all the Doors of the Temple fly open."—*The Kybalion*.

The Seven Hermetic Principles, upon which the entire Hermetic Philosophy is based, are as follows:

- I. THE PRINCIPLE OF MENTALISM.
- II. THE PRINCIPLE OF CORRESPONDENCE.
- III. THE PRINCIPLE OF VIBRATION.
- IV. THE PRINCIPLE OF POLARITY.
- V. THE PRINCIPLE OF RHYTHM.
- VI. THE PRINCIPLE OF CAUSE AND EFFECT.
- VII. THE PRINCIPLE OF GENDER.

These Seven Principles will be discussed and explained as we proceed with these lessons. A short explanation of each, however, may as well be given at this point.

I. THE PRINCIPLE OF MENTALISM.

"THE ALL is MIND; The Universe is Mental."—*The Kybalion*.

This Principle embodies the truth that "All is Mind." It explains that THE ALL (which is the Substantial Reality underlying all the outward manifestations and appearances which we know under the terms of "The Material Universe"; the "Phenomena of Life"; "Matter"; "Energy"; and in short, all that is apparent to our material senses) is SPIRIT, which in itself is UNKNOWABLE and UNDEFINABLE, but which may be considered and thought of as AN UNIVERSAL, INFINITE, LIVING MIND. It also explains that all the phenomenal world or universe is simply a Mental Creation of THE ALL, subject to the Laws of Created Things, and that the universe, as a whole, and in its parts or units, has its existence in the Mind of THE ALL, in which Mind we "live and move and have our being." This Principle, by establishing the Mental Nature of the Universe, easily explains all of the varied mental and psychic phenomena that occupy such a large portion of the public attention, and which, without such explanation, are non-understandable and defy scientific treatment. An understanding of this great Hermetic Principle of Mentalism enables the individual to readily grasp the laws of the Mental Universe, and to apply the same to his well-being and advancement. The Hermetic Student is enabled to apply intelligently the great Mental Laws, instead of using them in a haphazard manner. With the Master-Key in his possession, the student may unlock the many doors of the mental and psychic temple of knowledge, and enter the same freely and intelligently. This Principle explains the true nature of "Energy," "Power," and "Matter," and why and how all these are subordinate to the Mastery of Mind. One of the old Hermetic Masters wrote, long ages ago: "He who grasps the truth of the Mental Nature of the Universe is well advanced on The Path to Mastery." And these words are as true to-day as at the time they were first written. Without this Master-Key, Mastery is impossible, and the student knocks in vain at the many doors of The Temple.

II. THE PRINCIPLE OF CORRESPONDENCE.

"As above, so below; as below, so above."—*The Kybalion*

This Principle embodies the truth that there is always a Correspondence between the laws and phenomena of the various planes of Being and Life. The old Hermetic axiom ran in these words: "As above, so below; as below, so above." And the grasping of this Principle gives one the means of solving many a dark paradox, and hidden secret of Nature. There are planes beyond our knowing, but when we apply the Principle of Correspondence to them we are able to understand much that would otherwise be unknowable to us. This Principle is of universal application and manifestation, on the various planes of the material, mental, and spiritual universe—it is an Universal Law. The ancient Hermetists considered this Principle as one of the most important mental instruments by which man was able to pry aside the obstacles which hid from view the Unknown. Its use even tore aside the Veil of Isis to the extent that a glimpse of the face of the goddess might be caught. Just as a knowledge of the Principles of Geometry enables man to measure distant suns and their movements, while seated in his observatory, so a knowledge of the Principle of Correspondence enables Man to reason intelligently from the Known to the Unknown. Studying the monad, he understands the archangel.

III. THE PRINCIPLE OF VIBRATION.

"Nothing rests; everything moves; everything vibrates."—*The Kybalion*.

This Principle embodies the truth that "everything is in motion"; "everything vibrates"; "nothing is at rest"; facts which Modern Science endorses, and which each new scientific discovery tends to verify. And yet this Hermetic Principle was enunciated thousands of years ago, by the Masters of Ancient Egypt. This Principle explains that the differences between different manifestations of Matter, Energy, Mind, and even Spirit, result largely from varying rates of Vibration. From THE ALL, which is Pure Spirit, down to the grossest form of Matter, all is in vibration—the higher the vibration, the higher the position in the scale. The vibration of Spirit is at such an infinite rate of intensity and rapidity that it is practically at rest—just as a rapidly moving wheel seems to be motionless. And at the other end of the scale, there are gross forms of matter whose vibrations are so low as to seem at rest. Between these poles, there are millions upon millions of varying degrees of vibration. From corpuscle and electron, atom and molecule, to worlds and universes, everything is in vibratory motion. This is also true on the planes of energy and force (which are but varying degrees of vibration); and also on the mental planes (whose states depend upon vibrations); and even on to the spiritual planes. An understanding of this Principle, with the appropriate formulas, enables Hermetic students to control their own mental vibrations as well as those of others. The Masters also apply this Principle to the conquering of Natural phenomena, in various ways. "He who understands the Principle of Vibration, has grasped the sceptre of power," says one of the old writers.

IV. THE PRINCIPLE OF POLARITY.

"Everything is Dual; everything has poles; everything has its pair of opposites; like and unlike are the same; opposites are identical in nature, but different in degree; extremes meet; all truths are but half-truths; all paradoxes may be reconciled."—*The Kybalion*.

This Principle embodies the truth that "everything is dual"; "everything has two poles"; "everything has its pair of opposites," all of which were old Hermetic axioms. It explains the old paradoxes, that have perplexed so many, which have been stated as follows: "Thesis and antithesis are identical in nature, but different in degree"; "opposites are the same, differing only in degree"; "the pairs of opposites may be reconciled"; "extremes meet"; "everything is and isn't, at the same time"; "all truths are but half-truths"; "every truth is half-

false"; "there are two sides to everything," etc., etc., etc. It explains that in everything there are two poles, or opposite aspects, and that "opposites" are really only the two extremes of the same thing, with many varying degrees between them. To illustrate: Heat and Cold, although "opposites," are really the same thing, the differences consisting merely of degrees of the same thing. Look at your thermometer and see if you can discover where "heat" terminates and "cold" begins! There is no such thing as "absolute heat" or "absolute cold"—the two terms "heat" and "cold" simply indicate varying degrees of the same thing, and that "same thing" which manifests as "heat" and "cold" is merely a form, variety, and rate of Vibration. So "heat" and "cold" are simply the "two poles" of that which we call "Heat"—and the phenomena attendant thereupon are manifestations of the Principle of Polarity. The same principle manifests in the case of "Light and Darkness," which are the same thing, the difference consisting of varying degrees between the two poles of the phenomena. Where does "darkness" leave off, and "light" begin? What is the difference between "Large and Small"? Between "Hard and Soft"? Between "Black and White"? Between "Sharp and Dull"? Between "Noise and Quiet"? Between "High and Low"? Between "Positive and Negative"? The Principle of Polarity explains these paradoxes, and no other Principle can supersede it. The same Principle operates on the Mental Plane. Let us take a radical and extreme example that of "Love and Hate," two mental states apparently totally different. And yet there are degrees of Hate and degrees of Love, and a middle point in which we use the terms "Like or Dislike," which shade into each other so gradually that sometimes we are at a loss to know whether we "like" or "dislike" or "neither." And all are simply degrees of the same thing, as you will see if you will but think a moment. And, more than this (and considered of more importance by the Hermetists), it is possible to change the vibrations of Hate to the vibrations of Love, in one's own mind, and in the minds of others. Many of you, who read these lines, have had personal experiences of the involuntary rapid transition from Love to Hate, and the reverse, in your own case and that of others. And you will therefore realize the possibility of this being accomplished by the use of the Will, by means of the Hermetic formulas. "Good and Evil" are but the poles of the same thing, and the Hermetist understands the art of transmuting Evil into Good, by means of an application of the Principle of Polarity. In short, the "Art of Polarization" becomes a phase of "Mental Alchemy" known and practiced by the ancient and modern Hermetic Masters. An understanding of the Principle will enable one to change his own Polarity, as well as that of others, if he will devote the time and study necessary to master the art.

V. THE PRINCIPLE OF RHYTHM.

"Everything flows, out and in; everything has its tides; all things rise and fall; the pendulum-swing manifests in everything; the measure of the swing to the right is the measure of the swing to the left; rhythm compensates."—*The Kybalion*.

This Principle embodies the truth that in everything there is manifested a measured motion, to and fro; a flow and inflow; a swing backward and forward; a pendulum-like movement; a tide-like ebb and flow; a high-tide and low-tide; between the two poles which exist in accordance with the Principle of Polarity described a moment ago. There is always an action and a reaction; an advance and a retreat; a rising and a sinking. This is in the affairs of the Universe, suns, worlds, men, animals, mind, energy, and matter. This law is manifest in the creation and destruction of worlds; in the rise and fall of nations; in the life of all things; and finally in the mental states of Man (and it is with this latter that the Hermetists find the understanding of the Principle most important). The Hermetists have grasped this Principle, finding its universal application, and have also discovered certain means to overcome its effects in themselves by the use of the appropriate formulas and methods. They apply the Mental Law of Neutralization. They cannot annul the Principle, or cause it to cease its operation, but they have learned how to escape its effects upon themselves to a

certain degree depending upon the Mastery of the Principle. They have learned how to USE it, instead of being USED BY it. In this and similar methods, consist the Art of the Hermetists. The Master of Hermetics polarizes himself at the point at which he desires to rest, and then neutralizes the Rhythmic swing of the pendulum which would tend to carry him to the other pole. All individuals who have attained any degree of Self-Mastery do this to a certain degree, more or less unconsciously, but the Master does this consciously, and by the use of his Will, and attains a degree of Poise and Mental Firmness almost impossible of belief on the part of the masses who are swung backward and forward like a pendulum. This Principle and that of Polarity have been closely studied by the Hermetists, and the methods of counteracting, neutralizing, and USING them form an important part of the Hermetic Mental Alchemy.

VI. THE PRINCIPLE OF CAUSE AND EFFECT.

"Every Cause has its Effect; every Effect has its Cause; everything happens according to Law; Chance is but a name for Law not recognized; there are many planes of causation, but nothing escapes the Law."—*The Kybalion*.

This Principle embodies the fact that there is a Cause for every Effect; an Effect from every Cause. It explains that: "Everything Happens according to Law"; that nothing ever "merely happens"; that there is no such thing as Chance; that while there are various planes of Cause and Effect, the higher dominating the lower planes, still nothing ever entirely escapes the Law. The Hermetists understand the art and methods of rising above the ordinary plane of Cause and Effect, to a certain degree, and by mentally rising to a higher plane they become Causers instead of Effects. The masses of people are carried along, obedient to environment; the wills and desires of others stronger than themselves; heredity; suggestion; and other outward causes moving them about like pawns on the Chessboard of Life. But the Masters, rising to the plane above, dominate their moods, characters, qualities, and powers, as well as the environment surrounding them, and become Movers instead of pawns. They help to PLAY THE GAME OF LIFE, instead of being played and moved about by other wills and environment. They USE the Principle instead of being its tools. The Masters obey the Causation of the higher planes, but they help to RULE on their own plane. In this statement there is condensed a wealth of Hermetic knowledge—let him read who can.

VII. THE PRINCIPLE OF GENDER.

"Gender is in everything; everything has its Masculine and Feminine Principles; Gender manifests on all planes."—*The Kybalion*.

VII. THE PRINCIPLE OF GENDER.

This Principle embodies the truth that there is GENDER manifested in everything—the Masculine and Feminine Principles ever at work. This is true not only of the Physical Plane, but of the Mental and even the Spiritual Planes. On the Physical Plane, the Principle manifests as SEX, on the higher planes it takes higher forms, but the Principle is ever the same. No creation, physical, mental or spiritual, is possible without this Principle. An understanding of its laws will throw light on many a subject that has perplexed the minds of men. The Principle of Gender works ever in the direction of generation, regeneration, and creation. Everything, and every person, contains the two Elements or Principles, or this great Principle, within it, him or her. Every Male thing has the Female Element also; every Female contains also the Male Principle. If you would understand the philosophy of Mental and Spiritual Creation, Generation, and Re-generation, you must understand and study this Hermetic Principle. It contains the solution of many mysteries of Life. We caution you that this Principle has no reference to the many base, pernicious and degrading lustful theories,

teachings and practices, which are taught under fanciful titles, and which are a prostitution of the great natural principle of Gender. Such base revivals of the ancient infamous forms of Phallicism tend to ruin mind, body and soul, and the Hermetic Philosophy has ever sounded the warning note against these degraded teachings which tend toward lust, licentiousness, and perversion of Nature's principles. if you seek such teachings, you must go elsewhere for them—Hermeticism contains nothing for you along these lines. To the pure, all things are pure; to the base, all things are base.

CHAPTER III.

MENTAL TRANSMUTATION.

"Mind (as well as metals and elements) may be transmuted, from state to state; degree to degree; condition to condition; pole to pole; vibration to vibration. True Hermetic Transmutation is a Mental Art."—*The Kybalion*.

As we have stated, the Hermetists were the original alchemists, astrologers, and psychologists, Hermes having been the founder of these schools of thought. From astrology has grown modern astronomy; from alchemy has grown modern chemistry; from the mystic psychology has grown the modern psychology of the schools. But it must not be supposed that the ancients were ignorant of that which the modern schools suppose to be their exclusive and special property. The records engraved on the stones of Ancient Egypt show conclusively that the ancients had a full comprehensive knowledge of astronomy, the very building of the Pyramids showing the connection between their design and the study of astronomical science. Nor were they ignorant of Chemistry, for the fragments of the ancient writings show that they were acquainted with the chemical properties of things; in fact, the ancient theories regarding physics are being slowly verified by the latest discoveries of modern science, notably those relating to the constitution of matter. Nor must it be supposed that they were ignorant of the so-called modern discoveries in psychology—on the contrary, the Egyptians were especially skilled in the science of Psychology, particularly in the branches that the modern schools ignore, but which, nevertheless, are being uncovered under the name of "psychic science" which is perplexing the psychologists of today, and making them reluctantly admit that "there may be something in it after all."

The truth is, that beneath the material chemistry, astronomy and psychology (that is, the psychology in its phase of "brain-action"), the ancients possessed a knowledge of transcendental astronomy, called astrology; of transcendental chemistry, called alchemy; of transcendental psychology, called mystic psychology. They possessed the Inner Knowledge as well as the Outer Knowledge, the latter alone being possessed by modern scientists. Among the many secret branches of knowledge possessed by the Hermetists, was that known as Mental Transmutation, which forms the subject matter of this lesson.

"Transmutation" is a term usually employed to designate the ancient art of the transmutation of metals—particularly of the base metals into gold. The word "Transmute" means "to change from one nature, form, or substance, into another; to transform" (Webster). And accordingly, "Mental Transmutation" means the art of changing and transforming mental states, forms, and conditions, into others. So you may see that Mental Transmutation is the "Art of Mental Chemistry," if you like the term—a form of practical Mystic Psychology.

But this means far more than appears on the surface. Transmutation, Alchemy, or Chemistry, on the Mental Plane is important enough in its effects, to be sure, and if the art stopped there it would still be one of the most important branches of study known to man. But this is only the beginning. Let us see why!

The first of the Seven Hermetic Principles is the Principle of Mentalism, the axiom of which is "THE ALL is Mind; the Universe is Mental," which means that the Underlying Reality of the Universe is Mind; and the Universe itself is Mental—that is, "existing in the Mind of THE ALL." We shall consider this Principle in succeeding lessons, but let us see the effect of the principle if it be assumed to be true.

If the Universal is Mental in its nature, then Mental Transmutation must be the art of CHANGING THE CONDITIONS OF THE UNIVERSE, along the lines of Matter, Force and Mind. So you see, therefore, that Mental Transmutation is really the "Magic" of which the ancient writers had so much to say in their mystical works, and about which they gave so few practical instructions. If All be Mental, then the art which enables one to transmute mental conditions must render the Master the controller of material conditions as well as

those ordinarily called "mental."

As a matter of fact, none but advanced Mental Alchemists have been able to attain the degree of power necessary to control the grosser physical conditions, such as the control of the elements of Nature; the production or cessation of tempests; the production and cessation of earthquakes and other great physical phenomena. But that such men have existed, and do exist to-day, is a matter of earnest belief to all advanced occultists of all schools. That the Masters exist, and have these powers, the best teachers assure their students, having had experiences which justify them in such belief and statements. These Masters do not make public exhibitions of their powers, but seek seclusion from the crowds of men, in order to better work their way along the Path of Attainment. We mention their existence, at this point, merely to call your attention to the fact that their power is entirely Mental, and operates along the lines of the higher Mental Transmutation, under the Hermetic Principle of Mentalism. "The Universe is Mental"—The Kybalion.

But students and Hermetists of lesser degree than Masters—the Initiates and Teachers—are able to freely work along the Mental Plane, in Mental Transmutation. In fact all that we call "psychic phenomena"; "mental influence"; "mental science"; "new-thought phenomena," etc., operates along the same general lines, for there is but one principle involved, no matter by what name the phenomena be called.

The student and practitioner of Mental Transmutation works among the Mental Plane, transmuting mental conditions, states, etc., into others, according to various formulas, more or less efficacious. The various "treatments," "affirmations," "denials," etc., of the schools of mental science are but formulas, often quite imperfect and unscientific, of The Hermetic Art. The majority of modern practitioners are quite ignorant compared to the ancient masters, for they lack the fundamental knowledge upon which the work is based.

Not only may the mental states, etc., of one's self be changed or transmuted by Hermetic Methods; but also the states of others may be, and are, constantly transmuted in the same way, usually unconsciously, but often consciously by some understanding the laws and principles, in cases where the people affected are not informed of the principles of self-protection. And more than this, as many students and practitioners of modern mental science know, every material condition depending upon the minds of other people may be changed or transmuted in accordance with the earnest desire, will, and "treatments" of person desiring changed conditions of life. The public are so generally informed regarding these things at present, that we do not deem it necessary to mention the same at length, our purpose at this point being merely to show the Hermetic Principle and Art underlying all of these various forms of practice, good and evil, for the force can be used in opposite directions according to the Hermetic Principles of Polarity.

In this little book we shall state the basic principles of Mental Transmutation, that all who read may grasp the Underlying Principles, and thus possess the Master-Key that will unlock the many doors of the Principle of Polarity.

We shall now proceed to a consideration of the first of the Hermetic Seven Principles—the Principle of Mentalism, in which is explained the truth that "THE ALL is Mind; the Universe is Mental," in the words of The Kybalion. We ask the close attention, and careful study of this great Principle, on the part of our students, for it is really the Basic Principle of the whole Hermetic Philosophy, and of the Hermetic Art of Mental Transmutation.

CHAPTER IV.

THE ALL.

“Under, and back of, the Universe of Time, Space and Change, is ever to be found The Substantial Reality—the Fundamental Truth.”—*The Kybalion*.

“Substance” means: “that which underlies all outward manifestations; the essence; the essential reality; the thing in itself,” etc. “Substantial” means: “actually existing; being the essential element; being real,” etc. “Reality” means: “the state of being real; true, enduring; valid; fixed; permanent; actual,” etc.

Under and behind all outward appearances or manifestations, there must always be a Substantial Reality. This is the Law. Man considering the Universe, of which he is a unit, sees nothing but change in matter, forces, and mental states. He sees that nothing really IS, but that everything is BECOMING and CHANGING. Nothing stands still—everything is being born, growing, dying—the very instant a thing reaches its height, it begins to decline—the law of rhythm is in constant operation—there is no reality, enduring quality, fixity, or substantiality in anything—nothing is permanent but Change. He sees all things evolving from other things, and resolving into other things—a constant action and reaction; inflow and outflow; building up and tearing down; creation and destruction; birth, growth and death. Nothing endures but Change. And if he be a thinking man, he realizes that all of these changing things must be but outward appearances or manifestations of some Underlying Power—some substantial Reality.

All thinkers, in all lands and in all times, have assumed the necessity for postulating the existence of this Substantial Reality. All philosophies worthy of the name have been based upon this thought. Men have given to this Substantial Reality many names—some have called it by the term of Deity (under many titles); others have called it “The Infinite and Eternal Energy”; others have tried to call it “Matter”—but all have acknowledged its existence. It is self-evident—it needs no argument.

In these lessons we have followed the example of some of the world's greatest thinkers, both ancient and modern—the Hermetic Masters—and have called this Underlying Power—this Substantial Reality by the Hermetic name of “THE ALL,” which term we consider the most comprehensive of the many terms applied by Man to THAT which transcends names and terms.

We accept and teach the view of the great Hermetic thinkers of all times, as well as of those illumined souls who have reached higher planes of being, both of whom assert that the inner nature of THE ALL is UNKNOWABLE. This must be so, for naught by THE ALL itself can comprehend its own nature and being.

The Hermetists believe and teach that THE ALL, “in itself,” is and must ever be UNKNOWABLE. They regard all the theories, guesses and speculations of the theologians and metaphysicians regarding the inner nature of THE ALL, as but the childish efforts of mortal minds to grasp the secret of the Infinite. Such efforts have always failed and will always fail, from the very nature of the task. One pursuing such inquiries travels around and around in the labyrinth of thought, until he is lost to all sane reasoning, action or conduct, and is utterly unfitted for the work of life. He is like the squirrel which frantically runs around and around the circling treadmill wheel of his cage, travelling ever and yet reaching nowhere—at the end a prisoner still, and standing just where he started.

And still more presumptuous are those who attempt to ascribe to THE ALL the personality, qualities, properties, characteristics and attributes of themselves, ascribing to THE ALL the human emotions, feelings, and characteristics, even down to the pettiest qualities or mankind, such as jealousy, susceptibility to flattery and praise, desire for offerings and worship, and all the other survivals from the days of the childhood of the race. Such ideas are not worthy of grown men and women, and are rapidly being discarded.

(At this point, it may be proper for me to state that we make a distinction between Religion and Theology—between Philosophy and Metaphysics. Religion, to us, means that intuitional realization of the existence of THE ALL, and one's relationship to it; while Theology means the attempts of men to ascribe personality, qualities, and characteristics to it; their theories regarding its affairs, will, desires, plans, and designs; and their assumption of the office of “middle-men” between THE ALL and the people. Philosophy, to us, means the inquiry after knowledge of things knowable and thinkable; while Metaphysics means the attempt to carry the inquiry over and beyond the boundaries and into regions unknowable and unthinkable, and with the same tendency as that of Theology. And consequently, both Religion and Philosophy mean to us things having roots in Reality, while Theology and Metaphysics seem like broken reeds, rooted in the quicksands of ignorance, and affording naught but the most insecure support for the mind or soul of Man. We do not insist upon our students accepting these definitions—we mention them merely to show our position. At any rate, you shall hear very little about Theology and Metaphysics in these lessons.)

But while the essential nature of THE ALL is Unknowable, there are certain truths connected with its existence which the human mind finds itself compelled to accept. And in examination of these reports form a proper subject of inquiry, particularly as they agree with the reports of the Illumined on higher planes. And to this inquiry we now invite you.

“THAT which is the Fundamental Truth—the Substantial Reality—is beyond true naming, but the Wise Men call it THE ALL. “—*The Kybalion*.

“In its Essence, THE ALL is UNKNOWABLE.”—*The Kybalion*.

“But, the report of Reason must be hospitably received, and treated with respect.”—*The Kybalion*.

The human reason, whose reports we must accept so long as we think at all, informs us as follows regarding THE ALL, and that without attempting to remove the veil of the Unknowable:

1. THE ALL must be ALL that REALLY IS. There can be nothing existing outside of THE ALL, else THE ALL would not be THE ALL.

2. THE ALL must be INFINITE, for is nothing else to define, confine, bound, limit or restrict THE ALL. It must be Infinite in Time, or ETERNAL,—it must have always continuously existed, for there is nothing else to have ever created it, and something can never evolve from nothing, and if it had ever “not been,” even for a moment, it would not “be” now,—it must continuously exist forever, for there is nothing to destroy it, and it can never “not-be,” even for a moment, because something can never become nothing. It must be Infinite in Space—it must be Everywhere, for there is no place outside of THE ALL—it cannot be otherwise than continuous in Space, without break, cessation, separation, or interruption, for there is nothing to break, separate, or interrupt its continuity, and nothing with which to “fill in the gaps.” It must be Infinite in Power, or Absolute, for there is nothing to limit, restrict, restrain, confine, disturb or condition it—it is subject to no other Power, for there is no other Power.

3. THE ALL must be IMMUTABLE, or not subject to change in its real nature, for there is nothing to work changes upon it; nothing into which it could change, nor from which it could have changed. It cannot be added to nor subtracted from; increased nor diminished; nor become greater or lesser in any respect whatsoever. It must have always been, and must always remain, just what it is now—THE ALL—there has never been, is not now, and never will be, anything else into which it can change.

THE ALL being Infinite, Absolute, Eternal and Unchangeable it must follow that anything finite, changeable, fleeting, and conditioned cannot be THE ALL. And as there is Nothing outside of THE ALL, in Reality, then any and all such finite things must be as Nothing in Reality. Now do not become befogged, nor frightened—we are not trying to lead you into the Christian Science field under cover of Hermetic Philosophy. There is a Reconciliation of this apparently contradictory state of affairs. Be patient, we will reach it in time.

We see around us that which is called “Matter,” which forms the physical foundation for all

forms. Is THE ALL merely Matter? Not at all! Matter cannot manifest Life or Mind, and as Life and Mind are manifested in the Universe, THE ALL cannot be Matter, for nothing rises higher than its own source—nothing is ever manifested in an effect that is not in the cause—nothing is evolved as a consequent that is not involved as an antecedent. And then Modern Science informs us that there is really no such thing as Matter—that what we call Matter is merely “interrupted energy or force,” that is, energy or force at a low rate of vibration. As a recent writer has said “Matter has melted into Mystery.” Even Material Science has abandoned the theory of Matter, and now rests on the basis of “Energy.”

Then is THE ALL mere Energy or Force? Not Energy or Force as the materialists use the terms, for their energy and force are blind, mechanical things, devoid of Life or Mind. Life and Mind can never evolve from blind Energy or Force, for the reason given a moment ago: “Nothing can rise higher than its source—nothing is evolved unless it is involved—nothing manifests in the effect, unless it is in the cause.” And so THE ALL cannot be mere Energy or Force, for, if it were, then there would be no such things as Life and Mind in existence, and we know better than that, for we are Alive and using Mind to consider this very question, and so are those who claim that Energy or Force is Everything.

What is there then higher than Matter or Energy that we know to be existent in the Universe? LIFE AND MIND! Life and Mind in all their varying degrees of unfoldment! “Then,” you ask, “do you mean to tell us that THE ALL is LIFE and MIND?” Yes! and No! is our answer. If you mean Life and Mind as we poor petty mortals know them, we say No! THE ALL is not that! “But what kind of Life and Mind do you mean?” you ask.

The answer is “LIVING MIND, as far above that which mortals know by those words, as Life and Mind are higher than mechanical forces, or matter—INFINITE LIVING MIND as compared to finite Life and Mind.” We mean that which the illumined souls mean when they reverently pronounce the word: “SPIRIT!”

“THE ALL” is Infinite Living Mind—the Illumined call it SPIRIT!

CHAPTER V.

THE MENTAL UNIVERSE.

“The Universe is Mental—held in the Mind of THE ALL.”—*The Kybalion*.

THE ALL is SPIRIT! But what is Spirit? This question cannot be answered, for the reason that its definition is practically that of THE ALL, which cannot be explained or defined. Spirit is simply a name that men give to the highest conception of Infinite Living Mind—it means “the Real Essence”—it means Living Mind, as much superior to Life and Mind as we know them, as the latter are superior to mechanical Energy and Matter. Spirit transcends our understanding, and we use the term merely that we may think or speak of THE ALL. For the purposes of thought and understanding, we are justified in thinking of Spirit as Infinite Living Mind, at the same time acknowledging that we cannot fully understand it. We must either do this or stop thinking of the matter at all.

Let us now proceed to a consideration of the nature of the Universe, as a whole and in its parts. What is the Universe? We have seen that there can be nothing outside of THE ALL. Then is the Universe THE ALL? No, this cannot be, because the Universe seems to be made up of MANY, and is constantly changing, and in other ways it does not measure up to the ideas that we are compelled to accept regarding THE ALL, as stated in our last lesson. Then if the Universe be not THE ALL, then it must be Nothing—such is the inevitable conclusion of the mind at first thought. But this will not satisfy the question, for we are sensible of the existence of the Universe. Then if the Universe is neither THE ALL, nor Nothing, what can it be! Let us examine this question.

If the Universe exists at all, or seems to exist, it must proceed in some way from THE ALL—it must be a creation of THE ALL. But as something can never come from nothing, from what could THE ALL have created it? Some philosophers have answered this question by saying that THE ALL created the Universe from ITSELF—that is, from the being and substance of THE ALL. But this will not do, for THE ALL cannot be subtracted from, nor divided, as we have seen, and then again if this be so, would not each particle in the Universe be aware of its being THE ALL—THE ALL could not lose its knowledge of itself, nor actually BECOME an atom, or blind force, or lowly living thing. Some men, indeed, realizing that THE ALL is indeed ALL, and also recognizing that they, the men, existed, have jumped to the conclusion that they and THE ALL were identical, and they have filled the air with shouts of “I AM GOD,” to the amusement of the multitude and the sorrow of sages. The claim of the corpuscle that: “I am Man!” would be modest in comparison.

But, what indeed is the Universe, if it be not THE ALL, not yet created by THE ALL having separated itself into fragments? What else can it be—of what else can it be made? This is the great question. Let us examine it carefully. We find here that the “Principle of Correspondence” (see Lesson I.) comes to our aid here. The old Hermetic axiom, “As above so below,” may be pressed into service at this point. Let us endeavor to get a glimpse of the workings on higher planes by examining those on our own. The Principle of Correspondence must apply to this as well as to other problems.

Let us see! On his own plane of being, how does Man create? Well, first, he may create by making something out of outside materials. But this will not do, for there are no materials outside of THE ALL with which it may create. Well, then, secondly, Man pro-creates or reproduces his kind by the process of begetting, which is self-multiplication accomplished by transferring a portion of his substance to his offspring. But this will not do, because THE ALL cannot transfer or subtract a portion of itself, nor can it reproduce or multiply itself—in the first place there would be a taking away, and in the second case a multiplication or addition to THE ALL, both thoughts being an absurdity. Is there no third way in which MAN creates! Yes, there is—he CREATES MENTALLY! And in so doing he uses no outside materials, nor does he reproduce himself, and yet his Spirit pervades the Mental Creation.

Following the Principle of Correspondence, we are justified in considering that THE ALL creates the Universe MENTALLY, in a manner akin to the process whereby Man creates Mental Images. And, here is where the report of Reason tallies precisely with the report of the Illumined, as shown by their teachings and writings. Such are the teachings of the Wise Men. Such was the Teaching of Hermes.

THE ALL can create in no other way except mentally, without either using material (and there is none to use), or else reproducing itself (which is also impossible). There is no escape from this conclusion of the Reason, which, as we have said, agrees with the highest teachings of the Illumined. Just as you, student, may create a Universe of your own in your mentality, so does THE ALL create Universes in its own Mentality. But your Universe is the mental creation of a Finite Mind, whereas that of THE ALL is the creation of an Infinite. The two are similar in kind, but infinitely different in degree. We shall examine more closely into the process of creation and manifestation, as we proceed. But this is the point to fix in your minds at this stage: THE UNIVERSE, AND ALL IT CONTAINS, IS A MENTAL CREATION OF THE ALL. Verily, indeed, ALL IS MIND!

"THE ALL creates in its Infinite Mind countless Universes, which exist for aeons of Time—and yet, to THE ALL, the creation, development, decline and death of a million Universes is as the time of the twinkling of an eye."—*The Kybalion*.

"The Infinite Mind -of THE ALL is the womb of Universes."—*The Kybalion*.

The Principle of Gender (see Lesson I. and other lessons to follow) is manifested on all planes of life, material, mental and spiritual. But, as we have said before, "Gender" does not mean "Sex"—sex is merely a material manifestation of gender. "Gender" means "relating to generation or creation." And wherever anything is generated or created, on any plane, the Principle of Gender must be manifested. And this is true even in the creation of Universes.

Now do not jump to the conclusion that we are teaching that there is a male and female God, or Creator. That idea is merely a distortion of the ancient teachings on the subject. The true teaching is that THE ALL, in itself, is above Gender, as it is above every other Law, including those of Time and Space. It is the Law, from which the Laws proceed, and it is not subject to them. But when THE ALL manifests on the plane of generation or creation, then it acts according to Law and Principle, for it is moving on a lower plane of Being. And consequently it manifests the Principle of Gender, in its Masculine and Feminine aspects, on the Mental Plane, of course.

This idea may seem startling to some of you who hear it for the first time, but you have all really passively accepted it in your everyday conceptions. You speak of the Fatherhood of God, and the Motherhood of Nature—of God, the Divine Father, and Nature the Universal Mother—and have thus instinctively acknowledged the Principle of Gender in the Universe. Is this not so?

But, the Hermetic teaching does not imply a real duality—THE ALL is ONE—the Two Aspects are merely aspects of manifestation. The teaching is that The Masculine Principle manifested by THE ALL stands, in a way, apart from the actual mental creation of the Universe. It projects its Will toward the Feminine Principle (which may be called "Nature") whereupon the latter begins the actual work of the evolution of the Universe, from simple "centres of activity" on to man, and then on and on still higher, all according to well-established and firmly enforced Laws of Nature. If you prefer the old figures of thought, you may think of the Masculine Principle as GOD, the Father, and of the Feminine Principle as NATURE, the Universal Mother, from whose womb all things have been born. This is more than a mere poetic figure of speech—it is an idea of the actual process of the creation of the Universe. But always remember, that THE ALL is but One, and that in its Infinite Mind the Universe is generated, created and exists.

It may help you to get the proper idea, if you will apply the Law of Correspondence to yourself, and your own mind. You know that the part of You which you call "I," in a sense,

stands apart and witnesses the creation of Mental Images in your own mind. The part of your mind in which the mental generation is accomplished may be called the "Me" in distinction from the "I" which stands apart and witnesses and examines the thoughts, ideas and images of the "Me." "As above, so below," remember, and the phenomena of one plane may be employed to solve the riddles of higher or lower planes.

Is it any wonder that You, the child, feel that instinctive reverence for THE ALL, which feeling we call "religion"—that respect, and reverence for THE FATHER MIND? Is it any wonder that, when you consider the works and wonders of Nature, you are overcome with a mighty feeling which has its roots away down in your inmost being? It is the MOTHER MIND that you are pressing close up to, like a babe to the breast.

Do not make the mistake of supposing that the little world you see around you—the Earth, which is a mere grain of dust in the Universe—is the Universe itself. There are millions upon millions of such worlds, and greater. And there are millions of millions of such Universes in existence within the Infinite Mind of THE ALL. And even in our own little solar system there are regions and planes of life far higher than ours, and beings compared to which we earth-bound mortals are as the slimy life-forms that dwell on the ocean's bed when compared to Man. There are beings with powers and attributes higher than Man has ever dreamed of the gods' possessing. And yet these beings were once as you, and still lower—and you will be even as they, and still higher, in time, for such is the Destiny of Man as reported by the Illumined.

And Death is not real, even in the Relative sense—it is but Birth to a new life—and You shall go on, and on, and on, to higher and still higher planes of life, for aeons upon aeons of time. The Universe is your home, and you shall explore its farthest recesses before the end of Time. You are dwelling in the Infinite Mind of THE ALL, and your possibilities and opportunities are infinite, both in time and space. And at the end of the Grand Cycle of Aeons, when THE ALL shall draw back into itself all of its creations—you will go gladly, for you will then be able to know the Whole Truth of being At One with THE ALL. Such is the report of the Illumined—those who have advanced well along The Path.

And, in the meantime, rest calm and, serene—you are safe and protected by the Infinite Power of the FATHER-MOTHER MIND.

"Within the Father-Mother Mind, mortal children are at home."—*The Kybalion*.

"There is not one who is Fatherless, nor Motherless in the Universe"—*The Kybalion*.

CHAPTER VI.

THE DIVINE PARADOX.

“The half-wise, recognizing the comparative unreality of the Universe, imagine that they may defy its Laws—such are vain and presumptuous fools, and they are broken against the rocks and torn asunder by the elements by reason of their folly. The truly wise, knowing the nature of the Universe, use Law against laws; the higher against the lower; and by the Art of Alchemy transmute that which is undesirable into that which is worthy, and thus triumph. Mastery consists not in abnormal dreams, visions and fantastic imaginings or living, but in using the higher forces against the lower—escaping the pains of the lower planes by vibrating on the higher. Transmutation, not presumptuous denial, is the weapon of the Master.”—*The Kybalion*.

This is the Paradox of the Universe, resulting from the Principle of Polarity which manifests when THE ALL begins to Create—hearken to it for it points the difference between half-wisdom and wisdom. While to THE INFINITE ALL, the Universe, its Laws, its Powers, its Life, its Phenomena, are as things witnessed in the state of Meditation or Dream; yet to all that is Finite, the Universe must be treated as Real, and life, and action, and thought, must be based thereupon, accordingly, although with an ever understanding of the Higher Truth. Each according to its own Plane and Laws. Were THE ALL to imagine that the Universe were indeed Reality, then woe to the Universe, for there would be then no escape from lower to higher, divineward—then would the Universe become a fixity and progress would become impossible. And if Man, owing to half-wisdom, acts and lives and thinks of the Universe as merely a dream (akin to his own finite dreams) then indeed does it so become for him, and like a sleep-walker he stumbles ever around and around in a circle, making no progress, and being forced into an awakening at last by his falling bruised and bleeding over the Natural Laws which he ignored. Keep your mind ever on the Star, but let your eyes watch over your footsteps, lest you fall into the mire by reason of your upward gaze. Remember the Divine Paradox, that while the Universe IS NOT, still IT IS. Remember ever the Two Poles of Truth—the Absolute and the Relative. Beware of Half-Truths.

What Hermetists know as “the Law of Paradox” is an aspect of the Principle of Polarity. The Hermetic writings are filled with references to the appearance of the Paradox in the consideration of the problems of Life and Being. The Teachers are constantly warning their students against the error of omitting the “other side” of any question. And their warnings are particularly directed to the problems of the Absolute and the Relative, which perplex all students of philosophy, and which cause so many to think and act contrary to what is generally known as “common sense.” And we caution all students to be sure to grasp the Divine Paradox of the Absolute and Relative, lest they become entangled in the mire of the Half-Truth. With this in view this particular lesson has been written. Read it carefully!

The first thought that comes to the thinking man after he realizes the truth that the Universe is a Mental Creation of THE ALL, is that the Universe and all that it contains is a mere illusion; an unreality; against which idea his instincts revolt. But this, like all other great truths, must be considered both from the Absolute and the Relative points of view. From the Absolute viewpoint, of course, the Universe is in the nature of an illusion, a dream, a phantasmagoria, as compared to THE ALL in itself. We recognize this even in our ordinary view, for we speak of the world as “a fleeting show” that comes and goes, is born and dies—for the element of impermanence and change, finiteness and unsubstantiality, must ever be connected with the idea of a created Universe when it is contrasted with the idea of THE ALL, no matter what may be our beliefs concerning the nature of both. Philosopher, metaphysician, scientist and theologian all agree upon this idea, and the thought is found in all forms of philosophical thought and religious conceptions, as well as in the theories of the respective schools of metaphysics and theology.

So, the Hermetic Teachings do not preach the unsubstantiality of the Universe in any stronger terms than those more familiar to you, although their presentation of the subject may seem somewhat more startling. Anything that has a beginning and an ending must be,

in a sense, unreal and untrue, and the Universe comes under the rule, in all schools of thought. From the Absolute point of view, there is nothing Real except THE ALL, no matter what terms we may use in thinking of, or discussing the subject. Whether the Universe be created of Matter, or whether it be a Mental Creation in the Mind of THE ALL—it is unsubstantial, non-enduring, a thing of time, space and change. We want you to realize this fact thoroughly, before you pass judgment on the Hermetic conception of the Mental nature of the Universe. Think over any and all of the other conceptions, and see whether this be not true of them.

But the Absolute point of view shows merely one side of the picture—the other side is the Relative one. Absolute Truth has been defined as “Things as the mind of God knows them,” while Relative Truth is “Things as the highest reason of Man understands them.” And so while to THE ALL the Universe must be unreal and illusionary, a mere dream or result of meditation—nevertheless, to the finite minds forming a part of that Universe, and viewing it through mortal faculties, the Universe is very real indeed, and must be so considered. In recognizing the Absolute view, we must not make the mistake of ignoring or denying the facts and phenomena of the Universe as they present themselves to our mortal faculties—we are not THE ALL, remember.

To take familiar illustrations, we all recognize the fact that Matter “exists” to our senses—we will fare badly if we do not. And yet, even our finite minds understand the scientific dictum that there is no such thing as Matter from a scientific point of view—that which we call Matter is held to be merely an aggregation of atoms, which atoms themselves are merely a grouping of units of force, called electrons or “ions,” vibrating and in constant circular motion. We kick a stone and we feel the impact—it seems to be real, notwithstanding that we know it to be merely what we have stated above. But remember that our foot, which feels the impact by means of our brains, is likewise Matter, so constituted of electrons, and for that matter so are our brains. And, at the best, if it were not by reason of our Mind, we would not know the foot or stone at all.

Then again, the ideal of the artist or sculptor, which he is endeavoring to reproduce in stone or on canvas, seems very real to him. So do the characters in the mind of the author, or dramatist, which he seeks to express so that others may recognize them. And if this be true in the case of our finite minds, what must be the degree of Reality in the Mental Images created in the Mind of the Infinite? Oh, friends, to mortals this Universe of Mentality is very real indeed—it is the only one we can ever know, though we rise from plane to plane, higher and higher in it. To know it otherwise, by actual experience, we must be THE ALL itself. It is true that the higher we rise in the scale—the nearer to “the mind of the Father” we reach—the more apparent becomes the illusory nature of finite things, but not until THE ALL finally withdraws us into itself does the vision actually vanish.

So, we need not dwell upon the feature of illusion. Rather let us, recognizing the real nature of the Universe, seek to understand its mental laws, and endeavor to use them to the best effect in our upward progress through life, as we travel from plane to plane of being. The Laws of the Universe are none the less “Iron Laws” because of the mental nature. All, except THE ALL, are bound by them. What is IN THE INFINITE MIND OF THE ALL is REAL in a degree second only to that Reality itself which is vested in the nature of THE ALL.

So, do not feel insecure or afraid—we are all HELD FIRMLY IN THE INFINITE MIND OF THE ALL, and there is naught to hurt us or for us to fear. There is no Power outside of THE ALL to affect us. So we may rest calm and secure. There is a world of comfort and security in this realization when once attained. Then “calm and peaceful do we sleep, rocked in the Cradle of the Deep”—resting safely on the bosom of the Ocean of Infinite Mind, which is THE ALL. In THE ALL, indeed, do “we live and move and have our being.”

Matter is none the less Matter to us, while we dwell on the plane of Matter, although we know it to be merely an aggregation of “electrons,” or particles of Force, vibrating rapidly and gyrating around each other in the formations of atoms; the atoms in turn vibrating and gyrating, forming molecules, which latter in turn form larger masses of Matter. Nor does

Matter become less Matter, when we follow the inquiry still further, and learn from the Hermetic Teachings, that the "Force" of which the electrons are but units is merely a manifestation of the Mind of THE ALL, and like all else in the Universe is purely Mental in its nature. While on the Plane of Matter, we must recognize its phenomena—we may control Matter (as all Masters of higher or lesser degree do), but we do so by applying the higher forces. We commit a folly when we attempt to deny the existence of Matter in the relative aspect. We may deny its mastery over us—and rightly so—but we should not attempt to ignore it in its relative aspect, at least so long as we dwell upon its plane.

Nor do the Laws of Nature become less constant or effective, when we know them, likewise, to be merely mental creations. They are in full effect on the various planes. We overcome the lower laws, by applying still higher ones—and in this way only.

But we cannot escape Law or rise above it entirely. Nothing but THE ALL can escape Law—and that because THE ALL is LAW itself, from which all Laws emerge. The most advanced Masters may acquire the powers usually attributed to the gods of men; and there are countless ranks of being, in the great hierarchy of life, whose being and power transcends even that of the highest Masters among men to a degree unthinkable by mortals, but even the highest Master, and the highest Being, must bow to the Law, and be as Nothing in the eye of THE ALL. So that if even these highest Beings, whose powers exceed even those attributed by men to their gods—if even these are bound by and are subservient to Law, then imagine the presumption of mortal man, of our race and grade, when he dares to consider the Laws of Nature as "unreal," visionary and illusory, because he happens to be able to grasp the truth that the Laws are Mental in nature, and simply Mental Creations of THE ALL. Those Laws which THE ALL intends to be governing Laws are not to be defied or argued away. So long as the Universe endures, will they endure—for the Universe exists by virtue of these Laws which form its framework and which hold it together.

The Hermetic Principle of Mentalism, while explaining the true nature of the Universe upon the principle that all is Mental, does not change the scientific conceptions of the Universe, Life, or Evolution. In fact, science merely corroborates the Hermetic Teachings. The latter merely teaches that the nature of the Universe is "Mental," while modern science has taught that it is "Material"; or (of late) that it is "Energy" at the last analysis. The Hermetic Teachings have no fault to find with Herbert Spencer's basic principle which postulates the existence of an "Infinite and Eternal Energy, from which all things proceed." In fact, the Hermetics recognize in Spencer's philosophy the highest outside statement of the workings of the Natural Laws that have ever been promulgated, and they believe Spencer to have been a reincarnation of an ancient philosopher who dwelt in ancient Egypt thousands of years ago, and who later incarnated as Heraclitus, the Grecian philosopher who lived B.C. 500. And they regard his statement of the "Infinite and Eternal Energy" as directly in the line of the Hermetic Teachings, always with the addition of their own doctrine that his "Energy" is the Energy of the Mind of THE ALL. With the Master-Key of the Hermetic Philosophy, the student of Spencer will be able to unlock many doors of the inner philosophical conceptions of the great English philosopher, whose work shows the results of the preparation of his previous incarnations. His teachings regarding Evolution and Rhythm are in almost perfect agreement with the Hermetic Teachings regarding the Principle of Rhythm.

So, the student of Hermetics need not lay aside any of his cherished scientific views regarding the Universe. All he is asked to do is to grasp the underlying principle of "THE ALL is Mind; the Universe is Mental—held in the Mind of THE ALL." He will find that the other six of the Seven Principles will "fit into" his scientific knowledge, and will serve to bring out obscure points and to throw light in dark corners. This is not to be wondered at, when we realize the influence of the Hermetic thought on the early philosophers of Greece, upon whose foundations of thought the theories of modern science largely rest. The acceptance of the First Hermetic Principle (Mentalism) is the only great point of difference between Modern Science and Hermetic students, and Science is gradually moving toward the Hermetic

position in its groping in the dark for a way out of the Labyrinth into which it has wandered in its search for Reality.

The purpose of this lesson is to impress upon the minds of our students the fact that, to all intents and purposes, the Universe and its laws, and its phenomena, are just as REAL, so far as Man is concerned, as they would be under the hypotheses of Materialism or Energism. Under any hypothesis the Universe in its outer aspect is changing, ever-flowing, and transitory—and therefore devoid of substantiality and reality. But (note the other pole of the truth) under any of the same hypotheses, we are compelled to ACT AND LIVE as if the fleeting things were real and substantial. With this difference, always, between the various hypotheses—that under the old views Mental Power was ignored as a Natural Force, while under Mentalism it becomes the Greatest Natural Force. And this one difference revolutionizes Life, to those who understand the Principle and its resulting laws and practice.

So, finally, students all, grasp the advantage of Mentalism, and learn to know, use and apply the laws resulting therefrom. But do not yield to the temptation which, as The Kybalion states, overcomes the half-wise and which causes them to be hypnotized by the apparent unreality of things, the consequence being that they wander about like dream-people dwelling in a world of dreams, ignoring the practical work and life of man, the end being that “they are broken against the rocks and torn asunder by the elements, by reason of their folly.” Rather follow the example of the wise, which the same authority states, “use Law against Laws; the higher against the lower; and by the Art of Alchemy transmute that which is undesirable into that which is worthy, and thus triumph.” Following the authority, let us avoid the half-wisdom (which is folly) which ignores the truth that: “Mastery consists not in abnormal dreams, visions, and fantastic imaginings or living, but in using the higher forces against the lower—escaping the pains of the lower planes by vibrating on the higher.” Remember always, student, that “Transmutation, not presumptuous denial, is the weapon of the Master.” The above quotations are from The Kybalion, and are worthy of being committed to memory by the student

We do not live in a world of dreams, but in an Universe which, while relative, is real so far as our lives and actions are concerned. Our business in the Universe is not to deny its existence, but to LIVE, using the Laws to rise from lower to higher—living on, doing the best that we can under the circumstances arising each day, and living, so far as is possible, to our highest ideas and ideals. The true Meaning of Life is not known to men on this plane—if, indeed, to any—but the highest authorities, and our own intuitions, teach us that we will make no mistake in living up to the best that is in us, so far as is possible, and realizing the Universal tendency in the same direction in spite of apparent evidences to the contrary. We are all on The Path—and the road leads upward ever, with frequent resting places.

Read the Message of The Kybalion—and follow the example of “the wise”—avoiding the mistake of “the half-wise” who perish by reason of their folly.

CHAPTER VII.

“THE ALL” IN ALL.

“While All is in THE ALL, it is equally true that THE ALL is in All. To him who truly understands this truth hath come great knowledge.”—*The Kybalion*.

How often have the majority of people heard repeated the statement that their Deity (called by many names) was “All in All,” and how little have they suspected the inner occult truth concealed by these carelessly uttered words? The commonly used expression is a survival of the ancient Hermetic Maxim quoted above. As the Kybalion says: “To him who truly understands this truth, hath come great knowledge.” And, this being so, let us seek this truth, the understanding of which means so much. In this statement of truth—this Hermetic Maxim—is concealed one of the greatest philosophical, scientific and religious truths.

We have given you the Hermetic Teaching regarding the Mental Nature of the Universe—the truth that “the Universe is Mental—held in the Mind of THE ALL.” As the Kybalion says, in the passage quoted above: “All is in THE ALL. But note also the co-related statement, that: “It is equally true that THE ALL is in ALL.” This apparently contradictory statement is reconcilable under the Law of Paradox. It is, moreover, an exact Hermetic statement of the relations existing between THE ALL and its Mental Universe. We have seen how “All is in THE ALL”—now let us examine the other aspect of the subject.

The Hermetic Teachings are to the effect that THE ALL is Imminent in (“remaining within; inherent; abiding within”) its Universe, and in every part, particle, unit, or combination, within the Universe. This statement is usually illustrated by the Teachers by a reference to the Principle of Correspondence. The Teacher instructs the student to form a mental Image of something, a person, an idea, something having a mental form, the favorite example being that of the author or dramatist forming an idea of his characters; or a painter or sculptor forming an image of an ideal that he wishes to express by his art. In each case, the student will find that while the image has its existence, and being, solely within his own mind, yet he, the student, author, dramatist, painter, or sculptor, is, in a sense, immanent in; remaining within; or abiding within, the mental image also. In other words, the entire virtue, life, spirit, of reality in the mental image is derived from the “immanent mind” of the thinker. Consider this for a moment, until the idea is grasped.

To take a modern example, let us say that Othello, Iago, Hamlet, Lear, Richard III, existed merely in the mind of Shakespeare, at the time of their conception or creation. And yet, Shakespeare also existed within each of these characters, giving them their vitality, spirit, and action. Whose is the “spirit” of the characters that we know as Micawber, Oliver Twist Uriah Heep—is it Dickens, or have each of -these characters a personal spirit, independent of their creator? Have the Venus of Medici, the Sistine Madonna, the Appollo Belvidere, spirits and reality of their own, or do they represent the spiritual and mental power of their creators? The Law of Paradox explains that both propositions are true, viewed from the proper viewpoints. Micawber is both Micawber, and yet Dickens. And, again, while Micawber may be said to be Dickens, yet Dickens is not identical with Micawber. Man, like Micawber, may exclaim: “The Spirit of my Creator is inherent within me—and yet I am not HE!” How different this from the shocking half-truth so vociferously announced by certain of the half-wise, who fill the air with their raucous cries of: “I Am God!” Imagine poor Micawber, or the sneaky Uriah Heep, crying: “I Am Dickens”; or some of the lowly clods in one of Shakespeare's plays, grandiloquently announcing that: “I Am Shakespeare!” THE ALL is in the earth-worm, and yet the earth-worm is far from being THE ALL. And still the wonder remains, that though the earth-worm exists merely as a lowly thing, created and having its being solely within the

Mind of THE ALL—yet THE ALL is immanent in the earth-worm, and in the particles that go to make up the earthworm. Can there be any greater mystery than this of “All in THE ALL; and THE ALL in All?”

The student will, of course, realize that the illustrations given above are necessarily imperfect and inadequate, for they represent the creation of mental images in finite minds, while the Universe is a creation of Infinite Mind—and the difference between the two poles separates them. And yet it is merely a matter of degree—the same Principle is in operation—the Principle of Correspondence manifests in each—“As above, so Below; as Below, so above.”

And, in the degree that Man realizes the existence of the Indwelling Spirit immanent within his being, so will he rise in the spiritual scale of life. This is what spiritual development means—the recognition, realization, and manifestation of the Spirit within us. Try to remember this last definition—that of spiritual development. It contains the Truth of True Religion.

There are many planes of Being—many sub-planes of Life—many degrees of existence in the Universe. And all depend upon the advancement of beings in the scale, of which scale the lowest point is the grossest matter, the highest being separated only by the thinnest division from the SPIRIT of THE ALL. And, upward and onward along this Scale of Life, everything is moving. All are on the Path, whose end is THE ALL. All progress is a Returning Home. All is Upward and Onward, in spite of all seemingly contradictory appearances. Such is the Message of the Illumined.

The Hermetic Teachings concerning the process of the Mental Creation of the Universe, are that at the beginning of the Creative Cycle, THE ALL, in its aspect of “Being,” projects its Will toward its aspect of “Becoming,” and the process of creation begins. It is taught that the process consists of the lowering of Vibration until a very low degree of vibratory energy is reached, at which point the grossest possible form of Matter is manifested. This process is called the stage of Involution, in which THE ALL becomes “involved,” or “wrapped up,” in its creation. This process is believed by the Hermetists to have a Correspondence to the mental process of an artist, writer, or inventor, who becomes so wrapped up in his mental creation as to almost forget his own existence and who, for the time being, almost “lives in his creation”. If instead of “wrapped” we use the word “rapt,” perhaps we will give a better idea of what is meant.

This Involuntary stage of Creation is sometimes called the “Outpouring” of the Divine Energy, just as the Evolutionary state is called the “Indrawing.” The extreme pole of the Creative process is considered to be the furthest removed from THE ALL, while the beginning of the Evolutionary stage is regarded as the beginning of the return swing of the pendulum of Rhythm—a “coming home” idea being held in all of the Hermetic Teachings.

The Teachings are that during the “Out-pouring,” the vibrations become lower and lower until finally the urge ceases, and the return swing begins. But there is this difference, that while in the “Outpouring” the creative forces manifest compactly and as a whole, yet from the beginning of the Evolutionary or “Indrawing” stage, there is manifested the Law of Individualization—that is, the tendency to separate into Units of Force, so that finally that which left THE ALL as unindividualized energy returns to its source as countless highly developed Units of Life, having risen higher and higher in the scale by means of Physical, Mental and Spiritual Evolution.

The ancient Hermetists use the word “Meditation,” in describing the process of the mental creation of the Universe in the Mind of THE ALL, the word “Contemplation” also being frequently employed. But the idea intended seems to be that of the employment of the Divine Attention. “Attention” is a word derived from the Latin root, meaning “to reach out; to stretch out,” and so the act of Attention is really a mental “reaching out; extension” of mental energy, so that the underlying idea is readily understood when we examine into the real meaning of

“Attention.”

The Hermetic Teachings regarding the process of Evolution are that, THE ALL, having meditated upon the beginning of the Creation—having thus established the material foundations of the Universe—having thought it into existence—then gradually awakens or rouses from its Meditation and in so doing starts into manifestation the process of Evolution, on the material, mental and spiritual planes, successively and in order. Thus the upward movement begins—and all begins to move Spiritward. Matter becomes less gross; the Units spring into being; the combinations begin to form; Life appears and manifests in higher and higher forms; and Mind becomes more and more in evidence—the vibrations constantly becoming higher. In short, the entire process of Evolution, in all of its phases, begins, and proceeds according to the established Laws of the “Indrawing” process. All of this occupies æons upon æons of Man’s time, each æon containing countless millions of years, but yet the Illumined inform us that the entire creation, including Involution and Evolution, of an Universe, is but “as the twinkle of the eye” to THE ALL. At the end of countless cycles of æons of time, THE ALL withdraws its Attention—its Contemplation and Meditation—of the Universe, for the Great Work is finished—and All is withdrawn into THE ALL from which it emerged. But Mystery of Mysteries—the Spirit of each soul is not annihilated, but is infinitely expanded—the Created and the Creator are merged. Such is the report of the Illumined!

The above illustration of the “meditation,” and subsequent “awakening from meditation,” of THE ALL, is of course but an attempt of the Teachers to describe the Infinite process by a finite example. And, yet: “As Below, so Above.” The difference is merely in degree. And just as THE ALL arouses itself from the meditation upon the Universe, so does Man (in time) cease from manifesting upon the Material Plane, and withdraws himself more and more into the Indwelling Spirit, which is indeed “The Divine Ego.”

There is one more matter of which we desire to speak in this lesson, and that comes very near to an invasion of the Metaphysical field of speculation, although our purpose is merely to show the futility of such speculation. We allude to the question which inevitably comes to the mind of all thinkers who have ventured to seek the Truth. The question is: “WHY does THE ALL create Universes?” The question may be asked in different forms, but the above is the gist of the inquiry.

Men have striven hard to answer this question, but still there is no answer worthy of the name. Some have imagined that THE ALL had something to gain by it, but this is absurd, for what could THE ALL gain that it did not already possess? Others have sought the answer in the idea that THE ALL “wished something to love;” and others that it created for pleasure, or amusement; or because it “was lonely;” or to manifest its power;—all puerile explanations and ideas, belonging to the childish period of thought.

Others have sought to explain the mystery by assuming that THE ALL found itself “compelled” to create, by reason of its own “internal nature”—its “creative instinct.” This idea is in advance of the others, but its weak point lies in the idea of THE ALL being “compelled” by anything, internal or external. If its “internal nature,” or “creative instinct,” compelled it to do anything, then the “internal nature” or “creative instinct” would be the Absolute, instead of THE ALL, and so accordingly that part of the proposition falls. And, yet, THE ALL does create and manifest, and seems to find some kind of satisfaction in so doing. And it is difficult to escape the conclusion that in some infinite degree it must have what would correspond to an “inner nature,” or “creative instinct” in man, with correspondingly infinite Desire and Will. It could not act unless it Willed to Act; and it would not Will to Act, unless it Desired to Act; and it would not Desire to Act unless it obtained some Satisfaction thereby. And all of these things would belong to an “Inner Nature,” and might be postulated as existing according to the Law of Correspondence. But, still, we prefer to think of THE ALL as acting entirely FREE from any influence, internal as well as external. That is the problem which lies at the root of difficulty—and the difficulty that lies at the root of the problem.

Strictly speaking, there cannot be said to be any "Reason" whatsoever for THE ALL to act, for a "reason" implies a "cause." and THE ALL is above Cause and Effect, except when it Wills to become a Cause, at which time the Principle is set into motion. So, you see, the matter is Unthinkable, just as THE ALL is Unknowable. Just as we say THE ALL merely "IS"—so we are compelled to say that "THE ALL ACTS BECAUSE IT ACTS." At the last, THE ALL is All Reason in Itself; All Law in Itself; All Action in Itself—and it may be said, truthfully, that THE ALL is Its Own Reason; its own Law; its own Act—or still further, that THE ALL; Its Reason; Its Act; its Law; are ONE, all being names for the same thing. In the opinion of those who are giving you these present lessons, the answer is locked up in INNER SELF of THE ALL, along with its Secret of Being. The Law of Correspondence, in our opinion, reaches only to that aspect of THE ALL, which may be spoken of as "The Aspect of BECOMING." Back of that Aspect is "The Aspect of BEING," in which all Laws are lost in LAW; all Principles merge into PRINCIPLE—and THE ALL; PRINCIPLE; and BEING; are IDENTICAL, ONE AND THE SAME. Therefore, Metaphysical speculation on this point is futile. We go into the matter here, merely to show that we recognize the question, and also the absurdity of the ordinary answers of metaphysics and theology.

In conclusion, it may be of interest to our students to learn that while some of the ancient, and modern, Hermetic Teachers have rather inclined in the direction of applying the Principle of Correspondence to the question, with the result of the "Inner Nature" conclusion,—still the legends have it that HERMES, the Great, when asked this question by his advanced students, answered them by PRESSING HIS LIPS TIGHTLY TOGETHER and saying not a word, indicating that there WAS NO ANSWER. But, then, he may have intended to apply the axiom of his philosophy, that: "The lips of Wisdom are closed, except to the ears of Understanding," believing that even his advanced students did not possess the Understanding which entitled them to the Teaching. At any rate, if Hermes possessed the Secret, he failed to impart it, and so far as the world is concerned THE LIPS OF HERMES ARE CLOSED regarding it. And where the Great Hermes hesitated to speak, what mortal may dare to teach?

But, remember, that whatever be the answer to this problem, if indeed there be an answer—the truth remains that: "While All is in THE ALL, it is equally true that THE ALL is in All." The Teaching on this point is emphatic. And, we may add the concluding words of the quotation: "To him who truly understands this truth, hath come great knowledge."

CHAPTER VIII.

THE PLANES OF CORRESPONDENCE.

“As above, so below; as below, so above”—*The Kybalion*.

The great Second Hermetic Principle embodies the truth that there is a harmony, agreement, and correspondence between the several planes of Manifestation, Life and Being. This truth is a truth because all that is included in the Universe emanates from the same source, and the same laws, principles, and characteristics apply to each unit, or combination of units of activity, as each manifests its own phenomena upon its own plane.

For the purpose of convenience of thought and study, the Hermetic Philosophy considers that the Universe may be divided into three great classes of phenomena, known as the Three Great Planes, namely:

- I. The Great Physical Plane.
- II. The Great Mental Plane.
- III. The Great Spiritual Plane.

These divisions are more or less artificial and arbitrary, for the truth is that all of the three divisions are but ascending degrees of the great scale of Life, the lowest point of which is undifferentiated Matter, and the highest point that of Spirit. And, moreover, the different Planes shade into each other, so that no hard and fast division may be made between the higher phenomena of the Physical and the lower of the Mental; or between the higher of the Mental and the lower of the Physical.

In short, the Three Great Planes may be regarded as three great groups of degrees of Life Manifestation. While the purposes of this little book do not allow us to enter into an extended discussion of, or explanation of, the subject of these different planes, still we think it well to give a general description of the same at this point.

At the beginning we may as well consider the question so often asked by the neophyte, who desires to be informed regarding the meaning of the word “Plane,” which term has been very freely used, and very poorly explained, in many recent works upon the subject of occultism. The question is generally about as follows: “Is a Plane a place having dimensions, or is it merely a condition or state?” We answer: “No, not a place, nor ordinary dimension of space; and yet more than a state or condition. It may be considered as a state or condition, and yet the state or condition is a degree of dimension, in a scale subject to measurement.” Somewhat paradoxical, is it not? But let us examine the matter. A “dimension,” you know, is “a measure in a straight line, relating to measure,” etc. The ordinary dimensions of space are length, breadth, and height, or perhaps length, breadth, height, thickness or circumference. But there is another dimension of “created things,” or “measure in a straight line,” known to occultists, and to scientists as well, although the latter have not as yet applied the term “dimension” to it—and this new dimension, which, by the way, is the much speculated about “Fourth Dimension,” is the standard used in determining the degrees or “planes.”

This Fourth Dimension may be called “the Dimension of Vibration.” It is a fact well known to modern science, as well as to the Hermetists who have embodied the truth in their “Third Hermetic Principle,” that “everything is in motion; everything vibrates; nothing is at rest.” From the highest manifestation, to the lowest, everything and all things Vibrate. Not only do they vibrate at different rates of motion, but as in different directions and in a different manner. The degrees of the “rate” of vibrations constitute the degrees of measurement on the Scale of Vibrations—in other words the degrees of the Fourth Dimension. And these

degrees form what occultists call "Planes." The higher the degree of rate of vibration, the higher the plane, and the higher the manifestation of Life occupying that plane. So that while a plane is not "a place," nor yet "a state or condition," yet it possesses qualities common to both. We shall have more to say regarding the subject of the scale of Vibrations in our next lessons, in which we shall consider the Hermetic Principle of Vibration.

You will kindly remember, however, that the Three Great Planes are not actual divisions of the phenomena of the Universe, but merely arbitrary terms used by the Hermetists in order to aid in the thought and study of the various degrees and forms of universal activity and life. The atom of matter, the unit of force, the mind of man, and the being of the archangel are all but degrees in one scale, and all fundamentally the same, the difference between solely a matter of degree, and rate of vibration—all are creations of THE ALL, and have their existence solely within the Infinite Mind of THE ALL.

The Hermetists sub-divide each of the Three Great Planes into Seven Minor Planes, and each of these latter are also sub-divided into seven sub-planes, all divisions being more or less arbitrary, shading into each other, and adopted merely for convenience of scientific study and thought.

The Great Physical Plane, and its Seven Minor Planes, is that division of the phenomena of the Universe which includes all that relates to physics, or material things, forces, and manifestations. It includes all forms of that which we call Matter, and all forms of that which we call Energy or Force. But you must remember that the Hermetic Philosophy does not recognize Matter as a "thing in itself," or as having a separate existence even in the Mind of THE ALL. The Teachings are that Matter is but a form of Energy—that is, Energy at a low rate of vibrations of a certain kind. And accordingly the Hermetists classify Matter under the head of Energy, and give to it three of the Seven Minor Planes of the Great Physical Plane.

These Seven Minor Physical Planes are as follows:

- I. The Plane of Matter (A).
- II. The Plane of Matter (B).
- III. The Plane of Matter (C).
- IV. The Plane of Ethereal Substance.
- V. The Plane of Energy (A).
- VI. The Plane of Energy (B).
- VII. The Plane of Energy (C).

The Plane of Matter (A) comprises the forms of Matter in its form of solids, liquids, and gases, as generally recognized by the text-books on physics. The Plane of Matter (B) comprises certain higher and more subtle forms of Matter of the existence of which modern science is but now recognizing, the phenomena of Radiant Matter, in its phases of radium, etc., belonging to the lower sub-division of this Minor Plane. The Plane of Matter (C) comprises forms of the most subtle and tenuous Matter, the existence of which is not suspected by ordinary scientists. The Plane of Ethereal Substance comprises that which science speaks of as "The Ether," a substance of extreme tenuity and elasticity, pervading all Universal Space, and acting as a medium for the transmission of waves of energy, such as light, heat, electricity, etc. This Ethereal Substance forms a connecting link between Matter (so-called) and Energy, and partakes of the nature of each. The Hermetic Teachings, however, instruct that this plane has seven sub-divisions (as have all of the Minor Planes), and that in fact there are seven ethers, instead of but one.

Next above the Plane of Ethereal Substance comes the Plane of Energy (A), which comprises the ordinary forms of Energy known to science, its seven sub-planes being, respectively, Heat; Light; Magnetism; Electricity, and Attraction (including Gravitation, Cohesion, Chemical Affinity, etc.) and several other forms of energy indicated by scientific

experiments but not as yet named or classified. The Plane of Energy (B) comprises seven sub-planes of higher forms of energy not as yet discovered by science, but which have been called "Nature's Finer Forces" and which are called into operation in manifestations of certain forms of mental phenomena, and by which such phenomena becomes possible. The Plane of Energy (C) comprises seven sub-planes of energy so highly organized that it bears many of the characteristics of "life," but which is not recognized by the minds of men on the ordinary plane of development, being available for the use on beings of the Spiritual Plane alone—such energy is unthinkable to ordinary man, and may be considered almost as "the divine power." The beings employing the same are as "gods" compared even to the highest human types known to us.

The Great Mental Plane comprises those forms of "living things" known to us in ordinary life, as well as certain other forms not so well known except to the occultist. The classification of the Seven Minor Mental Planes is more or less satisfactory and arbitrary (unless accompanied by elaborate explanations which are foreign to the purpose of this particular work), but we may as well mention them. They are as follows:

- I. The Plane of Mineral Mind.
- II. The Plane of Elemental Mind (A).
- III. The Plane of Plant Mind.
- IV. The Plane of Elemental Mind (B)
- V. The Plane of Animal Mind.
- VI. The Plane of Elemental Mind (C).
- VII. The Plane of Human Mind.

The Plane of Mineral Mind comprises the "states or conditions" of the units or entities, or groups and combinations of the same, which animate the forms known to us as "minerals, chemicals, etc." These entities must not be confounded with the molecules, atoms and corpuscles themselves, the latter being merely the material bodies or forms of these entities, just as a man's body is but his material form and not "himself." These entities may be called "souls" in one sense, and are living beings of a low degree of development, life, and mind—just a little more than the units of "living energy" which comprise the higher sub-divisions of the highest Physical Plane. The average mind does not generally attribute the possession of mind, soul, or life, to the Mineral kingdom, but all occultists recognize the existence of the same, and modern science is rapidly moving forward to the point-of-view of the Hermetic, in this respect. The molecules, atoms and corpuscles have their "loves and hates"; likes and dislikes; "attractions and repulsions"; "affinities and non-affinities," etc., and some of the more daring of modern scientific minds have expressed the opinion that the desire and will, emotions and feelings, of the atoms differ only in degree from those of men. We have no time or space to argue this matter here. All occultists know it to be a fact, and others are referred to some of the more recent scientific works for outside corroboration. There are the usual seven sub-divisions to this plane.

The Plane of Elemental Mind (A) comprises the state or condition, and degree of mental and vital development of a class of entities unknown to the average man, but recognized to occultists. They are invisible to the ordinary senses of man, but, nevertheless, exist and play their part of the Drama of the Universe. Their degree of intelligence is between that of the mineral and chemical entities on the one hand, and of the entities of the plant kingdom on the other. There are seven sub-divisions to this plane, also.

The Plane of Plant Mind, in its seven sub-divisions, comprises the states or conditions of the entities comprising the kingdoms of the Plant World, the vital and mental phenomena of which is fairly well understood by the average intelligent person, many new and interesting scientific works regarding "Mind and Life in Plants" having been published during the last

decade. Plants have life, mind and “souls,” as well as have the animals, man, and super-man.

The Plane of Elemental Mind (B), in its seven sub-divisions, comprises the states and conditions of a higher form of “elemental” or unseen entities, playing their part in the general work of the Universe, the mind and life of which form a part of the scale between the Plane of Plant Mind and the Plane of Animal Mind, the entities partaking of the nature of both.

The Plane of Animal Mind, in its seven sub-divisions, comprises the states and conditions of the entities, beings, or souls, animating the animal forms of life, familiar to us all. It is not necessary to go into details regarding this kingdom or plane of life, for the animal world is as familiar to us as is our own.

The Plane of Elemental Mind (C), in its seven sub-divisions, comprises those entities or beings, invisible as are all such elemental forms, which partake of the nature of both animal and human life in a degree and in certain combinations. The highest forms are semi-human in intelligence.

The Plane of Human Mind, in its seven sub-divisions, comprises those manifestations of life and mentality which are common to Man, in his various grades, degrees, and division. In this connection, we wish to point out the fact that the average man of today occupies but the fourth sub-division of the Plane of Human Mind, and only the most intelligent have crossed the borders of the Fifth Sub-Division. It has taken the race millions of years to reach this stage, and it will take many more years for the race to move on to the sixth and seventh sub-divisions, and beyond. But, remember, that there have been races before us which have passed through these degrees, and then on to higher planes. Our own race is the fifth (with stragglers from the fourth) which has set foot upon The Path. And, then there are a few advanced souls of our own race who have outstripped the masses, and who have passed on to the sixth and seventh sub-division, and some few being still further on. The man of the Sixth Sub-Division will be “The Super-Man”; he of the Seventh will be “The Over-Man.”

In our consideration of the Seven Minor Mental Planes, we have merely referred to the Three Elementary Planes in a general way. We do not wish to go into this subject in detail in this work, for it does not belong to this part of the general philosophy and teachings. But we may say this much, in order to give you a little clearer idea of the relations of these planes to the more familiar ones—the Elementary Planes bear the same relation to the Planes of Mineral, Plant, Animal and Human Mentality and Life, that the black keys on the piano do to the white keys. The white keys are sufficient to produce music, but there are certain scales, melodies, and harmonies, in which the black keys play their part, and in which their presence is necessary. They are also necessary as “connecting links” of soul-condition; entity states, etc., between the several other planes, certain forms of development being attained therein—this last fact giving to the reader who can “read between the lines” a new light upon the processes of Evolution, and a new key to the secret door of the “leaps of life” between kingdom and kingdom. The great kingdoms of Elementals are fully recognized by all occultists, and the esoteric writings are full of mention of them. The readers of Bulwer's “Zanoni” and similar tales will recognize the entities inhabiting these planes of life.

Passing on from the Great Mental Plane to the Great Spiritual Plane, what shall we say? How can we explain these higher states of Being, Life and Mind, to minds as yet unable to grasp and understand the higher sub-divisions of the Plane of Human Mind? The task is impossible. We can speak only in the most general terms. How may Light be described to a man born blind—how sugar, to a man who has never tasted anything sweet—how harmony, to one born deaf?

All that we can say is that the Seven Minor Planes of the Great Spiritual Plane (each Minor Plane having its seven sub-divisions) comprise Beings possessing Life, Mind and Form as far above that of Man of to-day as the latter is above the earthworm, mineral or even certain forms of Energy or Matter. The Life of these Beings so far transcends ours, that

we cannot even think of the details of the same; their Minds so far transcend ours, that to them we scarcely seem to “think,” and our mental processes seem almost akin to material processes; the Matter of which their forms are composed is of the highest Planes of Matter, nay, some are even said to be “clothed in Pure Energy.” What may be said of such Beings?

On the Seven Minor Planes of the Great Spiritual Plane exist Beings of whom we may speak as Angels; Archangels; Demi-Gods. On the lower Minor Planes dwell those great souls whom we call Masters and Adepts. Above them come the Great Hierarchies of the Angelic Hosts, unthinkable to man; and above those come those who may without irreverence be called “The Gods,” so high in the scale of Being are they, their being, intelligence and power being akin to those attributed by the races of men to their conceptions of Deity. These Beings are beyond even the highest flights of the human imagination, the word “Divine” being the only one applicable to them. Many of these Beings, as well as the Angelic Host, take the greatest interest in the affairs of the Universe and play an important part in its affairs. These Unseen Divinities and Angelic Helpers extend their influence freely and powerfully, in the process of Evolution, and Cosmic Progress. Their occasional intervention and assistance in human affairs have led to the many legends, beliefs, religions and traditions of the race, past and present. They have super-imposed their knowledge and power upon the world, again and again, all under the Law of THE ALL, of course.

But, yet, even the highest of these advanced Beings exist merely as creations of, and in, the Mind of THE ALL, and are subject to the Cosmic Processes and Universal Laws. They are still Mortal. We may call them “gods” if we like, but still they are but the Elder Brethren of the Race,—the advanced souls who have outstripped their brethren, and who have foregone the ecstasy of Absorption by THE ALL, in order to help the race on its upward journey along The Path. But, they belong to the Universe, and are subject to its conditions—they are mortal—and their plane is below that of Absolute Spirit.

Only the most advanced Hermetists are able to grasp the Inner Teachings regarding the state of existence, and the powers manifested on the Spiritual Planes. The phenomena is so much higher than that of the Mental Planes that a confusion of ideas would surely result from an attempt to describe the same. Only those whose minds have been carefully trained along the lines of the Hermetic Philosophy for years—yes, those who have brought with them from other incarnations the knowledge acquired previously—can comprehend just what is meant by the Teaching regarding these Spiritual Planes. And much of these inner Teachings is held by the Hermetists as being too sacred, important and even dangerous for general public dissemination. The intelligent student may recognize what we mean by this when we state that the meaning of “Spirit” as used by the Hermetists is akin to “Living Power”; “Animated Force”; “Inner Essence”; “Essence of Life,” etc., which meaning must not be confounded with that usually and commonly employed in connection with the term, i.e., “religious; ecclesiastical; spirituelle; ethereal; holy,” etc., etc. To occultists the word “Spirit” is used in the sense of “The Animating Principle,” carrying with it the idea of Power, Living Energy, Mystic Force, etc. And occultists know that that which is known to them as “Spiritual Power” may be employed for evil as well as good ends (in accordance with the Principle of Polarity), a fact which has been recognized by the majority of religions in their conceptions of Satan, Beelzebub, the Devil, Lucifer, Fallen Angels, etc. And so the knowledge regarding these Planes has been kept in the Holy of Holies in all Esoteric Fraternities and Occult Orders,—in the Secret Chamber of the Temple. But this may be said here, that those who have attained high spiritual powers and have misused them, have a terrible fate in store for them, and the swing of the pendulum of Rhythm will inevitably swing them back to the furthest extreme of Material existence, from which point they must retrace their steps Spiritward, along the weary rounds of The Path, but always with the added torture of having always with them a lingering memory of the heights from which they fell owing to their evil actions. The legends

of the Fallen Angels have a basis in actual facts, as all advanced occultists know. The striving for selfish power on the Spiritual Planes inevitably results in the selfish soul losing its spiritual balance and falling back as far as it had previously risen. But to even such a soul, the opportunity of a return is given—and such souls make the return journey, paying the terrible penalty according to the invariable Law.

In conclusion we would again remind you that according to the Principle of Correspondence, which embodies the truth: “As Above so Below; as Below, so Above,” all of the Seven Hermetic Principles are in full operation on all of the many planes, Physical, Mental and Spiritual. The Principle of Mental Substance of course applies to all the planes, for all are held in the Mind of THE ALL. The Principle of Correspondence manifests in all, for there is a correspondence, harmony and agreement between the several planes. The Principle of Vibration manifests on all planes, in fact the very differences that go to make the “planes” arise from Vibration, as we have explained. The Principle of Polarity manifests on each plane, the extremes of the Poles being apparently opposite and contradictory. The Principle of Rhythm manifests on each Plane, the movement of the phenomena having its ebb and flow, rise and fall, incoming and outgoing. The Principle of Cause and Effect manifests on each Plane, every Effect having its Cause and every Cause having its effect. The Principle of Gender manifests on each Plane, the Creative Energy being always manifest, and operating along the lines of its Masculine and Feminine Aspects.

“As Above so Below; as Below, so Above.” This centuries old Hermetic axiom embodies one of the great Principles of Universal Phenomena. As we proceed with our consideration of the remaining Principles, we will see even more clearly the truth of the universal nature of this great Principle of Correspondence.

CHAPTER IX

VIBRATION.

“Nothing rests; everything moves; everything vibrates.”—*The Kybalion*.

The great Third Hermetic Principle—the Principle of Vibration—embodies the truth that Motion is manifest in everything in the Universe—that nothing is at rest—that everything moves, vibrates, and circles. This Hermetic Principle was recognized by some of the early Greek philosophers who embodied it in their systems. But, then, for centuries it was lost sight of by the thinkers outside of the Hermetic ranks. But in the Nineteenth Century physical science re-discovered the truth and the Twentieth Century scientific discoveries have added additional proof of the correctness and truth of this centuries-old Hermetic doctrine.

The Hermetic Teachings are that not only is everything in constant movement and vibration, but that the “differences” between the various manifestations of the universal power are due entirely to the varying rate and mode of vibrations. Not only this, but that even THE ALL, in itself, manifests a constant vibration of such an infinite degree of intensity and rapid motion that it may be practically considered as at rest, the teachers directing the attention of the students to the fact that even on the physical plane a rapidly moving object (such as a revolving wheel) seems to be at rest. The Teachings are to the effect that Spirit is at one end of the Pole of Vibration, the other Pole being certain extremely gross forms of Matter. Between these two poles are millions upon millions of different rates and modes of vibration.

Modern Science has proven that all that we call Matter and Energy are but “modes of vibratory motion,” and some of the more advanced scientists are rapidly moving toward the positions of the occultists who hold that the phenomena of Mind are likewise modes of vibration or motion. Let us see what science has to say regarding the question of vibrations in matter and energy.

In the first place, science teaches that all matter manifests, in some degree, the vibrations arising from temperature or heat. Be an object cold or hot—both being but degrees of the same things—it manifests certain heat vibrations, and in that sense is in motion and vibration. Then all particles of Matter are in circular movement, from corpuscle to suns. The planets revolve around suns, and many of them turn on their axes. The suns move around greater central points, and these are believed to move around still greater, and so on, ad infinitum. The molecules of which the particular kinds of Matter are composed are in a state of constant vibration and movement around each other and against each other. The molecules are composed of Atoms, which, likewise, are in a state of constant movement and vibration. The atoms are composed of Corpuscles, sometimes called “electrons,” “ions,” etc., which also are in a state of rapid motion, revolving around each other, and which manifest a very rapid state and mode of vibration. And, so we see that all forms of Matter manifest Vibration, in accordance with the Hermetic Principle of Vibration.

And so it is with the various forms of Energy. Science teaches that Light, Heat, Magnetism and Electricity are but forms of vibratory motion connected in some way with, and probably emanating from the Ether. Science does not as yet attempt to explain the nature of the phenomena known as Cohesion, which is the principle of Molecular Attraction; nor Chemical Affinity, which is the principle of Atomic Attraction; nor Gravitation (the greatest mystery of the three), which is the principle of attraction by which every particle or mass of Matter is bound to every other particle or mass. These three forms of Energy are not as yet understood by science, yet the writers incline to the opinion that these too are manifestations of some form of vibratory energy, a fact which the Hermetists have held and taught for ages past.

The Universal Ether, which is postulated by science without its nature being understood clearly, is held by the Hermetists to be but a higher manifestation of that which is erroneously called matter—that is to say, Matter at a higher degree of vibration—and is called by them “The Ethereal Substance.” The Hermetists teach that this Ethereal Substance is of extreme tenuity and elasticity, and pervades universal space, serving as a medium of transmission of waves of vibratory energy, such as heat, light, electricity, magnetism, etc. The Teachings are that The Ethereal Substance is a connecting link between the forms of vibratory energy known as “Matter” on the one hand, and “Energy or Force” on the other; and also that it manifests a degree of vibration, in rate and mode, entirely its own.

Scientists have offered the illustration of a rapidly moving wheel, top, or cylinder, to show the effects of increasing rates of vibration. The illustration supposes a wheel, top, or revolving cylinder, running at a low rate of speed—we will call this revolving thing “the object” in following out the illustration. Let us suppose the object moving slowly. It may be seen readily, but no sound of its movement reaches the ear. The speed is gradually increased. In a few moments its movement becomes so rapid that a deep growl or low note may be heard. Then as the rate is increased the note rises one in the musical scale. Then, the motion being still further increased, the next highest note is distinguished. Then, one after another, all the notes of the musical scale appear, rising higher and higher as the motion is increased. Finally when the motions have reached a certain rate the final note perceptible to human ears is reached and the shrill, piercing shriek dies away, and silence follows. No sound is heard from the revolving object, the rate of motion being so high that the human ear cannot register the vibrations. Then comes the perception of rising degrees of Heat. Then after quite a time the eye catches a glimpse of the object becoming a dull dark reddish color. As the rate increases, the red becomes brighter. Then as the speed is increased, the red melts into an orange. Then the orange melts into a yellow. Then follow, successively, the shades of green, blue, indigo, and finally violet, as the rate of speed increases. Then the violet shades away, and all color disappears, the human eye not being able to register them. But there are invisible rays emanating from the revolving object, the rays that are used in photographing, and other subtle rays of light. Then begin to manifest the peculiar rays known as the “X Rays,” etc., as the constitution of the object changes. Electricity and Magnetism are emitted when the appropriate rate of vibration is attained.

When the object reaches a certain rate of vibration its molecules disintegrate, and resolve themselves into the original elements or atoms. Then the atoms, following the Principle of Vibration, are separated into the countless corpuscles of which they are composed. And finally, even the corpuscles disappear and the object may be said to be composed of The Ethereal Substance. Science does not dare to follow the illustration further, but the Hermetists teach that if the vibrations be continually increased the object would mount up the successive states of manifestation and would in turn manifest the various mental stages, and then on Spiritward, until it would finally re-enter THE ALL, which is Absolute Spirit. The “object,” however, would have ceased to be an “object” long before the stage of Ethereal Substance was reached, but otherwise the illustration is correct inasmuch as it shows the effect of constantly increased rates and modes of vibration. It must be remembered, in the above illustration, that at the stages at which the “object” throws off vibrations of light, heat, etc., it is not actually “resolved” into those forms of energy (which are much higher in the scale), but simply that it reaches a degree of vibration in which those forms of energy are liberated, in a degree, from the confining influences of its molecules, atoms and corpuscles, as the case may be. These forms of energy, although much higher in the scale than matter, are imprisoned and confined in the material combinations, by reason of the energies manifesting through, and using material forms, but thus becoming entangled and confined in their creations of material forms, which, to an extent, is true of all creations, the creating force becoming involved in its creation.

But the Hermetic Teachings go much further than do those of modern science. They teach that all manifestation of thought, emotion, reason, will or desire, or any mental state or condition, are accompanied by vibrations, a portion of which are thrown off and which tend to affect the minds of other persons by "induction." This is the principle which produces the phenomena of "telepathy"; mental influence, and other forms of the action and power of mind over mind, with which the general public is rapidly becoming acquainted, owing to the wide dissemination of occult knowledge by the various schools, cults and teachers along these lines at this time.

Every thought, emotion or mental state has its corresponding rate and mode of vibration. And by an effort of the will of the person, or of other persons, these mental states may be reproduced, just as a musical tone may be reproduced by causing an instrument to vibrate at a certain rate—just as color may be reproduced in the same way. By a knowledge of the Principle of Vibration, as applied to Mental Phenomena, one may polarize his mind at any degree he wishes, thus gaining a perfect control over his mental states, moods, etc. In the same way he may affect the minds of others, producing the desired mental states in them. In short, he may be able to produce on the Mental Plane that which science produces on the Physical Plane—namely, "Vibrations at Will." This power of course may be acquired only by the proper instruction, exercises, practice, etc., the science being that of Mental Transmutation, one of the branches of the Hermetic Art.

A little reflection on what we have said will show the student that the Principle of Vibration underlies the wonderful phenomena of the power manifested by the Masters and Adepts, who are able to apparently set aside the Laws of Nature, but who, in reality, are simply using one law against another; one principle against others; and who accomplish their results by changing the vibrations of material objects, or forms of energy, and thus perform what are commonly called "miracles."

As one of the old Hermetic writers has truly said: "He who understands the Principle of Vibration, has grasped the sceptre of Power."

CHAPTER X.

POLARITY.

"Everything is dual; everything has poles; everything has its pair of opposites; like and unlike are the same; opposites are identical in nature, but different in degree; extremes meet; all truths are but half-truths; all paradoxes may be reconciled."—*The Kybalion*.

The great Fourth Hermetic Principle—the Principle of Polarity—embodies the truth that all manifested things have "two sides"; "two aspects"; "two poles"; a "pair of opposites," with manifold degrees between the two extremes. The old paradoxes, which have ever perplexed the mind of men, are explained by an understanding of this Principle. Man has always recognized something akin to this Principle, and has endeavored to express it by such sayings, maxims and aphorisms as the following: "Everything is and isn't, at the same time"; "all truths are but half-truths"; "every truth is half-false"; "there are two sides to everything"; "there is a reverse side to every shield," etc., etc.

The Hermetic Teachings are to the effect that the difference between things seemingly diametrically opposed to each other is merely a matter of degree. It teaches that "the pairs of opposites may be reconciled," and that "thesis and anti-thesis are identical in nature, but different in degree"; and that the "universal reconciliation of opposites" is effected by a recognition of this Principle of Polarity. The teachers claim that illustrations of this Principle may be had on every hand, and from an examination into the real nature of anything. They begin by showing that Spirit and Matter are but the two poles of the same thing, the intermediate planes being merely degrees of vibration. They show that THE ALL and The Many are the same, the difference being merely a matter of degree of Mental Manifestation. Thus the LAW and Laws are the two opposite poles of one thing. Likewise, PRINCIPLE and Principles. Infinite Mind and finite minds.

Then passing on to the Physical Plane, they illustrate the Principle by showing that Heat and Cold are identical in nature, the differences being merely a matter of degrees. The thermometer shows many degrees of temperature, the lowest pole being called "cold," and the highest "heat." Between these two poles are many degrees of "heat" or "cold," call them either and you are equally correct. The higher of two degrees is always "warmer," while the lower is always "colder." There is no absolute standard—all is a matter of degree. There is no place on the thermometer where heat ceases and cold begins. It is all a matter of higher or lower vibrations. The very terms "high" and "low," which we are compelled to use, are but poles of the same thing—the terms are relative. So with "East and West"—travel around the world in an eastward direction, and you reach a point which is called west at your starting point, and you return from that westward point. Travel far enough North, and you will find yourself traveling South, or vice versa.

Light and Darkness are poles of the same thing, with many degrees between them. The musical scale is the same—starting with "C" you move upward until you reach another "C," and so on, the differences between the two ends of the board being the same, with many degrees between the two extremes. The scale of color is the same—higher and lower vibrations being the only difference between high violet and low red. Large and Small are relative. So are Noise and Quiet; Hard and Soft follow the rule. Likewise Sharp and Dull. Positive and Negative are two poles of the same thing, with countless degrees between them.

Good and Bad are not absolute—we call one end of the scale Good and the other Bad, or one end Good and the other Evil, according to the use of the terms. A thing is "less good" than the thing higher in the scale; but that "less good" thing, in turn, is "more good" than the thing next below it—and so on, the "more or less" being regulated by the position on the scale.

And so it is on the Mental Plane. "Love and Hate" are generally regarded as being things diametrically opposed to each other; entirely different; unreconcilable. But we apply the Principle of Polarity; we find that there is no such thing as Absolute Love or Absolute Hate, as distinguished from each other. The two are merely terms applied to the two poles of the same thing. Beginning at any point of the scale we find "more love," or "less hate," as we ascend the scale; and "more hate" or "less love" as we descend—this being true no matter from what point, high or low, we may start. There are degrees of Love and Hate, and there is a middle point where "Like and Dislike" become so faint that it is difficult to distinguish between them. Courage and Fear come under the same rule. The Pairs of Opposites exist everywhere. Where you find one thing you find its opposite—the two poles.

And it is this fact that enables the Hermetist to transmute one mental state into another, along the lines of Polarization. Things belonging to different classes cannot be transmuted into each other, but things of the same class may be changed, that is, may have their polarity changed. Thus Love never becomes East or West, or Red or Violet—but it may and often does turn into Hate—and likewise Hate may be transformed into Love, by changing its polarity. Courage may be transmuted into Fear, and the reverse. Hard things may be rendered Soft. Dull things become Sharp. Hot things become Cold. And so on, the transmutation always being between things of the same kind of different degrees. Take the case of a Fearful man. By raising his mental vibrations along the line of Fear-Courage, he can be filled with the highest degree of Courage and Fearlessness. And, likewise, the Slothful man may change himself into an Active, Energetic individual, simply by polarizing along the lines of the desired quality.

The student who is familiar with the processes by which the various schools of Mental Science, etc., produce changes in the mental states of those following their teachings, may not readily understand the principle underlying many of these changes. When, however, the Principle of Polarity is once grasped, and it is seen that the mental changes are occasioned by a change of polarity—a sliding along the same scale—the matter is more readily understood. The change is not in the nature of a transmutation of one thing into another thing entirely different—but is merely a change of degree in the same things, a vastly important difference. For instance, borrowing an analogy from the Physical Plane, it is impossible to change Heat into Sharpness, Loudness, Highness, etc., but Heat may readily be transmuted into Cold, simply by lowering the vibrations. In the same way Hate and Love are mutually transmutable; so are Fear and Courage. But Fear cannot be transformed into Love, nor can Courage be transmuted into Hate. The mental states belong to innumerable classes, each class of which has its opposite poles, along which transmutation is possible.

The student will readily recognize that in the mental states, as well as in the phenomena of the Physical Plane, the two poles may be classified as Positive and Negative, respectively. Thus Love is Positive to Hate; Courage to Fear; Activity to Non-Activity, etc., etc. And it will also be noticed that even to those unfamiliar with the Principle of Vibration, the Positive pole seems to be of a higher degree than the Negative, and readily dominates it. The tendency of Nature is in the direction of the dominant activity of the Positive pole.

In addition to the changing of the poles of one's own mental states by the operation of the art of Polarization, the phenomena of Mental Influence, in its manifold phases, shows us that the principle may be extended so as to embrace the phenomena of the influence of one mind over that of another, of which so much has been written and taught of late years. When it is understood that Mental Induction is possible, that is that mental states may be produced by "induction" from others, then we can readily see how a certain rate of vibration, or polarization of a certain mental state, may be communicated to another person, and his polarity in that class of mental states thus changed. It is along this principle that the results of many of the "mental treatments" are obtained. For instance, a person is "blue," melancholy and full of fear. A mental scientist bringing his own mind up to the desired vibration by his

trained will, and thus obtaining the desired polarization in his own case, then produces a similar mental state in the other by induction, the result being that the vibrations are raised and the person polarizes toward the Positive end of the scale instead toward the Negative, and his Fear and other negative emotions are transmuted to Courage and similar positive mental states. A little study will show you that these mental changes are nearly all along the line of Polarization, the change being one of degree rather than of kind.

A knowledge of the existence of this great Hermetic Principle will enable the student to better understand his own mental states, and those of other people. He will see that these states are all matters of degree, and seeing thus, he will be able to raise or lower the vibration at will—to change his mental poles, and thus be Master of his mental states, instead of being their servant and slave. And by his knowledge he will be able to aid his fellows intelligently, and by the appropriate methods change the polarity when the same is desirable. We advise all students to familiarize themselves with this Principle of Polarity, for a correct understanding of the same will throw light on many difficult subjects.

CHAPTER XI.

RHYTHM.

“Everything flows out and in; everything has its tides; all things rise and fall; the pendulum-swing manifests in everything; the measure of the swing to the right, is the measure of the swing to the left; rhythm compensates.”—*The Kybalion*.

The great Fifth Hermetic Principle—the Principle of Rhythm—embodies the truth that in everything there is manifested a measured motion; a to-and-from movement; a flow and inflow; a swing forward and backward; a pendulum-like movement a tide-like ebb and flow; a high-tide and a low-tide; between the two-poles manifest on the physical, mental or spiritual planes. The Principle of Rhythm is closely connected with the Principle of Polarity described in the preceding chapter. Rhythm manifests between the two poles established by the Principle of Polarity. This does not mean, however, that the pendulum of Rhythm swings to the extreme poles, for this rarely happens; in fact, it is difficult to establish the extreme polar opposites in the majority of cases. But the swing is ever “toward” first one pole and then the other.

There is always an action and reaction; an advance and a retreat; a rising and a sinking; manifested in all of the airs and phenomena of the Universe. Suns, worlds, men, animals, plants, minerals, forces, energy, mind and matter, yes, even Spirit, manifests this Principle. The Principle manifests in the creation and destruction of worlds; in the rise and fall of nations; in the life history of all things; and finally in the mental states of Man.

Beginning with the manifestations of Spirit—of THE ALL—it will be noticed that there is ever the Outpouring and the Indrawing; the “Outbreathing and Inbreathing of Brahm,” as the Brahmans word it. Universes are created; reach their extreme low point of materiality; and then begin their upward swing. Suns spring into being, and then their height of power being reached, the process of retrogression begins, and after æons they become dead masses of matter, awaiting another impulse which starts again their inner energies into activity and a new solar life cycle is begun. And thus it is with all the worlds; they are born, grow and die; only to be reborn. And thus it is with all the things of shape and form; they swing from action to reaction; from birth to death; from activity to inactivity—and then back again. Thus it is with all living things; they are born, grow, and die—and then are reborn. So it is with all great movements, philosophies, creeds, fashions, governments, nations, and all else—birth, growth, maturity, decadence, death—and then newbirth. The swing of the pendulum is ever in evidence.

Night follows day; and day night. The pendulum swings from Summer to Winter, and then back again. The corpuscles, atoms, molecules, and all masses of matter, swing around the circle of their nature. There is no such thing as absolute rest, or cessation from movement, and all movement partakes of Rhythm. The principle is of universal application. It may be applied to any question, or phenomena of any of the many planes of life. It may be applied to all phases of human activity. There is always the Rhythmic swing from one pole to the other. The Universal Pendulum is ever in motion. The Tides of Life flow in and out, according to Law.

The Principle of Rhythm is well understood by modern science, and is considered a universal law as applied to material things. But the Hermetists carry the principle much further, and know that its manifestations and influence extend to the mental activities of Man, and that it accounts for the bewildering succession of moods, feelings and other annoying and perplexing changes that we notice in ourselves. But the Hermetists by studying the operations of this Principle have learned to escape some of its activities by Transmutation.

The Hermetic Masters long since discovered that while the Principle of Rhythm was invariable, and ever in evidence in mental phenomena, still there were two planes of its

manifestation so far as mental phenomena are concerned. They discovered that there were two general planes of Consciousness, the Lower and the Higher, the understanding of which fact enabled them to rise to the higher plane and thus escape the swing of the Rhythmic pendulum which manifested on the lower plane. In other words, the swing of the pendulum occurred on the Unconscious Plane, and the Consciousness was not affected. This they call the Law of Neutralization. Its operations consist in the raising of the Ego above the vibrations of the Unconscious Plane of mental activity, so that the negative-swing of the pendulum is not manifested in consciousness, and therefore they are not affected. It is akin to rising above a thing and letting it pass beneath you. The Hermetic Master, or advanced student, polarizes himself at the desired pole, and by a process akin to "refusing" to participate in the backward swing, or, if you prefer, a "denial" of its influence over him, he stands firm in his polarized position, and allows the mental pendulum to swing back along the unconscious plane. All individuals who have attained any degree of self-mastery, accomplish this, more or less unknowingly, and by refusing to allow their moods and negative mental states to affect them, they apply the Law of Neutralization. The Master, however, carries this to a much higher degree of proficiency, and by the use of his Will he attains a degree of Poise and Mental Firmness almost impossible of belief on the part of those who allow themselves to be swung backward and forward by the mental pendulum of moods and feelings.

The importance of this will be appreciated by any thinking person who realizes what creatures of moods, feelings and emotion the majority of people are, and how little mastery of themselves they manifest. If you will stop and consider a moment, you will realize how much these swings of Rhythm have affected you in your life—how a period of Enthusiasm has been invariably followed by an opposite feeling and mood of Depression. Likewise, your moods and periods of Courage have been succeeded by equal moods of Fear. And so it has ever been with the majority of persons—tides of feeling have ever risen and fallen with them, but they have never suspected the cause or reason of the mental phenomena. An understanding of the workings of this Principle will give one the key to the Mastery of these rhythmic swings of feeling, and will enable him to know himself better and to avoid being carried away by these inflows and outflows. The Will is superior to the conscious manifestation of this Principle, although the Principle itself can never be destroyed. We may escape its effects, but the Principle operates, nevertheless. The pendulum ever swings, although we may escape being carried along with it.

There are other features of the operation of this Principle of Rhythm of which we wish to speak at this point. There comes into its operations that which is known as the Law of Compensation. One of the definitions or meanings of the word "Compensate" is, "to counterbalance," which is the sense in which the Hermetists use the term. It is this Law of Compensation to which the Kybalion refers when it says: "The measure of the swing to the right is the measure of the swing to the left; rhythm compensates."

The Law of Compensation is that the swing in one direction determines the swing in the opposite direction, or to the opposite pole—the one balances, or counterbalances, the other. On the Physical Plane we see many examples of this Law. The pendulum of the clock swings a certain distance to the right, and then an equal distance to the left. The seasons balance each other in the same way. The tides follow the same Law. And the same Law is manifested in all the phenomena of Rhythm. The pendulum, with a short swing in one direction, has but a short swing in the other; while the long swing to the right invariably means the long swing to the left. An object hurled upward to a certain height has an equal distance to traverse on its return. The force with which a projectile is sent upward a mile is reproduced when the projectile returns to the earth on its return journey. This Law is constant on the Physical Plane, as reference to the standard authorities will show you.

But the Hermetists carry it still further. They teach that a man's mental states are subject to the same Law. The man who enjoys keenly, is subject to keen suffering; while he who

feels but little pain is capable of feeling but little joy. The pig suffers but little mentally, and enjoys but little—he is compensated. And on the other hand, there are other animals who enjoy keenly, but whose nervous organism and temperament cause them to suffer exquisite degrees of pain. And so it is with Man. There are temperaments which permit of but low degrees of enjoyment, and equally low degrees of suffering; while there are others which permit the most intense enjoyment, but also the most intense suffering. The rule is that the capacity for pain and pleasure, in each individual, are balanced. The Law of Compensation is in full operation here.

But the Hermetists go still further in this matter. They teach that before one is able to enjoy a certain degree of pleasure, he must have swung as far, proportionately, toward the other pole of feeling. They hold, however, that the Negative is precedent to the Positive in this matter, that is to say that in experiencing a certain degree of pleasure it does not follow that he will have to “pay up for it” with a corresponding degree of pain; on the contrary, the pleasure is the Rhythmic swing, according to the Law of Compensation, for a degree of pain previously experienced either in the present life, or in a previous incarnation. This throws a new light on the Problem of Pain.

The Hermetists regard the chain of lives as continuous, and as forming a part of one life of the individual, so that in consequence the rhythmic swing is understood in this way, while it would be without meaning unless the truth of reincarnation is admitted.

But the Hermetists claim that the Master or advanced student is able, to a great degree, to escape the swing toward Pain, by the process of Neutralization before mentioned. By rising on to the higher plane of the Ego, much of the experience that comes to those dwelling on the lower plane is avoided and escaped.

The Law of Compensation plays an important part in the lives of men and women. It will be noticed that one generally “pays the price” of anything he possesses or lacks. If he has one thing, he lacks another—the balance is struck. No one can “keep his penny and have the bit of cake” at the same time. Everything has its pleasant and unpleasant sides. The things that one gains are always paid for by the things that one loses. The rich possess much that the poor lack, while the poor often possess things that are beyond the reach of the rich. The millionaire may have the inclination toward feasting, and the wealth wherewith to secure all the dainties and luxuries of the table, while he lacks the appetite to enjoy the same; he envies the appetite and digestion of the laborer, who lacks the wealth and inclinations of the millionaire, and who gets more pleasure from his plain food than the millionaire could obtain even if his appetite were not jaded, nor his digestion ruined, for the wants, habits and inclinations differ. And so it is through life. The Law of Compensation is ever in operation, striving to balance and counter-balance, and always succeeding in time, even though several lives may be required for the return swing of the Pendulum of Rhythm.

CHAPTER XII.

CAUSATION.

“Every Cause has its Effect; every Effect has its cause; everything happens according to Law; Chance is but a name for Law not recognized; there are many planes of causation, but nothing escapes the Law.”—*The Kybalion*.

The great Sixth Hermetic Principle—the Principle of Cause and Effect—embodies the truth that Law pervades the Universe; that nothing happens by Chance; that Chance is merely a term indicating cause existing but not recognized or perceived; that phenomena is continuous, without break or exception.

The Principle of Cause and Effect underlies all scientific thought, ancient and modern, and was enunciated by the Hermetic Teachers in the earliest days. While many and varied disputes between the many schools of thought have since arisen, these disputes have been principally upon the details of the operations of the Principle, and still more often upon the meaning of certain words. The underlying Principle of Cause and Effect has been accepted as correct by practically all the thinkers of the world worthy of the name. To think otherwise would be to take the phenomena of the universe from the domain of Law and Order, and to relegate it to the control of the imaginary something which men have called “Chance.”

A little consideration will show anyone that there is in reality no such thing as pure Chance. Webster defines the word ‘Chance’ as follows: “A supposed agent or mode of activity other than a force, law or purpose; the operation or activity of such agent; the supposed effect of such an agent; a happening; fortuity; casualty, etc.” But a little consideration will show you that there can be no such agent as “Chance,” in the sense of something outside of Law—something outside of Cause and Effect. How could there be a something acting in the phenomenal universe, independent of the laws, order, and continuity of the latter? Such a something would be entirely independent of the orderly trend of the universe, and therefore superior to it. We can imagine nothing outside of THE ALL being outside of the Law, and that only because THE ALL is the LAW in itself. There is no room in the universe for a something outside of and independent of Law. The existence of such a Something would render all Natural Laws ineffective, and would plunge the universe into chaotic disorder and lawlessness.

A careful examination will show that what we call “Chance” is merely an expression relating to obscure causes; causes that we cannot perceive; causes that we cannot understand. The word Chance is derived from a word meaning “to fall” (as the falling of dice), the idea being that the fall of the dice (and many other happenings) are merely a “happening” unrelated to any cause. And this is the sense in which the term is generally employed. But when the matter is closely examined, it is seen that there is no chance whatsoever about the fall of the dice. Each time a die falls, and displays a certain number, it obeys a law as infallible as that which governs the revolution of the planets around the sun. Back of the fall of the die are causes, or chains of causes, running back further than the mind can follow. The position of the die in the box; the amount of muscular energy expended in the throw; the condition of the table, etc., etc., all are causes, the effect of which may be seen. But back of these seen causes there are chains of unseen preceding causes, all of which had a bearing upon the number of the die which fell uppermost.

If a die be cast a great number of times, it will be found that the numbers shown will be about equal, that is, there will be an equal number of one-spot, two-spot, etc., coming uppermost. Toss a penny in the air, and it may come down either “heads” or “tails”; but make a sufficient number of tosses, and the heads and tails will about even up. This is the operation of the law of average. But both the average and the single toss come under the Law of Cause and Effect, and if we were able to examine into the preceding causes, it would

be clearly seen that it was simply impossible for the die to fall other than it did, under the same circumstances and at the same time. Given the same causes, the same results will follow. There is always a "cause" and a "because" to every event. Nothing ever "happens" without a cause, or rather a chain of causes.

Some confusion has arisen in the minds of persons considering this Principle, from the fact that they were unable to explain how one thing could cause another thing—that is, be the "creator" of the second thing. As a matter of fact, no "thing" ever causes or "creates" another "thing." Cause and Effect deals merely with events." An "event" is "that which comes, arrives or happens, as a result or consequent of some preceding event." No event "creates" another event, but is merely a preceding link in the great orderly chain of events flowing from the creative energy of THE ALL. There is a continuity between all events precedent, consequent and subsequent. There is a relation existing between everything that has gone before, and everything that follows. A stone is dislodged from a mountain side and crashes through a roof of a cottage in the valley below. At first sight we regard this as a chance effect, but when we examine the matter we find a great chain of causes behind it. In the first place there was the rain which softened the earth supporting the stone and which allowed it to fall; then back of that was the influence of the sun, other rains, etc., which gradually disintegrated the piece of rock from a larger piece; then there were the causes which led to the formation of the mountain, and its upheaval by convulsions of nature, and so on ad infinitum. Then we might follow up the causes behind the rain, etc. Then we might consider the existence of the roof. In short, we would soon find ourselves involved in a mesh of cause and effect, from which we would soon strive to extricate ourselves.

Just as a man has two parents, and four grandparents, and eight great-grandparents, and sixteen great-great-grandparents, and so on until when, say, forty generations are calculated the numbers of ancestors run into many millions—so it is with the number of causes behind even the most trifling event or phenomena, such as the passage of a tiny speck of soot before your eye. It is not an easy matter to trace the bit of soot back to the early period of the world's history when it formed a part of a massive tree-trunk, which was afterward converted into coal, and so on, until as the speck of soot it now passes before your vision on its way to other adventures. And a mighty chain of events, causes and effects, brought it to its present condition, and the latter is but one of the chain of events which will go to produce other events hundreds of years from now. One of the series of events arising from the tiny bit of soot was the writing of these lines, which caused the typesetter to perform certain work; the proofreader to do likewise; and which will arouse certain thoughts in your mind, and that of others, which in turn will affect others, and so on, and on, and on, beyond the ability of man to think further—and all from the passage of a tiny bit of soot, all of which shows the relativity and association of things, and the further fact that "—there is no great; there is no small; in the mind that causeth all."

Stop to think a moment. If a certain man had not met a certain maid, away back in the dim period of the Stone Age—you who are now reading these lines would not now be here. And if, perhaps, the same couple had failed to meet, we who now write these lines would not now be here. And the very act of writing, on our part, and the act of reading, on yours, will affect not only the respective lives of yourself and ourselves, but will also have a direct, or indirect, affect upon many other people now living and who will live in the ages to come. Every thought we think, every act we perform, has its direct and indirect results which fit into the great chain of Cause and Effect.

We do not wish to enter into a consideration of Free-Will, or Determinism, in this work, for various reasons. Among the many reasons, is the principal one that neither side of the controversy is entirely right—in fact, both sides are partially right, according to the Hermetic Teachings. The Principle of Polarity shows that both are but Half-Truths—the opposing poles of Truth. The Teachings are that a man may be both Free and yet bound by Necessity,

depending upon the meaning of the terms, and the height of Truth from which the matter is examined. The ancient writers express the matter thus: "The further the creation is from the Centre, the more it is bound; the nearer the Centre it reaches, the nearer Free is it."

The majority of people are more or less the slaves of heredity, environment, etc., and manifest very little Freedom. They are swayed by the opinions, customs and thoughts of the outside world, and also by their emotions, feelings, moods, etc. They manifest no Mastery, worthy of the name. They indignantly repudiate this assertion, saying, "Why, I certainly am free to act and do as I please—I do just what I want to do," but they fail to explain whence arise the "want to" and "as I please." What makes them "want to" do one thing in preference to another; what makes them "please" to do this, and not do that? Is there no "because" to their "pleasing" and "wanting"? The Master can change these "pleases" and "wants" into others at the opposite end of the mental pole. He is able to "Will to will," instead of to will because some feeling, mood, emotion, or environmental suggestion arouses a tendency or desire within him so to do.

The majority of people are carried along like the falling stone, obedient to environment, outside influences and internal moods, desires, etc., not to speak of the desires and wills of others stronger than themselves, heredity, environment, and suggestion, carrying them along without resistance on their part, or the exercise of the Will. Moved like the pawns on the checkerboard of life, they play their parts and are laid aside after the game is over. But the Masters, knowing the rules of the game, rise above the plane of material life, and placing themselves in touch with the higher powers of their nature, dominate their own moods, characters, qualities, and polarity, as well as the environment surrounding them and thus become Movers in the game, instead of Pawns—Causes instead of Effects. The Masters do not escape the Causation of the higher planes, but fall in with the higher laws, and thus master circumstances on the lower plane. They thus form a conscious part of the Law, instead of being mere blind instruments. While they Serve on the Higher Planes, they Rule on the Material Plane.

But, on higher and on lower, the Law is always in operation. There is no such things as Chance. The blind goddess has been abolished by Reason. We are able to see now, with eyes made clear by knowledge, that everything is governed by Universal Law—that the infinite number of laws are but manifestations of the One Great Law—the LAW which is THE ALL. It is true indeed that not a sparrow drops unnoticed by the Mind of THE ALL—that even the hairs on our head are numbered—as the scriptures have said. There is nothing outside of Law; nothing that happens contrary to it. And yet, do not make the mistake of supposing that Man is but a blind automaton—far from that. The Hermetic Teachings are that Man may use Law to overcome laws, and that the higher will always prevail against the lower, until at last he has reached the stage in which he seeks refuge in the LAW itself, and laughs the phenomenal laws to scorn. Are you able to grasp the inner meaning of this?

CHAPTER XIII.

GENDER.

“Gender is in everything; everything has its Masculine and Feminine Principles; Gender manifests on planes.”—*The Kybalion*.

The great Seventh Hermetic Principle—the Principle of Gender—embodies the truth that there is Gender manifested in everything—that the Masculine and Feminine principles are ever present and active in all phases of phenomena, on each and every plane of life. At this point we think it well to call your attention to the fact that Gender, in its Hermetic sense, and Sex in the ordinarily accepted use of the term, are not the same.

The word “Gender” is derived from the Latin root meaning “to beget; to procreate; to generate; to create; to produce.”

A moment’s consideration will show you that the word has a much broader and more general meaning than the term “Sex,” the latter referring to the physical distinctions between male and female living things. Sex is merely a manifestation of Gender on a certain plane of the Great Physical Plane—the plane of organic life. We wish to impress this distinction upon your minds, for the reason that certain writers, who have acquired a smattering of the Hermetic Philosophy, have sought to identify this Seventh Hermetic Principle with wild and fanciful, and often reprehensible, theories and teachings regarding Sex.

The office of Gender is solely that of creating, producing, generating, etc., and its manifestations are visible on every plane of phenomena. It is somewhat difficult to produce proofs of this along scientific lines, for the reason that science has not as yet recognized this Principle as of universal application. But still some proofs are forthcoming from scientific sources. In the first place, we find a distinct manifestation of the Principle of Gender among the corpuscles, ions, or electrons, which constitute the basis of Matter as science now knows the latter, and which by forming certain combinations form the Atom, which until lately was regarded as final and indivisible.

The latest word of science is that the atom is composed of a multitude of corpuscles, electrons, or ions (the various names being applied by different authorities) revolving around each other and vibrating at a high degree and intensity. But the accompanying statement is made that the formation of the atom is really due to the clustering of negative corpuscles around a positive one—the positive corpuscles seeming to exert a certain influence upon the negative corpuscles, causing the latter to assume certain combinations and thus “create” or “generate” an atom. This is in line with the most ancient Hermetic Teachings, which have always identified the Masculine principle of Gender with the “Positive,” and the Feminine with the “Negative” Poles of Electricity (so-called).

Now a word at this point regarding this identification. The public mind has formed an entirely erroneous impression regarding the qualities of the so-called “Negative” pole of electrified or magnetized Matter. The terms Positive and Negative are very wrongly applied to this phenomenon by science. The word Positive means something real and strong, as compared with a Negative unreality or weakness. Nothing is further from the real facts of electrical phenomena. The so-called Negative pole of the battery is really the pole in and by which the generation or production of new forms and energies is manifested. There is nothing “negative” about it. The best scientific authorities now use the word “Cathode” in place of “Negative,” the word Cathode coming from the Greek root meaning “descent; the path of generation, etc.” From the Cathode pole emerge the swarm of electrons or corpuscles; from the same pole emerge those wonderful “rays” which have revolutionized scientific conceptions during the past decade. The Cathode pole is the Mother of all of the strange phenomena which have rendered useless the old text-books, and which have

caused many long accepted theories to be relegated to the scrap-pile of scientific speculation. The Cathode, or Negative Pole, is the Mother Principle of Electrical Phenomena, and of the finest forms of matter as yet known to science. So you see we are justified in refusing to use the term "Negative" in our consideration of the subject, and in insisting upon substituting the word "Feminine" for the old term. The facts of the case bear us out in this, without taking the Hermetic Teachings into consideration. And so we shall use the word "Feminine" in the place of "Negative" in speaking of that pole of activity.

The latest scientific teachings are that the creative corpuscles or electrons are Feminine (science says "they are composed of negative electricity—we say they are composed of Feminine energy).

A Feminine corpuscle becomes detached from, or rather leaves, a Masculine corpuscle, and starts on a new career. It actively seeks a union with a Masculine corpuscle, being urged thereto by the natural impulse to create new forms of Matter or Energy. One writer goes so far as to use the term "it at once seeks, of its own volition, a union," etc. This detachment and uniting form the basis of the greater part of the activities of the chemical world. When the Feminine corpuscle unites with a Masculine corpuscle, a certain process is begun. The Feminine particles vibrate rapidly under the influence of the Masculine energy, and circle rapidly around the latter. The result is the birth of a new atom. This new atom is really composed of a union of the Masculine and Feminine electrons, or corpuscles, but when the union is formed the atom is a separate thing, having certain properties, but no longer manifesting the property of free electricity. The process of detachment or separation of the Feminine electrons is called "ionization." These electrons, or corpuscles, are the most active workers in Nature's field. Arising from their unions, or combinations, manifest the varied phenomena of light, heat, electricity, magnetism, attraction, repulsion, chemical affinity and the reverse, and similar phenomena. And all this arises from the operation of the Principle of Gender on the plane of Energy.

The part of the Masculine principle seems to be that of directing a certain inherent energy toward the Feminine principle, and thus starting into activity the creative processes. But the Feminine principle is the one always doing the active creative work—and this is so on all planes. And yet, each principle is incapable of operative energy without the assistance of the other. In some of the forms of life, the two principles are combined in one organism. For that matter, everything in the organic world manifests both genders—there is always the Masculine present in the Feminine form, and the Feminine form. The Hermetic Teachings include much regarding the operation of the two principles of Gender in the production and manifestation of various forms of energy, etc., but we do not deem it expedient to go into detail regarding the same at this point, because we are unable to back up the same with scientific proof, for the reason that science has not as yet progressed thus far. But the example we have given you of the phenomena of the electrons or corpuscles will show you that science is on the right path, and will also give you a general idea of the underlying principles.

Some leading scientific investigators have announced their belief that in the formation of crystals there was to be found something that corresponded to "sex-activity," which is another straw showing the direction the scientific winds are blowing. And each year will bring other facts to corroborate the correctness of the Hermetic Principle of Gender. It will be found that Gender is in constant operation and manifestation in the field of inorganic matter, and in the field of Energy or Force. Electricity is now generally regarded as the "Something" into which all other forms of energy seem to melt or dissolve. The "Electrical Theory of the Universe" is the latest scientific doctrine, and is growing rapidly in popularity and general acceptance. And it thus follows that if we are able to discover in the phenomena of electricity—even at the very root and source of its manifestations—a clear and unmistakable evidence of the presence of Gender and its activities, we are justified in asking you to

believe that science at last has offered proofs of the existence in all universal phenomena of that great Hermetic Principle—the Principle of Gender.

It is not necessary to take up your time with the well known phenomena of the “attraction and repulsion” of the atoms; chemical affinity; the “loves and hates” of the atomic particles; the attraction or cohesion between the molecules of matter. These facts are too well known to need extended comment from us. But, have you ever considered that all of these things are manifestations of the Gender Principle?

Can you not see that the phenomena is “on all fours” with that of the corpuscles or electrons? And more than this, can you not see the reasonableness of the Hermetic Teachings which assert that the very Law of Gravitation—that strange attraction by reason of which all particles and bodies of matter in the universe tend toward each other—is but another manifestation of the Principle of Gender, which operates in the direction of attracting the Masculine to the Feminine energies, and vice versa? We cannot offer you scientific proof of this at this time—but examine the phenomena in the light of the Hermetic Teachings on the subject, and see if you have not a better working hypothesis than any offered by physical science. Submit all physical phenomena to the test, and you will discern the Principle of Gender ever in evidence.

Let us now pass on to a consideration of the operation of the Principle on the Mental Plane. Many interesting features are there awaiting examination.

CHAPTER XIV.

MENTAL GENDER.

Students of psychology who have followed the modern trend of thought along the lines of mental phenomena are struck by the persistence of the dual-mind idea which has manifested itself so strongly during the past ten or fifteen years, and which has given rise to a number of plausible theories regarding the nature and constitution of these "two minds." The late Thomson J. Hudson attained great popularity in 1893 by advancing his well-known theory of the "objective and subjective minds" which he held existed in every individual. Other writers have attracted almost equal attention by the theories regarding the "conscious and sub-conscious minds"; the "voluntary and involuntary minds"; "the active and passive minds," etc., etc. The theories of the various writers differ from each other, but there remains the underlying principle of "the duality of mind."

The student of the Hermetic Philosophy is tempted to smile when he reads and hears of these many "new theories" regarding the duality of mind, each school adhering tenaciously to its own pet theories, and each claiming to have "discovered the truth." The student turns back the pages of occult history, and away back in the dim beginnings of occult teachings he finds references to the ancient Hermetic doctrine of the Principle of Gender on the Mental Plane—the manifestation of Mental Gender. And examining further he finds that the ancient philosophy took cognizance of the phenomenon of the "dual mind," and accounted for it by the theory of Mental Gender. This idea of Mental Gender may be explained in a few words to students who are familiar with the modern theories just alluded to. The Masculine Principle of Mind corresponds to the so-called Objective Mind; Conscious Mind; Voluntary Mind; Active Mind, etc. And the Feminine Principle of Mind corresponds to the so-called Subjective Mind; Subconscious Mind; Involuntary Mind; Passive Mind, etc. Of course the Hermetic Teachings do not agree with the many modern theories regarding the nature of the two phases of mind, nor does it admit many of the facts claimed for the two respective aspects—some of the said theories and claims being very far-fetched and incapable of standing the test of experiment and demonstration. We point to the phases of agreement merely for the purpose of helping the student to assimilate his previously acquired knowledge with the teachings of the Hermetic Philosophy. Students of Hudson will notice the statement at the beginning of his second chapter of "The Law of Psychic Phenomena," that: "The mystic jargon of the Hermetic philosophers discloses the same general idea"—i. e., the duality of mind. If Dr. Hudson had taken the time and trouble to decipher a little of "the mystic jargon of the Hermetic Philosophy," he might have received much light upon the subject of "the dual mind"—but then, perhaps, his most interesting work might not have been written. Let us now consider the Hermetic Teachings regarding Mental Gender.

The Hermetic Teachers impart their instruction regarding this subject by bidding their students examine the report of their consciousness regarding their Self. The students are bidden to turn their attention inward upon the Self dwelling within each. Each student is led to see that his consciousness gives him first a report of the existence of his Self—the report is "I Am." This at first seems to be the final words from the consciousness, but a little further examination discloses the fact that this "I Am" may be separated or split into two distinct parts, or aspects, which while working in unison and in conjunction, yet, nevertheless, may be separated in consciousness.

While at first there seems to be only an "I" existing, a more careful and closer examination reveals the fact that there exists an "I" and a "Me." These mental twins differ in their characteristics and nature, and an examination of their nature and the phenomena arising from the same will throw much light upon many of the problems of mental influence.

Let us begin with a consideration of the "Me," which is usually mistaken for the "I" by the

student, until he presses the inquiry a little further back into the recesses of consciousness. A man thinks of his Self (in its aspect of "Me") as being composed of certain feelings, tastes, likes, dislikes, habits, peculiar ties, characteristics, etc., all of which go to make up his personality, or the "Self" known to himself and others. He knows that these emotions and feelings change; are born and die away; are subject to the Principle of Rhythm, and the Principle of Polarity, which take him from one extreme of feeling to another. He also thinks of the "Me" as being certain knowledge gathered together in his mind, and thus forming a part of himself. This is the "Me" of a man.

But we have proceeded too hastily. The "Me" of many men may be said to consist largely of their consciousness of the body and their physical appetites, etc. Their consciousness being largely bound up with their bodily nature, they practically "live there." Some men even go so far as to regard their personal apparel as a part of their "Me," and actually seem to consider it a part of themselves. A writer has humorously said that "men consist of three parts—soul, body and clothes." These "clothes conscious" people would lose their personality if divested of their clothing by savages upon the occasion of a ship-wreck. But even many who are not so closely bound up with the idea of personal raiment stick closely to the consciousness of their bodies being their "Me." They cannot conceive of a Self independent of the body. Their mind seems to them to be practically "a something belonging to" their body—which in many cases it is indeed.

But as man rises in the scale of consciousness he is able to disentangle his "Me" from his idea of body, and is able to think of his body as "belonging to" the mental part of him. But even then he is very apt to identify the "Me" entirely with the mental states, feelings, etc., which he feels to exist within him. He is very apt to consider these internal states as identical with himself, instead of their being simply "things" produced by some part of his mentality, and existing within him—of him, and in him, but still not "himself." He sees that he may change these internal states of feelings by an effort of will, and that he may produce a feeling or state of an exactly opposite nature, in the same way, and yet the same "Me" exists. And so after a while he is able to set aside these various mental states, emotions, feelings, habits, qualities, characteristics, and other personal mental belongings—he is able to set them aside in the "not-me" collection of curiosities and encumbrances, as well as valuable possessions. This requires much mental concentration and power of mental analysis on the part of the student. But still the task is possible for the advanced student, and even those not so far advanced are able to see, in the imagination, how the process may be performed.

After this laying-aside process has been performed, the student will find himself in conscious possession of a "Self" which may be considered in its "I" and "Me" dual aspects. The "Me" will be felt to be a Something mental in which thoughts, ideas, emotions, feelings, and other mental states may be produced. It may be considered as the "mental womb," as the ancients styled it—capable of generating mental offspring. It reports to the consciousness as a "Me" with latent powers of creation and generation of mental progeny of all sorts and kinds. Its powers of creative energy are felt to be enormous. But still it seems to be conscious that it must receive some form of energy from either its "I" companion, or else from some other "I," ere it is able to bring into being its mental creations. This consciousness brings with it a realization of an enormous capacity for mental work and creative ability.

But the student soon finds that this is not all that he finds within his inner consciousness. He finds that there exists a mental Something which is able to Will that the "Me" act along certain creative lines, and which is also able to stand aside and witness the mental creation. This part of himself he is taught to call his "I." He is able to rest in its consciousness at will. He finds there not a consciousness of an ability to generate and actively create, in the sense of the gradual process attendant upon mental operations, but rather a sense and consciousness of an ability to project an energy from the "I" to the "Me"—a process of "willing"

that the mental creation begin and proceed. He also finds that the "I" is able to stand aside and witness the operations of the "Me's" mental creation and generation. There is this dual aspect in the mind of every person. The "I" represents the Masculine Principle of Mental Gender—the "Me" represents the Female Principle. The "I" represents the Aspect of Being; the "Me" the Aspect of Becoming. You will notice that the Principle of Correspondence operates on this plane just as it does upon the great plane upon which the creation of Universes is performed. The two are similar in kind, although vastly different in degree. "As above, so below; as below, so above."

These aspects of mind—the Masculine and Feminine Principles—the "I" and the "Me"—considered in connection with the well-known mental and psychic phenomena, give the master-key to these dimly known regions of mental operation and manifestation. The principle of Mental Gender gives the truth underlying the whole field of the phenomena of mental influence, etc.

The tendency of the Feminine Principle is always in the direction of receiving impressions, while the tendency of the Masculine Principle is always in the direction of giving out, or expressing. The Feminine Principle has a much more varied field of operation than has the Masculine Principle. The Feminine Principle conducts the work of generating new thoughts, concepts, ideas, including the work of the imagination. The Masculine Principle contents itself with the work of the "Will," in its varied phases. And yet without the active aid of the Will of the Masculine Principle, the Feminine Principle is apt to rest content with generating mental images which are the result of impressions received from outside, instead of producing original mental creations.

Persons who can give continued attention and thought to a subject actively employ both of the Mental Principles—the Feminine in the work of active mental generation, and the Masculine Will in stimulating and energizing the creative portion of the mind. The majority of persons really employ the Masculine Principle but little and are content to live according to the thoughts and ideas instilled into the "Me" from the "I" of other minds. But it is not our purpose to dwell upon this phase of the subject, which may be studied from any good text-book upon psychology, with the key that we have given you regarding Mental Gender.

The student of Psychic Phenomena is aware of the wonderful phenomena classified under the head of Telepathy; Thought Transference; Mental Influence; Suggestion; Hypnotism, etc. Many have sought for an explanation of these varied phases of phenomena under the theories of the various "dual mind" teachers. And in a measure they are right, for there is clearly a manifestation of two distinct phases of mental activity. But if such students will consider these "dual minds" in the light of the Hermetic Teachings regarding Vibrations and Mental Gender, they will see that the long sought for key is at hand.

In the phenomena of Telepathy it is seen how the Vibratory Energy of the Masculine Principle is projected toward the Feminine Principle of another person, and the latter takes the seed-thought and allows it to develop into maturity. In the same way Suggestion and Hypnotism operates. The Masculine Principle of the person giving the suggestions directs a stream of Vibratory Energy or Will-Power toward the Feminine Principle of the other person, and the latter accepting it makes it its own and acts and thinks accordingly. An idea thus lodged in the mind of another person grows and develops, and in time is regarded as the rightful mental offspring of the individual, whereas it is in reality like the cuckoo egg placed in the sparrow's nest, where it destroys the rightful offspring and makes itself at home. The normal method is for the Masculine and Feminine Principles in a person's mind to co-ordinate and act harmoniously in conjunction with each other. But, unfortunately, the Masculine Principle in the average person is too lazy to act—the display of Will-Power is too slight—and the consequence is that such persons are ruled almost entirely by the minds and wills of other persons, whom they allow to do their thinking and willing for them. How few original thoughts or original actions are performed by the average person? Are not the

majority of persons mere shadows and echoes of others having stronger wills or minds than themselves? The trouble is that the average person dwells almost altogether in his "Me" consciousness, and does not realize that he has such a thing as an "I." He is polarized in his Feminine Principle of Mind, and the Masculine Principle, in which is lodged the Will, is allowed to remain inactive and not employed.

The strong men and women of the world invariably manifest the Masculine Principle of Will, and their strength depends materially upon this fact. Instead of living upon the impressions made upon their minds by others, they dominate their own minds by their Will, obtaining the kind of mental images desired, and moreover dominate the minds of others likewise, in the same manner. Look at the strong people, how they manage to implant their seed-thoughts in the minds of the masses of the people, thus causing the latter to think thoughts in accordance with the desires and wills of the strong individuals. This is why the masses of people are such sheep-like creatures, never originating an idea of their own, nor using their own powers of mental activity.

The manifestation of Mental Gender may be noticed all around us in everyday life. The magnetic persons are those who are able to use the Masculine Principle in the way of impressing their ideas upon others. The actor who makes people weep or cry as he wills, is employing this principle. And so is the successful orator, statesman, preacher, writer or other people who are before the public attention. The peculiar influence exerted by some people over others is due to the manifestation of Mental Gender along the Vibratorial lines above indicated. In this principle lies the secret of personal magnetism, personal influence, fascination, etc., as well as the phenomena generally grouped under the name of Hypnotism.

The student who has familiarized himself with the phenomena generally spoken of as "psychic" will have discovered the important part played in the said phenomena by that force which science has styled "Suggestion," by which term is meant the process or method whereby an idea is transferred to, or "impressed upon" the mind of another, causing the second mind to act in accordance therewith. A correct understanding of Suggestion is necessary in order to intelligently comprehend the varied psychical phenomena which Suggestion underlies. But, still more is a knowledge of Vibration and Mental Gender necessary for the student of Suggestion. For the whole principle of Suggestion depends upon the principle of Mental Gender and Vibration.

It is customary for the writers and teachers of Suggestion to explain that it is the "objective or voluntary" mind which make the mental impression, or suggestion, upon the "subjective or involuntary" mind. But they do not describe the process or give us any analogy in nature whereby we may more readily comprehend the idea. But if you will think of the matter in the light of the Hermetic Teachings, you will be able to see that the energizing of the Feminine Principle by the Vibratory Energy of the Masculine Principle is in accordance to the universal laws of nature, and that the natural world affords countless analogies whereby the principle may be understood. In fact, the Hermetic Teachings show that the very creation of the Universe follows the same law, and that in all creative manifestations, upon the planes of the spiritual, the mental, and the physical, there is always in operation this principle of Gender—this manifestation of the Masculine and the Feminine Principles. "As above, so below; as below, so above." And more than this, when the principle of Mental Gender is once grasped and understood, the varied phenomena of psychology at once becomes capable of intelligent classification and study, instead of being very much in the dark. The principle "works out" in practice, because it is based upon the immutable universal laws of life.

We shall not enter into an extended discussion of, or description of, the varied phenomena of mental influence or psychic activity. There are many books, many of them quite good, which have been written and published on this subject of late years. The main

facts stated in these various books are correct, although the several writers have attempted to explain the phenomena by various pet theories of their own. The student may acquaint himself with these matters, and by using the theory of Mental Gender he will be able to bring order out of the chaos of conflicting theory and teachings, and may, moreover, readily make himself a master of the subject if he be so inclined. The purpose of this work is not to give an extended account of psychic phenomena, but rather to give to the student a master-key whereby he may unlock the many doors leading into the parts of the Temple of Knowledge which he may wish to explore. We feel that in this consideration of the teachings of The Kybalion, one may find an explanation which will serve to clear away many perplexing difficulties—a key that will unlock many doors. What is the use of going into detail regarding all of the many features of psychic phenomena and mental science, provided we place in the hands of the student the means whereby he may acquaint himself fully regarding any phase of the subject which may interest him. With the aid of The Kybalion one may go through any occult library anew, the old Light from Egypt illuminating many dark pages, and obscure subjects. That is the purpose of this book. We do not come expounding a new philosophy, but rather furnishing the outlines of a great world-old teaching which will make clear the teachings of others—which will serve as a Great Reconciler of differing theories, and opposing doctrines.

CHAPTER XV.

HERMETIC AXIOMS.

“The possession of Knowledge, unless accompanied by a manifestation and expression in Action, is like the hoarding of precious metals—a vain and foolish thing. Knowledge, like Wealth, is intended for Use. The Law of Use is Universal, and he who violates it suffers by reason of his conflict with natural forces.”—*The Kybalion*.

The Hermetic Teachings, while always having been kept securely locked up in the minds of the fortunate possessors thereof, for reasons which we have already stated, were never intended to be merely stored away and secreted. The Law of Use is dwelt upon in the Teachings, as you may see by reference to the above quotation from *The Kybalion*, which states it forcibly. Knowledge without Use and Expression is a vain thing, bringing no good to its possessor, or to the race. Beware of Mental Miserliness, and express into Action that which you have learned. Study the Axioms and Aphorisms, but practice them also.

We give below some of the more important Hermetic Axioms, from *The Kybalion*, with a few comments added to each. Make these your own, and practice and use them, for they are not really your own until you have Used them.

“To change your mood or mental state—change your vibration.”—*The Kybalion*.

One may change his mental vibrations by an effort of Will, in the direction of deliberately fixing the Attention upon a more desirable state. Will directs the Attention, and Attention changes the Vibration. Cultivate the Art of Attention, by means of the Will, and you have solved the secret of the Mastery of Moods and Mental States.

“To destroy an undesirable rate of mental vibration, put into operation the Principle of Polarity and concentrate upon the opposite pole to that which you desire to suppress. Kill out the undesirable by changing its polarity.”—*The Kybalion*.

This is one of the most important of the Hermetic Formulas. It is based upon true scientific principles. We have shown you that a mental state and its opposite were merely the two poles of one thing, and that by Mental Transmutation the polarity might be reversed. This principle is known to modern psychologists, who apply it to the breaking up of undesirable habits by bidding their students concentrate upon the opposite quality. If you are possessed of Fear, do not waste time trying to “kill out” Fear, but instead cultivate the quality of Courage, and the Fear will disappear. Some writers have expressed this idea most forcibly by using the illustration of the dark room. You do not have to shovel out or sweep out the Darkness, but by merely opening the shutters and letting in the Light the Darkness has disappeared. To kill out a Negative quality, concentrate upon the Positive Pole of that same quality, and the vibrations will gradually change from Negative to Positive, until finally you will become polarized on the Positive pole instead of the Negative. The reverse is also true, as many have found out to their sorrow, when they have allowed themselves to vibrate too constantly on the Negative pole of things. By changing your polarity you may master your moods, change your mental states, remake your disposition, and build up character. Much of the Mental Mastery of the advanced Hermetics is due to this application of Polarity, which is one of the important aspects of Mental Transmutation. Remember the Hermetic Axiom (quoted previously), which says:

“Mind (as well as metals and elements) may be transmuted from state to state; degree to degree; condition to condition; pole to pole; vibration to vibration.”—*The Kybalion*.

The mastery of Polarization is the mastery of the fundamental principles of Mental Transmutation or Mental Alchemy, for unless one acquires the art of changing his own polarity, he will be unable to affect his environment. An understanding of this principle will enable one to change his own Polarity, as well as that of others, if he will but devote the time, care, study and practice necessary to master the art. The principle is true, but the

results obtained depend upon the persistent patience and practice of the student.

“Rhythm may be neutralized by an application of the Art of Polarization.”—*The Kybalion*.

As we have explained in previous chapters, the Hermetists hold that the Principle of Rhythm manifests on the Mental Plane as well as on the Physical Plane, and that the bewildering succession of moods, feelings, emotions, and other mental states, are due to the backward and forward swing of the mental pendulum, which carries us from one extreme of feeling to the other.

The Hermetists also teach that the Law of Neutralization enables one, to a great extent, to overcome the operation of Rhythm in consciousness. As we have explained, there is a Higher Plane of Consciousness, as well as the ordinary Lower Plane, and the Master by rising mentally to the Higher Plane causes the swing of the mental pendulum to manifest on the Lower Plane, and he, dwelling on his Higher Plane, escapes the consciousness of the swing backward. This is effected by polarizing on the Higher Self, and thus raising the mental vibrations of the Ego above those of the ordinary plane of consciousness. It is akin to rising above a thing, and allowing it to pass beneath you. The advanced Hermetist polarizes himself at the Positive Pole of his Being—the “I Am” pole rather than the pole of personality, and by “refusing” and “denying” the operation of Rhythm, raises himself above its plane of consciousness, and standing firm in his Statement of Being he allows the pendulum to swing back on the Lower Plane without changing his Polarity. This is accomplished by all individuals who have attained any degree of self-mastery, whether they understand the law or not. Such persons simply “refuse” to allow themselves to be swung back by the pendulum of mood and emotion, and by steadfastly affirming the superiority, they remain polarized on the Positive pole. The Master, of course, attains a far greater degree of proficiency, because he understands the law which he is overcoming by a higher law, and by the use of his Will he attains a degree of Poise and Mental Steadfastness almost impossible of belief on the part of those who allow themselves to be swung backward and forward by the mental pendulum of moods and feelings.

Remember, always, however, that you do not really destroy the Principle of Rhythm, for that is indestructible. You simply overcome one law by counter-balancing it with another, and thus maintain an equilibrium. The laws of balance and counter-balance are in operation on the mental as well as on the physical planes, and an understanding of these laws enables one to seem to overthrow laws, whereas he is merely exerting a counterbalance.

“Nothing escapes the Principle of Cause and Effect, but there are many Planes of Causation, and one may use the laws of the higher to overcome the laws of the lower.”—*The Kybalion*.

By an understanding of the practice of Polarization, the Hermetists rise to a higher plane of Causation and thus counter-balance the laws of the lower planes of Causation. By rising above the plane of ordinary Causes they become themselves, in a degree, Causes instead of being merely Caused. By being able to master their own moods and feelings, and by being able to neutralize Rhythm, as we have already explained, they are able to escape a great part of the operations of Cause and Effect on the ordinary plane. The masses of people are carried along, obedient to their environment; the wills and desires of others stronger than themselves; the effect of inherited tendencies; the suggestions of those about them; and other outward causes; which tend to move them about on the chess-board of life like mere pawns. By rising above these influencing causes, the advanced Hermetists seek a higher plane of mental action, and by dominating their moods, emotions, impulses and feelings, they create for themselves new characters, qualities and powers, by which they overcome their ordinary environment, and thus become practically players instead of mere Pawns. Such people help to play the game of life understandingly, instead of being moved about this way and that way by stronger influences and powers and wills. They use the Principle of Cause and Effect, instead of being used by it. Of course, even the highest are

subject to the Principle as it manifests on the higher planes, but on the lower planes of activity, they are Masters instead of Slaves. As The Kybalion says:

“The wise ones serve on the higher, but rule on the lower. They obey the laws coming from above them, but on their own plane, and those below them, they rule and give orders. And, yet, in so doing, they form a part of the Principle, instead of opposing it. The wise man falls in with the Law, and by understanding its movements he operates it instead of being its blind slave. Just as does the skilled swimmer turn this way and that way, going and coming as he will, instead of being as the log which is carried here and there—so is the wise man as compared to the ordinary man—and yet both swimmer and log; wise man and fool, are subject to Law. He who understands this is well on the road to Mastery.”—*The Kybalion*.

In conclusion let us again call your attention to the Hermetic Axiom:

“True Hermetic Transmutation is a Mental Art.”—*The Kybalion*.

In the above axiom, the Hermetists teach that the great work of influencing one's environment is accomplished by Mental Power. The Universe being wholly mental, it follows that it may be ruled only by Mentality. And in this truth is to be found an explanation of all the phenomena and manifestations of the various mental powers which are attracting so much attention and study in these earlier years of the Twentieth Century. Back of and under the teachings of the various cults and schools, remains ever constant the principle of the Mental Substance of the Universe. If the Universe be Mental in its substantial nature, then it follows that Mental Transmutation must change the conditions and phenomena of the Universe. If the Universe is Mental, then Mind must be the highest power affecting its phenomena. If this be understood then all the so-called “miracles” and “wonder-workings” are seen plainly for what they are.

“THE ALL is MIND; The Universe is Mental.”—*The Kybalion*.

Five Phases or Five Sefirot	69
The Screen (and the Unlikely Example).....	70
5×5×5	71
The Fifth Level and the Barrier.....	73
The Start of the Climb	75
Towards a Common Soul.....	75
Up the Ladder.....	76
Back to the Future	76
What Goes Around Comes Around	78
CHAPTER 8: SETTING THE STAGE FOR MAN.....	80
Five Worlds, and None Real.....	80
At the Top of the Ladder.....	81
Equal but Opposite.....	82
A Short Story of Creation	82
For Your Pleasure Only.....	84
The Construction Workers.....	86
Adam and Eve Are Born (and Dropped)	86
Tricked into Sinning.....	87
Sin—the Way Out of Evil	88
Tiny Gold Coins	89

CHAPTER 9: UNLOCKING THE LANGUAGE OF KABBALAH	91
Like Roots and Branches	92
The Same but Opposite.....	93
The Hidden Meaning of the Bible	94
Behind the Monitor.....	95
The Apple Story.....	95
Abraham—between Egypt and Israel	96
Moses' Tug-of-War with Pharaoh.....	97
The (Classic Happy-end) Story of Esther	98
The Zohar—Not without Attainment	99
The Donkey Driver	100
The Night of the Bride	101
The Beginning of the Last Generation.....	101
The Study of the Ten Sefirot	102
CHAPTER 10: WHEN LETTERS AND WORDS ADD UP	103
The Ties between Letters, Words, and Numbers	104
A Map of Spirituality.....	104
Dots and Lines.....	106
Black on White.....	106
Letters and Worlds	108
Ones, Tens, Hundreds, and Beyond	110
If God = Nature, and Nature = Desire, then.....	111
The Building-Blocks of Life	112
Abraham Took It Personally (and so can you)	113
Discover Your Root, Discover Your Name	114
CHAPTER 11: BODY AND SOUL	115
Your Body—a Container for Your Soul.....	116
Recycle until You're Ripe and Ready.....	116
Why the Repeated Appearances?.....	117
The Seed of the Soul	117
Where and What Is a Soul?	118
A Shirt for the Soul	119
No Time in Spirituality.....	120
Some Q&A's.....	120
Who Was I?.....	120
Can We Identify People from the Past?	121
Can I Reincarnate as an Animal?	122
How Many Times do I Have to Reincarnate?.....	122
Can I Remember Past Lives?.....	123
What Remains of Past Lives?	123
How Can I Positively Affect My Next Life?	124

CHAPTER 12: BECOMING A KABBALAH STUDENT	126
Everyday Is an Open-House Day	127
Studying with the Right Intention	128
No Coercion in Spirituality	129
No Hermits	129
The Trinity of Kabbalah	131
Books: Our Spiritual Tour Guides	131
Texts in the Language of the Branches.....	132
Books that Help You Reach Your Goal.....	133
Finding the Right Teacher	134
Let Your Heart Decide.....	134
Group Study.....	135
Joint Desires.....	136
Letting the Light Flow into You	136
Long Distance Kabbalah Study	137
CHAPTER 13: LET THE MUSIC SPEAK	139
Not by Words Alone	139
Music—Touches where Texts Can Not.....	140
Bathing in Light.....	141
Melodies of the World to Come.....	142
Tuning Your Inner Instrument	142

About Bnei Baruch.....	210

INTRODUCTION

For many centuries, Kabbalah has been a “banned” topic. Examine this (partial) list of prerequisites you previously had to answer “yes” to in order to become a student: Jewish, male, married, over 40 years old, and proficient in other Jewish studies. So how come Kabbalah is being openly taught and studied everywhere? Because the ban has been lifted.

As Kabbalists Rav Yehuda Ashlag, the Vilna Gaon (GRA), and many other prominent Kabbalists have stated, the end of the 20th century marks a fundamental change in the history of Kabbalah. Now it is open for all.

As we will show inside the book, the bans were there for a reason. But it is for exactly the same reason that they have now been lifted. We, humanity in the twenty-first century, have become ready to see Kabbalah for what it really is—a scientific, time-tested, empirical method of achieving spirituality while living here in this world.

Studying Kabbalah is a fascinating journey. It changes your perspective on the world and the people around you, and opens parts in you that you never knew existed. It is a journey of discoveries happening within, affecting all of life’s levels: our relationships with our kin, friends, and co-workers. Kabbalah

states very simply that when you know how to connect to the Creator directly, without any go-betweens, you will find your inner compass. And this is the goal of Kabbalah—to help you make, and sustain, direct contact with the Creator. And when you do, you will need no further guidance. So welcome to *The Guide to Hidden Wisdom of Kabbalah*.

WHAT YOU'LL FIND IN THIS BOOK

The book is set up in three parts and a three part appendix. Here's what you'll find inside: Kabbalah is a science that describes the laws of the spiritual world. In Part 1, "Kabbalah Facts and Fallacies," we'll talk about the basic principles of Kabbalah and give you some background on how it began.

We'll continue our spiritual journey in Part 2, "Before there Was Time," which starts with Kabbalah's cycle of reality, explaining how we were created, what we are doing here, and how and at which point we begin our ascent to the Upper World. We'll discuss how the world was created, how Kabbalah explains what's wrong with our world today, and what needs to be done to fix it.

In this part we will also talk about how you can become a Kabbalah student and how you can use the knowledge on a day-to-day basis to your benefit. We will explain how to tell the right teacher from the wrong one, how to use books and the Internet in Kabbalah studies, and even the role of music in your spiritual progress.

Kabbalah is directly related to the state of the world today. In Part 3, "Kabbalah Today," we will explore Kabbalah's perspective of the global crises and discuss ways to cure them. Finally, we'll end with a brief tour of how Kabbalah will affect your future.

You'll also find a helpful appendix to enhance your journey and point you in the right direction if you'd like to learn more. The appendix contains a glossary, list of additional resources, and some info about our organization.

SIDEBARS

We've included five kinds of sidebars strewn throughout the text for learning and for entertainment:

Kabbalearn

Definitions of Kabbalah terms you
may not be familiar with.

Tidbits

Did you know that few books about Kabbalah were written before 1980, and most were written after 2000? Check out these boxes for bits of neat stuff about Kabbalah.

Off Course

These boxes clear up misconceptions and tip you on what to avoid as you study Kabbalah.

Spiritual Sparks

Inspiring quotes and selected poems from great Kabbalists reflecting the chapter's topic of discussion.

On Course

Useful tips for putting the points in the text into practice.

Kabbalah Facts and Fallacies

The list of celebrities studying Kabbalah reads like a who's who in Hollywood. But Kabbalah is more than a pop craze. In this section, we'll explain the popularity of Kabbalah and give an overview of what you can find if you search for Kabbalah. We'll discuss what Kabbalah is and what it isn't, and give you some background on how it started.

After reading these chapters, you'll understand why Kabbalah is becoming so trendy. You'll learn that this is not a passing fad, but an empirical science explaining the world in a way traditional sciences can't.

OUT IN THE OPEN

JUST THE GIST

- Kabbalah comes out of hiding
- Change is a coming
- Why now and not before
- Kabbalah and the “anything goes” spirit

The Book of Zohar, the pinnacle of Kabbalah books, writes that Kabbalah will boom and prosper at the end of days. With today’s popularity of Kabbalah, it appears that the end of days is here.

Kabbalah illuminates and describes the laws of the spiritual world. It’s not religion. It’s a spiritual science, and for almost 2,000 years, it has been shrouded in mystery.

IN THE SPOTLIGHT

Kabbalah has traditionally been closed to all but a few select and serious students. No longer. Like never before, Kabbalah has become hot, chic, cool, in. Moreover, Kabbalists, who were previously so hesitant to open their secrets to the public, have become the key players in doing just that.

FROM SMALL GROUPS TO MASS EXPOSURE

But Kabbalah wasn't always so popular, and Kabbalists weren't nearly so open. For almost 2,000 years, Kabbalah was kept secret, shunning the public's eye for faintly lit quarters of Kabbalists who meticulously selected their students and taught them in small groups.

For instance, the 18th century Ramchal Group, the students of Rabbi Moshe Chaim Luzzato, made it especially difficult to join its ranks. Membership required agreeing to a rigorous pact of lifestyle and study that had to be met all day, every day, for as long as one remained a member.

Other groups, such as the Kotzk Group (named after a town in Poland), used to dress in worn-out clothes and treat nonmembers with offensive cynicism. They deliberately distanced themselves

Tidbits

Searching for "Kabbalah" on Amazon.com returns over five thousand books, almost none of which were written before 1980. Very few were written before 1990, and only a few more were written before the turn of the century. The vast majority of books on Kabbalah were written after the year 2000. In the last few years, Kabbalah really has been mass exposed!

from others by appearing to disobey the most sacred Jewish customs like The Day of Atonement. Group members would scatter breadcrumbs on their beards to appear as if they'd been eating on this day of fasting. Naturally, most people were repelled.

Nevertheless, the same Kabbalists who hid the wisdom also made tremendous efforts to write the books that remain the pillars of Kabbalah to this day. Rabbi Isaac Luria (The Holy Ari) at once would take only one student and state that, from his time on, the study of *The Book of Zohar* (*The Zohar*, for short) is permitted to all who wish it.

For this reason, in his lifetime, the Ari taught a group of students, but at his deathbed he ordered all except Rav Chaim Vital to stop studying. The Ari said that only Chaim Vital understood the teaching properly, and he was afraid that without a proper teacher, the rest would go astray.

BREAKING THE IRON WALL

It was not until the last decade of the twentieth century that Kabbalah really began its advent to the center stage of public awareness. The single most dominant figure in the worldwide dissemination of Kabbalah is undoubtedly Rav Yehuda Ashlag, known as Baal HaSulam (Owner of the Ladder) for his *Sulam* (Ladder) commentary on *The Book of Zohar*. He was the first Kabbalist to not only speak in favor of dissemination, but to actually do it.

Baal HaSulam published a magazine, *ha-Uma* (*The Nation*), on June 5, 1940. He also tried to convince David Ben-Gurion and other leaders of the Jewish settlement in Palestine (today's Israel) to incorporate Kabbalistic principals in the education system. Baal HaSulam also stated that in the future, people of all religions would study Kabbalah while maintaining their birth religions, with no collision between the two.

Such statements and the act of disseminating Kabbalah seemed so unorthodox and unacceptable at the time that *The Nation* was shut down after just one issue by the British Mandate in Palestine. In justification, the British Mandate stated that it had been told that Ashlag was promoting Communism.

KABBALAH—BECAUSE NOW WE NEED IT

Kabbalah has but a single purpose: it offers an approach that helps answer the question, “What is the meaning of my life?”

Now, more than ever before, people are asking about the meaning and the purpose of their lives. With material needs met—and met even beyond imagining, in some cases—people still

Spiritual Sparks

At the outset of my words, I find a great need to break an iron wall that has been separating us from the wisdom of Kabbalah since the ruin of the Temple to this generation. It lies heavily on us and arouses fear of being forgotten.

—Rav Yehuda Ashlag,

“Introduction to the Study of the Ten Sefirot”

feel emptiness in their lives. Kabbalah is a discipline that invokes insights and new perspectives on life, which in turn provide a spiritual fullness. This is the key to its popularity.

In *The Study of the Ten Sefirot*, an extensive commentary on the writings of the great Ari, Baal HaSulam wrote that you are ready for Kabbalah if you sometimes...

- Question the meaning of your life.
- Wonder why you and all life exist.
- Question why life can sometimes be so difficult.

THE RIGHT WISDOM FOR IT'S TIME

In the perfect cycle of life, each part has its designated function. No part of creation is free to do as it pleases because the well-being of each part depends on the well-being of all other parts of creation. Nature's law of interdependency guarantees that no creature will overpower other creatures because to destroy other creatures would mean destroying itself.

Human beings are no exception to this rule, but many—if not most—do not appreciate this idea and in one way or another act in ways that hurt others and thus themselves, as well. By controlling others or our environment, we think we can manipulate and shape the world to our liking. But a quick glimpse at the news makes you reflect on the results; all we have achieved is unhappiness for ourselves and for others. Yet, as we will show in Part 3, nothing is created without a reason, not even human destructiveness.

Today, it seems our destructiveness is causing great unhappiness to people and threatening our environment. So it shouldn't come as a surprise that people are beginning to ask questions about life that the wisdom of the Kabbalah can help us if not completely answer, at least explore more deeply.

As more people are beginning to realize that greater wealth, more sex, and additional power do not make them happier, they are no longer asking “How to?” questions, but “What for?” questions. At such a time, any doctrine that can help us answer “What for?” questions has a good chance at popularity.

Because Kabbalah specifically explores questions about the meaning of life, it’s not surprising many people find it appealing. This, coupled with the publicity generated by its celebrity adherents, has brought it to the attention of seekers everywhere.

KABBALAH WITH ANYTHING

In the “anything goes” spirit of today’s world, everything’s mixed with everything else: science with religion, rock and roll with Beethoven. There is even sushi ice cream (bet you didn’t know that). Following the trend, Kabbalah has been associated with more doctrines and teachings than there are toppings for pizza.

But there is another, more serious reason for the sudden emergence of this ancient discipline. Kabbalah has always had a reputation of possessing insight into the highest forces of nature, of the spiritual worlds, and of the nature of God. As a result, people have always wanted to connect Kabbalistic terms with all kinds of teachings.

The problem with such connections is that they undermine the power of Kabbalah to help us understand our human and spiritual natures. This, after all, is at the heart of today’s interest in this teaching, and the reason Kabbalah was developed in the first place.

So, to clear up any misconceptions, let’s look at what Kabbalah is not. It is not, and has nothing to do with religion, magic, mysticism, divination, cults, holistic medicine, meditation, philosophy, theosophy, psychology or parapsychology, ESP, telepathy, dream interpretation, tarot cards, yoga, red strings,

holy water, blessings, past-life regressions, numerology, reiki, channeling, astrology, astral travels or projection, communicating with the dead, out-of-body experiences, voodoo, freemasonry, reflexology, UFO's, creationism, Sufism or any ism.

Kabbalah has been around for a long, long time and is only now taking its place in the general public awareness. Those who embrace it as the latest fad will perhaps move on to something else. But those who dig deeply into its principles are likely to find enough to keep them going for a lifetime.

IN A NUTSHELL

- Kabbalah is a method that answers life's deepest question: "What is the meaning of my life?"
- Kabbalah has been waiting in hiding until the questions it answers arose.
- Kabbalah has been incorrectly associated with many flavors of spiritual teachings.
- Kabbalah is not a passing fad, but a time-tested, practical method to understanding human nature and the nature of the Creator.

SOME BASICS

JUST THE GIST

- The real reality
- The door to the “sixth sense” opens
- Getting to know what we want
- At the heart of selfishness lies true giving

Now that we’ve cleared up common misconceptions about Kabbalah, let’s see what it’s really all about. This chapter briefly presents the basic concepts of Kabbalah. The terms we present and discuss in this chapter set up the language of Kabbalah that we use throughout the book.

This chapter also presents how and why your study of Kabbalah is not only good for you, but also for the benefit of society as a whole.

THE TRUTH ABOUT REALITY

In Hebrew, the word *Kabbalah* means “reception.” But Kabbalah isn’t just that—reception. It’s a discipline of study, a method that teaches you *how* to receive. Kabbalah helps you know where you truly are in relation to where you think

you are. It shows the boundaries of our five senses and opens up the part that they can't reveal by helping you develop a "sixth sense."

This sixth sense not only enriches your life with a new di-

Kabbalearn

In his essay "The Essence of the Wisdom of Kabbalah," Baal HaSulam defines Kabbalah as follows: "This wisdom is no more and no less than a sequence of roots, which hang down by way of cause and consequence in fixed, determined rules, interweaving to a single, exalted goal described as 'the revelation of His Godliness to His creatures in this world.'"

mension, but opens a door to a "brave new world."

There is no death in this world, no sorrow, no pain. And best of all, you don't have to give up anything for it: you don't have to die to get there; you don't have to fast or restrain yourself in any way. In short, Kabbalah

doesn't take you away from life; it adds a whole new meaning and strength to everything that happens. That's right, Kabbalists live life to the fullest.

TO RECEIVE—DISCOVER THE FORCE OF GIVING

To understand the kind of pleasure that the Kabbalist receives, it's essential to understand a basic concept in Kabbalah: In the whole of reality, there is only a single force—the force of giving. And because that force is giving, it creates "something" to receive what it gives. The giving force in Kabbalah is called "Creator," and what it creates is called "creation," a "creature" or a "created being." The created being is us, humanity as a whole and each of us in person.

This creature goes through a process of learning and development, and at its end discovers the full grandeur and beauty of its Creator. Baal HaSulam explains that this revelation of the Creator to the creature is the essence and the purpose of the whole of creation.

REALITY AS AN EMBROIDERY

Now let's talk a little more about revealing the Creator. When Baal HaSulam describes the purpose of Kabbalah as "the revelation of His Godliness to His creatures in this world," he means that the essence of Kabbalah ("reception") is to discover the Creator because this is what gives us the ultimate pleasure.

But there is more to it: Kabbalah explains that discovering the Creator means discovering the law that governs nature. In fact, the Creator is nature. By disclosing this law of nature, Kabbalah aims to disclose reality in its entirety, the whole gamut, revealing why things happen to us and how we can not only predict them, but change them to our benefit.

Also, if you can understand all sides of nature, you can reach far beyond your present physical life, far beyond the boundaries of your five senses, as if someone has removed a blindfold from your eyes and allowed you to see the true vastness and beauty of the world.

How does it work, and what do you actually receive? Reality is like embroidery. When you look at an embroidery you see a coherent picture. But when you look behind the picture, at the threads that make up the picture, you find a mess of strings and cords that you can't decide where they begin, where they end, and which part of the picture they belong to. Kabbalah helps you understand the threads behind the picture of reality, and teaches you how to become an embroiderer yourself, so you can build a picture that suits your liking.

THE LATENT SENSE

Reception in Kabbalah is all about perceiving the spiritual world. It is a world invisible to the five senses, but one we certainly experience. If everything we perceive depends on our senses, it stands to reason that all we need to sense the

spiritual world is a special sense that perceives it. In other words, we don't need to look for anything outside of us, but we need to cultivate a perception that already exists within us that lies dormant. In Kabbalah, this perception is called "the sixth sense."

Actually, the title, "sixth sense," is a bit misleading; it is not a "sense" in the physiological meaning of the word. But because it enables us to perceive something that we otherwise wouldn't, Kabbalists have decided to call this different means of perception "the sixth sense."

Here's the crux of it all: our five senses are "programmed" to serve personal interests. For this reason, all we perceive

Kabbalearn

In Hebrew, the name "Adam" comes from the word *Domeh*, as in *Dome la Elyon* (similar to the Upper One), as described in the verse, "I will be like the Most High" (Isaiah 14:14).

is what seems to serve our best interests. If your senses were somehow programmed to serve the interest of the whole world, then that's what we would perceive. In this way, each

of us would be able to perceive what every other person, animal, plant, or mineral in the universe perceives. We would become creatures of unlimited perception—omniscient, literally Godlike people.

In such an unbounded state, the five senses would be used in a very different way. Instead of focusing on personal interests, they would serve as means of communication with others. This is why the sixth sense, which enables perception of the spiritual worlds, is not a sense in the usual meaning of the word; it is the intention with which we use our senses. Intention is a critical Kabbalah concept that we explore more fully in Chapter 4.

THE CREATOR HAS TO GIVE; WE HAVE TO RECEIVE

Kabbalah is really very simple, once you know it. It explains that the Creator is benevolent and that He wants to give us endless, infinite pleasure. Because the Creator is benevolent, He created us with an endless, infinite desire to receive the pleasure He wants to give. In Kabbalah, this is called “the will to receive delight and pleasure,” or, in short, “the will to receive.”

On Course

Basically, intention is the “goal” for which we act. If we want to benefit ourselves, then all we see is ourselves and all that we have created. But if we want to benefit the Creator, then all we’ll see will be the Creator’s world and all that He has created.

In his “Introduction to the Book of Zohar,” Baal HaSulam explains the Creator’s necessity to create the will to receive (creatures):

Since the Thought of Creation was to bestow upon His creatures, He had to create in the souls a great measure of desire to receive that which He had thought to give them. ...Thus, the Thought of Creation itself necessarily dictates the creation of an excessive will to receive in the souls, to fit the immense pleasure that His Almightyness thought to bestow upon the souls.

In other words, we have the capability, potential, and even unconscious desire to connect with the Creator and, in receiving His pleasures, enhance our joy in living.

SELFISH TO THE CORE

But in practice, there are consequences to such an immense will to receive. Baal HaSulam himself describes the complexity of the human condition in his essay “Peace in the World”:

each and every individual feels himself in the world of the Creator, as a sole ruler, that all the others were created

only to ease and improve his life, without him feeling any obligation whatsoever to give anything in return.

In plain words, we're selfish to the core. However, when corrected, this extreme egoism becomes the highest level of altruism and benevolence.

THE MOST EGOISTIC DESIRE: TO BE AN ALTRUIST

But being born selfish doesn't mean we will remain selfish forever. Remember that the Creator is benevolent; He has nothing on His mind but giving. As a result, He creates creatures that want only to receive. These creatures begin to receive what He gives, more, and more, and more. Endlessly.

As the will to receive evolves in creatures, an almost magical transformation takes place. They not only want what the Creator gives, but they also want to actually *be* Creators. Think of how every child wants to become like his or her parents. Think, too, how

Spiritual Sparks

There is a wonderful, invaluable remedy to those who engage in the wisdom of Kabbalah [T]hey awaken upon themselves the Lights that surround their souls [T]he illumination received time-after-time during the study draws upon one grace from Above, imparting abundance of sanctity and purity, which bring one much closer to perfection.

—Baal HaSulam,

"Introduction to the Study of the Ten Sefirot"

the very basis of learning is the little one's desire to grow. Kabbalists say the child's will to be a grown up stems from the creature's desire to be like its Creator.

If your parents are your role models, you would study their actions and do your best to emulate them and become a grownup, too. Similarly, if the Creator is

your role model, you would study the Creator in order to become like Him. If the Creator you study is all about giving, about benevolence, you can see how the extreme egoism of wanting to become "Creatorlike" can be turned into altruism (which we

explore more fully in upcoming chapters), because that's what He is. In Kabbalah, the ability to be like the Creator is called "achieving the attribute of bestowal."

The implication, though it may sound like an oxymoron, is that every person's *most egoistic desire* is to be like the Creator: a total altruist.

On Course

Another way to think about this idea of altruism is to remember that Kabbalah reminds us that we are not separate from but part of our world. Altruism is about being one with others, united with them. From this perspective, altruism is an intelligent way to look out for our own welfare, as well.

IN A NUTSHELL

- Kabbalah provides a method by which you learn to receive.
- The Creator's primary desire is to give pleasure, so He imbues His creations with a desire to receive that pleasure.
- The "sixth sense" allows you to perceive higher spiritual worlds.
- The purpose of Kabbalah is the revelation of the Creator while we are living here in this world.
- The biggest egoists want to be like the Creator: altruists.

REALITY CHECK

JUST THE GIST

- Reality—not what meets the eye
- The boundaries of our subjective perception
- We are made of four factors (layers), and we can change one, to change all
- Free choice really isn't free, except the choice in the environment

Now that we have a basic understanding of how Kabbalah developed and what it is, it's time to take a deeper look at what Kabbalah does for you. This chapter expands upon the concepts introduced in Chapter 2, in order to show how Kabbalists understand the Creator and what the Creator wishes for you.

This chapter also explores more fully the nature of reality and what you perceive and don't perceive about reality. You also learn more about the power of free choice and how to focus your mind on what helps you change your life for the better.

IS THIS ALL THERE IS?

Look around you. What do you see? What do you hear? Have you ever wondered if there's anything out there that your five senses can't detect? Perhaps other worlds and creatures exist within the space you can't perceive—worlds that are transparent and unrecognizable from our point of view?

To a Kabbalist, we are living in darkness, unable to see the greater reality, although it is still there. Without knowing any better we take this view of the world as the only possible reality. But think of Kabbalah as a way of illuminating the *whole* of reality so that it is plain to see. Once that happens and we take it all in, our perceptions of reality are changed. We can no longer act the way we did when we were in the dark, and this is to the mutual benefit of ourselves and of others.

Spiritual Sparks

Our five senses and our imagination offer us nothing more than the disclosure of the actions of the Essence, but not the Essence itself. For example, the sense of sight offers us only shadows of the visible Essence, according to how they are formed opposite the Light.

—Rav Yehuda Ashlag, "Preface to the Book of Zohar"

BEYOND THE FIVE SENSES

Do you ever think that your hand feels odd because you have only five fingers? Probably not. Although we can increase the range our five senses perceive, we cannot really imagine what perceptions we lack. It's impossible to recognize the true reality because it isn't something that we feel the absence of any more than we feel the lack of a sixth finger.

Because imagination is the product of the five senses, we can never envision an object or creature that is not in some way already familiar. Think of the most creative children's book illustrator or the most abstract artist you know. Do their designs

in some way resemble things that exist in the physical world? Try to imagine the wildest thing, and you will still create something already known or that you can puzzle out from your experience of everyday reality.

Going beyond the five senses doesn't happen literally. It's more of a way to describe a higher level of perception where we understand the interconnectedness of everything and our place in this interconnected reality.

Quite possibly, you and I receive many sensations from external objects. But because our senses do not have the same

Spiritual Sparks

You must therefore understand and perceive that all the names and appellations, and all the worlds, Upper and lower, are all one Simple Light, Unique and Unified. In the Creator, the spreading Light, the Thought, the Operation, the Operator, and anything the heart can think and contemplate are one and the same thing.

—Rav Yehuda Ashlag, *The Study of the Ten Sefirot*

qualities as those objects, we do not perceive them. We perceive only that part of the object that resonates to qualities we already have. For a complete perception of anything, we need to first be complete within. In other words, we have to be aware of all the forms of reality that exist in us, and then

our picture of reality will be complete.

So how do we attain the sixth sense that enhances our perception beyond conventional reality? In fact, it exists in everyone but is hidden. Remember the intention mentioned in the previous chapter? With it, we can bring this dormant sense into action.

Through persistence and study, we begin to gain perception of the world of the Creator—the world of giving. In Kabbalah, that world is called “the Upper World.” By study and development of the sixth sense, we gradually begin to feel and to understand the Upper World.

ACROSS THE BARRIER

Our perception of the Upper World varies depending on our spiritual state. Initially, we cannot perceive the Upper World because our qualities are opposite from the Creator's. In such a state, we can only perceive the material world we presently live in, and everything we imagine the spiritual world to be is strictly a figment of our imagination.

But once we acquire the first spiritual quality, the first bit of altruism, we also gain the ability to see the spiritual as it truly is. Kabbalists call it “crossing the barrier.” Once we cross the barrier we can advance even without a teacher because in that state we are under the conscious guidance of the Creator. Still, in most cases, Kabbalists continue to study with a teacher even after they cross the barrier, but their relationship with their teacher changes drastically: the teacher no longer needs to lead a blind person by the hand, but the two walk together on an enchanted path of discovery.

Beyond the barrier, one learns from one's own soul, through observation of the soul and its relationship with the Creator. To understand this learning process, think of how we hear. The hearing mechanism reacts to some pressure from the outside by working in the same way as the pressure but in the opposite direction, pressing back from within. This way, it keeps itself in balance, enabling you to measure, in this case, the volume and pitch of a sound. But here's the hitch: for this type of perception to occur, there must be some uniting element between the perceiver and the object of perception. In the case of our hearing it's the eardrum.

But what's the uniting force that can tie our perception to the Creator? Perhaps what we need is a “spiritual eardrum,” which would have the same quality as what's given out by the Creator? Well, such an “eardrum” exists; it is the intention introduced in Chapter 2. Whatever you do with an *intention* to give is

considered “giving” in spirituality. The problem is to see where your intention is to receive and turn it into an intention to give. More on how this is done in Chapter 12: Studying Kabbalah.

THE ONLY REALITY IS WITHIN

Our understanding of what we sense is based on the genes we inherit, our experiences, our socialization, and what we have learned. It’s all totally subjective. Regardless of what our senses take in, what we eventually understand of it and how we act as a result are very personal.

For example, if we were deaf, wouldn’t there still be sounds around us? Wouldn’t there still be music and the sound of jet planes roaring over our heads? Would birds stop singing because we wouldn’t be able to hear them? To us, they would. There is no way to explain to a deaf person what a nightingale sounds like. Moreover, no two people experience the same experience when they hear the same sound.

All that you and I believe to exist outside of us are actually experiences we sense within us. We have no way of telling what they are truly like in and of themselves. So when we think of reality, we are actually thinking of what *we* view as objective through the lens of our own perception.

IN SEARCH OF FREEDOM

Let’s begin this section with an allegory by Baal HaSulam: Once there was a king who wanted to know which of his subjects were trustworthy. He announced that anyone who wanted to come and work for him would be handsomely rewarded by a festive meal, fit for kings. When the people arrived, there was no one at the gate, just a sign indicating where to go and what to do, but no guards to watch over the arrivals. Those who worked in the designated area were unknowingly exposed to a magic powder, and those who went elsewhere were not. In the evening,

when everyone sat at the table, those who worked where the sign indicated enjoyed the meal tremendously, but to those who didn't, the food was the worst they'd ever tasted. Thus, only those who freely chose to follow the king were rewarded with enjoying what the king enjoys.

It has long been said that people are only truly happy if they are truly free—free from bondage, free from oppression, and free to make their own decisions. Likewise, people have long wondered how to reconcile the concept of free will with the existence of a greater power, and in the case of Kabbalists—the Creator.

The Creator's singular desire is for you and me to be fulfilled and made joyful. This state can occur only when we reach His state, His degree. This can happen only when our desire to enjoy is equal to the Creator's desire to bestow enjoyment. If it sounds circular, it is: it's the reciprocity that brings us ever closer to perfection and the Creator's wish for us. So how do we reconcile this idea of free will with what the Creator wishes for us?

Here's the Kabbalist's logic, step by step:

1. The Creator is absolutely benevolent.
2. As a result, He wants to grant us absolute pleasure.
3. Absolute pleasure means being in His state: omniscient, omnipotent, and benevolent.
4. Therefore, we have to come to feel that His state is the absolute good state. In other words, we have to *choose* it of our own free will.
5. Free choice can only be made on condition that the Creator does not apply force on us, so that we are independent from Him.
6. Therefore, He is hidden and gave us the existence in this world where we don't sense the Creator as vividly and as tangibly as we sense physical objects.

7. Without feeling Him as either fearsome or good, but from a completely “neutral” state, we could decide freely that being like Him is the absolute good.

FAKE FREEDOM

Kabbalah teaches that even though the Creator wants to enter into a relationship with His creation, He has concealed Himself from us to give the impression of free will. Under these conditions, we seem to be able to act, think, and choose, completely independent of the Creator’s presence. Our choices appear to be made of our own volition and free will; we do not detect an unseen hand guiding our actions and, as far as we can tell, our choices are truly free.

Think of it this way: the Creator has your entire life planned out for you, down to what you will have for lunch today. But if the Creator has all of our decisions and moves mapped out in advance, is free choice truly free? The answer is that our choices are free when looking from our perspective. The fact that the Creator knows what we will decide is meaningless to us, as long as *we* don’t know what we will choose.

THE PLEASURE AND PAIN PRINCIPLE

As we just explained, the Creator’s only wish is for us to be filled with joy. Recognizing this truth is central to our path to perfection. It is no secret that we all desire pleasure and often go to great lengths to find it.

But if the Creator’s intent was for us to seek and experience endless pleasure, how does pain fit into the equation? You and I do not commit to any action unless we believe that it will, in some way, make us feel good or, at least, better. Each of our actions is a result of a calculation that our happiness will increase. In this way, you and I consciously put ourselves through

painful situations to gain greater pleasure.

Certain painful situations make us reevaluate what we believe are the causes of our happiness and rank them according to importance. Say you have a Rolex watch, the ownership of which brings you great pleasure—what it represents in the way of achievement, what it says about your status, and who knows what else. One day, a mugger puts a gun to your chest and demands your beloved watch, or else... Most sane people would agree to a painful act (in this case, giving up a cherished item) in order to avoid a more painful act (injury of some sort or worse).

Think of it as a sort of pleasure-ranking system. People can calculate that any current discomfort is worth the future pleasure. In other words, current pain may be worthwhile in order to obtain some future pleasure.

FOUR FACTORS (LAYERS) OF OUR MAKEUP

Kabbalah states that four factors determine a person's state at each and every moment:

1. **Source.** This is the starting point, the spiritual gene-pool. But it is not a blank canvas. Think of it more as a wall that has been painted and repainted many times. The layers of previous coats of paint are there beneath the surface. Perhaps they cannot be seen or distinguished, but they are a part of the composition of that wall, always the starting point for the next

Spiritual Sparks

The living creatures have no freedom... to choose pain or reject pleasure. And man's advantage over animals is that he can aim at a remote goal, to agree to a certain amount of current pain, out of choice of future benefit or pleasure, to be attained after some time.

...And so it sometimes happens that we are tormented because we did not find the attained pleasure to be the surplus... compared to the agony we suffered; hence, we are in deficit, just as merchants do.

—Baal HaSulam, "The Freedom"

layer of transformation, as a wall's current paint is always the undercoat for the next coat.

2. Unchanging paths of development that stem from one's nature. This factor deals with the way we evolve as a result of our genes. These paths may refer to things we tend to like or dislike, our talents and other hereditary traits.

3. Paths of development that change under the influence of external factors. This is our attitude toward the external environment. Say you get a bad performance review from your boss at work. You may be upset and angry, and feel that the

On Course

Why does your attitude, whatever it is, change the environment? The answer is that you are not separate from but another part of the environment. Given this, an important question to ask would be "What attitude should I adopt so as to make my environment better?"

feedback is unfair, or you may decide your boss has your best interest at heart and told you what you need to do in order to succeed. Either way, the external event of your boss' criticism will inevitably affect you and change you.

4. Paths of development of the external factors themselves. The fourth factor is the external environment and its continued evolution. To continue the previous example, if you chose to change your boss (perhaps by changing your job), this would expose you to a new set of influences, but these would be influences you have *chosen* to be under.

As the four factors show, the confluence of a person's origin, inner nature, unchangeable and changeable outside forces all contribute to our inner makeup. However, of all four elements, the only element we can modify is the fourth, our environment. But because the elements affect each other, by changing our environment, we can ultimately shape all other elements within us.

IN A NUTSHELL

- What we perceive as our world is a subjective image of what the Creator has really given to us.
- The Creator wants only to give to you, and as you receive, you will want to be like the Creator and give back to Him.
- Four factors determine your state at any moment: Source, unchanging paths of development that stem from one's nature, paths of development that change under the influence of external factors, and paths of development of the external factors themselves.
- If you want to change your desires and direction in life, you must take control over the environment you live in.

THE HISTORY OF DESIRES

JUST THE GIST

- Five levels of desire
- Recognition of evil as a condition for discovering the Creator
- The “point in the heart”
- Intention is life’s decisive force

The history of humankind runs on a par with the story of human desires and how they developed. The search for ways of fulfilling our desires determines the speed and direction of a civilization’s evolution and defines how it measures progress.

This chapter explores the development of human desires, from basic needs all the way up to the highest level: the need for spirituality. You can begin a serious study of Kabbalah only after you’ve acquired that need; it is the gateway to understanding the Creator’s role and our own role in the world.

FIVE LEVELS OF DESIRES

The list of humankind's achievements is parallel to a list of its desires. Humans' desire to transfer more goods at a faster pace prompted the invention of the wheel. And humans' desire to rule and conquer was the driving force behind the invention of the canon in the Middle Ages.

As collective desires grow, civilizations advance. Kabbalah divides the entire complex of human desires into five levels:

Level 1. Meeting basic natural desires, such as food, shelter, and sex

Level 2. Striving for wealth

Level 3. Craving power and fame

Level 4. Thirsting for knowledge

Level 5. Desiring spirituality

Once the immediate craving is fulfilled, however, a feeling of "emptiness" appears. The more the process repeats itself, the more a person is driven to question the profitability of the empty-full-empty process itself. Once we give up on finding fulfillment to our desires on one level, we try the same in the next. And when desires of the first four levels have all proven incapable of providing lasting fulfillment, we begin to ask, "Is there anything more to life than chasing material goods and social status?" When that happens, we begin to want spirituality. In Kabbalah, this state is called "the appearance of the point in the heart" (More on that below in this chapter).

THE RECOGNITION OF EVIL AND THE REVELATION OF GOOD

In the previous chapter, we talked about the recognition of evil, that is, the recognition that we are egoists, acting only in our own interest. We said that if we consider our state as totally evil, and His state as utterly desirable, we will cross the barrier and enter

the spiritual world. The question that remains open is which is the quickest and most painless way to recognize our evil. This is where Kabbalah comes into play. The advantage in Kabbalah is that it teaches you about human nature without having to physically experience the evil. This is why Kabbalists say we don't have to suffer; we can study instead.

Kabbalearn

In Kabbalah, *correct* refers to correction. No one will tell you that who you are or what you do is correct or incorrect. But if you've used a desire to become more "Creatorlike," then you've done the correct thing. To Kabbalists, correction means turning the intention with which we use a desire from "for me" to "for the Creator."

In that sense, humans finish the Creator's creation, meaning that they *correct* it. Because humans have the ability to be like the Creator, the Creator passes on to them the leadership of creation, once they are corrected. So the good purpose of evil is realized

only if egoism becomes a driving force towards the Creator. Otherwise, evil is evil is evil. And it produces evil, as egoistic acts throughout history show.

The Creator increases the pressure on us to make us take control of ourselves. This is why the world seems to become increasingly hostile. The Creator made it that way so you and I would begin to correct the world and ourselves. If He hadn't done it this way, you and I would sit under a tree and work on our tan. Although that may sound great, it doesn't bring you any closer to becoming like the Creator, which is why He created us in the first place.

The Creator wants us to partake in our own creation. If you remember that, all your calculations stop being passive. Instead, they become tools with which you contact the Creator and experience Him. Every negative, or evil, attribute in you becomes a means to an end.

In Kabbalah, there is no other way to make contact with the Creator—only through realization that our attributes are negative. Put differently, the recognition of evil is the beginning of the revelation of good.

This explanation of the Creator's goal leaves one question open: if he wants to give us pleasure, as Kabbalists say, what's wrong with a good tan, if we enjoy it? Well, there is nothing wrong with it, if that's what you really want. But if you have a question nagging in the back of your mind (while lying on the beach), and you can't enjoy sunbathing anymore, then maybe you need something more, and maybe that something is Kabbalah. As Baal HaSulam puts it: Kabbalah is for those who ask (even unconsciously), "What is the meaning of my life?"

FEELING GOOD, THEN BETTER

Behind all our desires is the search for satisfaction. Kabbalah explains that life is based on only one desire: to feel good, regardless of whether that good feeling comes through obtaining a better job, a new car, a mate, or successful children.

When you begin to feel spirituality, it changes your scale of desire. You may begin to see that some desires have become more important and others have become less so. You begin to weigh your life not according to what you see and know in this world, what your physical body sees right now, but according to a much broader scale. You begin to see what favors you and what does not for generations to come. As a result, you change how you assess your environment.

When you begin to realize that you are a part of a single soul and that all of humanity are parts of that soul, too, you begin to think that it may be in your interest to help them. In short, Kabbalah reminds you to look at the big picture.

Ironically, however, the more you want spirituality, the more you want mundane pleasures, too. A Kabbalist is not a person without desires for food, sex, money, power, and knowledge. On the contrary, a Kabbalist is one with stronger mundane desires than most people experience, but also with a desire for spirituality that is greater than all his or her mundane desires put together.

This process of intensifying is designed to make you develop such a strong desire for spirituality that you will be willing to do anything to attain it, including conceding all desires that are not for spirituality. But to give up those desires, you must experience them. This is why Kabbalists explain that the higher your spiritual degree, the greater your mundane desires, too. Kabbalists progress by experiencing the greatest worldly pleasures, and then being given the awareness that there is something that's even better and greater than all those pleasures combined.

In spirituality, just as in our world, your desires change as you grow. The earlier objects of your desire seem like toys compared to the things you seek now. That search finally leads to the absolute good—direct contact with the Creator, achieved through equivalence of form with Him, through being like Him.

A WIN, WIN SITUATION

But if the Creator made a world in order to bestow His abundance to the created beings, then what's wrong with wanting to receive everything "for oneself"? Why is it perceived as evil or egoism? Why was it necessary to create a world so imperfect and a creation so corrupted that it must be corrected?

Kabbalists explain that the Creator receives pleasure by giving pleasure to His created beings—us. If we delight in the fact that our reception pleases the Creator, then the Creator and we coincide in qualities and in desires. In this way, everyone thinks of the other, not of him or herself, and everyone still receives pleasure; it's a win, win situation.

WHEN SEX, POWER, AND KNOWLEDGE DON'T DO IT FOR ME

When desires for worldly pleasures—food, sex, family, wealth, power, and knowledge—fail to keep their promise of lasting happiness, “the point in the heart” begins to develop. It’s a desire for something higher, appearing when all the mundane desires have exhausted themselves.

Kabbalearn

Kabbalah distinguishes the desire for the Creator from all other desires. Desires for worldly pleasures are called “man’s heart,” while the desire for the Creator is called “the point in the heart.”

THE POINT IN THE HEART

The point in the heart, the desire for Light—the Creator—awakens within the egoistic desires, which an individual cannot fulfill. Faced with the inability to satisfy the desire for the Creator through worldly means, a person comes to the final state of the evolution of the will to receive.

When that happens, that person often feels dark inside. But this is not because he or she has grown worse. On the contrary, it is because that person has become more corrected, drawn more Light, and the new Light shines on new places in the soul. But because these places are not yet corrected, they often give off a “dark” feeling. When darkness appears, it’s a sure sign that you have made progress and that Light is sure to follow.

In the “Introduction to the Study of the Ten Sefirot,” Baal HaSulam writes that it’s as if the Creator appears to a person from amidst the cracks in a wall and offers hope for future peace. In Kabbalah, this is called “putting one’s hand on the good fortune.”

ZOOMING ON THE “WHY”

Spiritual Sparks

For man looks on the outward appearance, but the Lord looks on the heart.

—Samuel 1, 16:7

Kabbalah, the focal point is the *intention*. Desires create our thoughts, but intentions give them direction. This, in turn, creates our actions and ultimately our whole reality.

Using the study of Kabbalah, you can concentrate on developing intentions that affect reality in a way that elevates you to experience the Upper World, the Creator.

In the science of Kabbalah, the thought is the intention, because it is its progenitor. In a regular life, thought is the considerations made by the desire to receive. The desire to receive in and of itself isn't bad—that's how you and I were created, and when used correctly it is beneficial to us and to the Creator. The intention in which we use our desire is where we must focus our attention.

In simple words, we must become aware of *why* we do what we do, what we want to get out of it, and whom we want to please by experiencing pleasure—ourselves or the Creator. This intention will then create a work plan, a thought, and the thoughts will determine our whole reality. So the only part that needs mending in reality is our intentions. That's why Kabbalists say that what you do doesn't matter, only what you aim to achieve by it. The following section will elaborate on that.

COUPLING WITH THE CREATOR

The intent of the Creator from the start was to make the desire complete. However, this happens only when your intent resembles the Creator's attribute of bestowal by your free choice. This requires transforming your will for self-enjoyment into the

will to please the Creator. And the Creator is pleased when you acquire His qualities.

When you acquire this intent, the desire to enjoy becomes equal to the Creator's desire to give. You bring yourself to perfection by the correct use of your only attribute: the reception of pleasure. This is a change in intent, a change in the aim of your actions and not your actions themselves. Changing the intent of one's desire involves three phases:

1. Avoiding the use of desire in its original form.
2. Isolating from your desire to enjoy only those desires that you can use in order to please the Creator.
3. Correcting the intention of the worthy desires and achieving sameness with the Creator in those desires. In Kabbalah, this is called "coupling with the Creator" or discovering the Creator."

In spirituality, you turn away from looking at the picture of reality you are born with. Instead, you get to know the forces that paint the picture. You get to know the artist. You acquire the ability to connect to the forces that create the picture, and ultimately to govern those forces. You begin to understand how reality is made.

This goes for society as a whole as well as for individuals. Today, many among us have already completed Levels 1–4 and are now embarking on Level 5, the spiritual level. This is a time when people will want to know what they are living for. Our next chapter will explore key points in the evolution of Kabbalah and their congruence with the history of humanity.

IN A NUTSHELL

- There are five levels of desire: food and sex, wealth, power, knowledge, and spirituality. The only one we can really fulfill is the last.

- History is really a tale of heightening, insatiable desires.
- Your negative attributes will eventually lead you to know the Creator.
- The desire for more worldly things necessarily leads to greater emptiness because our true (unconscious desire) is to know the Creator.
- Intention is the force that drives the outcome of actions, the aim behind the act.

KABBALAH—ITS HISTORY AND VIPs

JUST THE GIST

- Reality evolved from thought to matter, to man.
- Adam and *The Angel of God's Secret*
- Abraham and *The Book of Creation*
- Moses and *The Torah*
- Shimon Bar Yochai and *The Book of Zohar*
- The Ari and *The Tree of Life*

Kabbalah doesn't talk about the physical existence of the universe, but what it says about spirituality has a corresponding part in the physical world. In this chapter, you learn about the history of Kabbalah and the people who contributed to its position as a key player in the human drama.

FROM THE FIRST THOUGHT TO THE FIRST MAN

The history of Kabbalah corresponds to the history of creation. The Thought of Creation caused creation to happen. The Thought of Creation is called the Root Phase or Phase Zero. Phase Zero generated four more phases, which then

generated a Root World, which is still a spiritual world, not a physical one. The Root World, called *Adam Kadmon* (The Primeval Man), generated four more worlds, called *Atzilut*, *Beria*, *Yetzira*, and *Assiya*. Those, too, are spiritual worlds, not physical ones.

At the bottom of *Assiya* was a black point, called “the point of This World,” which materialized into what you and I know as “the universe.” Within our universe there is a galaxy, called the Milky Way, and in that galaxy there is a tiny planet called Earth.

Earth’s evolution from fiery lava to cool seas to the upheaval of mountains and the break-up of landmass into the continents

On Course

When we talk about moving from inanimate to vegetative, to animate, and to human, we automatically think of Darwin, or of the explanation of creation that suits our belief system. But you should know that according to Kabbalah, the only reason for the appearance of the next step of creation—or of anything else, for that matter—is the completion of the previous step. When a phase is completed, the very end of the phase is the incentive for the appearance of the next stage in line.

continued for many millions of years. It is the physical parallel of the spiritual Root Phase. When Earth cooled, vegetative life began, which reigned the globe for several million years.

Life on Earth continued to evolve until, at some point, the first animals appeared.

The last animal to evolve was, you guessed it, man. Humans first appeared several tens of thousands of years ago. They first lived like animals, finding whatever food was available.

Gradually, humans evolved and became the first animal to ask about the origin of its own existence. The name of the first person to ask where he came from was Adam. Yes, *that* Adam. This is why Adam is considered by Kabbalists as the first person to reach spirituality, to discover the source of his own existence—and yours, too.

If you look back at this short history of evolution, you will notice that it always consists of five phases before a major change occurs. Kabbalists describe five phases, five spiritual worlds, and five stages in the physical world: inanimate, vegetative, animate, human, and spiritual.

ADAM

Adam, partner of Eve and temporary resident of the Garden of Eden, marks the beginning of the final phase in evolution: the spiritual phase. In Kabbalah, Adam is considered the Root Phase of human spirituality. This is why he is called *Adam ha Rishon*, The First Man.

Adam was also the first person to write a Kabbalah book, *HaMalaach Raziel* (*The Angel of God's Secret*), a small book that included a few drawings and tables. (It should be noted that even though Kabbalists ascribe this work to Adam, there is no written proof that he is indeed its author.) The name *HaMalaach Raziel* comes

from the Hebrew words *Malaach* (angel), *Raz* (secret), and *El* (God). Thus, *HaMalaach Raziel* reveals to us the secrets of the Creator.

The Kabbalistic tradition has it that Adam wrote *The Angel of God's Secret* more than 5,769 years ago. Adam used allegories and metaphors to tell us how he sensed that he lived in two worlds, the earthly and the spiritual. He felt the entire Upper Existence, but he could not describe it in a manner we can relate to today. He attained it in his feelings and thus pictured it the best way he could.

Off Course

Kabbalah books are packed with vivid descriptions of anything from two people walking and talking to their donkey driver to flying towers. As a result, we can be easily misled into thinking that there are worlds where these things happen on a physical level. They do not. All the stories in Kabbalah describe one's connection to the Creator, one's level of altruism, and one's efforts to become one. This is why it is so important to study with a teacher who can provide the correct explanations, which bring you

"down to Earth."

If you browse *The Angel of God's Secret*, it is evident that the author is not an uncivilized, uneducated mammoth hunter. Adam was a Kabbalist of a very high degree who discovered the fundamental secrets of creation in his spiritual journey. He studied the Upper World, where our souls roam prior to their descent to Earth when we are born, and where the souls return after death. Adam tells us how these souls will regroup into one soul and build what we call “man,” of which we are but fragments. More on how that works in Chapter 8.

ABRAHAM

Abraham came 20 generations after Adam and was the first to conduct organized Kabbalah studies. He saw the wonders of human existence and asked questions of the Creator, and thus discovered the Upper Worlds.

Abraham passed the knowledge and the method he used to acquire the Upper Worlds to the generations following him. In this way, Kabbalah was transferred from teacher to students for many centuries. Each Kabbalist added his unique experience and personality to this body of accumulated knowledge.

Abraham lived in Mesopotamia (today's Iraq) and, as all inhabitants, worshiped the sun, the moon, the stones, and the trees. But one day he began to wonder, “How was the world created?” “Why does everything ‘spin’ around us?” and “What does life mean?” Indeed, there must be some meaning to life, he thought, a beginning, end, cause and effect. There must be a force that sets everything in motion! Abraham asked himself those questions and, eventually, through the picture of our world, felt and saw the same as Adam did, that he lived in two worlds at once, the spiritual and the material.

And, yes, these are all the very same questions that have begun to bring Kabbalah to the fore in today's society.

Like Kabbalists after him, Abraham wrote about his discoveries. His book, *Sefer Yetzira* (*The Book of Creation*), is the next important text after *HaMalaach Raziel*. Unlike longer Kabbalah books, *Sefer Yetzira* has only several dozen pages.

Abraham's purpose in writing his book was not to teach attainment of the Upper World, but only to mark out a few principal laws that he discovered about the spiritual world, like an outline.

Kabbalists consider it a difficult book to study correctly because it was written for people who lived thousands of years ago. In those days, souls of people were not as coarse as they are today. They could understand the text even though it is written very succinctly. Today we need a much more detailed text to be able to relate to it. This is why Baal HaSulam wrote his commentaries on *The Book of Zohar* and *The Tree of Life*.

When Abraham discovered spirituality, he immediately started disseminating his knowledge. This is why it is written that he would sit at his tent door and invite people in. There, he taught them what he had learned of the spiritual. Eventually, these students that Abraham would invite into his tent became the first study group in the history of Kabbalah.

MOSES

The name *Moshe* (Moses) comes from the Hebrew word *Moshech* (pulling), as in pulling out of this world. Moses was different than other Kabbalists in that alongside his revelations, he was ordered to publicize them in writing and establish learning centers.

Moses had 70 disciples, and Yehoshua Ben Nun (Joshua, the son of Nun) was the one who succeeded him. Moses did more than research the Upper World. He dealt with the practical realization of his spiritual attainment in our world, such as the exodus from Egypt. With the wisdom he acquired and the Upper

Forces he received from Above, he brought the people of Israel out of exile.

His next task was to write a book with which any person could “conquer” the Upper World. With this book, they could exit Egypt in the spirit and stop worshipping idols, the sun, and other false gods. It would grant them entrance to the *spiritual* Israel—*Atzilut*, a world of eternity and wholeness.

Moses created a method in his book, *The Torah* (Pentateuch), from the word *Ohr* (Light). It contains instructions on how to use the Light as a means to advance in the spiritual world. All people can uncover the entire picture of creation; they can reach the desired outcome and achieve the final goal if they only read and understand the instructions correctly. Moses’ method from *The Torah*, adapted to today’s souls, allows anyone to attain Moses’ degree of spirituality.

RASHBI (RABBI SHIMON BAR YOCHAI)

The Book of Zohar (*The Book of Radiance*), the next major work in Kabbalah and perhaps the most famous, was written by Rabbi Shimon Bar Yochai, “the Rashbi,” around the year 150 C.E. Rashbi was a disciple of Rabbi Akiva (40 C.E.–135 C.E.), famed first and foremost for his emphases on the rule, “Love thy friend as thyself.”

Rabbi Akiva did not, however, live a similar fate. He and several of his disciples were tortured and killed by the Romans, who felt threatened by his teaching of the Kabbalah. They flayed his skin and stripped his bones with an iron scraper (like today’s currycomb) used for cleaning their horses.

Before that, a plague killed almost all of Rabbi Akiva’s 24,000 students except a handful, among which was Rabbi Shimon Bar-Yochai. Kabbalists saw this plague as a result of their

growing egoism, which led them to unfounded hatred. This was the opposite of their teacher's rule, "Love thy friend as thyself."

Following the death of Rabbi Akiva's 24,000 disciples, Rashbi was authorized by Rabbi Akiva and Rabbi Yehuda Ben Baba to teach future generations the Kabbalah as it had been taught to him. It was felt that only those who hadn't fallen into this unfounded hatred survived and they wrote the next great chapter in Kabbalah, *The Book of Zohar*.

Tidbits

Academics and Kabbalists differ on the question of where and when *The Book of Zohar* was written. Kabbalists trace *The Zohar* back to Rabbi Shimon and the academia to Rabbi Moshe de Leon of thirteenth-century Spain. Baal HaSulam clearly states that *The Zohar* was written from the highest possible spiritual degree. According to him, only one as high as Rabbi Shimon could have written it, and not a Kabbalist at the degree of Moshe De Leon, even though he is a respected Kabbalist. Baal HaSulam even said that *The Zohar* was written from such a high degree that it wouldn't surprise him to discover that Moses himself wrote it.

IN THE CAVE

Rashbi and four others were the only ones to survive the plague and the wrath of the Romans, who killed his teacher. Following the capture and imprisonment of Rabbi Akiva, Rashbi escaped with his son, Rabbi Elazar, to a cave.

After 13 years, they had heard that the Romans were no longer searching for them and they emerged from the cave. Once outside the cave, Rashbi gathered 8 more men, and all 10 (Rashbi, his son, and the men) went to a small cave in Meron, a village in Northern Israel. With the help of his son and the other 8, Rabbi Shimon wrote the pinnacle of Kabbalah books, *The Book of Zohar*, only to hide it soon after it was written.

Rashbi did not write *The Zohar* himself; he dictated the book to Rabbi Aba, who phrased it in such a way that only those who are worthy of understanding would be able to do so. After

**Tidbits**

The Zohar disappeared for hundreds of years until it was discovered by Arabs, who used its pages as paper to prepare fish for the market. It was later discovered by a hungry Kabbalist.

its writing, when Rabbi Shimon and his pupils saw that their generation wasn't ready for its content, they hid it until the time was ripe and the people were ready.

Many prominent Kabbalists

say that this time is our time, and indeed *The Zohar* is more in demand today than ever before.

EARLY REAPPEARANCE

The book was discovered earlier, however, purely by accident. It fell into the hands of Kabbalist, Rabbi Moshe De Leon, who kept it and studied it in secret. When he died, his wife sold the book because she had to make ends meet once her husband died, and he probably didn't tell her about its importance. This is why the writing of *The Zohar* is often ascribed to Moshe De Leon, even though Moshe De Leon himself ascribed it to Rashbi.

The Zohar states that it is written for a time when *chutzpah* (impudence) mounts and the face of the generation is as the face of a dog. When prominent Kabbalists such as the Vilna Gaon, Baal HaSulam, and others looked into the future, they declared the present generation as the one that *The Zohar* referred to. Clearly, they didn't mean it as a compliment.

RABBI ISAAC LURIA (THE ARI)

This stage in the development of Kabbalah is extremely important to the Kabbalah of our generation. This is the period of "the Ari," Rabbi Isaac Luria. The Ari proclaimed the start of a period of open mass study of Kabbalah.

Until the arrival of the Ari, the predominant study method was that of the Ramak (Rabbi Moshe Cordovero) of Safed. It

was a method where a Kabbalist simply experienced the Upper World, almost intuitively.

When the Ari came to Safed, however, it was clear that times had changed. It was the middle of the 1500s, and the world was moving toward the age of science and industry. The Ari realized that Kabbalah study required a new and more systematic method to meet the terms of a new and more scientific era. Not all agreed so enthusiastically, but the Ramak himself, by then the predominant Kabbalist of his time, abandoned his own method and sat down to learn the new way from the new teacher, the Ari. Many brows were raised at this step, but the 36-year-old Ari knew what the generation needed, and the Ramak acknowledged it.

A METHOD THAT SUITS ITS TIME

Rabbi Isaac Luria was born in Jerusalem in 1534. A child when his father died, his mother took him to Egypt, where he grew up in his uncle's home. During his life in Egypt, he made his living in commerce but devoted most of his time to studying Kabbalah. Legend has it that he spent 7 years in isolation on the island of Roda, on the Nile, where he studied *The Zohar*, books by the first Kabbalists, and writings of the Ramak.

The Ari arrived in Safed, Israel, in 1570. Despite his youth, he immediately started teaching Kabbalah. For a year and a half, his disciple, Rav Chaim Vital, committed to paper the answers to many of the questions that arose during his studies. In fact, the Ari didn't write anything himself. "The writings of the Ari" are in fact, the notes that Chaim Vital took while studying with his master.

The Ari's important works include *The Tree of Life*, *Mavo She'arim* (*Entrance to the Gates*), *Sha'ar HaKavanot* (*The Gateway of Intentions*), and *Sha'ar HaGilgulim* (*The Gateway of Reincarnation*). The unique part of the Ari's method is its systematic order, which was suitable for the approaching era of the scientific and industrial revolution.

Today, his method, called “Lurianic Kabbalah,” is the leading study method of Kabbalah, since it is adapted to the souls of today’s humanity. The Ari died of a sudden illness in 1572, still a young man.

The writings of Kabbalah shed a unique light on history and can be said to comprise a history of the Light of the Creator. During most of this time, however, Kabbalah was hidden, studied in the dark, away from the public eye. It was a private affair and, for the most part, even secretive.

With the prophecies of *The Zohar* and the work of the Ari, Kabbalah was meant to shed its light on all. The journey of how Kabbalah sheds its light publicly continues with the work of Rabbi Yehuda Ashlag, who, as the next chapter shows, opened the study of Kabbalah to more people than ever.

IN A NUTSHELL

- The Creation according to Kabbalah consists of five phases.
- Adam was the first Kabbalist and is said to have authored the book *The Angel of God’s Secret*.
- Abraham started the first “Kabbalah group” through his teaching and wrote *The Book of Creation*.
- Moses is the force that pulls us out of egoism and into spirituality. He wrote the Torah (Pentateuch).
- *The Book of Zohar*, the seminal book in Kabbalah, predicted its own reemergence at the end of time. Kabbalists say that the end of time is our time.
- The Ari created the scientific method of teaching Kabbalah that is the predominant teaching method today. The book he is most famed for is *The Tree of Life*.

BAAL HASULAM

JUST THE GIST

- The goal of Kabbalah
- The benefit in Kabbalah books
- Baal HaSulam and his commentaries on *The Zohar* and the writings of the Ari
- Baal HaSulam's mission
- The urgency in revealing Kabbalah

Kabbalah wasn't always as popular as it is today. When it first started, it was in demand by only a few, who searched for the meaning of their lives. These first Kabbalists continued to develop it through the generations, adapted it to the changing times and made it more scientific, as our generation demands. This chapter introduces the way Kabbalistic texts work and how they have developed over the centuries to make their wisdom more available and accessible to everyone.

In particular, this chapter discusses the work of the most "universal" of all Kabbalists: Rav Yehuda Ashlag. Rav Ashlag

clearly stated that Kabbalah study is open for all, that Kabbalah can be disclosed, distributed, and taught to everyone, without any consideration of age, race, sex, or religion.

THE GOAL OF KABBALAH

The goal of Kabbalah is to create a method for individuals to become spiritually fulfilled. As you know by now, *Kabbalah* means “reception.” The purpose of life in this world is for a person to achieve the highest level of spirituality.

According to Kabbalah, souls repeatedly come back to this world in people until their goal is reached. The spiritual goal is different from creative and intellectual aspirations. As described in Chapter 4, the quest for spirituality is the final stage of human development. Kabbalah guides and offers a path to spiritual fulfillment.

WHAT KABBALAH BOOKS DO FOR YOU, AND WHAT THEY DON'T

Kabbalist writers describe their experiences and offer recommendations so others can follow in their path. Kabbalah books are accounts of their journeys into the Upper World.

Off Course

The use of mundane words in Kabbalah, like drinking, sitting, mating, and animal names, leads to false conceptions and erroneous conclusions because it makes us think of physical objects as having any spiritual merit. And they don't. They only symbolize spiritual states. Hence, Kabbalah forbids imagining a connection between the names used in our world and their spiritual roots. This is considered the grossest error in Kabbalah.

Kabbalah books are also filled with drawings that illustrate spiritual concepts and events. It is important to remember that the shapes in the drawings are not real objects, but images used to explain *spiritual* states concerning your relationship with the Creator.

But Kabbalah books don't show you the whole picture. To really know what the

spiritual worlds look and feel like, you have to experience them for yourself. Kabbalists think of themselves as tour guides whose job is to get you to a place and let you admire it for yourself. This is why, in texts that were written to teach, the descriptions you'll find are partial, displaying only what you need to know to get to spirituality yourself. Such "didactic" texts are Rashbi's *The Book of Zohar*, the Ari's *The Tree of Life*, and Yehuda Ashlag's *The Study of the Ten Sefirot*.

ROOTS—FROM TOP TO BOTTOM

Kabbalah explains that the roots of our world are spiritual roots, coming down from Above, not from below. Roots come from the source, which is Above this world. Picture roots growing in from the outside of a bubble. Because you are in the bubble, the area of creation, the roots come down to you. They can be thought of as colorful party streamers hanging from above.

The main goal of this wisdom is for the Creator to reveal his Godliness to his creatures (that's us). Each root has its own branch in this world, and everything in this world is a branch of some root in spirituality. In this way, Kabbalists "use" this world to communicate with the Creator and to learn His ways, so that they can become like Him.

To avoid "miscommunication" with the Creator, you need to know which branch relates to which root. The arrival of the Ari and, to a greater extent, that of Rav Ashlag, marked a shift toward a new and clearer terminology in Kabbalah. Kabbalists describe their internal experiences and understandings using metaphors and a language suitable for the souls of their time. Over time, their texts become unclear because people's souls develop and require new explanations. This requires of succeeding Kabbalists to write interpretations to make the spiritual journey clearer

and more accessible for us. This is why Rav Ashlag wrote a commentary on *The Tree of Life*, published in his major work *The Study of the Ten Sefirot*.

Rav Ashlag's commentary on *The Tree of Life* details the stages, events, and forms of life's creation, originally described by the Ari. Ashlag did a similar thing with Rashbi's *The Book of Zohar*: he took Rashbi's text and clarified it in a commentary he called *HaSulam* (The Ladder). This is why Rabbi Yehuda Ashlag is also known as Baal HaSulam (Owner of the Ladder).

THE GREAT COMMENTATOR

Born in 1884 in Warsaw, Poland, Baal HaSulam studied Kabbalah with the Rabbi Yehoshua of Porsov, and absorbed written and oral law. He became a judge and teacher in Warsaw as early as the age of 19. In 1921, he immigrated to Israel (then called Palestine) with his family (including his first-born son, Baruch, who later succeeded him) and became the rabbi of *Givat Shaul* in Jerusalem. While writing many other important works, such as *The Study of the Ten Sefirot*, he also began *The Sulam Commentary on The Zohar* in 1943. He finished just 10 years later, in 1953. He died the following year and is buried in Jerusalem.

Baal HaSulam is the only one who succeeded in composing complete (and updated) commentaries of *The Zohar* and the writings of the Ari since they were first written. His books allow Kabbalists to study ancient texts in modern language and are indispensable tools for those who aspire to achieve spirituality.

In his article "Time to Act," Baal HaSulam explains that before the printing press, when scribes were in vogue, no one would bother bending their back to copy a book with wild claims; it wouldn't be worth the time, expense, and candle wax. As bookmaking advanced, theories and connections to Kabbalah were enhanced by authors, which were easily published.

With many people trying to define it, an atmosphere of frivolity developed around Kabbalah. Therefore, Ashlag's goal in his writing was to reveal what he could of its true essence.

In his "Introduction to The Book of Zohar," Ashlag says that he must write Kabbalah books because every generation has its own needs, and therefore its own books. Our generation, too, requires books that we can all understand. Since the books of the Ari were written hundreds of years ago, and *The Book of Zohar* was written almost 2,000 years ago, he has taken it on himself to interpret them for us. This way, we can come to know what these ancient Kabbalists knew, and experience the spiritual worlds for ourselves.

Off Course

These days, Kabbalah has attained a kind of popularity and notoriety often ascribed to the latest fads. If that is the reason for your study, you will likely be disappointed for two reasons. It does not provide easy answers, and to approach it as the latest fad is to completely misunderstand what it's about. On the other hand, if you study it with an honest desire to come in touch with your spiritual nature, you're likely to be thoroughly satisfied by this study. However, even if you're looking for easy answers and something resonates here, that's all for the good as well.

CALL OF THE HOUR

But the spreading of Kabbalah is happening today not only as a result of the appearance of incorrect and inaccurate books. Ashlag explains, in his "Introduction to The Book of Zohar" and in many of his essays, that the spreading of Kabbalah is a must today. He explains that now is the time that Prophet Jeremiah referred to when he said, "for they shall all know Me, from the least of them unto the greatest of them."

We can take our time and let it happen naturally, but Ashlag says that such a decision will cost us heavily, because we would be compelled to evolve into spirituality by nature itself. He says that the other option is to study what nature wants of us and do it.

This, according to Ashlag, will not only prevent the suffering he was talking about, but will show us how to receive the pleasures that the Creator wants to give us. Ancient Kabbalists called these two choices “in due time” or “accelerating time.”

Today, according to Ashlag, it is no longer a mere “good idea” to share the knowledge; it is the call of the hour. Hence, without further ado let’s dive into the heart of the wisdom and its concepts.

IN A NUTSHELL

- Kabbalah provides a method for attaining spiritual fulfillment.
- Rav Yehuda Ashlag is credited with making older, difficult-to-read Kabbalah texts easier to interpret.
- Kabbalah study has evolved into a systematic and scientific method of study.
- The wisdom of Kabbalah disappears and reappears when the time for its insights is ripe, and now the time is ripe.

II

Before
there
Was Time

Curious about why we were created?

Questions about the meaning of life and why we are here have been asked since the beginning of time, so join the rest of the world in your queries. But the answers may be more easily understood than you thought.

Kabbalists seek to understand the questions of the purpose of life, and all it takes to begin your own understanding is to ask. In this section, you'll learn some pure Kabbalah knowledge and find some of the answers to those age-old mysteries.

DOWN AND UP THE LADDER

JUST THE GIST

- A ladder was made as we came down; now we can use it to climb back up
- 125 spiritual degrees
- *Reshimot*—your spiritual databank—and what you can do with them.
- Free choice and the choice of your friends

In his “Introduction to The Book of Zohar,” Baal HaSulam depicts three states that souls experience. The first state is the beginning of creation, which contains everything that will later evolve in the soul, like a seed contains the plant that will grow. The second state is the birth of the soul, somewhat like the seed’s stages of growth. The third state is when the soul realizes its potential to the fullest, reaches the level of the Creator, and bonds with Him. In the third state, the soul returns to the first state, but this time it is a conscious and mature act.

Another way to think of these stages is like a baby’s growth: in the first stage the child is at its mother’s height because she’s

holding it next to her chest. In stage two, the child stands and begins to grow from below. In the third and last stage, the child has become fully grown, once more reaching the mother's level, but this time as a conscious and mature adult.

THE FIVE-RUNG LADDER

The cycle of spiritual reality is like a ladder. This ladder is probably not available at your local hardware store, but you could ask. The Spiritual Light is at the top of the ladder. It is the starting point, the zero, or Root point, in Kabbalistic language. The starting point is Phase Zero, which we introduced in Chapter 5, but here we are referring to it as the beginning of the circle, hence the different name. Kabbalists often use different names to the same spiritual states, to emphasize a different function of the same spiritual entity or degree.

The Light came down in four steps: 1, 2, 3, 4. Because the cycle starts at the root or zero, Kabbalah's ladder has five stages and four steps. A barrier at the end of Phase 4 stops the spiritual Light, except for a fraction of Light, which evolves into our universe.

Note the similarity to the five levels of human desire presented in Chapter 4. Kabbalah is a system in which cycles in one aspect of existence match cycles in another. The five levels of desire in our world correspond to the five cycles in the spiritual reality of the Upper Worlds. As you will see throughout this chapter, the number 5 reappears in Kabbalah in different ways, describing different aspects of an overall Kabbalistic journey to spiritual attainment.

The fraction of Light that went through the barrier continued to evolve, and Earth was formed. The planet cooled and vegetative life appeared, then animals, humans, and finally humans who are reaching the last degree of evolution—the desire for spirituality. So the Creator came “down” the

ladder to Earth, and Kabbalah helps us follow the same path “up” the ladder to the Creator, which the Creator took to get “down” to us.

FIVE PHASES OR FIVE SEFIROT

Because the Creator started out by giving, this is the foundation for the relationship with the Creator, marked by five phases of spiritual development. The starting point for you and I involves receiving. The Creator gives, and we receive.

So Phase Zero is the Creator, the desire to give, and happily receiving is Phase 1 in the cycle of spirituality. But the Creator gave humans more than a mere desire to enjoy. He gave us the desire to become like Him because what could be better than being like Him? Because being like the Creator is even better than mere receiving, Phase 2 is wanting to give, and in this case, it means wanting to give back to the Creator.

In Phase 3, we (the created beings) understand that the only way to give to the Creator is to do what He wants because there is nothing else we can give Him. Because He wants us to receive, that’s what we do in Phase 3. But note the difference: this isn’t like the receiving in Phase 1. Here, in Phase 3 we receive because He wants to give, not because we wish to receive. Our *intention* has changed from receiving for ourselves to receiving for the Creator. This, in Kabbalah, is considered giving.

Phase 3 could have been the end of the process if it hadn’t been for this tiny issue called “the third stage.” We previously said that our goal is not merely to be attached to the Creator, but to become like Him. This can only happen when we have His Thoughts, when we know and actually participate in the Thought of Creation. Therefore, Phase 4 introduces a new thrill: the desire to understand the actual Thought of Creation. Here you want to understand what the giving is for, what makes it

Kabbalearn

The whole business with the *Sefirot* may sound confusing, but it is less so if we remember that they stand for desires. *Keter* is the Creator's desire to give Light (pleasure); *Hochma* is our reception of the pleasure; *Bina* stands for our desire to give back to the Creator; *ZA* is our desire to receive in order to give to the Creator; and *Malchut* is our pure desire to receive, the actual root of the creatures—us.

pleasurable, why giving creates everything, and what wisdom it provides.

The four phases and their root each have a second name. Phase Zero is also called *Keter*, Phase 1—*Hochma*, Phase 2—*Bina*, Phase 3—*Tifferet* or *Zeir Anpin* (*ZA*), and Phase 4—*Malchut*. These

additional names are called *Sefirot* (Sapphires), because they shine like sapphires.

THE SCREEN (AND THE UNLIKELY EXAMPLE)

The Creator did not instill in us the wish to be like Him, however. In Phase 4, you decide that you will receive only if you understand *why* the Creator wants to give—until you understand what's in it for Him.

For example, imagine that you offer to take your children to the mall to buy them whatever they want. Unlikely, granted. Now imagine that they say to you, “Why are you suggesting that? What does that do for you? If we don't understand why you are giving, we're not interested in the gifts.” Far more unlikely. This conditioning of not receiving for yourself is called *Tzimtzum* (restriction). It is the first thing we do to become non-egoistic, and the mechanism that enables the *Tzimtzum* is called a *Masach* (screen).

Once we have acquired a *Masach* we can begin to calculate if and how much we can receive while focusing on our parents' pleasure instead of our own. When we acquire this ability, it is considered that we have a complete *Partzuf* (face).

5 × 5 × 5

The five phases of spiritual development correspond to five spiritual worlds, and each spiritual world contains five *Partzufim* (faces). To continue the ladder metaphor, the worlds begin at the top of the ladder, closest to the Creator, and continue on down. The worlds, from top to bottom, are *Adam Kadmon*, *Atzilut*, *Beria*, *Yetzira*, and *Assiya*. The world closest to the Light and the Creator, *Adam Kadmon*, is also the most spiritual. The other worlds move downward, becoming more “material” and less “spiritual” as they descend.

Our task is to attain the highest degree in our advancement toward the Creator. There are 125 degrees in the spiritual ladder that move you up through these five worlds. Why the number 125? Because there are 5 worlds, and 5 *Partzufim* in each world, and 5 *Sefirot* (*Keter–Malchut*) in each *Partzuf*. Therefore, 5×5×5 equals 125. (You may have noticed that Kabbalists have a thing with numbers.)

Note that our world does not count as a *spiritual degree*. The degrees begin Above our world and move up. *Assiya* is the closest spiritual world to our own and the starting point of spiritual attainment.

The advancement from one degree to the next happens only when a person has experienced the full measure of desire in the

On Course

It is important to try to understand the five worlds because the effort itself brings you closer to them, just as we feel naturally close to a person who wants to be like us. Besides, even if you don't understand them as you study, you will understand them when you climb the spiritual ladder yourself because you will discover that these worlds already exist within you. They are part of your spiritual makeup, just as they are part of creation's makeup.

Kabbalearn

Two elements make up a spiritual degree: a *desire* for something and the *intention* to use it for the Creator.

present degree, with the pure intention to give to the Creator. A higher degree is characterized by a greater desire for pleasure and a stronger intention to give that pleasure to the Creator.

The smallest element in spirituality is called *Sefira* because it shines like a sapphire. We already said that there are five basic *Sefirot*: *Keter*, *Hochma*, *Bina*, *Zeir Anpin*, and *Malchut*. However, *Zeir Anpin* (ZA) is made of six internal *Sefirot*: *Hesed*, *Gevura*, *Tifferet*, *Netzah*, *Hod*, and *Yesod*. So whether we talk about the five *Sefirot*—*Keter*, *Hochma*, *Bina*, ZA, and *Malchut*—or about the 10 *Sefirot*—*Keter*, *Hochma*, *Bina*, *Hesed*, *Gevura*, *Tifferet*, *Netzah*, *Hod*, *Yesod*, and *Malchut*—it refers to the same basic structure of 10 *Sefirot*.

Each five *Sefirot* make up one *Partzuf* (face), and five *Partzufim* make up one *Olam* (world). Interestingly, the word *Olam* comes from the Hebrew word *Ha'alama*, which means “concealment.” The higher the *Olam*, the less there is *Ha'alama* (of the Creator). So when you get to the Higher Worlds, too, you’ll know where you are by seeing what’s around you and comparing it with the “tour guide”—the Kabbalah books.

One of the mechanisms of this progression and development is the concept of *Tzimtzum* (restriction), which we mentioned earlier. It works like this: if you have a desire for object A, but a much stronger desire for object B, then your desire for object A gets *Tzimtzumed* (restricted). For example, say you’re very tired and want to go to sleep. You tuck yourself in and cuddle under the warm blanket. Suddenly, someone knocks on your door and shouts that there is a fire and that you’d better run for your life. Naturally, your desire to save yourself is stronger than your desire to sleep. At that moment the fatigue vanishes as if it never existed. In truth, it does exist, and you will feel it again when the danger has passed, but the desire to live restricts it and covers it completely.

Turning back to our topic, to move from degree x to degree $x+1$, we need to want degree $x+1$ more than our present x degree.

In *The Study of the Ten Sefirot*, Baal HaSulam says that even though *Malchut*, the *Sefira* that represents the future us, wanted to receive the Creator's Light very much, she couldn't. *Malchut* didn't know how to receive the Light with the intention to give (remember the mall example from earlier in this chapter). Without the intention to give, she would become different from the Creator and, therefore, separated from Him. Because she did not want to become separated from the Creator, she restricted her desire to receive so she could stay close to the Creator.

This is why the first thing you must learn when entering the spiritual world is how to restrict your egoistic desires. If you can't do that, the doors to spirituality remain closed, which brings us to the Barrier.

THE FIFTH LEVEL AND THE BARRIER

The sole purpose of everything that happens in our world is to take you across the barrier between our world and the spiritual world. Once you cross it, you can start advancing in spirituality.

Where did this barrier come from? You may recall that contact with the Creator can exist only if you, like Him, have the intention to give. Because He created you without the intention to give, you are separated from Him. This separation is called a barrier because it bars you from direct contact with Him. The good news is that you can cross the barrier and meet the Creator "face to face" simply by wanting the intention to give.

Kabbalah has many divisions. One division is into *Sefirot*, another is into worlds, and another is into levels of vitality.

So spiritual as well as corporal life is divided into five levels of vitality:

1. Still (inanimate)
2. Vegetative
3. Animate (alive)
4. Speaking (human)
5. Spiritual (point in the heart)

Every being has all five levels, but the predominant level determines its category. Animals, for example, have some characteristics that are typically human, such as the ability to plan for the future, but this is not their predominant trait. Humans have animalistic characteristics, too, but we are still fundamentally different from animals.

What makes people human in the spiritual sense is their ability to experience a uniquely human state: the desire to be spiritual (like the Creator), the point in the heart. This is the

Kabbalearn

The voluntary and conscious evolution at the human level is what we call "free choice." Free choice makes us similar to the Creator because we choose to be like Him.

highest state, where you can cross the barrier into the spiritual realm.

Achieving this stage involves different factors than the first four levels of vitality, which are based on

biological factors. Levels 1–4 evolve through pressures from nature that push evolution along unconsciously. But evolution to the fifth level is voluntary and conscious, made out of one's own *free choice*. A desire for it is the first step to crossing the barrier. It's the desire mentioned in the beginning of this book, the desire to ask what life is about, the desire upon which Kabbalah itself is based.

THE START OF THE CLIMB

At the bottom rung on the spiritual ladder, where you and I start, we are disconnected from the Creator. Here, the task is to refurbish our desire for spirituality and make it a working vehicle to drive us up the spiritual ladder once more.

All souls started out at being one with the Creator. In a sense, then, you and I have been developing and refurbishing ourselves for many thousands of years. In the framework of Kabbalah, the last 6,000 years have been the culmination of this process. Now the process is nearing its end, a time when all of humanity is becoming spiritual. So let's look at the process and see how Kabbalah shows a way to go about this spiritual process.

TOWARDS A COMMON SOUL

Kabbalah provides a method for spiritual correction and specifies a 6,000-phase route, referred to in the literature as "6,000 years." After their complete correction, all souls reunite into one common soul and start working as a unified system. The construction of this common soul binds the individual souls together so that each of them feels what all the others feel. This is the achievement of absolute attainment, called the "End of Correction."

The only thing necessary to embark on this spiritual journey is the desire to do so. No spiritual progress can possibly occur in you if you do not want it beforehand. At the spiritual degree, evolution should be conscious and voluntary.

Questions such as "Why am I suffering?" "Where does pain come from and what does it want of me?" "Is there a purpose to suffering?" and "Is it all worthwhile?" are useful if the predicaments give you the sense to ask for directions on how to evolve. They are even more useful if you can use them to increase your desire for spirituality. When you begin to ask yourself these questions, it is a sure sign that you've begun your way up the spiritual ladder.

UP THE LADDER

The desire to be spiritual is the first step up the ladder. You start by wanting to fulfill this desire, and you will obtain it by simply

Off Course

The environment can speed you up, but it can also slow you down. If you surround yourself with people, books, and media that do not appreciate spirituality, (that is, altruism), you, too, will not want it. Once you've placed yourself in a certain society, you cannot choose your thoughts; you subconsciously absorb them from the environment. The free choice we do have, however, is in the environment itself. Choosing the right environment will lead to or from spirituality, and determine our speed.

asking (in your heart). Asking to be more spiritual is called “raising MAN” (Aramaic: *Mayin Nukvin*—Female Water). Raising MAN is also called a prayer. MAN, or desire to be more spiritual, comes from two sources: One is your own spiritual structure, *Reshimot*. These are the soul's unconscious recollections of its past

states. The second is the environment (friends, books, films, and all other media), which enhances and speeds up the MAN that the *Reshimot* evoke.

BACK TO THE FUTURE

If you remember at the beginning of the chapter, we stated that the Root was the beginning, at the top of the ladder. Although it may seem like a contradiction, it's important to remember it because it means that you and I contain the seeds of the Root within us—the seeds of the Creator, if you will.

So the Root is both the beginning of the cycle of spirituality and our ultimate goal. Having “fallen,” you and I seek to regain the top, or correct ourselves. That requires climbing the spiritual ladder, from the earthly world back up to the Root. To understand how to return to your Root, you need to know your root and how you came down from there (the *Reshimot*).

How else could you know where to return if you hadn't already been there in some way? The emergence of new desires, new *Reshimot*, indicates that you are making progress, how fast you are progressing, and if you're on the best and fastest route. In the end, we will all reach the end of correction, but a correct use of the *Reshimot* can save us much trouble, time, and effort.

You move up the ladder each time you increase your desire to be spiritual. As you become more spiritual, you build on the last degree of spirituality to achieve the next. Every time you increase your need, your future spiritual degree responds by elevating you to it. The cycle repeats itself and moves you to become more like the Creator.

Off Course

Kabbalah explains that the spiritual path is predetermined, but this does not mean that you do not have free will and choices. You will be on the same path, but you can progress faster or slower, pleasantly or painfully, depending on your participation.

Once you have examined all your egoistic desires on the egoistic level, called “this world,” a new desire appears. This new desire is special. It is your first desire with a non-egoistic intention. This event in a Kabbalist's life, though it is a natural evolution of the surfacing of the desires (*Reshimot*), is so radical that it is known as “The Crossing of the Barrier,” or “the admittance to the spiritual world.”

At any state your soul is in, the *Reshimo* (singular for *Reshimot*) is predetermined. If you have an urge to realize the *Reshimo*, this urge stems from within. But if you use the environment to strengthen your desire and accelerate the unfolding of the *Reshimo*, that would not only shorten the unfolding period, but also elevate the experience to the spiritual level and make it adventurous and exciting.

WHAT GOES AROUND COMES AROUND

Life shows us that we cannot survive without a sufficient number of people around, to serve and help provide for our needs. Humans are social beings, and society is like a machine where each individual is like a wheel, linked to other wheels. A single wheel cannot move by itself. However, it joins the motion of all the other wheels and helps the machine perform its purpose.

On Course

In Kabbalah, the collective group and the individual are treated as one and the same. What is good for the whole is good for the individual, and vice versa. Therefore, a negative society harms the individual, and a positive society benefits the individual.

If the wheel breaks, the problem is not the wheel's problem, but the problem of the whole machine because the broken wheel stops the machine from running. It turns out that we are not evaluated for who or what we are, but for the kind of

service we do for society. A "bad" person is only as bad as he or she harms the public, not because he or she didn't perform up to the level of some abstract value of good.

Good and bad attributes and deeds are good or bad according to whether they benefit the public. If a part of the group does not contribute its share, those individuals not only harm the collective, but they, too, are harmed. This is why a negative society harms the individual.

Likewise, a good society benefits the individual. Individuals are part of the whole, and the whole is not worth more than the sum of its individuals. In Kabbalah, the collective and the individual are one and the same.

One of the key ideas to understand about Kabbalah is that people will come to see that their own benefit and the benefit of

the collective are the same. As people realize that, the world will be much closer to its full correction.

Kabbalah explains that our experiences are personal, but they are described in general terms that apply to everyone. For example, we all agree that blood is red when we look at it, but we each experience it very differently. Some people faint at the sight of blood, some say “Cool!”, and some say “Ugh!”

IN A NUTSHELL

- In the spiritual cycle, our souls started at being like the Creator. Then they climbed down the ladder, and now we must travel up it and become like Him again.
- Crossing the barrier into the spiritual realm is done only through a conscious desire to be like the Creator.
- Kabbalah allots 6,000 years for all souls to achieve correction, which can be experienced as a joyous and exciting journey or as an ordeal.
- If we want to reach spirituality, we have to choose a spiritually supportive environment made up of friends, books, and all kinds of media.
- Everything else is determined by the *Reshimot*, except for our choice of environment.

SETTING THE STAGE FOR MAN

JUST THE GIST

- The five worlds and the world without end
- The Creator's wish in creating us
- Adam, Eve, and their relationship with the Creator
- Many people, one soul, one correction

This chapter is the heart of the book, the core of Kabbalah. Here, we focus more on the individual in the process and less on degrees, worlds, and *Partzufim*. When you learn it, you will grasp the essence of the Kabbalistic journey toward spirituality, and how Kabbalah provides a way for humanity to correct itself for the good of all.

FIVE WORLDS, AND NONE REAL

As we've mentioned in Chapter 7, there are five spiritual worlds: *Adam Kadmon*, *Atzilut*, *Beria*, *Yetzira*, and *Assiya*. The only thing that is real is the world of *Ein Sof* (No End). We also explained that the word *Olam* (World) comes from word *Ha'alama* (concealment). Therefore, the worlds are incomplete appearances of

the Creator. The only place where He is completely revealed is therefore the world of *Ein Sof*, where there are no limitations, hence the name *Ein Sof*, no end to our perception of the Creator.

Spiritual Sparks

All the worlds, Upper and lower, are contained within.

— Rav Yehuda Ashlag,

"Introduction to the Preface to the Wisdom of Kabbalah"

The Upper Worlds affect objects in the worlds below, as all the worlds are essentially the same reality—that of *Ein Sof*. For example, if you thought about doing something, and knew for certain that that thought would come true, then your plan would be experienced as existing in you, even before the thought has actually been carried out. Our body knows this process very well; this is why the stomach produces digestive juices before the food actually gets there. In that sense, the thought of eating is a higher world, which creates the lower world where the eating occurs. But in both worlds the event (substance) is the same—eating. Because our thought is not limited, you could say that it is in the world of *Ein Sof*, and our body is in one of the lower worlds.

Keep in mind that although Kabbalah speaks only about the spiritual worlds, it uses physical examples, such as eating, to explain them. Although the examples are used to understand *how* things work in spirituality, don't be misled into thinking that there is physical eating (as in the last example) in spirituality.

AT THE TOP OF THE LADDER

We previously defined Kabbalah as a sequence of causes and consequences that hang down from root to branch, whose purpose is the revelation of the Creator to the creatures. But how do Kabbalists know that? As they reach the top of the spiritual ladder, they discover two things: that creation is made of pure, unadulterated desire to receive pleasure, and that the Creator is made of pure, unadulterated desire to give it to creation.

Off Course

Discussing what the Creator wants is dangerous because it can lead us to thinking about the Creator instead of our own correction, which is what is needed if we want to become like Him. What Kabbalists discover once they reach the Creator's level isn't written anywhere, but we, too, can get there and find out for ourselves.

This brings up another question: If the Creator's only wish is to give, where did creation's pure desire to receive come from? Kabbalists explain that the Creator *had* to create us; otherwise, He wouldn't have anyone to give to. This is the begin-

ning of the root and branch sequence.

EQUAL BUT OPPOSITE

Kabbalists called the desire "to do good to the creatures" (us), the Thought of Creation. If we keep this in mind, the whole wisdom of Kabbalah will be easy to learn.

If I want to give, like the Creator, there is nothing that can limit me, because you can't "lock" a desire in a certain place or time. Of course, we, people, are also unlimited—we want only to receive, and that desire is just as unlimited as the desire to give. In that sense, we are equal to but opposite from the Creator: our orientation is toward receiving, and His is toward giving.

Another element that becomes clearer when we understand the Thought of Creation is why it takes giving to create. When you want to give, you're looking outwardly, to see where you can do good. But when you want to receive, you are concentrated on yourself, and want only to take from what already exists. Now let's look at the stages of creation.

A SHORT STORY OF CREATION

The story of creation started with a root (His desire to do good to His creations), and expanded in four more phases. This is the origin of the Tree of Life, its first root, if you will. In Phase 4 creation restricted itself, performed a *Tzimtzum*, and rejected

all the Light (pleasure) that the Creator wanted to give. Such an act seems to contradict the very Thought of Creation, but it is a necessary step in determining creation as a separate and independent entity from the Creator.

The power by which creation stops receiving the Light is a very special kind of shame, the root of all disgraces, called “the bread of shame.” Kabbalists explain that shame is the most powerful force that drives us.

Now hold tight, because we’re about to plunge deep into the heart of man: the bread of shame is the mother of all shames. It is an experience unlike anything in this world. It is a burning sensation that has only one name fitting for it: Hell. But don’t worry, in Kabbalah no bad comes without its compensation and reward immediately following.

The main difference between our (worldly) shame and the (spiritual) bread of shame is that in our world we are ashamed of not meeting society’s standards, and in spirituality we are ashamed of not meeting the Creator’s standards.

Imagine that you suddenly discovered that the entire universe, from before the Big Bang until the end of all time, is kind, generous, and giving. Sound great? Now imagine that you also discover that there is only one element in it that’s selfish and wants to use everyone and everything else. Well, that must be the devil. Now imagine that you discover that this evil devil is you. What would you do?

Of course, no person can bear it. Then, to top it all off, you discover that the evil is not in your body, it’s in your soul, in your desires, so even if you committed suicide you’d still be evil, because no gun can put an end to your soul.

Naturally, when you discover something like that, the last thing you want is to remain yourself, and the thing you want

most is to be a giver like the Creator. And the minute you want it, you get it.

Now you know that the *Tzimtzum* isn't a restriction imposed on you. It is the result of your own work of studying yourself. It is also a very rewarding and pleasurable event because it is the first time you receive the ability to actually be something else. You can choose not only between two options in this world but also between two entirely different kinds of nature. When you choose one, your senses will show you our world; and when you choose the other, your senses will show you the spiritual world. But you will be able to choose between them and even jump back and forth from one to the other whenever you want.

FOR YOUR PLEASURE ONLY

In Chapter 7, we explained that the worlds, from top to bottom, are *Adam Kadmon*, *Atzilut*, *Beria*, *Yetzira*, and *Assiya*. We also said that each world is made of five interior elements

On Course

Don't let all the names in Kabbalah confuse you; they refer to either bestowal or reception. Creator, Light, Giver, Thought of Creation, Phase Zero, Root, Root Phase, *Bina*, and others describe the desire to bestow. Creature, *Kli*, receivers, Phase One, and *Malchut* are some examples of the desire to receive. There are so many names because of the subtle differences in each. But in the end, they all refer to bestowal or reception.

called *Partzufim*. Now let's talk about how they're made and how they work.

Once Phase 4, called *Malchut*, experienced the bread of shame, its oppositeness from the Creator, it set up a condition before Him: "If you want me to enjoy, give me the ability to do it for *your* pleasure, not for mine, because I don't enjoy

being an egoist." So the Creator gave her a *Masach*, the screen, to resist the entrance of the Light. Then she said to Him: "Thanks, now give me the ability to decide what to receive and what not to

receive. I know that I can't receive anything and still be thinking of your pleasure, so let's start with little bits and pieces of Light." He gave her this ability as well.

Malchut began to receive the Light in five primary categories. Just like the visible Light is made of three basic colors—red, green, and blue—Spiritual Light is made of five basic Lights—*Nefesh*, *Ruach*, *Neshama*, *Haya*, *Yechida*. *Nefesh* is the smallest Light, and *Yechida* is the greatest.

Once *Malchut* receives the ability to split the Light into five sections, she begins to receive each of them, but only as long as she can do that while thinking of the Creator. Each time she receives a different Light of the five, she builds a special *Partzuf* to receive it. Thus, she completes her ability to sense the Creator at a certain degree by exploring the five Lights as much as she can without thinking of herself. And because there are five such Lights, each spiritual world contains five *Partzufim*.

Now you also understand why each such phase is called *Olam* (world), meaning concealment. This is the level to which *Malchut* can bare to enjoy the Creator's pleasure without thinking of herself. Naturally, the higher the world, the greater is *Malchut's* ability to enjoy the Creator's Light. This is also the great reward that comes with reaching the world of *Ein Sof* (No End)—there are no limitations on reception of the Creator's pleasures.

On Course

Kabbalah ascribes each element in spirituality a gender tag; an element can't be neutral, but it can "switch" between genders. In general, anything that gives is considered male and anything that receives is considered female. Also, each entity contains male and female elements within it, and uses them according to need. So although everything has its basic gender, it can function as its opposite sex when the need arises.

THE CONSTRUCTION WORKERS

The spiritual worlds have what could be called a teaching mechanism built into them. They can teach you how to direct your desire to give back to the Creator. Although they run on “auto-pilot” meaning they unfold as a necessary cause and effect process, the guiding principle in each of them is “I will not receive unless it’s for the Creator.” When a person enters the spiritual worlds, this is what the spiritual worlds teach him or her: how to think more of the Creator and less of him or herself.

Kabbalearn

Upper Worlds and lower worlds do not relate to positions or places but to the value of desires. Higher desires are simply more altruistic than lower desires, which are more egoistic.

In that sense, the relationship between the worlds and the creature is like a group of construction workers teaching a rookie what to do. They teach each task by demonstrating it. Bit by bit,

creatures (we) can begin to “fix up their desires” and transform their reception from the Creator into an act of giving.

ADAM AND EVE ARE BORN (AND DROPPED)

In Chapter 7 we said that the last phase (and the greatest desire) is to know the Thought of Creation. To understand the Thought of Creation, it was necessary to create a special *Partzuf*, which would exist in a special world, where this *Partzuf* could study the Thought of Creation of its own free choice. This is how the *Partzuf* of *Adam ha Rishon* was formed. Although *Adam ha Rishon* was not born in our physical world, it was quickly brought here (or should we say, dropped here?), and was given the name Adam, after its task, to be *Domeh* (similar) to the Upper One, the Creator.

If you’re wondering where Eve is in this picture, she is very much in there. In Kabbalah, Adam and Eve are two parts of the

same *Partzuf*. When Kabbalists want to emphasize the reception in this *Partzuf* they refer to it as Eve, and when they want to focus on its giving capabilities they call it Adam.

TRICKED INTO SINNING

Adam was born in the worlds *Beria*, *Yetzira*, and *Assiya*, but was quickly elevated by them to *Atzilut*, where all the desires are corrected and work only to give to the Creator. In the world of *Atzilut*, Adam worked (received) with small desires, ones he was sure he could use altruistically, with the intention of giving to the Creator. He was told he could do anything, as long as he didn't eat from the Tree of Knowledge, which represents the stronger desires, the ones Adam couldn't use with the intention to give to the Creator.

At this point, Adam was considered holy, a saint. But he was unaware of his own uncorrected desires. What Adam didn't know was that he was placed in the Garden of Eden and allowed to work with his small desires only as an example of how he should work with his coarser desires. So when they first appeared, he didn't know how to handle them, and sinned.

When Adam finally decided to try to receive with the intention to give to the Creator, he failed, and wanted to receive for himself. He discovered that he was totally egoistic in those desires, and this (bread of) shame made him cover himself. In Kabbalistic terms, Adam learned that he was naked, without a *Masach* (screen) to cover his bare (egoistic) desires.

But spirituality is a failsafe mechanism. Once a correction is made, you cannot breach it. As a result of Adam's mistake the *Tzimtzum* was reinstalled and all the Light in *Partzuf Adam ha Rishon* left it, leaving Adam and Eve outside of the Garden of Eden. However, they were not totally alone; they had their memories (*Reshimot*) of the corrected state and the *Reshimot* of their egoism. Those two seemingly bad memories are the most

valuable tools for any person who wishes to discover the Creator and correct the relationship that existed between Adam and the Creator and discover His full glory.

SIN—THE WAY OUT OF EVIL

In the Kabbalistic version, the story of the original sin has a twist or two that you may not know. Adam was commanded not to eat from the Tree of Knowledge so he would not entangle himself with desires he couldn't handle. But his internal female, Eve, told him that if he did eat, he would be able to give to the Creator even more than if he didn't. She was right, too, because in doing that, he would be using greater desires to receive in order to give to the Creator. But what Eve didn't know was that to give to the Creator with such strong desires, you need to have a very strong *Masach* to handle them. Adam did not have that. You may justly ask, "Why didn't the Creator tell Adam that he couldn't handle such desires, did He want him to fail? What kind of a giving Creator lets his creation suffer?"

To understand why the Creator did that to Adam, we must remember the Thought of Creation, and that this is what Adam really wanted. To teach Adam about his own desires, the Creator had to expose them to him. And how can you expose a desire

Off Course

This is a good place to remind ourselves that all that the Torah (Five Books of Moses) and Kabbalah write about unfolds in the spiritual worlds, not in our world.

to someone without letting him or her experience what that desire feels like?

From the perspective of the Creator no harm was done by Adam's sin because

from His perspective, this is just another step toward teaching creation how to receive everything that He wants to give. The greatest gift the Creator can give to us is His Thoughts, so that's what He had to show us. Now that we have this memory in our *Reshimot* we can begin to correct ourselves and learn how to receive it.

TINY GOLD COINS

The first step in the correction of Adam's soul was to split it into "digestible" pieces, small bits of desire that weren't so hard to correct. For this reason his soul shattered into no less than 600,000 pieces. It continued to shatter and splinter and today we have as many pieces of his soul as there are people on Earth. Yes, you understand correctly. We're all parts of the same soul. In Part 3 we'll talk about the practical aspects of this fact.

The splitting happened in the following way: when all the desires in *Adam ha Rishon* had a common intention to bestow upon the Creator, they were united as one. When the intention in the desires was reversed into an aim for self-gratification, each desire sensed itself separated from the others, and the single soul became divided. All souls, therefore, are extensions of the general soul of *Adam ha Rishon* (literally translated as "the first man").

Tidbits

The more egoistic we become, the harder it is correct each bit of soul, and the more we have to divide and multiply.

Here is an allegory by Baal HaSulam that explains the splitting principle: A king needed to send a large quantity of gold coins to his son who lived overseas. He had no messengers that he could trust with a big sum, so he split up the gold coins into pennies and sent them by many messengers. Each messenger decided it was not worth stealing such insignificant loot and delivered it. Once the pennies reached their destination they were reunited into the original large sum.

In the same way, many souls over many days can redeem the fragments after the apple incident. All the pieces combine to successfully complete the original task of receiving all the Light in order to give to the Creator. Our job is to correct our individual portions, the roots of our own souls.

IN A NUTSHELL

- There are five worlds—*Adam Kadmon*, *Atzilut*, *Beria*, *Yetzira*, and *Assiya*—but the only real world is *Ein Sof*.
- Our desires are as strong as the Creator's but our intentions are opposite from His.
- Adam and Eve had to be tricked into sinning
- Adam was born in the worlds *Beria*, *Yetzira*, and *Assiya*, raised to *Atzilut*, then quickly dropped to our world.
- Eve is the female part of *Partzuf Adam ha Rishon*.
- All people are bits of the common soul of *Adam ha Rishon*.

UNLOCKING THE LANGUAGE OF KABBALAH

JUST THE GIST

- It's all about the forces
- Understanding the Language of the Branches
- New meanings of old stories
- Demystifying the language of *The Zohar*

To understand Kabbalah texts, you have to understand the language that it's written in. No, you don't have to learn Hebrew, but you do need to understand the way Kabbalistic texts use stories to present ideas. Stories about people and the world become metaphors for concepts and ideas in the Upper Worlds.

The language of Kabbalah describes how forces from the Upper Worlds act on the objects of this world. Stories and the ideas behind them show how the universe is structured. When read in this way, stories about this world—the stories in the Bible, for instance—take on new meanings.

In this chapter, you start to understand how to unlock Kabbalah knowledge. You see that the roots and branches of Kabbalah language bring out more in the stories than generally meets the eye.

LIKE ROOTS AND BRANCHES

As we've explained in Chapters 7 and 8, the worlds are created by a series of causes and effects. Therefore, "roots" refer to the spiritual forces, which create our world and the people in it. They exist in the spiritual worlds beyond this material one, but they influence and operate on our world.

The roots are like many unseen fingers pushing and prodding a piece of clay—our existence—into a certain form. They mold existence by guiding objects. These objects that the spiritual forces, or roots, guide are the "branches." The branches exist in this world. They have material existence. Every object in this world, including you and me, is a branch of some spiritual root.

Kabbalearn

In Kabbalah, every cause is considered a root and every consequence of the cause is considered a branch. The roots are also referred to as "parents" and the branches are considered their "offspring." The key concept in Kabbalah is that what happens in the roots will happen in the branches.

As their names indicate, roots and branches are connected. Like a tree, one of them you see and the other you don't, yet both are connected.

A tree or plant cannot exist without its roots.

Things that happen to the roots show up in the plant. If the roots don't receive enough water, the plant droops. If the roots are fertilized, the plant grows fuller.

Kabbalah describes the same mechanism in people. In the universe described by Kabbalah, what happens in the roots shows up in the branches. Just as a plant is affected by the condition of its roots, the forces in the spiritual worlds influence people and objects in this world.

In Chapter 8 we said that the elements in all the worlds are the same. We said that the only difference between them is in the spiritual level of the same elements: the higher worlds contain more altruistic elements and events. So clearly, the objects of each world relate to the objects Above or below it. Forces from one appear in the next, and so on, though in a new way. The highest level, the Root or the Source, creates and controls the events through all the worlds, down to the “branches” in our world.

THE SAME BUT OPPOSITE

To indicate the difference in the quality of the substance in each world, the same elements in each world receive different names. The Upper World, for instance, contains angels, while our world contains animals. This does not mean that animals are angels. But if we keep in mind the world within a world concept from the previous chapter, we will recall that each element in reality contains five levels: 0–4. Level 3 of the will to receive in the spiritual world is called “angels,” and the same level in the physical world is called “animals.”

The correspondence between the Upper and lower systems is similar to having an object, which you can sink in wax, in sand, in plaster, in cement, or in dough. The final result is different because of the different substances. The shape, however, is the same. Even though the quality of the matter or its behavior is different, the final form corresponds to the shape that made it.

But the matter is always opposite than the shape. If you press a flat board with a little dome in the middle against the beach sand, you will get a flat surface with a little crater in it. Similarly,

Tidbits

Kabbalah explains that at the end of correction, when all our desires are corrected, even the angel of death will become a holy angel. It means that when we are corrected we will see that all the forces we thought were evil are actually good but presented themselves as evil to prompt us to correct.

the Creator is the shape and we are the matter. Because He is a giver, we are receivers.

Just like the dome and the crater, our will to receive is the exact negative of His desire to give. It contains all the elements that exist in Him, but in an inverted way: what's good in Him is bad in us. And since He is only good, we are only ... you get the point.

THE HIDDEN MEANING OF THE BIBLE

The Bible (or Torah) is sublime and spiritual, but, frankly, it can be a bit long on history with its lists of relations. You read about people marrying, divorcing, cheating on each other, and killing one another. A fair question might be: what's so spiritual about that?

In the framework of Kabbalah, however, the Bible doesn't tell stories of people. Instead, it presents relations between spiritual forces.

Spiritual Sparks

First, you must know that when dealing with spiritual matters that have no concern with time, space, and motion, and especially when dealing with Godliness, we do not have the words by which to express and contemplate. ...For that reason, the sages of the Kabbalah have chosen a special language, which we can call "the language of the branches."

—Baal HaSulam, *The Study of the Ten Sefirot*

The Bible shows the process of the correction of souls through higher forces. This takes the souls on their path of ascent as they rise in their ability to bestow. Characters such as Adam, Noah, and Abraham are

not thought of as people who lived somewhere and wandered (or floated) around. They are considered forces that operate over desires that have to be corrected, within each and every one of us. For example, the story of the exodus of Hebrew slaves from Egypt represents not their freedom from physical bondage, but the acquisition of the first *Masach* (screen), the crossing of the barrier.

Some stories may seem to have no rationality or sanctity in them. When reading them, remember that these are not events, but stories of forces. They are not to be understood or justified in earthly terms.

BEHIND THE MONITOR

The Language of the Branches is the expression of higher forces that operate on our world. It is expressed in objects and in everything that happens.

Where does it come from?

It's like a computer monitor: if you looked behind the monitor, you would not see the picture—you would see the electronics that built it.

Spiritual Sparks

You have not a blade of grass below that has not a sign Above, which strikes it and tells it, "grow."

—Midrash Rabba

Let's say there is a picture on the screen, a beach. Behind the screen is not a beach, but a collection of electric impulses, forces and energies that create the picture on the screen. The picture is the "branch," and the electric forces that create this picture are its "roots." The connection you have with the electronic forces (root) through the picture (branch) is called the Language of the Branches.

Here's how some of the stories in the Bible are explained using the Language of the Branches.

THE APPLE STORY

Let's talk about the Biblical story of creation. The will to receive in the common soul (us) is called "Eve." The will to bestow, to give, is called "Adam." Egoism—the will to receive with the intention to receive—is called "the serpent," and we call it "ego." The ego wants to take over all our desires and pull us toward egoism. This is considered that the serpent came to Eve—the will

to receive—and said, “You know what? You can use your will to receive in a very good way.” So Eve went to Adam—the will to bestow—and said, “You know what? We have a chance to climb up to the highest worlds here. Moreover, this is what the Creator wants, that’s why He made us receivers.”

And she ate. The will to receive, joined with the serpent (egoism), ate the apple. Because they liked it, they thought, “Why not pull Adam (the forces of bestowal) into it?” So she did. As a result, the whole body of *Adam ha Rishon* (the common soul), all his desires were corrupted by the serpent’s intention to receive in what became the original sin.

ABRAHAM—BETWEEN EGYPT AND ISRAEL

Abram was born in Mesopotamia (today’s Iraq), immigrated to Israel, and then, because of famine, went down to Egypt. This travel has a spiritual meaning because these places are degrees or forces. They actually tell the correction story of his desire.

Mesopotamia is a starting point, where Abram’s desires are egoistic, like yours and mine. The land of Israel, called “desires to bestow,” is the desire to give. Egypt is called *Malchut*, the will to receive, and it consists of egoistic desires, with Pharaoh being the epitome of egoism.

Tidbits

In Kabbalah, Israel is not a piece of land. Its name comes from two words: *Yashar* (straight), *Ei* (God, Creator). Therefore, to a Kabbalist, anyone with a strong desire to be like the Creator is considered a part of Israel.

When Abram first achieved correction, he changed his name to Abraham, broken down as *Av* (father) *ha Am* (the nation)—the great desires to receive that were to emerge from him.

To match those desires, he had a will to give, which guaranteed that the desires will ultimately be corrected. Every time Abraham increases his will to give, he moves to Israel, and every time he increases his will to receive, he moves to Egypt. This is also

why immigration to Israel is considered ascent and immigration to Egypt is considered descent.

The will to give by itself is powerless. You can truly give to the Creator only by receiving from Him. So Abraham asked, “How will I know that I will reach the same level of giving as the Creator?” Abraham couldn’t receive because he was in a state of giving. The Creator put his seed in Egypt and told him he would receive the full measure of the will to receive. Abraham was delighted. After the exile, when the people mingle with the Egyptians and absorb their desires, the people will be corrected and know how to receive in order to bestow. This is the pattern of attainment for everyone and leads to the end of correction.

The Bible says that Abraham went down to Egypt because of famine. The famine was spiritual because he wanted to bestow but had nothing to bestow with. For Abraham, a situation in which he can’t bestow is called famine, absence of desires to receive. As a person gradually acquires a bigger will to receive, it is considered experiencing the exile in Egypt. When you come out of the experience with great substance of vessels of reception, you can begin to correct them so they work in order to bestow.

MOSES’ TUG-OF-WAR WITH PHARAOH

The next key Bible story from the perspective of Kabbalah is the story of Moses. Pharaoh enslaving the Jews has deeper significance than historical record.

Pharaoh dreamed that there would be 7 years of wealth, followed by 7 years of famine. Wealth is when you first discover a great desire for spirituality and feel great happiness. This is because you think that you can achieve spirituality using your ego. You are ready to read and learn and do all kinds of things. Famine happens when you see that you cannot acquire spirituality unless you concede your ego and gain the attribute of giving. But

you can't give, despite wanting to. You are caught in between. This is Egypt.

To bring about change, your "Pharaoh" grows. Your Pharaoh is your ego. It begins to show you bad things about the present state. If it is very bad, you want to escape or flee to spirituality. You want to go even if there is nothing appealing and attractive about it. When your ego shows you how bad it is, you will want to change.

The name Moses comes from the word *Moshech* (pulling). This is the point that pulls us out of Egypt, just like the Messiah, which also comes from the same word. Moses is the feeling within a person that stands against his or her ego and says, "I really think we should leave." The big force that pushes is Pharaoh. The small force that pulls is Moses. This pulling is the start of your spirituality, the point in the heart.

THE (CLASSIC HAPPY-END) STORY OF ESTHER

This story describes the final correction of the will to receive, named Haman. Mordechai (the will to bestow) and Haman share a horse. Haman rides first, then Haman lets Mordechai ride while he walks the horse. This shows how your will to receive ultimately surrenders before your will to bestow and gives up the reins.

Esther—from the Hebrew word *Hester* (concealment)—is the hidden Kingdom of Heaven. She is hidden, along with Ahasuerus, the Creator, who is seemingly neither good nor bad. The person who experiences it doesn't know who's right and whether the Creator is good or bad.

Esther is also a relative of Mordechai, the will to bestow. Mordechai, like Moses but at a different spiritual stage, is the point of *Bina* in one's soul, which pulls you toward the Light.

When the will to give appears, sometimes it cannot be seen right away. Sometimes it is hidden, like Esther the Queen. You may not know if the action is really giving. However, if Mordechai is the one riding, your will to receive can correct itself.

Tidbits

The happiest holiday in the Hebrew calendar is Purim, when the story of Haman and Mordechai is told. This holiday represents the end of correction, and dictates drinking until we cannot tell Haman from Mordechai, egoism from altruism. This is because at the end of correction, all desires are corrected and work in order to give to the Creator, so it doesn't matter which desire you work with, it'll

always be with the intention to give.

THE ZOHAR—NOT WITHOUT ATTAINMENT

All that *The Zohar* speaks of, even its legends, are the 10 Sefirot—Keter, Hochma, Bina, Hesed, Gevura, Tifferet, Netzah, Hod, Yesod, and Malchut—and their interactions. To a Kabbalist, the entries and their various combinations are sufficient to reveal all the spiritual worlds.

Rabbi Shimon Bar-Yochai (Rashbi), author of *The Zohar*, had a big problem. He was debating with himself on how to convey Kabbalah knowledge for future generations. He did not want to expose people to the content in *The Book of Zohar* prematurely. He was afraid this would only confuse and mislead people from the true path.

To avoid confusion, he entrusted the writing in the hands of Rabbi Aba, who knew how to write in a special way so only the worthy would understand. Because of *The Zohar's* special language, only those who are *already* on the ladder of spiritual degrees understand what is written there. *The Zohar* is only for those who've already crossed the barrier and acquired some level of spirituality. They are the ones who can understand the book, according to their spiritual degree.

Today, most souls are too materialistic and egoistic to understand *The Zohar*. They need tools to bring them into the spiritual “zone” first. It’s like a space shuttle that needs a big thrust before it can continue on its own engine. A supportive environment, teacher, and correct books give your spiritual understanding a “boost.”

There are different styles of writing in *The Zohar*. It was written in different languages, depending on how they wanted to express specific spiritual states. Sometimes the various languages create confusion. When the book talks about laws, people may think *The Zohar* is preaching morals. When it tells stories, people may see them as fables. Without spiritual attainment, it is difficult to understand what *The Zohar* is really about.

Some of *The Zohar* is written in the language of Kabbalah, and some of it is written in the language of legends. Below are examples of two such legends.

THE DONKEY DRIVER

The Zohar contains a beautiful story about a donkey driver, a man who drives the donkeys of important men so they can carelessly walk and talk about their affairs. But the donkey driver in *The Zohar* is a force that helps a person who already has his own soul.

In the story, two men talk about spiritual matters as they walk along from one place to another. Whenever they come to a dilemma they can’t resolve, the donkey driver “miraculously” gives them the answer. As they progress (thanks to the driver’s answers), they discover that their simple donkey driver is actually a heaven-sent angel who is there for just that purpose: to help them progress. When they have progressed to the final degree, they find that their driver is already there, waiting for them.

The Kabbalistic interpretation: the donkey is our will to receive, our egoism. You and I all have a donkey driver, waiting

for us to enter the spiritual world so he can guide us. But just like the legend, we will discover who the donkey driver really is only when we reach his degree, at the end of our correction.

THE NIGHT OF THE BRIDE

Before the end of correction, there is a special state called “the night of the bride.” The story in *The Zohar* talks about the preparation of the bride for the wedding ceremony. The bride is the collection of all the souls. It is a *Kli* that is ready to bond with the Creator.

When you reach this state, you feel that your *Kli* is prepared, supported, and ready for spiritual unity. The groom is the Creator. It is called “night” because the *Dvekut* (unity) is still not apparent and the Light is still not shining in the vessels. Night means that the vessels still feel darkness, absence of unity.

When the night turns into day, the abundance of the end of correction is promised, but *The Zohar* doesn’t tell us exactly why it is good—only that it is wholeness, Light, and peace.

THE BEGINNING OF THE LAST GENERATION

The writing of *The Tree of Life* by the Ari, marks the beginning of the last phase in the evolution of the souls. The Ari writes that his phase is the last generation. From his time on, the wisdom of Kabbalah begins to emerge from hiding, though it still takes centuries. With him, a new *qualitative* process has begun.

Kabbalist writers can feel that their phase is the last before correction because they know it takes only a little *MAN* (prayer for correction) to reveal everything and put an end to our world’s troubles. There’s just a fraction of an inch missing to make contact. Crossing the gap is up to us, and this is why Kabbalists try to spread their knowledge, so more souls are corrected. They feel we are very close to completing our correction.

THE STUDY OF THE TEN SEFIROT

The words of Rabbi Shimon Bar-Yochai were written in *The Book of Zohar* by his student, Rabbi Aba. The words of the Ari were written by his student, Chaim Vital. But unlike his spiritual ancestors, Rav Yehuda Ashlag, known as Baal HaSulam (Master of the Ladder) for his *Sulam* (ladder) commentary on *The Book of Zohar*, wrote his books by himself.

The “flagship” of his work is his commentary on the writings of the Ari, known as *Talmud Eser Sefirot* (*The Study of the Ten Sefirot*). In six volumes and more than 2,000 pages, Baal HaSulam explains to uneducated souls of the twentieth and twenty-first centuries what the Ari actually meant when he wrote *The Tree of Life*. Baal HaSulam wrote his book specifically to people who want spirituality and nothing else. In his “Introduction to The Study of the Ten Sefirot,” he states that his intended audience is those who ask, “What is the meaning of my life?”

IN A NUTSHELL

- All things in this world are branches of roots that first appear in the spiritual world.
- The Bible is written in the language of the branches, using worldly names and terms to indicate spiritual processes.
- The stories of the Bible and *The Zohar* are not about people—they are about forces that act on souls.
- The book written with our correction in mind is *The Study of the Ten Sefirot* and its author is Baal HaSulam.

WHEN LETTERS AND WORDS ADD UP

JUST THE GIST

- Getting a handle on Hebrew letters, words, and numbers
- The Creator-creation-desire connection
- The way numbers, words, and letters reflect your own correction

The Hebrew language, and the way it is written, is a direct result of communication with the Upper Worlds. The combination of letters and the strokes of ink that make them up are laced with spiritual knowledge.

Also, letters, words, and numbers are usually three separate things, but they are intricately linked in Kabbalah. Understanding their relationship gives greater spiritual meaning to each of them. Each letter and the words that they form have their own spiritual story to tell, so let's begin telling them.

THE TIES BETWEEN LETTERS, WORDS, AND NUMBERS

In Hebrew, each letter corresponds to a number. As a result, any word or name can become a series of numbers. Numbers can be taken one at a time or added together. Its letters are results of spiritual sensations. The direction of the lines and shapes in a letter has spiritual meaning.

As a result, Hebrew letters are also codes for sensations the writer receives from the Creator. When a letter or word is written, the author is giving us his or her conscious perception of the Creator. The Creator is acting on them as they write.

The color in writing is also a clue to the way creation (black ink) works hand in hand with the Creator (white paper). Without both of them, you could not understand the writing or the story of creation and what it means to you.

A MAP OF SPIRITUALITY

The *Torah* is the major text of Judaism and the “Old Testament” in Christianity, as well as a Kabbalah text. Believe it or not, this large book in its original form was recorded as a single word. Later, this single word was divided into more words, which are made of letters.

The letters show all the information that is radiating down from the Creator. There are two basic kinds of lines in Hebrew letters, representing two kinds of Light. The vertical lines stand for the Light of wisdom or pleasure. The horizontal lines stand for the Light of mercy, or correction. (There are also diagonals and circular lines that have specific meanings in each letter, but that’s beyond the scope of this book.)

The codes come from changes in the Light as it develops your *Kli* (desire). The Light expands your desire. When Light enters your *Kli*, it is called *Taamim* (flavors), and when it leaves,

it is called *Nekudot* (dots or points). Memories of Light entering are called *Tagin* (tags), and memories of Light departing are *Otiot* (letters).

All letters start with a dot or point. A complete cycle of a spiritual state contains entrance, departure, memories of the entrance, and the memories of the departure. The fourth and last element creates letters, and the other three are written as tiny symbols *Taamim* (flavors), tags (*Tagin*), and dots (*Nekudot*) above, within, and below the letters respectively.

With correct instruction for reading the *Torah*, Kabbalists can see their past, present, and future states by gazing at these symbols in each of their combinations. But to see that, it is not enough to simply read the text. You must know how to see the codes.

Certain combinations of letters can be used instead of the language of *Sefirot* and *Partzufim* when you describe spiritual actions. Objects and actions shown through letters and their combinations, too, can give a description of the spiritual world.

The key to reading the *Torah* in this way is *The Zohar*. In essence, the book contains commentaries on the five parts of the *Torah* and explains what is concealed in the text of Moses.

The letters represent information about the Creator. More precisely, they describe the individual's experience of the Creator. Kabbalists depict the Creator as white Light, the background of the paper on which letters and words are written. The creature's perceptions of the Creator emphasize different sensations that a person feels while experiencing the Creator, using letters and words. This is why traditional Hebrew writing is made of black letters over a white background.

It turns out that the Hebrew letters are like a map of spirituality, describing all the spiritual desires. The way they connect gives us the *Torah*.

Kabbalearn

There are Emanator and emanated. The Emanator has four elements: Fire, Wind, Water, and Dust, which are the four *Otiot* (letters): *Yod*, *Hey*, *Vav*, *Hey*, which are *Hochma*, *Bina*, *Tifferet*, and *Malchut*. They are also *Taamim*, *Nekudot*, *Tagin*, *Otiot*, and they are *Atzilut*, *Beria*, *Yetzira*, *Assiya*.

—The Holy Ari, *The Tree of Life*

DOTS AND LINES

The dots and lines in Hebrew letters are shapes on the paper, which is blank and void. The paper is the Light, or Creator. The black ink on it is the creation.

A vertical line (|) means that the Light descends from

Above—from the Creator toward creation. A horizontal line (—) means the Creator is relating to all existence (like the sweep of a landscape).

The shape of Hebrew letters comes from the combination of *Malchut* (represented by black) and *Bina* (represented by white). The black point is *Malchut*. When the dot connects to the Light, it expresses the way it receives the Light through all kinds of forms and shapes. The shapes show the different ways creation (black ink) reacts to the Creator (the white background).

Each letter signifies combinations of forces. Their structure and how letters are pronounced express qualities of the Creator. You express the spiritual qualities you achieve through the shapes.

BLACK ON WHITE

Hebrew letters also represent *Kelim* (vessels). *The Zohar* tells us that the letters appeared one by one before the Creator and asked to be selected to serve Him in creating the universe. Put simply, the letters asked to receive his blessing and give it to creation, just as a *Kli* (vessel) receives water and pours it out to sustain life.

White symbolizes Light (giving) and black symbolizes darkness (receiving). For this reason, the properties of the Creator are absolutely white, symbolized by the white paper. Black is creation,

symbolized by the black ink. Alone, the Creator and creation cannot be understood at all. Together, they make letters and symbols that can be read and understood.

Think of it this way: without a creation, can we really call the Creator, "Creator"? To be a Creator, He needs to create. This Creator-creation dualism is the basis for all that exists. You can talk about something only from the perspective of the being that perceives that something.

The shapes of the letters symbolize a connection and bond between you and the Creator. They are not just black lines; they form clear shapes because they represent corrected relationships between creation and Creator.

This bond is built on contrast and collision. As creatures, you and I don't experience Light unless it collides with something. To sense Light, it must be stopped by something, such as the retina in your eye. The surface of an object (sound, light, or any kind of wave) collides with our perception. This stops it from continuing and allows us to sense it.

Because the paper is like the Light, it must be stopped with black lines (letters). That allows a person to sense the Light and learn from it. The black lines of the letters are seen as a barrier to the Light. This is because black (the color) is the opposite of Light. The Light strikes against the creature's *Masach*; it wants to enter the *Kli* and give delight. Instead of deflecting it, the

Off Course

Even if we take the subtlest word that can be used ... the word "Upper Light" or even "Simple Light," it is still borrowed and lent from the light of the sun, or candlelight, or a light of contentment one feels upon resolving some great doubt. ...How can we use them in context of the spiritual and Godly? ... It is particularly so where one needs to find some rationale in these words to help one in the negotiation customary in the research of the wisdom. Here one must be very strict and accurate using definitive descriptions ...

—Baal HaSulam,

"The Essence of the Wisdom of Kabbalah"

struggle between the rejecting *Masach* and the striking Light creates a powerful bond. This collision is what the relationship between the Light and letters is based on.

In this way, the black lines of the letters limit the Light or restrict it. When the Light “hits” a line, it is forced to stop, and then the *Kli* can study it. It turns out that the only way to learn anything about the Creator is by stopping His Light—restricting it and studying it. Ironically, it is precisely when you contain the Creator that you learn how to be as free as Him. In a sense, the *Masach* is like a prism: the rejection of Light breaks it into the elements that comprise it, and this allows us, creatures, to study it and decide how much of each “color” we want to use.

LETTERS AND WORLDS

Hebrew consists of 22 letters. The first nine letters, *Aleph* through *Tet*, represent the lower part of *Bina*. The next nine, *Yod* through *Tzadik*, stand for *Zeir Anpin*, and the last four, *Kof* through *Tav*, stand for *Malchut*, the creature itself.

On Course

You study the qualities of the Creator in the same way you determine an object's color. When you see a red ball, it means that the ball reflected the red color, and that's why we can see it. Similarly, when you reject (reflect) a fragment of the Creator's Light, you know exactly what you rejected. This is why the only way you can know the Creator is by first rejecting all His Light. Then you can decide what you want to do with it.

In addition to the “regular” letters, there are five final letters in Hebrew. If you look at the illustration on the following page, you will see that they are not new letters; they bear the same names as letters in the original 22. There is a good reason for that.

The original 22 letters are all in the world of *Atzilut*, the highest of the five worlds introduced in Chapter 7. Because the original 22 letters are in the world closest to the Creator, they describe a corrected connection between creation and Creator. The five final letters

א = Aleph	1	י = Yod	10	ק = Kof	100
ב = Bet	2	כ = Chaf	20	ר = Reish	200
ג = Gimel	3	ל = Lamed	30	ש = Shin	300
ד = Dalet	4	מ = Mem	40	ת = Tav	400
ה = Hey	5	נ = Nun	50		
ו = Vav	6	ס = Samech	60		
ז = Zayin	7	ע = Ain	70		
ח = Het	8	פ = Peh	80		
ט = Tet	9	צ = Tzadik	90		

Final Letters:

ך = Final Chaf	20
ם = Final Mem	40
ן = Final Nun	50
ף = Final Peh	80
ץ = Final Tzadik	90

The Hebrew Letters and Their Numeric Values

make contact between the corrected state (World of *Atzilut*) and the worlds of the uncorrected state, *Beria*, *Yetzira*, *Assiya* (*BYA*). Because there are five phases in creation, there must be five final forms of contact between *Atzilut* and *BYA*, hence the five final letters.

The letter *Bet* is the first letter in the *Torah* and the second letter in the Hebrew alphabet. It's the first in the *Torah* because *Bet* stands for the corrected connection between *Bina* and *Malchut*, which is called *Beracha* (blessing). A blessing is received when *Malchut* (creation, us) can connect to *Bina* (Creator). We can connect to Him *only* when we want to be like Him, and that's what is meant by "corrected connection." When *Malchut* asks to be like *Bina*—that is, when you and I want to be like the Creator—it is called "a corrected connection" blessing (*Beracha*).

ONES, TENS, HUNDREDS, AND BEYOND

Letters are divided into three numerical categories: ones, tens, and hundreds:

- The *Bina* level corresponds to ones: *Aleph*, *Bet*, *Gimel*, *Dalet*, *Hey*, *Vav*, *Zayin*, *Het*, *Tet*. These are the nine (1–9) *Sefirot* of *Bina*.
- The *ZA* level corresponds to tens: *Yod*, *Chaf*, *Lamed*, *Mem*, *Nun*, *Samech*, *Ayin*, *Peh*, *Tzadik*. These are the nine (10–90) *Sefirot* of *ZA*.
- The *Malchut* level corresponds to hundreds: *Kof*, *Reish*, *Shin*, *Tav*. These are the four (100–400) *Sefirot* of *Malchut*.

The obvious question comes to mind: what about the numbers above 400? The answer is that Hebrew is a spiritual language, not a math language. Everything about it represents spiritual states, and no more numbers are required to describe the structure of the world of *Atzilut* (the “home” of the letters). In other words, with these 22 letters, you can describe *everything* from the beginning of creation to infinity.

So what happens when you want to express complicated numbers, like 248? You use three letters: *Reish* (200), *Mem* (40), and *Het* (8). And what if you want to write a higher number than 400, like 756? You use more than three letters: *Tav* (400) + *Shin* (300) + *Nun* (50) + *Vav* (6) = 756.

Of course, we can reach this number using many different combinations, but it is important to remember that if two words add up to the same number, they are spiritual synonyms and have the same spiritual meaning.

Now here’s how this discussion of numbers relates to the evolution of spiritual desire explained in Kabbalah. When numbers represent the size of your *Kli*, the bigger they are, the more Light enters them. If there are only ones in your desire,

that is, if you have a small desire, a small amount of Light is present. If tens are added and your desire grows, more Light enters. If hundreds are added and your desire reaches its peak, the Light symbolized by the letters fills your spiritual *Kelim*.

Things get tricky, however, as Kabbalah has an exception. Numbers can also represent the Light, not just the desires. In this case, ones (small Lights) are in *Malchut*, tens are in *ZA*, and hundreds are in *Bina*. This is because of an inverse relation between Light and *Kli* (desire). This may be confusing, but it is because the greatest Light of the Creator enters your *Kli* only when you activate your lowest desires.

Here are the numerical values of each level expressed in terms of the Light they represent and the level at which they fill your vessels:

- ***Bina***—Light (100); *Kli* (1)
- ***ZA***—Light (10); *Kli* (10)
- ***Malchut***—Light (1); *Kli* (100)

IF GOD = NATURE, AND NATURE = DESIRE, THEN...

Here's something else to think about: if you sum up the numeric values of the letters in the words *HaTeva* (the nature), they add up to 86. Next, if you sum up the value of the letters in the word *Elokim* (God), they add up to 86. And finally, if you sum up the value of the letters in the word *Kos* (cup), they add up to—you guessed it—86. That shows the equivalence of God, cup, and nature in Kabbalah, which we noted in Chapter 2. Here's how it works.

We've already said that if two words add up to the same number, they have the same spiritual meaning. Therefore, the statement that Kabbalah is making here is very interesting (if a little complex):

- Nature and Creator are one and the same. The fact that we don't see them as such doesn't make it less true, just like the fact that we can't see bacteria with a naked eye doesn't stop them from affecting our bodies.
- A cup, in Kabbalah, stands for a *Kli*, meaning a desire to receive. Therefore, nature and our *Kli* are the same. Here, too, the fact that we don't sense it doesn't mean it isn't true, but the fact that they have the same value means that we have the opportunity to correct (change) our desires to match nature's structure.
- When we match our desires (*Kli*) with those of nature, we will also match them with the Creator (because nature and the Creator are synonyms). In simple words, when we equalize our *Kli* with nature, we will discover the Creator.

In terms of an equation, it looks like this: If $A = B$, and $B = C$, then $A = C$.

THE BUILDING-BLOCKS OF LIFE

The name of all these “games” Kabbalists play with letters and numbers is *Gematria*. Ancient Kabbalists perfected *Gematria* to a point that they could (and did) describe the whole of creation and the Creator-creation relationship using *Gematria*, as the following sections demonstrate.

Gematria is an expression of the state of a *Kli* that discovers the Creator. The *Kli* discovers Him within its own structure. The *Kli* is made of 10 *Sefirot*. These 10 *Sefirot* are divided into the tip of the letter *Yod*, and then the letters *Yod*, *Hey*, *Vav*, and *Hey* again. This four-letter structure is known as the *tetragrammaton* (in Greek), *HaVaYaH* (in Hebrew), and *Yaweh* or *JHVH* or *Jehovah* (in English).

The first *Sefira*, *Keter*, belongs to the tip of the *Yod*; the second *Sefira*, *Hochma*, to the *Yod*; and the third *Sefira*, *Bina*, to *Hey*. The next *Sefira*, *ZA*, contains six internal *Sefirot*: *Hesed*, *Gevura*, *Tifferet*, *Netzah*, *Hod*, and *Yesod*. All those *Sefirot* are contained in the letter *Vav*. And the last *Hey* is *Malchut*, which is also the last *Sefira*.

Tidbits

We already said that there is no bad in Kabbalah; it's all a question of how we relate to the situations we're in. Pharaoh is considered an evil force. But Kabbalists inverted the Hebrew letters of the name Pharaoh, and found that it really meant *Oref H* (the posterior side of the Creator). In other words Pharaoh is really the Creator, harshly goading you to progress to spirituality because you are not pushing yourself hard enough. If you push harder, you will find that Pharaoh is really your friend.

As a matter of fact, *HaVaYaH* isn't just the structure of one *Kli*; it is the structure of every *Kli*—and of everything there is, was, or will be. It is the building-blocks of existence. Like a hologram, however small you cut it, you'll always get a structure of 10 complete *Sefirot*, contained in *HaVaYaH*. This is also why these four letters comprise the word *havayah* (a generic term that in Hebrew means existence, being).

ABRAHAM TOOK IT PERSONALLY (AND SO CAN YOU)

It's important to understand that there is a relationship between the letters, *Sefirot*, and the *Kli* because, in Kabbalah, a person's name stands for a person's spiritual *Kli*. Abraham, for instance, stands for a very specific kind of relationship between the Creator and creation. Abraham stands for a soul that made a certain kind of correction. When he was born, his name was Abram. But after he made the correction of turning his desires from egoistic to altruistic, he changed his name to Abraham. The added *h* stands for adding the *Hey* of *Bina* to his name, the Creator's quality of altruism. This indicates that he has risen to that spiritual level.

DISCOVER YOUR ROOT, DISCOVER YOUR NAME

All the letters exist within us and nowhere else. They are spiritual *Kelim*, experiences that each of us has felt and will feel again, as we develop in spirituality.

The *Kelim* perceive the Creator and when we learn the true meaning of the letters, we find within us all the lines, dots, and circles that symbolize our connection with the spiritual world. Every person has something called “the root of the soul.” As we climb the spiritual ladder and discover the letters, words, and numbers within us, we gradually come closer to our true selves.

The Creator created only one creation. This creation was divided into 600,000 pieces, which then broke into the billions of souls we have in the world today. As we climb the ladder, we realize that we are one body, and we find our place in it. This is the root of our soul.

Each root has its own name, and when we reach the root of our soul, we discover our place in the system of creation and who we really are. And we describe it with a name that is just our own.

IN A NUTSHELL

- Hebrew letters describe a Kabbalist’s relationship with the Creator.
- Hebrew letters carry numeric values. Similar numeric values indicate spiritual similarity, and identical values indicate spiritual synonymy.
- God = nature, and nature = desire (*Kli*). Hence, God = desire.
- As you climb the spiritual ladder, you discover the letters within you according to your spiritual state. This is how you discover your own true name.

BODY AND SOUL

JUST THE GIST

- The Kabbalah explanation of reincarnation
- The meaning of the body in the eyes of the soul
- The longest dinner party
- Soul Q&A's

Reincarnation is usually thought of as an event where a person lives and dies several times. But the notion of being reborn into a different identity is not the only form of reincarnation. In Kabbalah, a reincarnation is every time you make a step in spiritual growth. For example, if you correct yourself intensely, you can experience many lifetimes in a matter of minutes. On the other hand, when you go on without correcting yourself, you may never experience a single incarnation. This is how reincarnation is defined according to Kabbalah.

YOUR BODY—A CONTAINER FOR YOUR SOUL

Kabbalah recognizes people by spiritual characteristics. When Kabbalistic texts say a new person is created, they're not talking about arms and legs. They mean aims and desires. When the quality of your desires is transformed for the better, you would say, from a Kabbalistic perspective, that a new person, a more spiritual you, was created. The body is merely a biological container. Organs, for example, can be replaced through transplants. Kabbalah sees the body as a vehicle through which your soul can work. To correct your soul, your body must be present and active.

Spiritual Sparks

This life is not eternal ... for itself; it is rather like a sweat of life.

—Baal HaSulam, "Introduction to The Tree of Life"

Souls have only one desire while existing within physical bodies. They wish to return to their source, the level they were at prior to their descent. Your physical

body, with its desire to receive, pulls the souls back into this world. Your desire to be spiritual helps your soul return to its spiritual roots.

RECYCLE UNTIL YOU'RE RIPE AND READY

Souls come down to earth and then up again in a cycle. They join bodies, return to the Source—another Kabbalistic term for the Creator—and repeat the process. They keep returning until they complete their correction.

You experience many incarnations, or new souls, in several ways. It can be through a troubling experience that makes you ready to question your purpose or seek new answers. It can be through Kabbalah study. When you are ripe for spirituality, for example, you may discover *A Guide to the Hidden Wisdom of*

Kabbalah. This book can be the beginning of your conscious incarnations.

The incarnations that flow through you then return to the Source. Your “task” on Earth is to go through as many incarnations as possible so that your soul finds ultimate correction.

WHY THE REPEATED APPEARANCES?

Reincarnation is the repeated appearances of souls within the bodies in this world. This occurs until each soul reaches its individual end of correction.

Complete correction is a multilevel undertaking—a soul may not complete its task and return to the Root in a single cycle. On its next entry, because of the progress you may have made, it reincarnates further along on the spiritual trail.

The Creator wants you to be filled with spiritual pleasure, to be complete. That is possible only through great desire. Only with a corrected desire can you reach the spiritual world.

We’ve already determined that a desire is considered corrected only when it has the right intention. This is not automatic; the “right intention” is acquired through study. This is a process, not an instant fix.

Today, by the way, the study itself isn’t enough to get you to spirituality. You need a group of friends to support you, and you need to try to help others reach correction. This way you bond with their desire for spirituality (point in the heart), even when they are still unaware of it.

THE SEED OF THE SOUL

The purpose of your soul’s correction is more than just for its own needs. The picture is much bigger! The correction of your soul affects all souls because all souls are connected. When you first come into this world, your soul is called a “point.” Recall that we are all parts of one spiritual vessel or *Kli*, called

Adam ha Rishon (the First Man). Recall also that the soul of *Adam ha Rishon* was split into 600,000 souls, which come down to this world. This world occupies a large number of bodies, each with its own soul.

If you do not build a spiritual *Kli* out of this point while living here in this world, your soul returns to its root in *Adam ha Rishon*. It is like a seed that did not evolve, unconscious and lifeless. The goal is for you to return to the exact same root in *Adam ha Rishon* from which you came down.

WHERE AND WHAT IS A SOUL?

Location, as you and I think of it in time and space, does not exist in the Upper Worlds. What happens when the soul goes back to the Source? Actually, the soul returns to its root in *Adam ha Rishon*. “Root of the soul” is the place of the soul in the system of *Adam ha Rishon*. This is a spiritual location that is very close to the Source, the Creator. You cannot find this spiritual location with the five physical senses.

A soul is a spiritual force. In Kabbalah, souls are arranged in a pyramid, stacked according to their desires. Earthly desires are at the bottom, and spiritual desires are at the very top.

At the base of the pyramid are many souls with small de-

On Course

Kabbalists distinguish between what they call “the animate soul” and “a soul.” The animate soul is what we’re all born with: character, likes and dislikes, emotions, and tendencies. But when Kabbalists speak of a soul, they are referring to something quite different: a will to receive, corrected with a *Masach* that enables it to receive in order to give to the Creator.

sires (food, sex, sleep, and shelter). These are animal-like desires. The next level has those that desire wealth, something beyond basic needs. At the next level is the desire to control others, through power. Even fewer souls are here. Next is knowledge—these souls are

engaged in discovery. At the top of the pyramid are the few souls that strive for attainment of the spiritual world. All these levels make up the pyramid.

This pyramid is also within you. You have the potential to act in all these ways. The pressure of the lower worlds must give way to the purest desire, the infinite desire for truth. Here you prefer to put effort and energy into increasing your desire for spirituality, rather than into earthly, egoistic desires. You don't have to do it all yourself—it is achieved through study, with groups, and through spreading the knowledge to others.

A SHIRT FOR THE SOUL

The body is the cover for the soul. You can think of your body as a shirt for the soul. Your soul connects you to all the other souls and to the Upper World, and this connection remains after your biological body is gone.

If you cultivate your altruism and think more about the unity of humanity and less about yourself, your efforts become a spiritual *Kli*. A *Kli* perceives the spiritual world, beyond your five senses. You feel the Upper Force in your soul, not in your body.

When spiritual perception is attained, you do not feel the physical life and death. This is because your soul is in the spiritual realm. By focusing on the development of your soul, you can

Spiritual Sparks

In our world, there are no new souls the way bodies are renewed, but only a certain amount of souls that incarnate on the wheel of transformation of the form, because each time they clothe a new body and a new generation.

Therefore, with regard to the souls, all generations since the beginning of Creation to the end of correction are as one generation that has extended its life over several thousand years, until it developed and became corrected as it should be. And the fact that in the meantime each has changed its body several thousand times is completely irrelevant, because the essence of the body's self, called "the soul," did not suffer at all by these changes.

—Baal HaSulam, "The Peace"

transcend biological (earthly) influences to the point that you are unaffected by them.

Rav Baruch Ashlag used to say that, to a Kabbalist, death and rebirth are as meaningless as taking your dirty shirt off and putting on a clean one. When his father, Rav Yehuda Ashlag, was asked where he wanted to be buried, he muttered in blatant indifference: “I couldn’t care less where you dump my bag of bones.”

NO TIME IN SPIRITUALITY

Time is our perception of the changes we experience as our soul develops. When your thoughts and desires change slowly, you feel that time is “crawling.” When they change quickly, you feel that time is “flying.”

Time is sensed only when we experience change. When your spiritual void is full, there are no changes. This is why it is said that there is no time in spirituality.

SOME Q&A’s

All the souls on Earth have been here on previous occasions. It is like a dinner party where the guests keep going in and out. Each time they return, they learn something, leave, then bring it to the next party, which is held in a new house (person). All their experiences from past parties are applied to their present visit. Also, each time a soul visits, its desires strengthen and evolve because of its development in yesterday’s party (life).

WHO WAS I?

Baal HaSulam writes in the article “The Freedom” that each generation contains the same souls as the previous generation, but in new bodies. The soul that is joined with your body could have been in a variety of persons, but there is no way to know because your soul is focused only on the present.

All of your memories are connected to one another. Everything you have ever experienced remains within you; nothing ever disappears. However, you cannot use it like a filing cabinet and pull out specific thoughts. Past memories appear on their own, in order to understand the present.

All souls are connected within the common soul of *Adam ha Rishon*. Because they are connected, memory is shared. Like a drop of water in a bucket, souls don't keep their earthly identities.

CAN WE IDENTIFY PEOPLE FROM THE PAST?

Yes we can. People's souls return to Earth. Kabbalists see the same soul reincarnated in Adam, Abraham, Moses, Rabbi Shimon, the Ari, and Yehuda Ashlag (all Kabbalist writers). It is as if the same soul covers itself in a contemporary Kabbalist each time it appears in our world. This allows each generation to get to know Kabbalah in its unique way.

However, Baal HaSulam was not born with the soul of the Ari. He was born and lived in his body as everyone does, with his own spiritual potential. In addition, though, he received the potential, the Light, the quality of bestowal called "Ari." This is the spiritual force of the Ari. He then continued developing it with the method of Kabbalah.

You, too, can try to have all the souls joined within you. In that state, you will have other souls beyond your own. One of these additional souls will be called "the donkey driver," the soul that helps steer you along your spiritual path, which we mentioned in Chapter 9.

On Course

When Kabbalah speaks of a person being in this world, it is referring to a person's will to receive in a state of concealment from the Creator, with no intention to give to Him. In other words, before we cross the barrier we are in this world. After we cross it we are in the next world.

CAN I REINCARNATE AS AN ANIMAL?

As far as souls are concerned, Kabbalah distinguishes between animals and humans. Animals are animate, while humans are both animate and spiritual. As humans, you and I have the ability to give back to the Creator.

The book, *Together Forever*, tells the story of a lonely magician who creates things to keep him company. He creates a dog,

Spiritual Sparks

Reincarnation occurs in all the objects of the tangible reality, and each object, in its own way, lives eternal life.

—Baal HaSulam, “The Peace”

which is very loyal and good to care for, but the dog cannot reciprocate the specific care the magician gave.

Being able to reciprocate to the Creator is the gift of

humanity. Therefore, reincarnation and evolution of souls deals only with human bodies.

HOW MANY TIMES DO I HAVE TO REINCARNATE?

In his article, “Which Degree Should One Achieve?” Rav Baruch Ashlag—Yehuda Ashlag’s son and a great Kabbalist in his own right—asks, “What is the degree one should achieve, so he will not have to reincarnate?” He answers that the soul continues to come back until it completes its correction and returns to its root. You don’t have to correct anybody else, but you should try to give them the means to do it. If you’ve corrected yourself entirely, and did all you could for others, you will not continue to reincarnate.

The number of souls in the universal system is 600,000, and it is unchanging. There are 6,000 years given for all souls to reach attainment. As of 2009, there are 231 years left.

How long the souls continue to come back to Earth depends on how much progress is made toward their correction. You can think of it as your soul being on a journey, and

you are the trail guide. If you lead the hikers (souls) to their goal, they won't have to come back next year to Trail Life, or they will come back stronger and ready to progress more. Any progress is good progress.

The goal is to bring all the souls to the top of the spiritual mountain, where complete correction is achieved. They become more corrected as they climb. Until all souls reach the top, they will keep returning to our earthly bodies so we can help them climb. Studying Kabbalah speeds up the progress.

Tidbits

A famous Chinese proverb says "Give a man a fish and you feed him for a day. Teach a man to fish and you feed him for a lifetime." This is similar to what we do when we help others to learn the knowledge of Kabbalah, which helps correct their souls.

CAN I REMEMBER PAST LIVES?

You cannot sense past lives with your bodily senses. You have gone through phases in your life: baby, youth, teenager—all leading to you today. "You today" cannot see "you last week" because "you today" covered it up. All the phases are there, but you can see only the present state, "you today."

The most advanced point in your soul's past is your starting point in this life. If you achieve a high degree of spirituality, the next person that joins with your soul will have an even better starting point.

WHAT REMAINS OF PAST LIVES?

A previous life can also affect this one, usually positively. By simply existing, there is already some correction. This is because in every life cycle, we experience suffering. In that, we are no different from the rest of creation. This suffering leads to spiritual progress as we ask questions and seek change.

We can accelerate correction by making an effort to be spiritual. When we do, we feel pain consciously, and discover its cause.

Off Course

You do not want to progress through pain. This is not the way. Pain only leads you to thinking you're a martyr, making you proud and drives you away from the need to become like the Creator. The only good thing about pain is that it indicates that you are not in the right direction.

We then decide to change our intentions in order to get rid of the pain. This is how the past affects the present. This is important because there is a need to constantly renew the links between the souls. This fixes their connections in place and makes

the unification of all the souls possible. This is called the correction of the collective soul.

HOW CAN I POSITIVELY AFFECT MY NEXT LIFE?

The closer you bring your soul to the Creator in this life, the better off it will be in the next. With the correction you achieve, your soul will be “further along” spiritually in its next visit.

The closeness you achieve with the Creator in this life makes your soul’s “return journey” easier in the next life because your soul is further along on the path to complete correction. People head toward correction either intentionally or by way of pain.

Everything you acquire (attributes, qualities, knowledge) in this world passes away except the changes in your soul. It’s like a seed that will grow in the next rainy season. When the plant dies, its seed falls and sprouts another bud. What remains is the plant’s energy. The spiritual energy that remains in us is a soul.

Kabbalah teaches that the ultimate measure of your life is in the difference between the soul you received at birth and the soul that you have now. This measures the extent to which you have spiritually elevated your soul.

IN A NUTSHELL

- Souls continue returning to Earth until they achieve complete correction.
- Reincarnation includes only the human soul, not the animate soul (character, likes and dislikes, emotions, and tendencies).
- The spiritual progress you've made in previous lives is your starting point in this one.
- If you want to know how you were, first discover who you *are* by discovering the root of your soul.
- You cannot change your species or even your gender between life cycles.

BECOMING A KABBALAH STUDENT

JUST THE GIST

- The shift from learning in dimly lit rooms to online open, free teaching
- Know which books to read for your spiritual progress
- Find the right teacher and learn how make the most of the study
- The power and practice of Kabbalah groups
- Kabbalah study online

The study of Kabbalah has changed dramatically over the years, and not just in the opening up of the once mysterious and secretive wisdom to the masses. Kabbalists are connected in the most technologically advanced and media-savvy ways. As a result, the books, teachers, and groups required to get the most out of Kabbalah study are easy to find today.

Today, you can go right to the authentic source texts of Kabbalah from your own home and in your own language. You can even find a teacher and a virtual group when you get to that

point in your spiritual development. In this chapter, you learn how to use the study and live Kabbalah the modern way while staying true to the wisdom in the traditional texts.

EVERYDAY IS AN OPEN-HOUSE DAY

From the early Kabbalists, Adam and Abraham, through the writing of *The Zohar* and up to the Middle Ages, Kabbalah was primarily passed through word of mouth. Kabbalists primarily shared their spiritual experiences with each other as they discovered the Upper Worlds.

At the same time, Kabbalists prohibited the study of Kabbalah from people who had not been prepared for it. They treated their students cautiously, to ensure that they studied in the proper manner, and they intentionally limited the number of students.

Although we have made the point that Kabbalah study is open to all, we have not related how important the study of Kabbalah is today. To Kabbalists, in fact, wide dissemination of the wisdom of Kabbalah is a *must*. That, as much as anything else, accounts for the tremendous interest in Kabbalah today.

The reason why dissemination is a *must* is that Kabbalah is based on the need for all souls to correct, and places great importance on the collective. The greater the number of people studying Kabbalah, the greater the overall effect. When masses of people study, the quantity itself improves the quality of the study. Studying in the evening for half an hour or an hour is enough because millions, if not billions, of other people are doing the same. All of these people become spiritually connected, even if they don't feel it, and the mass has its effect on the entire world. Even tiny changes in millions of people produce great changes for the better in society as a whole (more on that in Part 3).

Spiritual Sparks

One learns in the place one's heart wishes.

—Ancient Kabbalists' maxim

As a result, today's method of Kabbalah study appeals to a mass audience, not just to a few ultra-dedicated students studying in the wee hours of the morning.

STUDYING WITH THE RIGHT INTENTION

Only two things are necessary to study Kabbalah correctly: a desire to improve your life and to find its meaning, and the right instruction. The right instruction is achieved by three means:

- The right books
- The right group
- The right teacher

A person who studies Kabbalah the right way, progresses without forcing him or herself. There can be no coercion in spirituality.

The aim of the study is to discover the connection between that student and what is written in the books. This is why Kabbalists wrote what they experienced and achieved. It is not to impart knowledge of how reality is built and functions, as in science. The purpose of Kabbalah texts is to create an understanding, assimilation, and sensation of the spiritual truth.

If a person approaches the texts in order to gain spirituality, the text becomes a source of Light, a correcting force. But if he or she approaches the texts in order to gain knowledge, the text will provide information, but nothing more. The measure of inner demand determines the measure of strength one gleans and the pace of one's correction.

If a person studies in the right manner, he or she crosses the barrier between this world and the spiritual world, entering a place of inner revelation. If the student does not

achieve this, it is a sign of insufficient effort in either quality or quantity. It is not a question of the amount of study, but of the focus of the student's intentions. Of course, crossing the barrier doesn't happen overnight, but it should be the end result of the study.

Advancement in Kabbalah does not mean avoiding pleasures so that one's desire will not be kindled. Also, it is a mistake to believe that by being courteous and well-mannered you will achieve spirituality. Correction does not come from false pretence of correction.

NO COERCION IN SPIRITUALITY

The Kabbalah way absolutely rejects any form of coercion. If you experience any external pressure from others or any obligatory rules or regulations, it is a sign that the action is intended not by the Upper Worlds, but by someone's ego.

The study of Kabbalah enhances our desire for spirituality, bringing us to prefer it to materialism. Then, in relation to our spirituality, we clarify our desires. As a result, we either retreat from material things or not, depending on our attraction to or necessity for them.

On Course

Material desires appear successively, not all at once. If you felt a desire for money, it doesn't mean you won't feel it again tomorrow. You probably will, and even stronger. But the fact that desire for money appeared, disappeared, and reappeared is a sign you are working correctly, that the reappearance is a surfacing of a new *Reshimo*, from a new degree. It's a sign you completed your work on the previous degree and thus cleared the way for a new degree of desire to appear.

NO HERMITS

Kabbalah has changed not only in who can or cannot study, but also in its practices. As you'll recall from Chapter 5, some of the original Kabbalists, such as Rabbi Shimon Bar-Yochai, were essentially hermits. But even that was not because they chose

that lifestyle; they were persecuted or forbidden to engage in Kabbalah. The Ari, for instance, was a rich merchant when he arrived as a Kabbalist in Safed. Kings David and Solomon also were neither poor nor hermits, as we all know, but they were great Kabbalists.

Rav Ashlag, for instance, believed in manual labor. When he came to Israel from Poland, he brought with him machines for processing leather. He wanted to start a leather factory, work during the day, and study at night. He also brought up his children in this manner. When his eldest son, Baruch Ashlag—who succeeded him—turned 18, Rav Ashlag sent him to work as a construction worker. He, too, would work during the day and study at night.

Yet there is a contradiction that anyone who follows Kabbalah faces. On one hand, earthly life is meaningless, and a serious Kabbalist ascribes no importance to it. On the other hand, it is a Kabbalah imperative to live within the flesh and feel it.

Tidbits

Why is Kabbalah traditionally studied before dawn, in the wee hours?

When people sleep, the local "thought-field" is quieter, and there are fewer disturbances resulting from people's thoughts. Kabbalists also study in these hours because they have to work in the morning, just like everybody else. A true Kabbalist is forbidden to retire from worldly life.

Many teachings and religions in the world talk about abstinence. The more one diminishes one's corporal pleasures and the more one secludes oneself, the better it is for one's spiritual ascent. Kabbalah suggests the opposite: leave mundane and earthly

things as they are, stop messing with your body and its habits, and deal only with the point in the heart. Rather than working to diminish your desires, Kabbalah suggests that you leave them alone, because restraining *physical* desires will not correct your *soul*.

THE TRINITY OF KABBALAH

Correction does not happen without study. For this reason, the Creator sent us the Trinity of Kabbalah: books, teachers, and groups of study companions. The rest of this chapter describes each of those tools of Kabbalah study—books, teachers, and groups—and you should work with them.

BOOKS: OUR SPIRITUAL TOUR GUIDES

Spirituality can be attained by studying the right books, meaning books written by a true Kabbalist. Reading the right books is like being led by a tour guide in a foreign country. With the aid of the guidebook, the traveler becomes oriented and better understands his new whereabouts.

We need books that are suited to our souls, books by the Kabbalists closest to our generation. This is because different souls descend in each generation, and each generation requires different teaching methods.

There is a special force in books of Kabbalah: any person who studies those books under the right guidance can attain the spiritual degree of the author. Students who follow the ways expounded by the writers of authentic books of wisdom can bond with the spiritual. By delving into a text of wisdom, they gradually rise to the spiritual level of the author.

Whenever you read the works of the righteous, you bond directly with them through the Surrounding Light (see Appendix). You are then enlightened, and your vessels of reception are purified and imbued with the spirit of the Creator.

Living in our world, we absorb various pictures and impressions. Because of that, we can all describe what we feel. But Kabbalah books describe experiences of a person who feels the spiritual world. They describe the writer's feelings of a world that most of us do not sense.

That is why Kabbalah books and Kabbalist writers are unique. A Kabbalist teacher is not only a person who feels the Upper World, but also a person who can describe emotions in a clear language so that others can feel and understand them. By studying books of Kabbalists, we nurture the missing senses within us, the ones that must be developed in order to feel the Upper World.

TEXTS IN THE LANGUAGE OF THE BRANCHES

There are many books of Kabbalah, written in various styles and forms, and written by Kabbalists in various degrees of attainment. This is why it is crucial that we know which books to study.

When a Kabbalist grasps spirituality, he feels it experientially, just as we experience the occurrences and incidences of this physical world with our physical senses and feelings. Because the objects in the spiritual realm are totally dissimilar from the objects of our physical world, it is difficult for Kabbalists to find the right words.

It happens in our world, too. We are not always able to explain our feelings, and at times we end up using vague words and gestures.

On Course

Don't become frustrated if what seemed clear yesterday becomes abstruse the next day. Depending on your mood and spiritual state when you are reading, the text can appear full of deep meaning or be entirely meaningless. Don't give up if the text appears to be vague, strange, or illogical. Kabbalah is studied to help you to see and to perceive, not for the sake of gaining technical knowledge.

This is why Kabbalah books are difficult to understand. Until we have a connection to spirituality, what we read is just words, without any understanding of the meaning behind them.

Remember, too, that Kabbalah uses the language of the branches, described in Chapter 9. The spiritual world and our own world are parallel. There is not an object, phenomenon,

or force in this world that is not a consequence of the Upper World. Therefore, Kabbalists use names taken from our world in order to describe spiritual objects, for these objects are the roots of our world.

An ordinary person, as yet without a “spiritual screen,” relates to books of Kabbalah as a kind of fairytale stories that happen in our world. But one who is already a Kabbalist is not confused by the words because he knows precisely which “branch” they stem from and which consequence in our world correlates to the “root” in the spiritual world.

Off Course

One of the most common mistakes beginners make is ascribing spiritual forces to branches, instead of focusing on the roots. For example, because we have a spiritual state called “water” (*Hassadim*, mercy), we also have water in our world. But that doesn't mean that if you drink water you become merciful.

BOOKS THAT HELP YOU REACH YOUR GOAL

Not all books, even authentic ones, have the same ability to promote you toward the spiritual world. Also, because Kabbalah has picked up many associations in its development (most of which are inaccurate, as described in Chapter 1), it is important to review the books you read with a thoughtful approach. Today, the same rule of caution applies to Internet sites.

To make this easy, most dedicated Kabbalists recommend abandoning all books on the subject of Kabbalah other than *The Zohar*, the writings of the Ari, and the writings of Baal HaSulam. That may be the best approach for the serious, lifelong Kabbalah student. For most anyone else, however, look for introductory books based on those writings, such as those listed in the Appendix. This book provides an introduction to the root sources so that readers can make enlightened choices for further study.

FINDING THE RIGHT TEACHER

But what is the correct way of studying and how do you make sure you study properly? Students who study correctly work on themselves and their inner beings, and they are guided by a teacher.

Experiencing the Creator requires a teacher. The teacher guides the student as the student rises to the spiritual level of the teacher and bonds with the teacher's wisdom and thoughts.

In fact, today, a single individual cannot enter the spiritual world. This would be like one individual beginning to develop the whole of physics or chemistry and then developing the technology to apply them. It would be similar to living like a Neanderthal without using all that humanity has achieved so far. In other words, it would be senseless.

That's why a beginning student needs a teacher who has already attained the Upper World and can show the student how to attain each step toward the Upper World. The teacher ushers the student into spirituality, but the student will fully understand the connection with the teacher only after attaining the Upper World independently.

Unity with the teacher occurs in the preliminary stages because both are on the worldly level. But unity with the Creator is possible only when you experience the Upper World. The teacher is your leader in that journey. Contact and unity with a teacher leads to contact and unity with the Creator.

LET YOUR HEART DECIDE

How do you find such a teacher? Kabbalah has a very simple answer: Study where your heart desires, where you feel you belong. The right teacher doesn't persuade you to think this or that. Kabbalah is a wisdom you learn of your own free will and choice. Spiritual development can take place in no other way.

When you detach yourself from persuasions, from anything external, from your upbringing, and from everything that you have heard in your entire life. When you feel in your heart that you have found a teacher and place of study, you should stay. That is the only valid test, and nothing else matters.

As Rav Baruch Ashlag said, “Criticize and doubt everything. The most important objective is to be freed from prejudice, from education, and from public opinion. Free yourself from anything extraneous and try to absorb the way your nature tells you. That would be the truest, because any education and any external opinion is coercion.”

Spiritual Sparks

When I asked my teacher, Rav Baruch Ashlag, if he could prove he was the right teacher, Ashlag replied: “I have no answer for you. It is something you will have to answer in your own heart. You should believe no one. I do encourage you to go and look elsewhere, and if you find a better place for you, that’s where you should stay.”

Off Course

The teacher’s role in Kabbalah is very subtle. The teacher must direct the student away from himself, and toward the Creator. There is no way a person can avoid the attention and admiration students shower on a teacher, unless the teacher has already transcended the ego and entered the Upper World. And how do you know your teacher is the right one? Let your heart decide!

GROUP STUDY

All of the great Kabbalists studied in groups. Rabbi Shimon Bar Yochai held a group of students, and so did the Ari. A group is vital in order to progress. It is the primary tool of Kabbalah, and everyone is measured by his contribution to the group.

A person who studies alone can use only one’s own vessel to receive the Light of the Creator. Those who study in a group create a spiritual vessel that consists of all the participants, and everyone enjoys its illumination.

Also, in today’s high-tech world, a group doesn’t have to meet in a physical location. It can be a group of like-minded

people who share a common (spiritual) goal, and they can meet on the Internet. Such a group can be contacted at this e-mail: info@kabbalah.info.

JOINT DESIRES

The group provides strength. Everybody has only a small desire for spirituality. The way to augment the will for spirituality is through joint desires. Several students together stimulate the Light and provide a unified force-field that is stronger as a whole than each individual on his or her own.

The reason is that we are all parts of the same soul (remember Adam?). Mixing the parts together recreates the collective vessel and brings us more Light. This Light affects each person in the group, and this way, all the group members become corrected both individually and as a collective.

A group is like a partnership. You can fall and have nothing left of the previous spiritual state, but the group will continue to exist and hold your desire for you. Your share in the group continues to exist, regardless of your present state.

LETTING THE LIGHT FLOW INTO YOU

Rav Yehuda Ashlag said that you must think of your group members as great (in spirituality). This will help you absorb spiritual powers from them when you are in personal decline. This is similar to the law of connected vessels, by which water always flows to the lowest place. If you think of the Light, or spiritual power, as water, then all you need to do is feel lower than your friends. The Light in them will flow into you, and as a result, more Light will flow into them from Above.

This creates continuous progress of the entire group. Although the group members may change roles according to their personal spiritual states, the group's progression is endless, and always toward enhanced spirituality.

How do you make the most of group study? This is done by a very simple means: you absorb from the group their appreciation for the goal of unification with the Creator. This is what the verse “Love thy friend as thyself” relates to; this is what makes them your friends.

If you listen to them, and if you appreciate your friends in the group, you will absorb the message of the greatness of the Creator, the greatness of bestowal. Then you can really become a group of Kabbalists.

On Course

The information in this book builds the foundations for your journey toward perceiving the spiritual forces of the Upper Worlds. Yet it is only the beginning. At later stages in your ascent, progress can be made only with the help of a teacher and a group, either in person or online.

LONG DISTANCE KABBALAH STUDY

Kabbalists are standing by ... it's almost like a call center these days. The general public cannot have a teacher standing next to each of them, but teachers are available to anyone, anywhere.

Advanced communications connect groups with teachers. Everything develops according to what is needed for the final correction; this is why communication has developed in the way it has. Social networks, e-learning, cheap and fast Internet, all those make Kabbalah study accessible to everyone.

Baal HaSulam, Rav Kook, and other great Kabbalists noted that the teaching must be suitable for today's world. The Internet offers an ideal way to study Kabbalah. You can watch live lessons or download them at your convenience. You can partake in online worldwide meetings and conferences of students, and a few times a year you can travel to regional gatherings of friends to enhance your connection with them. The Bnei Baruch site, for example, www.kab.info, offers all these online possibilities at no cost.

IN A NUTSHELL

- Kabbalah is not only open for everyone today, but disseminating it is the call of the hour.
- There is no coercion in spirituality; study where your heart desires.
- The Trinity of Kabbalah is the (right) books, the (right) teacher, and the (right) group.
- Today, learning with a virtual group is just as effective as learning with physical group.

LET THE MUSIC SPEAK

JUST THE GIST

- When words fail, music will prevail
- The two modes (and moods) of Kabbalistic music
- Music and the World to Come

Kabbalists have always written music as part of their spiritual expression. It's an inseparable part of their spirituality and stems directly from their spiritual degree.

Because there are no words in the spiritual Upper Worlds, music fills in where words fail. For a music-sensitive student, music can be just as beneficial and powerful as any book—at times, even more so.

NOT BY WORDS ALONE

Starting to perceive the Upper World, a Kabbalist enters a different dimension. An entire world is revealed before you in its full grandeur and wealth. It is something that does not exist in this world.

The Kabbalist perceives an entirely different picture: forces that bring our world into action and souls that are not attached to bodies. Past, present, and future stand before the Kabbalist in the present. The Kabbalist experiences all of this and lives fulfilled with the eternal, perfect sensation, a feeling that encompasses the whole universe.

Spiritual Sparks

When the lower ones begin their lives by song... the Upper Ones grant them more power so the lower ones will attain the Upper Light of Wisdom that has become revealed in ZON of the World of Atzilut and in the angels preceding it. This way, the lower ones increase the powers and luminescence of the wisdom in the Upper Realms.

—Rav Yehuda Ashlag,

The Sulam Commentary on The Zohar

Words are not enough to express this deep emotional experience. How do you describe something that can't be seen or touched? The worlds of Kabbalah have to be "felt" by the Kabbalist.

When words fail, music can provide insights beyond our common understand-

ing. Music has the power to "move" us and to make us sense things that are beyond words.

MUSIC—TOUCHES WHERE TEXTS CAN NOT

Kabbalists use texts to explain to others the levels of spirituality they have reached. In their writings, however, Kabbalists only advise us on how to attain an impression, sensation, and discovery of this reality. They write about the kind of actions that you must perform within, with your desires, screens, and *Reshimot*—with everything inside your soul.

The books say, in effect, "Perform certain actions and you will discover certain things." They do not, however, describe what we will *feel* because it is impossible to convey the feeling in words.

It is similar to offering a new food to someone and saying, "Try it, and you'll see what it's like!" Whether it is bitter or sweet,

you only hint at what the person is going to sense or how he will experience the sensation. Yet the sensation itself is experienced only by the person receiving the offer, not by anyone else.

This is why it is difficult for Kabbalists to convey what they feel, what they face, what is revealed before them: what the concealed world is like. Only one medium somehow expresses the impressions and delight of a person before whom the Upper World has revealed itself, and that is music. This is why, in addition to writing articles and very deep, intricate material, Kabbalists also write melodies and songs. It is one more way to express the sensations of a Kabbalist in a more concise manner, from heart to heart, through melodies, without words, so that these melodies would permeate our hearts and change us in some way, somehow tuning us into perceiving the Upper World.

Off Course

Even music cannot convey impressions of the Upper World precisely, for we do not have the same *Kelim* (vessels), the same sensory organs, or the same inner attributes as Kabbalists who attain and sense the Upper Worlds. Music gives us an impression of the Upper Worlds, a similar sensation yet a weak duplicate.

BATHING IN LIGHT

Kabbalah music expresses the spiritual states of the Kabbalist. The melodies are composed to describe the experience of two opposing stages in spirituality. The first is agony, a result of drifting away from the Creator. The feeling of drifting away from the Creator produces sad music, expressed by a prayer appealing for closeness. The second emotion is delight, felt as a result of getting closer to the Creator. This feeling of closeness to the Creator produces joyous music, expressed by a thanksgiving prayer. If you listen to Kabbalah music, you hear and feel the two distinct moods in the music.

The two moods together express the Kabbalist's relationship to and unification with the Creator. Even though the melody

may bring one to tears, one loves to hear it because the melody expresses distress that has been dealt with and has been resolved in a good way. In Kabbalah, it is called “sweetening of judgments.”

The music bathes the listener in a wondrous Light. We do not need to know anything about it before listening to it because it is wordless, yet its effect on our hearts is direct and swift. Hearing it over and over again is a special experience.

If you feel the music, you won’t need to imagine the shapes in spiritual worlds, described in books. These shapes exist nowhere but within you and, therefore, mislead you. What is so special about the music is that everyone can understand it, even if we have not reached the composer’s spiritual level. Listening to music composed by Kabbalists gives us all the opportunity to experience their spiritual sentiments.

MELODIES OF THE WORLD TO COME

The melodies in Kabbalah could be described as melodies of the “World to Come,” as they serve the purpose of bringing the Upper Worlds to this world. Singing evokes blessings from Above so that they manifest in all lower worlds.

In the words of Rabbi Elazar Azikri (1533–1600), “Those who aspire shall sing praises unto spiritual heights, unto the Upper Ones and lower ones, fastening all the worlds with the tie of faith.” (In Kabbalah, “faith” means attainment of the Creator.)

TUNING YOUR INNER INSTRUMENT

To understand what the Kabbalistic composer wants to express in the melody, you merely need to listen, and your understanding works automatically. By listening to the melodies of a Kabbalist, you have the opportunity to be affected to a certain degree by their impressions of the spiritual worlds.

There is a soul in each of us, and the soul of a Kabbalist resembles a musical instrument that plays properly and feels properly, similar to King David's biblical violin. This is no ordinary violin, but the inner *Kli* (vessel/instrument) of a Kabbalist's soul. In it, the Kabbalist feels reality in a certain way and can express it in melodies.

Spiritual Sparks

When a person acquires the quality of *Bina*, mercy, he or she feels calm and serene. Rav Baruch Ashlag expressed it in his gentle melody to the words from Psalms (116), "For thou hast delivered my soul."

SPIRITUAL HARMONY

You can use Kabbalist tunes to connect to the spiritual roots from which they were written without having to work hard. Just relax and listen to the music.

Yet there is information in the notes themselves. The notes in Kabbalah are not random or "free form." Their harmony is built on Kabbalistic rules and notes are chosen according to the way a soul is built. They are a way to climb the ladder. You (the listener) feel them penetrating deep within your soul, unobstructed. This happens because of the direct connection between your soul and the roots of the notes.

Go back to Chapter 10 and think of the spiritual nature of Hebrew letters and their representation of numbers. The most important thing in Kabbalistic music is not the notes themselves, but all the fine nuances that exist between them.

Just to give you a sense of it, in Chapter 10 we said that there are *Taamim* (flavors), *Nekudot* (dots under, within, and above the letters), *Tagin* (tags on top of the letters), and *Otiot* (letters). These represent nuances formed by the impression from the Light—impressions, for instance, of *Reshimot* leaving and reentering the spiritual vessel.

It is the same with melodies. Musicians who understand how to play Kabbalistic melodies are few and far between. The differ-

Spiritual Sparks

Singing is the call of the soul, ... the song, to which the Upper and the lower ones in all the worlds awaken. The song is like a spring from Above, a repose of the Upper One, the Divine mercy. The song adorns the Holy Supernal Name, *Malchut*, the receptacle of the Creator. And this is why it is the Holy of Holies.

—Rav Yehuda Ashlag

The Sulam Commentary on The Zohar

ence between one who plays nicely and one who plays *correctly* lies in the extent to which one understands where the important things are. What's most important lies not in the sounds, but in the tiniest symbols, in how the sound begins and ends.

I had a wonderful student who played the violin.

"I'm ready to play only on the condition that you will hold my hand," he would tell me. And he was right—Kabbalah music is about conveying the right feeling, not the accurate note.

IN A NUTSHELL

- Music is another medium for Kabbalists to express their spiritual states
- Kabbalah music lets you *feel* what the books express in text.
- Kabbalistic songs express the interplay of two moods: anguish over moving away from the Creator and joy over moving toward the Creator.
- In the end, all you need to do is relax, listen to the music, and try to be absorbed in the emotions the Kabbalists reveal in their music.

III

Kabbalah Today

You know what Kabbalah is and how it got started, but how does it relate to today's world? In this section we'll explore the reasons for the global crises we are facing

from the Kabbalistic point of view.

You may be asking, “What’s in it for me?” Well, we’ll also discuss your role in the big picture and how you can help heal yourself, your close environment, and the world at large.

Remember, we are all one soul. What happens to me affects you directly, so you have the ability to impact someone on the other side of the world. This final section will help you understand how to use Kabbalah to make the world a better place.

IN THE GLOBAL ERA

JUST THE GIST

- How we affect each other
- United we stand, united we fall
- At the edge of the desire-sequence
- The potential (and danger) in great desires
- How selfish can we be

It is hardly news that the world is in a crisis. But the worst part is not that we don't feel as happy or safe today as we did yesterday; the worst part is the sensation that we have lost control. It seems more and more difficult to make our tomorrows brighter. And that's the real crisis.

A physicians' proverb says that an accurate diagnosis is half the cure; the entire healing process depends on it. In this chapter, we explore the roots of our crisis and the way to cure it. This chapter introduces the concepts, and the following chapters discuss in more detail the ideas presented here and their practical implementation.

OUR BIG BLUE MARBLE

When miners dig coal in China, the air in California gets polluted. When emissions from American cars dissolve in the air, the ice in Greenland melts. And when the ice in Greenland melts, the sea level rises and The Netherlands sinks.

It boils down to this: we are all part of the global village, and our actions affect one another.

THROUGH THICK AND THROUGH THIN

Of all the values you and I hold dear, the one we probably cherish most is privacy. We'd all like to have a piece of private property.

Back in Chapter 5, we said that there are five levels of desire: inanimate, vegetative, animate, human, and spiritual. We

Spiritual Sparks

This entire reality, Upper and lower, is one ... and was emanated and created by a Single Thought. That Single Thought is the essence of all the operations, the purpose. It is, by itself, the entire perfection, the "One, Unique, and Unified."

—Rav Yehuda Ashlag, *The Study of the Ten Sefirot*

also said that there was once a single soul, called Adam, which broke into myriad fractions, which then dressed in physical bodies in our world. This is why we have so many people on planet Earth.

But no matter how far we feel from one another, we are still that one soul, Adam. If a brain cell is oblivious to a blood cell, it doesn't mean that it can live without it. Without the blood cells bringing food and oxygen to the brain, the brain cells would die—and so would the blood cells. So would we.

Through thick and through thin, united we stand and united we fall because united we are, already.

ASSUMING RESPONSIBILITY

Consider this: A newborn baby is responsible for nothing. How can it be? Because it cannot think about things and process

them, because it cannot understand the world it experiences, a baby cannot be held responsible.

But an older child is already responsible for something, even if it's just to remember to put the sandwich in the lunchbox or to take the dog out at the end of a school day. A youth is already responsible for many more things, and a young adult is expected to take full responsibility for his or her life.

When we grow and have kids, we become responsible for others, too. But what if we were responsible for every single human being on Earth? What if that responsibility was not only to the people alive today, but also to all the people, animals, plants, and minerals that have ever lived since the moment of creation and to all eternity? This is the meaning of spiritual responsibility.

Now, this responsibility may sound like a heavy load, but what if that responsibility was not the result of some mean schoolteacher wishing to torment his students with an assignment they can't perform? What if it were simply the result of love?

We love our children, so responsibility for their well-being is not only natural, but welcome. What if we felt the same kind of love and care that we feel for our children toward the whole world and everything in it—toward all the creatures that ever lived, that are alive today, and that will be alive at any time in the future? That immense love is spiritual bliss. Kabbalah helps us experience this immense love, and make it inherent in our nature.

AS ONE UNIT

Remember how we started? First there was Adam, one soul. Adam was a good soul, wanting only to give to the Creator. But he misjudged his ability to give to the Creator, and that mistake cost him—and, consequently, us—heavily. He broke. His soul shattered into 600,000 pieces, which still today continue to

break, hence the billions of people inhabiting our world. All of them are tiny fragments of the original soul.

The beauty of it is that each of us is both a particular soul and a piece in the puzzle of *Adam ha Rishon*. Within us

Tidbits

Here's the Kabbalistic explanation for the overpopulation on our planet. Our egoism keeps growing and becomes increasingly difficult to correct. The only way to correct it is by "splitting" it to tiny bits. For the egoism to correct, it needs to "dress" in a physical body. Thus, the number of people in the world is the number of fragments of the common soul (Adam) we currently need to correct.

are all the pieces of that first soul, just as every cell in our body contains all the genetic information to create a whole new identical body or a part of a hologram contains the entire image.

But to realize that we are one soul, we have to want to feel this way. This

simple rule runs throughout Kabbalah and spirituality: no coercion. In other words, you don't get what you don't want to get.

The cells in our bodies don't "think" about how they work together. They just function as one unit. We wouldn't make it past the first week of pregnancy if it hadn't been this way. Indeed, biology provides a perfect model for what Kabbalah describes as the common soul.

When a baby grows in its mother's womb, the minute cells begin to differentiate, a beautiful thing happens—they begin to communicate and cooperate with one another. The more differentiated they become, the more they are forced to cooperate. A liver cell can't do what a kidney cell does, so the kidney cleans up the toxins that the liver can't, and the liver creates the new cells that the kidney can't. This way, they are different but cooperating, and every part of the body benefits as a result.

THE TIME OF TOGETHERNESS

Just like our bodies, our souls can work cooperatively. We can live as separate units, just as there are unicellular creatures, but we all know that unicellular creatures are at the low end of nature's pyramid. The creatures at the top of the pyramid are multicellular creatures. Each cell in their bodies performs only one function, and all the cells collaborate to sustain the organism.

Kabbalists of the past attained spirituality on their own because they were unique souls with unique tasks, hence the fantastic nature of their achievements. But it's different today. Now that Kabbalah is open to all and studied by many, it's a safe bet that most of us will attain nothing individually. As a unit, however, we can achieve far more than has ever been achieved before.

For this reason, contemporary Kabbalists stress the importance of dispersing the knowledge of Kabbalah. They want the world to know so that more "cells" will join in the collective work of the soul, the spiritual body.

LITTLE ME IN YOU LITTLE YOU IN ME

There are many offshoots to the fact that we are made of one shattered soul. One of them is that if I correct myself, I also correct my part in you. And vice versa. If you correct yourself, you also correct your "you" in me.

To bring it all down to earth, let's take three separate people as an example: Jack, James, and Mary. One day, Jack begins to feel his point in the heart and begins to correct himself. Jack has a little piece of James and a little piece of Mary within him, and the two others also have little pieces of the others in them. They are "cells" in the same spiritual body, and each cell contains all the genetic information to create a whole body.

When Jack corrects himself, the Jack in James and the Jack in Mary are corrected, too. Of course, the other two don't feel it because they're not Jack. Subconsciously, however, the Jack within them begins to urge the other two to start checking out this new concept of spirituality.

In this way, Jack subconsciously *inspires* them to check it out for themselves. His transformation serves as a model for theirs. This is because the basic structure of every human being is the same. We all have points in the heart, so we don't need to receive them from anyone. We need to merely listen openly and our own point in the heart will open. We've already talked in Chapters 3 and 7 about the importance of the social influence in determining the direction of our growth. If we want to become rich, we have to surround ourselves with people who

Off Course

If we are in an environment of people with a negative approach—to society or to themselves—we will inevitably begin to think like them. The way to make sure we progress in a positive direction is to surround ourselves with people who are on that direction, too.

want money. If we want to become lawyers, we surround ourselves with judges and advocates, and listen to what they say.

We learn more than just techniques by talking to people we want to resemble.

We absorb their *spirit*. Absorbing the spirit is the most important thing in everything we do, and it's the whole difference between success and mediocrity, or even failure.

The same goes with becoming spiritual. The best way to do it is to surround yourself with people who want spirituality. We all have more egoistic desires within us than anything else, and just one tiny speck of spirituality (true altruism)—a point in the heart.

So if many others talk to me about spirituality, I get inspired and think that everyone but me has loads of spirituality. Of

course, it isn't true, but it does have the effect of making me want spirituality much more strongly, thus accelerating my progress. In turn, my progress accelerates others' progress, too, and their bogus spirituality becomes a reality.

SAVING OURSELVES ... AND EVERYTHING ELSE

Today many already realize that man is the only destructive element in nature. The reason for it is that we are not really part of nature. Our bodies belong to the animal kingdom, but our minds don't. Our minds are the reflection of our higher, spiritual self, which is still hidden from us.

Animals don't need to be taught how to behave because their behavior is hard-coded in them, written in their genes before they are born. If we were made of only the animal part in us, we'd be the same. But we're not, and therein lies the problem.

When babies learn to crawl, we must watch so they don't hurt themselves because their bodies can do things that their minds cannot monitor. For the children to avoid trouble, they don't need to develop their bodies further; they need to develop their minds so their minds will know what to do with their bodies.

There is a rule in Kabbalah: "General and particular are equal." It means that what is true for an individual is true for the whole, and vice versa. Just like a single baby, the whole of humanity must develop its mind so that its body—the collective body of humanity—will not harm itself.

Regrettably, we are slow learners. And this is why we are harming every creature and place on Earth, extinguishing its life and exploiting its minerals. In the process, we're also harming ourselves, probably more than we're harming any other creature. Just look at the rate of degenerative diseases today, and you'll see what we're doing to ourselves.

To stop this exploitation, we first have to correct our minds, and our minds can be corrected only if we correct the spiritual element in all of us.

SPIRIT OVER MATTER

In Kabbalah, the most basic rule is called “The higher degree rules.” Spirit is Above matter. There is probably no dispute about that. So to change our world, we have to go to the place that corrupts it, and that place is the human mind.

As long as humans were only sophisticated animals, the world was fine. It was not in danger. But when we began to want to control it, when we started developing our egoism, that’s

Spiritual Sparks

A will in the Upper One is a mandatory law in the lower one.

—Rav Yehuda Ashlag, *The Study of the Ten Sefirot*

when the troubles started, not just for ourselves, but for the world at large.

If we correct our spirits, our bodies will act naturally, in harmony with the whole

of nature, and hence with the Creator. Then we won’t have to worry about saving virtually extinct animals. Nature will do it. After all, it had been doing it for millions of years before we came, and far better than we have ever succeeded.

ON THE DESIRE-SEQUENCE

There is a rule in Kabbalah: “He who is greater than his friend, his desire is greater than him.” It means that if Jack, for instance, has a greater desire than James, Jack’s desire is greater than Jack himself. In other words, in the correction process, we’re always one step behind our own desires.

This is a deliberate process. It isn’t that our desires grow. They only appear one by one, from lighter to heavier. When I finish correcting one desire, the next desire in line appears.

Remember the *Reshimot*? They form the desire-sequence that leads up the spiritual ladder. This is why Jack, who corrected his previous desire, is greater than James, who hasn't corrected this level of desire. But Jack's desire is greater than Jack himself because it is leading him to the next degree. More on that in just a bit.

DESIRES RUNNING RAMPANT

We've already said that desires grow from generation to generation. Our generation has the worst and strongest desire in the history of humankind. Kabbalists graphically demonstrate what they think of this generation with the words, "The face of the generation is as the face of a dog." Desire is running rampant to the point that people simply cannot find satisfaction anywhere—hence the soaring depression and violence rates in today's society.

But people in this generation aren't merely greedier than their parents were. Today, for the first time, there is a desire to know how things really work, to control Creation—to equalize with the Creator! This is a desire of millions of people, too, not just of a select few. More people are not settling for the answers provided by traditional means. They want to find out for themselves, and find out for certain. Taking someone else's word for it just doesn't do it for them any longer. These people need a method to reveal the overall design, and that method is Kabbalah.

TECHNOLOGY BROKE ITS PROMISE

As long as we are not using the method that can satisfy our deepest desire, to know the designer of the world and to learn from Him why He did it and how, we will not be happy. But as we've said before, the more we want, the more we develop our brains to provide us what we want.

Technology isn't going to stop just because we have a new desire. But as long as our technology is not accompanied by the study of the Upper Worlds, it will only make us feel worse. There

isn't anything wrong with technology itself. It's just that it has become imbued with hopes that don't belong there. We think it can make us happier by making our lives faster, easier, more exciting. But all it can really do is show us more easily and more quickly that we are empty inside.

For knowledge to make us happy, it needs to be used for spiritual purposes. When we do that, what we know will open up new sides of itself that will make us see our world in a light we never dreamed existed. *The Upper World isn't a different place; it's a different perspective.*

A GREAT POTENTIAL

In light of what we've just said about growing desires and scientific progress, we can now begin to see our current situation from a spiritual point of view. In the past, people were not as mean and egoistic as they are today.

The gradual emergence of the *Reshimot* accounts for the change. When *Reshimot* of smaller desires appear, they don't seem like such mean desires. Today, however, the last and most egoistic *Reshimot* are appearing.

But this is not a bad thing. It's a lever for greater achievements. If we play our cards right—if we funnel these ferocious desires into the only constructive direction there is, the sky (or shall we say, heaven) is the limit.

WISHING FOR THE KING'S DAUGHTER'S HAND

We can't control which desires surface, but we can control what we do with them once they do. People still want money, power, and knowledge. But people are also getting frustrated and depressed because underneath the surface, the foundation of all those desires is spiritual. People want to control *everything*, they want to know *everything*.

Granted, most of us don't feel those desires. But we have them nonetheless because it's human nature to want *everything*. The only reason that we don't feel them is that we're realistic enough to know we will never have them, so we subconsciously prohibit them from surfacing.

In Kabbalistic terms, this is called "A man does not wish for the King's daughter's hand." Even so, knowing that I can't have the king's daughter doesn't mean that deep down I wouldn't like to. Thus frustration arises.

But the truth is that even if I did have the king's daughter, I wouldn't be satisfied. A desire that great really stems from the spiritual. It can be completely satisfied only through spiritual means.

If we direct these desires toward the root from which every desire and every pleasure comes, then we will experience the satisfaction of these desires immediately after we experience the desire itself. It would be like a never-ending chain of desires and pleasures endlessly linked.

What would we do then? Delightfully ride the wave.

SELFISH TO THE CORE

We don't have to worry about the kind of desires that surface in us. Deep within, we are all potential criminals of the worst kind you can imagine. But that doesn't mean that we have to act on those desires. Most of us don't.

But if we acknowledge those parts of ourselves, if we can begin to realize that we're that selfish, that's a very good start. We can then really start a change in ourselves and in the world around us.

No good thing ever came out of another good thing. Good things always grow out of crises because crises are opportunities for change. It is simple mathematics to see that because the present crisis is the worst, the opportunity for growth and for progress is greater than ever.

HOW TO START THE CHANGE

Now we're left with just one question: "What do I need to do?" That's the beauty of Kabbalah. You don't need *to do* anything, you need *to think*. Every now and again, hook up with Kabbalah, read something about it, watch a lesson on the video, talk about it with friends. That's enough to begin the change.

Nature created us egoists, and nature will change us. But for the change to happen, we need to want it to happen. That's all we need to worry about—wanting to change.

IN A NUTSHELL

- We're all connected and we all effect each other, for better or for worse.
- It is time to grow up and assume responsibility.
- Because we are all interrelated like cells in a body, we can change the whole by changing the parts.
- The desire to know how the world works and to understand the unseen secrets is greater than ever.
- The opportunity for growth and change is greater in this time of crisis.

DIAGNOSIS IS HALF THE CURE

JUST THE GIST

- Where is there free choice and who can make it?
- Nature's basic makeup
- Reality as reflection of our desires
- Are luxuries necessary?

In the last chapter, we presented the ills of society. As we said in Chapter 14, to cure the crisis, we must first diagnose it. This is half the healing. With that in mind, in this chapter we start looking at what we can practically do to find the root of our problem, and how Kabbalah allows us to take personal and societal action. We also review what we said about our perception of reality and show how you can put that information to use. As you'll see, by recognizing the evil in society and, more important, the evil in yourself, you'll be on your way to making the world a better place.

UNDERSTANDING NATURE

As is now quite evident, our world is on the brink of a catastrophe of gargantuan proportions. To understand the origin of the crisis, let's analyze the rudiments of nature itself. We start with the nature of human nature, as viewed from the perspective of Kabbalah.

TO GIVE OR NOT TO GIVE

Of all nature, only human beings relate to others with malicious intentions. No other creature harms, degrades, or exploits other creatures, derives pleasure from the oppression of others, or enjoys another's affliction.

The egoistic use of human desires, with the intention to elevate oneself at the expense of others, leads to a precarious imbalance with the surrounding world. Human egoism is the only destructive force with the ability to destroy nature itself. The danger to the world will persist until we change our egoistic approach to society.

Egoism of a part leads to the death of the whole. Look at it from a biological point of view. If a cell in a living organism begins to relate egoistically to other cells, it becomes cancerous. Such a cell begins to consume surrounding cells, oblivious to them and to the needs of the whole organism. The cell divides and multiplies unrestrainedly and eventually extinguishes the entire body, including itself.

The same applies to human egoism with respect to nature. While developing for itself, detached from the rest of nature and not as an integral part of nature, human egoism leads everything to extinction, including itself.

Cells can exist, develop, and multiply only by interacting as a single whole. This altruistic interaction functions in every being, even in human bodies, save for the human mind. The Creator gave

us the freedom of will to fully perceive the need for altruism and to keep this comprehensive law of nature voluntarily—or not to.

As is well recognized in the media, globalization has compelled us to see the world as an interdependent whole. It may sound trite to say we're all connected, but trite or not, it's true. It's also true that many of the world's ills have developed because of the interconnectedness of societies. So will the solutions. They will come about only through the coexistence of all parts of nature and while each part works to sustain the *entire* system.

It is evident that humankind's problem is to balance each person's excessive desires with nature, to become an integral part of it and to act as a single organism. In Kabbalistic terms, humankind's task is to become altruistic.

NATURE'S BEDROCK

Altruism is defined as care for the wellbeing of one's fellow person. Research of altruism reveals that not only does it exist in nature, it is the very basis for the existence of every living thing. A living organism is one that receives from its environment and gives to it.

Every organism comprises a combination of cells and organs that work together and complement each other in perfect harmony. In this process, the cells are obliged to concede, influence, and help one another. The law of cell and organ integration according to the altruistic principle of "one for all" operates in every living organism.

Conversely, different natural elements, such as plants and animals, consist of different measures of a desire to be filled with power, vitality, and delight. The intensity of this desire creates nature's various levels: inanimate, vegetative, animate, and human.

Kabbalearn

Succinctly speaking, Kabbalistic altruism means working to increase the connectedness, the ties among the parts of the world.

Don't forget that each of the four levels—inanimate, vegetative, animate, and human—exists within each element in nature. Even a rock has a human part to it, as do plants and animals. What determines their outward appearance is the dominant level in them. In humans, the dominant level should be the human level, and because it's the highest, it controls all other levels. So you can see what happens when this level is malfunctioning. In Kabbalah, the human level is that part in us that has free choice. If we can develop a part within us that is totally untouched by calculation of

Tidbits

At the risk of oversimplifying matters we can say this: To correct the world we need only follow Kennedy's advice, but make it more inclusive—Ask not what nature can do for you; ask what you can do for nature.

self-gratification, we will truly be free—from our egos.

By attaining nature's unity under the principle, "one for all," we begin to perceive the uniqueness of humanity and its place in the world. The peculiarity of

humans, compared to the rest of nature, lies in the power and nature of human desires and in their continuous evolution.

Altruism is connectedness for a higher purpose than the individual element in the collective. Human desires are the motivating force that propels and develops civilization. The trick is to use Kabbalah as a way to turn the developing egoistic desires into altruistic desires.

WHAT YOU SEE IS WHO YOU ARE

How do you use Kabbalah to turn egoism into altruism? From a Kabbalistic point of view, the first thing to do is to realize that the corruption and egoism you see in the world around you are reflections of yourself on the inside. Let's see how.

In Chapter 3, we discussed the nature of perception. We said that the five human senses cannot perceive everything and that

Kabbalah develops a sixth sense, or *Kli*, which is the intention to use the desire to receive in order to give to the Creator.

We also showed how the senses perceive not the thing itself, but a personal interpretation of the thing, according to our qualities. On that basis, we suggested that what you perceive is influenced, if not determined, by what you already know, and what you experience is on the inside, not on the outside.

So what you and I see outside, in society, is really a reflection of our internal states, not an external reality. You and I are the society in which we live. As we'll see in the next chapter, the best thing you can do about the maladies of the world is to change yourself.

Before we head in that direction, however, one last look at human desire is necessary to clarify how our evolving desire is not only part of the problem, but also the solution.

Off Course

Correction works only from the inside out. We shouldn't fall into the trap of thinking that by changing our social and ecological environment we will be making any real change. As long as we haven't corrected our egoism, the world cannot truly be a better place.

MORE FOR ME AND LESS FOR YOU

Save for humans, all of nature consumes only what it needs for sustenance. Humans crave more food, more sex, and more physical comfort than they need for their sustenance. This state is especially true in desires that are uniquely human, in the (endless) pursuit of wealth, power, honor, fame, and knowledge.

Desires for things that are necessary for existence are not considered egoistic, but natural because they come as nature's commands. These desires are present in the inanimate, vegetative, and animate, as well as in humans. Only those human desires that exceed what is necessary for existence are egoistic.

In addition to the fact that human desires grow exponentially, they incorporate pleasure from degrading others or seeing others suffer. These desires are unique to the human nature, and they are the real egoism. We experience them through our con-

Spiritual Sparks

If we were not all so interested in ourselves, life would be so uninteresting that none of us would be able to endure it.

—Arthur Schopenhauer

(1788–1860), German philosopher

nections with others, and this is why the only way to correct our desires is to work on them with other people, as discussed in Chapter 11.

Our continuing indulgence in those desires indicates that we have not com-

pleted our evolution. But all desires can be considered altruistic or egoistic, depending on the purpose with which we use them. It turns out that the development of desires yields progress as well as crisis.

THE NECESSITY OF LUXURIES

Open your refrigerator and see what's in there. You'll find food from dozens of countries. And what those countries produce comes to them from dozens of other countries. Look at your clothes, your shoes—they come from all over the world, too.

Do you have to have it all?

The answer is twofold: we don't have to have it all if all we want is to survive. But if we want to have a life that we can call "life," the answer is most definitely "Yes." Moreover, we cannot control the evolution of our desires because they're determined by the *Reshimot*. That means that those of us who already want more than needed to merely survive cannot suppress their desires. Even if we try and succeed for a while, those desires will resurface and probably in a much more unruly manner.

For most of us, having all that we have in our refrigerators, closets, and garages *is a must*, not a luxury. This will be even

more so in the coming years because our desires keep growing. Actually, if you think about the purpose of creation—and remember that the final goal is to acquire the Creator’s mind—then what we want right now seems quite small in comparison.

The bottom line is that our will to receive is too great today for us to settle for providing for our sustenance. We want much more than that. We want cars and planes, we want to see the world. We want to vacation in resorts, we want to watch TV. So we don’t have a choice. The only way to have great pleasures is to have great desires for them.

Now let’s ask another question: What’s wrong with wanting all that? Whom am I hurting by wanting to go to Hawaii for a luxury vacation? The answer is that the one who is hurt most by my desires is me. It’s not that my desires are evil, it’s that they don’t give me true and lasting pleasure. And when they end, I am left twice as empty as before.

The recognition of evil we first mentioned in Chapter 3 is really the recognition that something is *bad for me*. What is not bad for me, I will never define it as evil. After all, every one of us is born completely self-centered and can therefore define something as bad *only* if it is bad for oneself.

So having great desires isn’t bad in and of itself. What’s bad is that when we satisfy them, we don’t feel happy and fulfilled.

Spiritual Sparks

Man’s heart is evil from his youth.

—Genesis, 8:21

But don’t worry, for there is a good reason for all our desires and wants. These desires exist within us whether we are aware of them or not. But their root is much deeper and higher than, say, the beaches of Hawaii, as beautiful as those beaches may be.

WHY “DISGUISED” DESIRES FAIL US

Our desires for material things are rooted in the desire to receive pleasure, installed in us by the Creator back in Phase 1 (as described in Chapter 7): the pleasure of knowing the Creator, of being like Him. This desire is concealed by the chain of *Reshimot* as we climb down the spiritual worlds.

Today we are already climbing up the ladder, re-exposing the *Reshimot* of our desires even if we’re unaware of it. Our decline has brought us to a state of complete detachment from the Creator, and in that sense, our egoism has fulfilled its role. In a world where the Creator is not tangibly sensed, we can freely choose between spirituality and corporeality, without any temptations to choose one way or another, except our own experience.

We explained in Chapter 7 that *Reshimot* are the soul’s unconscious recollections of its past states. Now that we have come to the end of our decline, they are resurfacing in us, and we are experiencing intensifying desires for both material things and for more spiritual fulfillment (hence the spirituality and New Age trends, especially in the developed countries). Because these desires are actually cravings to experience the Creator, “disguised” as desires for other things (sex, wealth, power, etc.), when we provide them those other things, we don’t experience fulfillment.

The trick—and here’s where Kabbalah comes to our aid—is to keep our minds focused on the ultimate goal: the Creator. Desires come and go. But keeping our minds focused on the Creator prevents us from feeling disillusion when the satisfaction of a “disguised” desire fails to fulfill us.

If you work with this in mind, questions such as bad desires or good desires, luxuries and necessities, won’t trouble you. Instead, you’ll be bothered with much higher issues concerning

your relationship with the Creator. This is why Kabbalists say that this world doesn't matter. Fulfillment exists only in spirituality, in your contact with the Creator.

In a sense, "bad" desires are actually good because they show us we haven't completed our work and where we still need to focus our attention on the Creator. When a desire first appears, you don't know that it's a desire for the Creator. You experience it as a desire for something in this world. Only when you strive to focus your attention on the Creator, despite your mundane thoughts, does the true nature of your desire (*Reshimo*) appears. At that point, you will discover that the desire was actually another facet of your desire for the Creator. This is how spiritual work happens on a day to day basis.

A HARMONIOUS PYRAMID

If we continue to focus on the Creator, and not on our own desires, we will eventually discover Him, by becoming like Him. When we become like Him, we discover that the whole of Nature is already like Him, existing in constant giving. Each level gives to the next, and the whole world lives in a harmonious pyramid.

SPIRITUALITY: A UNIQUELY HUMAN DESIRE

As we explained in Chapter 14, it's the law of nature that the highest degree rules over the lower degrees. Plants are higher than rocks, for instance, and you could make a case that plants help break down rocks over time for their own nourishment.

Animals rule over the plant world, and, in turn, humans rule over animals. In a sense, animals live at the expense of the inanimate and the vegetative, just as the vegetative lives at the expense of the inanimate. Each feeds on its lower degrees, but for a higher need than itself.

The higher orders have greater desires and, therefore, power over the lower degrees. Why?

A creature with a less-developed desire is like a baby. When the baby grows, it wants more things because its desire has evolved and can now detect more objects that are desirable. When it becomes an adult, the child becomes a man or a woman, goes to school, attends college, works and makes money, and has a career and family. One rises according to one's desire.

Kabbalearn

An animal feels life much more than a plant. It is alive, it breathes, it moves, and it has all kinds of sensitivities. It recognizes its habitat, its offspring, and its family, its pack. So the greater a creature is, the more it senses its existence, its selfness. That makes it greater and unique.

When desires push us, we become restless and progress. We don't have a choice. So desire is the motivating force for progress, for achievements.

Yet the egoistic desire drives us only to a certain point, until we despair of ever being satisfied and fulfilled this way. This is the journey we described at the beginning, in Chapters 1 and 2. This unsatisfied state forces us to change the method because we all ultimately want fulfillment. In that state, we begin to want spirituality, a uniquely human desire.

The will to receive grows even more. Gradually, as we learn about spirituality, we understand that fulfillment doesn't come only from benefitting ourselves directly, but from benefitting others. And *that* gives us the *real* fulfillment, just as a mother is happiest when her child is happy.

In short, the only way to have great pleasures is to have great desires. Great (unfulfilled) desires lead to emptiness. This, in turn, leads to the recognition of evil—that our desires are bad for us. Recognition of evil can lead to a desire for something entirely

different, on a higher level. That something more is people's unique ability to desire and know the Creator.

THE POINT OF THIS WORLD

How does this desire to be similar to the Creator influence the rest of nature? We never influence anything at the level of this world. In this world, we can come to some decisions only according to what is in us and what we see. There are no actions in our world. Everything we do in our world is only to finally ask, "What is the point of all that?"

There is an animal level in us that wants a home, a family, and everything the body needs. There is a human level in us that wants money, honor, and knowledge. And there is Adam in us, the point in the heart that has a drive to be like the Creator. And this is the point of all that.

Precisely when one has a drive to be like the Creator, one changes. All other degrees can't change themselves in any way. They can't do anything. They simply exist the way they do. Only beings with a point in the heart have free choice. The free choice appears in the point in the heart. When the free choice appears, if we use it correctly, we become similar to the Creator.

This is really the only choice we have: to be or not to be similar to the Creator. Because only humans have points in the heart, only humans can have free choice, and only humans can change.

Correction begins when a person realizes that his or her egoistic nature is both a source of evil and the engine of change. It is a very personal and powerful experience, but it invariably brings one to want to change, to move toward altruism and away from egoism.

IN A NUTSHELL

- Humans are the only creatures with the choice to give or not to give.
- If we can develop the part within us that is totally untouched by calculation of self-gratification we will truly be free—from our egos.
- Reality reflects who we are. When it seems corrupt, it's because we are corrupt.
- The purpose of the existence of this world is to bring us to ask, “What’s it all for?”

CORRECTION STARTS WITH ME

JUST THE GIST

- How He built the perfect world for correction
- What correction depends on (hint: it has to do with bonding)
- Why complete correction requires complete corruption
- The long and short ways to correction

It's easy to look at the world's problems and say, "There's nothing I can do" There *is* something you and I can do.

Up to this point, we have been learning the basics of Kabbalah and that the ego, or egoism, is our problem. The last two chapters focus on the way to correct our egoism. Naturally, to succeed in correcting the world, we have to first correct ourselves, which is the topic of this chapter.

DISCOVERING THE UNIFIED STRUCTURE

As we've said throughout this book, Kabbalah provides a method by which you see that what happens inside you is how you experience the world outside you. We have also pointed out the interconnectedness of everything in creation. Tying these two is the key to correction.

At the end of the day, the wisdom of Kabbalah is very simple: there is an infinite desire to give, which created an infinite desire to receive. Because the desire to receive is infinite, it wants to receive its own Creator. The whole "story" of creation describes our attempts to realize that this is really how things are. As long as we feel separated from others, we have to work on how to experience this unified structure of desires. But when we are corrected, we will know that we are all one creation, and then correcting ourselves and correcting society are one and the same. So let's start breaking down the correction process into pieces we can work with.

LIVING IN A CREATORLESS BOAT

What you do affects the whole, and vice versa. A Kabbalah story from Rabbi Shimon Bar Yochai perfectly brings home the point. One of two people in a boat suddenly began to drill a hole in the bottom. His friend asked, "Why are you drilling?" The person drilling replied, "What business is it of yours? I am drilling under me, not under you."

Because all humankind is connected into one system, the irresponsible egoists subject themselves and all the others to suffering. It is the transformation activated by Kabbalah that makes us see the irresponsible egoists in ourselves and transform them into responsible adults, altruists in Kabbalistic terms.

Think back to Chapter 3 and remember that the Creator created only one soul, *Adam ha Rishon*. Then, in Chapter 8, we

learned that he fell and his soul split into 600,000 parts. We've been trying to put them back together ever since. But for Adam to become equal to the Creator, he has to do something that will make him equal to the Creator. He must engage in giving.

Adam (you and I) is in a bind. If he gives because the Creator compels him to, it is not considered that *he* is giving, but that the Creator is forcing him to do it. To bring Adam to a state where he wants to give because the quality of giving is, in itself, of the highest value, without any thought of himself, the Creator must be concealed.

We have to feel as though we live in a "Creatorless" world, without guard and government from Above. We have to feel as though we alone make all the decisions and draw all the conclusions, including the conclusion that the quality of giving is the most worthy quality in reality. We are given the concealment of the Creator and the sensation that we are in contact with other people. Because the Creator (quality of giving) is hidden, we are egoistic and hate them, and they hate us. But at the same time, we are dependent on them, and they are dependent on us. This is precisely what globalization has been showing us so clearly in recent years.

So how do we reconcile our attitude toward society, where on one hand we need others and on the other we hate them and want to exploit them?

The Creator has put us between two forces, and we have a chance to see how we will choose. We can freely build ourselves as someone who gives to society, Above our nature, and without any consideration of ourselves, or we can choose to remain as egoistic as we are today.

Spiritual Sparks

When man is converted to loving others, he is in direct adhesion, which is equivalence of form with the Maker, and along with it man passes from his narrow world, full of pain and impediments, to an eternal world of bestowal to the Lord and to the people.

—Baal HaSulam,

"The Essence of Religion and Its Purpose"

By choosing to give above self-interest we make ourselves similar to the Creator. To the extent that we do it, the Creator opens up to us. He doesn't have to be hidden anymore because we have become like Him.

SALVATION IN BONDING OF EGOISTS

By the way, this explains why Adam fell. We had to first be created as a single creature and then be separated into egoistic, distanced, and detached individuals because this is the only way for us to see our complete oppositeness from the Creator.

There are many, many others like us around. The one soul of Adam divided into a multitude of souls (or bodies) to give each of us a chance to determine his or her attitude and choose whether he or she wants to be similar to the Creator.

The original soul was very pure when the Creator created it, with very small desires. But to receive all the pleasures that the Creator wants to give, a person must have an exaggerated, infinite desire to receive. The original soul had it, but unconsciously. These desires had to be made conscious and felt.

In addition, the creature had to feel that these desires are egoistic, which required that the creature be broken or divided, for a number of reasons.

First, it is impossible to correct a powerful will to receive if there is only one person. The Creator split Adam so that each person could correct the little egoism within. Even more, Adam split to have other people with whom to work. You and I need to bond with other egoistic people just like us in order to become similar to the Creator.

Finally, in a state of depravity, we can acknowledge the pettiness, limited nature, and hopelessness of our egoistic nature. We may then develop a desire to unite in order to transform our nature into the opposite, altruistic nature.

Now that you know the Kabbalistic explanation of Adam's story, what do you do? Others are treating you the way you are treating them because they are reflections of your attitude to the world. Because we try to exploit the world and treat it badly, we think that that's the way the world is treating us. The "scenario" of reality in our brain is negative, so reality seems negative to us. This naturally makes our world seem threatening and unsafe.

In that state, the only way to restore security and confidence is to unanimously agree to correct our egoistic desires. This is why we are discovering that simply to exist, we need each other. Moreover, we need to be treated well by everyone or we will not be able to escape the threat of destruction.

When we realize that we have no choice but to treat each other well, we will decide that we *have* to love our fellow

beings and we will ask for this power from Above. This power will come from the Creator, from the Upper Light, and we will reach correction. Therein lies the inherent optimism of Kabbalah.

On Course

Kabbalah's statement that we are one interconnected soul isn't a philosophical statement; it places the responsibility for correction squarely in our laps. There is no correction to the world and to ourselves—on any level—without our active participation in mind, heart, and action.

A CHAIN OF SOULS

So we're all sharing life, just like cells in a body, where each cell depends on the life of the whole organism. If the other souls think about you, you will live. If they don't think about you, you will die. That law is the condition for spiritual, as well as physical life.

Today we are considered spiritually dead; the souls we have today are called "animate souls." The animate soul refers to our lives in this world, in a state of detachment from the Creator. Everything we feel and experience in this life, as long as we don't acquire a screen and develop the first spiritual *Kli*, is considered part of the animate soul. It exists for as long as we exist in this

world, and disappears when we die. But these are far from the soul that Kabbalists refer to when they write about souls in *The Zohar* and other books. To have such a soul, we have to first decide that we want our soul, that we want eternal life, and that we want to be like the Creator.

Rav Yehuda Ashlag writes that all people throughout history are actually one long chain of souls. To see and experience this oneness of humanity, you must have an eternal soul that is connected to the eternal, to the Creator. That's the kind of soul that Kabbalists are talking about.

Now you see why your personal correction is so tightly connected to everybody else's correction. All souls are linked as one.

But here it's our own responsibility to choose. We have to decide that we want our souls, and we have to build our souls by ourselves, along with other souls.

In the language of Kabbalah, we say that souls are connected and integrated in a single body. For each soul to provide all the souls with what they need, all souls have to understand one another and realize that they are integrated in the others' desires. In other words, in your soul, you have to be incorporated with all the other desires, of all people, so you can provide them

Off Course

In Kabbalah, there is a difference between what people *want* and what they *need*. What they want is what their egos tell them they want. What they need is a desire for spirituality because this is a desire for giving, the only lasting desire that can be fulfilled endlessly. By having a desire for spirituality, you feel eternal satisfaction because you sense both the desire and its satisfaction simultaneously.

with what they want. Each cell in the body does just that; it feels what the body requires of it.

On a personal level, you must know what others need from you and provide what they need. In this way, you become like a complete body. You contain the

Desire of others within you because of your love for them, and *you* want what *they* need.

When you work with others in that way, you feel that you, personally, have grown tremendously. Then you can give them what they need, and you become one unique and unified great creature, standing opposite the Creator.

THROUGH *HIS* EYES

When you want to give others what they need, you have become like the Creator. When you give someone else what he or she needs, you instill a part of yourself in the other person. As the other person receives, it begins to build in the other the understanding that giving to others is good, valuable, and—most importantly—pleasurable. In time, the giver begins to feel that it is not the giving to others that is pleasurable but the giving itself, the state of being a giver.

If you think about it for a moment, you'll see that nothing, even in our physical world, is created without giving. How can creatures be born without their parents' giving? Newborns are born because their parents love them and want to give to them, even before they come into existence.

This brings home one point: if this world exists, it means that its Creator loves it. If we, too, want to love our world, we have to learn to see it through His eyes, beyond our self-centered egos. If you want to give people what they need, you begin to see the world through the Creator's eyes, and thus, gradually, achieve the purpose of creation: acquiring the Creator's mind.

When you give because giving has merit in your eyes, without any direct or indirect benefits from the giving, it's considered that your actions are of your own free will. The giving is not for yourself, but for the sake of giving.

Of course, no act goes unrewarded because, as we've just explained, the Creator *wants* to give to us. But the reward for liking to give is seemingly detached from the giving itself. It's the revelation of the giver, the Creator. In other words, the reward for acting like the Creator is discovering the Creator and why He does what

Off Course

Love thy friend, or neighbor, as thyself, taught by the great Kabbalist Rabbi Akiva, is a maxim that virtually all religions and teachings have adopted. But this is a very dangerous maxim if lived without its final goal—reaching the Creator. Baal HaSulam writes that this is exactly what happened with Russia's communism. It was doomed to fail because it used nature's law of altruism without its final purpose: reaching the Creator through equivalence of form with Him.

He does. By that you achieve the final correction, and the purpose of your creation.

The key to the whole process is a shift in thought and awareness. You need not change *anything* in the whole world except your *own* attitude to all the other souls, all the other people. This is why the saying "Love thy friend as thyself" is

enough to correct the whole world. There is no other way to influence and change the world.

MY EGOISM IS MY OWN BANE

In the previous chapter we said that egoism is the engine of change. The greater your desires, the more evolved you are because when you want more, you can also receive more. You can achieve more because your will to receive drives you and gives you the strength to get what you want. Such a person is stronger because of his stronger willpower.

Because desires are egoistic by nature, they are initially ill-willed. In the end, that's bad for you, too. If you care only for yourself, you become detached from others and then can't fulfill yourself. The sensation of self-fulfillment depends on the existence of others. Thus, if I'm an egoist, I can't connect to others, and if I can't connect to others, I can't enjoy. My egoism has become my own bane. This leaves me poor, deficient and

suffering. Because I have a big will to receive, I'm constantly chasing pleasures, yet I'm constantly empty.

This is the state that, as we have said, leads to a spiritual crisis. You realize that you can't go on living like that and understand that you have to change something in your life. Your point in the heart awakens, and in that state, all the evil in you can be turned into good.

ALL GROWN UP

As a result, the great desire leads to a choice that is, really, no choice. If we're so dependent on others, we have to care for them and watch over them, even if we hate them.

To survive and correct, we must tend to those we hate. If we don't, we will suffer.

So what should we do? Become true grownups. If we're that connected, we're also that responsible for one another. Just as grownups take responsibility for everything around them—their environment, their children, their employees, their friends, their cities and towns and countries. Everything and everyone. The Creator wouldn't want it any other way. It's His plan.

On Course

What greater pleasure is there for parents than to see their children grow up to become mature and successful adults? Similarly, the purpose for which the Creator created us is to be like Him. As a result, the goal of our lives in this world is to learn the Creator's ways of giving, learn His thoughts, and become like Him.

TWO WAYS UP

According to the Creator's plan, the entire universe must reach the state of correction, and the time allocated for correction is limited. *The Zohar* indicates that the correction must begin its final stages from the end of the 20th century. From this time on, humanity will be urged to correct by intensifying sufferings—read the news, and you'll see a fair case of that.

Recognizing the purpose of creation and knowing the method of correction will enable you to approach the goal consciously. This is the key, and it's faster than the suffering that will otherwise catch up with us from behind. Instead of suffering, we have the opportunity to feel fulfillment and inspiration even while still on the path of correction.

Remember from Chapter 7 how Kabbalah tells of a time frame for the final correction? The path to personal correction may take a while, but it will happen sooner or later. Plus, every soul must go through the process.

None of your experiences in life disappear. They are stored within your desire, and desires are eternal; they pass from one generation to another, from one incarnation to the next.

The next time you are born, as described in Chapter 11, your desire will retain the record of everything you did with regard to the Creator.

This is how the *Reshimot* play their role. Everything that you did inside your egoistical desire is stored in a “box,” which eventually gives you the “recognition of evil.” And until this box is filled completely, and until you correct all of your evil, you will continue to come to this world.

Next time you show up in this world, this “box” will contain what you have gained in your current round. The small steps you make accumulate and eventually yield results. Each step ultimately leads to spiritual elevation, but you get to experience the road as pleasurable and exciting or as painful and agonizing. You have a choice in the matter, and the last section in this chapter will explain how.

TAKE THE SHORT WAY, IT'S QUICK AND EASY

You can advance toward the realization that egoism is the root of evil through a long path of suffering or through a much shorter and delightful path of correction. Moreover, the path of

suffering is not a path, merely the length of time needed for the realization that you need to march on the short path.

Yet as soon as a sufficient measure of suffering has been accumulated, you realize that there is greater profit in correction than in suffering, and you work to change. Instead of treading the long path, there is a short and easy path to correction.

Both paths are the same, but on the short path there are no phases of suffering, only constant progress. On the long path, however, there is suffering almost every step of the way.

The wisdom of Kabbalah is a tour guide to the short path. It tells you of all the states and helps you through them easily, with gentle encouragement.

You can acquire knowledge about the structure of the world, its causality and purpose *before* you are met with affliction. Through this knowledge, you accelerate the realization that egoism is bad and avoid the need to realize the evil in egoism under the threat of annihilation.

Although it seems that we are free to do as we please, in truth, we follow the commandments of our genes and adhere to the influence of the social environment. Those influences and commandments determine all our values, showing us how profitable it is to be powerful and prosperous.

We work hard all of our short lives only to win society's recognition of how successfully we keep its values. At the end of the day, we do not live for ourselves at all, but strain to find grace in the eyes of our children, our kin, our acquaintances, and society in general.

Clearly, succeeding in solving the crisis depends upon changing the values of society. That's the topic of the next chapter.

IN A NUTSHELL

- The Creator created a “Creatorless” boat, and we must keep it afloat.
- Only if we, egoists, unite we will survive.
- The Creator created the world with love. To be like the Creator means to love the world the way He loves it, to see it through His eyes.
- There are two ways to progress to spirituality: quickly and pleasantly, using Kabbalah, or slowly and painfully, without Kabbalah.

ALL TOGETHER NOW

JUST THE GIST

- How one little correction can make a huge difference
- The power of social values
- Where is Babel's broken tower?
- The benefits of true altruism

Kabbalah contains both personal and social aspects. As we discussed in the last chapter, we are all parts of the same collective soul. This chapter explains how the personal corrections presented in the last chapter flow through our connections to society. In the end, the individual correction we described in Chapter 16 is complete only when it contains a reciprocal connection with the entire humanity.

THE HEIGHT OF CREATION

Think back to Chapter 15, where we said that the source of all the suffering in the world is our oppositeness from the rest of nature. All other parts of nature—still, vegetative, and animate—follow nature's commandments instinctively and definitively.

Only human behavior places us in contrast to the still, vegetative, and animate practice.

Because humanity is the height of nature's creation, all other parts of nature depend on us. Through our correction, all parts of nature, the entire universe, will rise to its initial, perfect level, in complete unity with the Creator.

A DOMINO EFFECT

As we have said, the Creator treats all of us as a single, united being. We have tried to achieve our goals egoistically, but today we are discovering that our problems will be solved only collectively and altruistically.

The more conscious we become of our egoism, the more we will want to use the method of Kabbalah to change our nature to altruism. We did not do it when Kabbalah first appeared, but we can do it now because now we know we need it.

The past 5,000 years of human evolution have been a process of trying one method, examining the pleasures it provides, exhausting it, and leaving it for another. Methods came and went, and we have grown more prosperous, but not happier.

Now that the method of Kabbalah has appeared in force, aimed to correct the highest level of egoism, we no longer have to tread the path of disillusionment. We can simply correct our worst egoism through Kabbalah, and all other corrections will follow like a domino effect. During this correction, we can feel fulfillment, inspiration, and joy.

To review a little of the history presented in Chapters 5 and 6, *The Book of Zohar* states that starting from the end of the twentieth century, humanity will reach the maximum level of egoism and, at the same time, the maximum spiritual impoverishment in it. At that point, humanity will need a new method in order to survive.

Then, according to *The Zohar*, it will be possible to disclose Kabbalah, as the method of humanity's moral ascent to similarity with the Creator. This is why Kabbalah is revealed to humankind in these times.

Humanity is not corrected by everybody all at once. Rather, correction of humanity occurs to the extent that each person realizes his personal and general crisis, as covered in the last chapter.

Correction starts with a human being realizing that his or her egoistic nature is the source of all evil. Later, by changing the values of society, a person is subjected to society's influence.

The individual and one's social environment, the entirety of humanity, are bound by collective responsibility. In other words, humanity wanted to solve its problem egoistically and, hence, individually. Meanwhile, it found itself inevitably obliged to solve the problem collectively and, hence, altruistically.

In this respect, it is worth reflecting on Baal HaSulam's four factors that comprise us, which he explains in his essay, "The Freedom," and which we introduced in Chapter 3. To review and expand, the first factor is the source, the foundation, our inherent traits, which we cannot change because we inherit them from our parents. The second is how this source evolves, which we are also unable to change because it's determined by the source. The third factor is the environment, which we cannot change once we are in it.

The fourth factor, however, is the changes in the environment, and *those we can and must* change by choosing the environment that is right for us. The fourth factor affects the third, which affects the second, which affects the first. By building the right environment for our spiritual purposes, we build a society that not only changes us toward spirituality, but also makes everybody

else's way to spirituality much easier and faster. Now let's see how we can put this theory into action.

LET'S AGREE ON GIVING

If everyone thinks giving is good, then I, too, will think giving is good, out of my own egoistic interest. This is so because altruistic behavior is profitable for all.

Altruism rules in education, for instance. Schools teach us to be altruists. We are told to be honest, hard-working, and respectful of others; to share with others what we have; to be friendly; and to love our neighbors. All this happens because altruism is beneficial to society.

Furthermore, the biological laws of living organisms teach us that the existence of an organism depends on the cooperative work

Spiritual Sparks

Anyone who is experienced knows that there is one issue in the world, which is the greatest of all imaginable pleasures, namely finding grace in the eyes of people, for which every effort is worthwhile.

—Rav Yehuda Ashlag

of all its parts, as recounted in Chapters 15 and 16.

Similarly, the perception of the benefits of altruistic behavior is present in an egoistic human society. No one actively opposes altruistic acts. On the con-

trary, every organization and public figure advertises his, her, or its involvement in altruistic actions and takes pride in them. No one overtly denounces the spreading of altruistic ideals.

THE POWER IN THE APPRECIATION OF SOCIETY

The means to change our behavior from egoistic to altruistic is to change our priorities and value hierarchy. We need to be convinced that bestowal to society is much more important and worthwhile than receiving from it. In other words, each person must come to feel much greater fulfillment from giving to society than from any egoistic acquisition.

Public opinion is the only means to facilitate this goal because the single most important thing for every person is the appreciation of society. Humans are built in such a way that receiving the sympathy of society is the purpose of life.

This element is so intrinsic that people tend to deny that the purpose of every action is to acquire society's appreciation. We might claim that we are motivated by curiosity or even money, but we would not admit to the real incentive: the recognition of society.

We are built in such a way that the human environment determines all our predilections and values. We are entirely and involuntarily controlled by public opinion. This is why society can infuse its members with any mode of behavior and any value, even the most abstract or absurd.

DENOUNCE EGOISM AND EXTOL ALTRUISM

Modifying society's tasks will require changing the education systems, starting from a very early age, as well as cardinal transformations in all areas of education and culture. All media will have to praise and evaluate events according to their benefit to society, thus creating an environment of education for bestowal upon society. Using every means of mass media, advertisement, persuasion, and education, the new public opinion should openly and resolutely denounce egoistic actions and extol altruistic actions as the ultimate value.

Through society's purposeful influence, everyone will aspire to receive only what is necessary for sustenance from society and spare no effort to benefit society, in order to receive society's appreciation. At first, everyone will work to benefit society under environmental encouragement and influence. People will feel satisfied, and we will begin to see the act of bestowal upon society as the ultimate unique value, even without reward from the environment for each act of giving.

It isn't just social institutions that need to change. So must the most prevalent and, in some ways, most "dug in" social institution: the family.

If my children at home look at me and appreciate me according to society's appreciation of me, and if my children appreciate me according to how much I give to society, then I am more likely to change.

If my kin and co-workers and generally everyone appreciate me only according to what I give to society, then I will not

Off Course

We must be very careful here. Past attempts to use society and kin to altering social values have produced the most terrible atrocities, including the Nazis and Stalin's communism. This is *not* what Kabbalah refers to when it suggests that we use society to change our values. Kabbalah merely suggests that we encourage everyone that giving is profitable and pleasurable. Then, when more people believe it, I, too, will believe it, even if at first I was coaching others to believe it without believing it myself.

have a choice. I will have to contribute. I will have to become a net giver to all.

All this activity will raise the level of human consciousness to the level of a new civilization.

"Rabbi Ashlag was passionately committed to that far-reaching social vision, as it emerged from his understanding of the Kabbalistic

tradition," writes Micha Odenheimer in *Latter-Day Luminary*: "He grasped humanity as a single entity, both physically and spiritually interdependent, and believed that only an economic system that recognized this could liberate humankind and catalyze an era of collective enlightenment."

By developing a community based on love among its members and a society founded on economic justice, Odenheimer writes, Kabbalah provides a focus on individual consciousness and the mending of society and the world. Rabbi Ashlag's contribution is a "concept of social justice founded on the spiritual science of Kabbalah."

UNDERSTANDING BABEL'S TOWER

In ancient times, humans were not so egoistic as to be opposite to nature. They felt nature and their fellow persons reciprocally. This was their language of communication, which, for the most part, was a silent language, similar to telepathy, on a certain spiritual level.

Increased egoism, however, detached humans from nature. Instead of correcting the oppositeness, humans thought they would be able to attain the Creator egoistically, not through correction.

As a result, they stopped perceiving nature and their fellow humans, stopped loving, and started hating one another. This separated us from each other and instead of being one nation, we split into many.

The first level of egoistic development is marked by what we allegorically call “building of the Tower of Babel.” In the story of Babel, you may recall, people, out of increased egoism, aspired to reach the Creator, allegorically described as wanting to build a tower whose head reaches the sky.

Humanity failed to direct its increased egoism toward the attainment of the governing forces because this method of attainment demanded of us to curb egoism, and we failed to do that.

People's increased egoism made them stop feeling each other and the spiritual connection; the telepathy was broken. Because they knew of the Creator from their previous level of egoism, they now wanted to exploit Him as well. That's what was meant by building a tower that reaches the sky. As a result of their egoism, they stopped understanding each other, and their oppositeness from nature alienated them from it and from the Creator, and they dispersed.

We may have compensated for it with technological development. But in doing so, we have only increased our detachment from one another and our alienation from nature (the Creator). So now humanity is becoming disillusioned with fulfilling the egoism solely by social or technological development.

We are realizing that egoistic desires cannot be filled in their natural form. The very fulfillment of a desire annuls it. As a result, the desire is no longer felt, just as food reduces the sensation of hunger and, along with it, the pleasure from eating is gradually extinguished.

Particularly today, as we acknowledge the crisis and the dead-end point of our development, it can be said that the confrontation of the egoism with the Creator is the actual destruction of the Tower of Babel.

Formerly, the Tower of Babel was ruined by the Upper Force. Today it is being ruined in our own consciousness. We are at a similar separation point that occurred in the time of Babel, except now we are aware of our situation. According to the wisdom of Kabbalah, the global crisis is the beginning of the reconnection of all humanity into a new and united civilization.

It is time for the members of the single nation of humankind to reunite into a united people. Spiritual fulfillment provides a path and a perhaps unexpected truth.

ENHANCED PERCEPTION

How much is one plus one? The answer is *Ein Sof* (infinity). Each of us is integrated with everybody else, and for this reason, with just one more person to work with, we can simulate a society. This, in turn, simulates our relationship with the Creator. The reward is huge.

Indeed, there is a special bonus to altruism. It may seem as if the only change will be putting others before ourselves, but there are actually far greater benefits. When we begin to think of others, we become integrated with them, and they with us.

Actually, each of us is *Ein Sof*, but without a society to help you correct yourself, how will you feel it? If you remember one of Kabbalah's basic rules that the whole and the part are the same, your life will be much easier. You will be able to work on the whole (society) knowing that you are actually working on yourself, and this will make your correction much easier.

Think of it this way: there are about 6.5 billion people in the world today. What if, instead of having two hands, two legs, and one brain to control them, you had 13 billion hands, 13 billion legs, and 6.5 billion brains to control them?

Confusing? Not really, because all those brains would function as a single brain, and the hands would function as a single pair of hands. All of humanity would function as one organism whose capabilities were enhanced 6.5 billion times. After all, there are much more than 6.5 billion cells in our body, but it still functions as one unit. So if a single body can do it, why not the whole of humanity?

In addition to becoming superhuman, anyone who became altruistic would receive the most desirable gift of all: omniscience, or total recall and total knowledge. Because altruism is the Creator's nature, acquiring it equalizes our nature with His, and we begin to think like Him. We begin to know why everything happens, when it should happen, and what to do if we want to make it happen differently. In Kabbalah, this state is called "equivalence of form," and attaining it is the purpose of creation.

BEYOND LIFE AND DEATH

This state of enhanced perception, of equivalence of form, is why we were created in the first place. This is why we were created united and were then broken—so we could reunite. In the process of uniting, we will learn why nature does what it does and will become as wise as the Thought that created nature.

When we unite with nature, we will feel as eternal and complete as nature. In that state, even when our bodies die, we will feel that we continue to exist in the eternal nature.

Physical life and death will no longer affect us because our previous self-centered perception will have been replaced with holistic, altruistic perception. Our own lives will have become the life of the whole of nature.

But if you've gotten this far, no matter what you might think, it's really even simpler than it sounds. You can already relate to Eternity. We're already in *Ein Sof*. We're just unaware of it. With the wisdom of Kabbalah, we have a great guide. With great guides, we can all find our way.

IN A NUTSHELL

- Humans are the height of creation, so when we are corrected, everything else will follow.
- The first thing to do is to agree that giving is good.
- The most powerful force, and the motivation behind our actions, is our desire for society's appreciation.
- To create a shift in society, there must be open denunciation of egoism and extolling of altruism.
- Babel's tower is broken in our minds, in our separation from each other. When we correct it, we will obtain not only love for each other, but the mind of the Creator, and existence beyond life and death.

Appendix

GLOSSARY

Abraham: A man born in Babylon who discovered the wisdom of Kabbalah, taught it to all who were interested, and started the first Kabbalah group, which later became the nation of Israel. *Sefer Yetzira* (*The Book of Creation*) is ascribed to him.

Adam: *See Adam ha Rishon.*

Adam ha Rishon: The Kabbalistic name of Adam, the original soul. The breaking of Adam's soul caused the division of Adam's soul into 600,000 particular souls or individual desires.

Altruism: Working for the gratification of the system of creation regardless of one's own desires.

Bestowal: The Creator's quality of giving without thinking of Himself. This is the quality the creatures (us) need to acquire in order to become like Him and discover Him.

Bina: Understanding. In Kabbalah, it generally refers to the contemplation of the ways of cause and effect and to benevolence. It also means the quality of giving, *Hassadim* (Mercy), which is the quality of the Creator.

Correction: Kabbalists refer to correction to mean turning the intention with which we use a desire from “for me” to “for the Creator.” No one will tell you that you are correct or incorrect. But if you’ve used a desire to make you more “Creatorlike,” you’ve done the correct thing.

Degree: See Spiritual Degree.

125 degrees: Between the Creator and creation there are five worlds, with five *Partzufim* in each world, and five *Sefirot* in each *Partzuf*. If you multiply 5 worlds \times 5 *Partzufim* \times 5 *Sefirot*, you get 125 degrees. See also spiritual degree, *Sefirot*.

Egoism: Working for self-gratification regardless of the needs of the system of creation.

Equivalence of Form: The form (quality) of the Creator is bestowal; the form of the creature is reception. When one can learn to receive with the intention to bestow, it is considered that one has equalized one’s form with the Creator’s: both are now givers.

Faith: The quality of bestowal; clear perception of the Creator.

Four Phases of Direct Light: The first five stages, root (0)–4, by which the Thought of Creation created *Malchut*, the will to receive, and the root of all creations.

Free choice: A choice made without being partial toward oneself. To have free choice, one has to be Above one’s ego, in the spiritual world.

Haman: One of the names given to the will to receive.

Intention: The direction in which a desire is used—for you or for the Creator.

Kabbalah: A science that provides a detailed method of showing you how to perceive and experience the spiritual worlds, which

exist beyond what you can perceive with your five senses. Kabbalah means “Reception” in Hebrew.

Kabbalists: People who have acquired additional senses because they have attained the ability to *lekabel* (“to receive” in Hebrew) higher knowledge. The method that enables people to transcend the boundaries of their nature is called *Kabbalah* (“reception” in Hebrew) because it enables them to know the true reality.

Kli: (vessel) The sixth sense; the will to receive with a *Masach* (screen) on it.

Law of Correction: States that first the easiest parts are corrected; and then, with their help, the tougher parts are handled.

Light: Pleasure, the force of bestowal that operates and fills the whole reality.

Masach (screen): The ability to reject the Creator’s Light if it is not in order to give back to Him.

Mordechai: The will to bestow.

Moses: The greatest prophet and the next great Kabbalist after Abraham. Wrote the *Torah* (Pentateuch) and taught Kabbalah to all who listened. Moses is the point in the heart in everyone of us, the desire for spirituality.

Olam (World): There are five worlds between the Creator and creation—*Adam Kadmon*, *Atzilut*, *Beria*, *Yetzira*, and *Assiya*. The word *Olam* comes from the word *Haalama* (Concealment). The name of the *Olam* designates a specific measure of concealment of the Creator’s Light from creation (us).

Partzuf (Face): A *Partzuf* is a complete structure of ten *Sefirot* with a *Masach* that can determine which *Sefira* receives Light and which doesn’t.

Person (in this world) : Means that the will to receive is in a state of concealment from the Creator, with no intention to receive from Him or to give to Him.

Point in the heart: The last degree in the evolution of human desire, the desire for spirituality.

Prayer: Any desire is a prayer. But a prayer that is answered is a desire to be corrected, to becoming like the Creator. A prayer is called “the work in the heart.”

Purpose of Creation: The reason the Creator created creation is for it to receive the ultimate pleasure: being like Him. This is the purpose of creation.

Rabbi Isaac Luria (the Holy Ari): A great Kabbalist who lived in the 16th century in Israel. Author of *The Tree of Life*.

Rabbi Shimon Bar-Yochai (Rashbi): Author of 2nd century CE *The Book of Zohar*, the seminal text of Kabbalah. Rashbi was the student and successor of Rabbi Akiva, the great Kabbalist who taught “Love thy friend as thyself.”

Rav Yehuda Ashlag: The last great Kabbalist (1884–1954). Known as Baal HaSulam (owner of the ladder) for his *Sulam* (Ladder) commentary on *The Book of Zohar*.

Reality: The part of the Creator’s Light that a person can perceive, depending on one’s inner structure. Because of that, reality is always subjective.

Reincarnation: A reincarnation is every time you make a step in spiritual growth. If you correct yourself intensely, you can experience many lifetimes in a matter of minutes.

Reshimot: The soul’s unconscious recollections of its past states.

Root of the Soul: The place of the soul in the system of *Adam ha Rishon*.

Sanctity: An exalted state in which you ascribe everything to the Creator. You realize that there is none else besides him and that you are equal to Him in your attributes.

Screen: See *Masach*.

Sefirot: The 10 basic qualities of the spiritual world. Their names are *Keter*, *Hochma*, *Bina*, *Hesed*, *Gevura*, *Tifferet*, *Netzah*, *Hod*, *Yesod*, and *Malchut*. Sometimes they are divided into five, and then you have *Keter*, *Hochma*, *Bina*, and *Zeir Anpin*, which includes the *Sefirot Hesed*, *Gevura*, *Tifferet*, *Netzah*, *Hod*, and *Yesod*. The last *Sefira* is *Malchut*.

Shame: *Malchut's* sensation of her oppositeness from the Creator. When *Malchut* realizes that she only receives and that He only gives (to her), she is so ashamed that she stops receiving, and makes the *Tzimtzum* (restriction).

Soul: A desire to receive with a *Masach* and the intention to bestow is called “a soul.” Also, *Adam ha Rishon* is considered the common soul from which we all come. Adam represents the first person to have a *Masach*, and we are all his “spiritual” children. See also *Adam ha Rishon*.

Spiritual degree: An ability to receive a certain amount (and kind) of pleasure with the intention to bestow upon the Creator.

Surrounding Light: The Light that wishes to fill creation, as well as the Light that is destined to transform egotistical desire into altruistic one.

Tetragrammaton: In Greek, literally “four-letter word.” Designates the sacred name of God. In Hebrew, it is the *HaVaYaH* (*Yod*, *Hey*, *Vav*, *Hey*), or the Four Phases of Direct Light.

The Book of Zohar: Written around 2nd century CE by Rabbi Shimon Bar-Yochai and his group. This is the seminal book of Kabbalah. It was hidden right after it was written and reappeared

in the 13th century in possession of Rabbi Moshe de Leon. Probably for this reason, there are scholars who consider Moshe de Leon to be its author, although Moshe de Leon himself claimed that he did not write the book, but Rabbi Shimon Bar-Yochai.

Torah: Five Books of Moses. Torah means “Light” as well as “instruction.” The text of the Torah holds within it the instructions to receive all the Light of the Creator, if you know how to read it right. Today, we need to study Kabbalah to be able to understand it correctly.

The Tree of Life: The Ari’s (Rabbi Isaac Luria) principal text. This text is still at the heart of contemporary Kabbalah. Because of the importance of the Ari’s book, the term *Tree of Life* has become a synonym of the term *The Wisdom of Kabbalah*.

Tzimtzum (Restriction): Not receiving Light despite wanting it. When *Malchut* discovers that she is opposite from the Creator, her shame makes her stop receiving His Light although she has a great desire for it.

World: See *Olam*.

Yam Suf: The Red Sea. *The Book of Zohar* calls the Red Sea “the Sea of the End,” representing the ego’s final frontier. Beyond *Yam Suf* begins the spiritual world.

FURTHER READING

To help you determine which book you would like to read next, we have divided the books into five categories—Beginners, Intermediate, Advanced, Good for All, and Textbooks. The first three categories are divided by the level of prior knowledge readers are required to have. The Beginners Category requires no prior knowledge. The Intermediate Category requires reading one or two beginners' books first; and the Advanced level requires one or two books of each of the previous categories. The fourth category, Good for All, includes books you can always enjoy, whether you are a complete novice or well versed in Kabbalah.

The fifth category—Textbooks—includes translations of authentic source materials from earlier Kabbalists, such as the Ari, Rav Yehuda Ashlag (Baal HaSulam) and his son and successor, Rav Baruch Ashlag (the Rabash).

Additional translated material that has not yet been published can be found at **www.kabbalah.info**. All materials on this site, including e-versions of published books, can be downloaded free of charge.

BEGINNERS

Kabbalah for Beginners

Kabbalah for Beginners is a book for all those seeking answers to life's essential questions. We all want to know why we are here, why there is pain, and how we can make life more enjoyable. The four parts of this book provide us with reliable answers to these questions, as well as clear explanations of the gist of Kabbalah and its practical implementations.

Part One discusses the discovery of the wisdom of Kabbalah, and how it was developed, and finally concealed until our time. Part Two introduces the gist of the wisdom of Kabbalah, using ten easy drawings to help us understand the structure of the spiritual worlds, and how they relate to our world. Part Three reveals Kabbalistic concepts that are largely unknown to the public, and Part Four elaborates on practical means you and I can take, to make our lives better and more enjoyable for us and for our children.

Kabbalah Revealed

This is the most clearly written, reader-friendly guide to making sense of the surrounding world. Each of its six chapters focuses on a different aspect of the wisdom of Kabbalah, illuminating its teachings and explaining them using various examples from our day-to-day lives.

The first three chapters in *Kabbalah Revealed* explain why the world is in a state of crisis, how our growing desires promote progress as well as alienation, and why the biggest deterrent to achieving positive change is rooted in our own spirits. Chapters Four through Six offer a prescription for positive change. In these chapters, we learn how we can use our spirits to build a personally peaceful life in harmony with all of Creation.

Wondrous Wisdom

This book offers an initial course on Kabbalah. Like all the books presented here, *Wondrous Wisdom* is based solely on authentic teachings passed down from Kabbalist teacher to student over thousands of years. At the heart of the book is a sequence of lessons revealing the nature of Kabbalah's wisdom and explaining how to attain it. For every person questioning "Who am I really?" and "Why am I on this planet?" this book is a must.

Awakening to Kabbalah

A distinctive, personal, and awe-filled introduction to an ancient wisdom tradition. In this book, Rav Laitman offers a deeper understanding of the fundamental teachings of Kabbalah, and how you can use its wisdom to clarify your relationship with others and the world around you.

Using language both scientific and poetic, he probes the most profound questions of spirituality and existence. This provocative, unique guide will inspire and invigorate you to see beyond the world as it is and the limitations of your everyday life, become closer to the Creator, and reach new depths of the soul.

Kabbalah, Science, and the Meaning of Life

Science explains the mechanisms that sustain life; Kabbalah explains why life exists. In *Kabbalah, Science, and the Meaning of Life*, Rav Laitman combines science and spirituality in a captivating dialogue that reveals life's meaning.

For thousands of years Kabbalists have been writing that the world is a single entity divided into separate beings. Today the cutting-edge science of quantum physics states a very similar idea: that at the most fundamental level of matter, we are all literally one.

Science proves that reality is affected by the observer who examines it; and so does Kabbalah. But Kabbalah makes an even bolder statement: even the Creator, the Maker of reality, is within the observer. In other words, God is inside of us; He doesn't exist anywhere else. When we pass away, so does He.

These earthshaking concepts and more are eloquently introduced so that even readers new to Kabbalah or science will easily understand them. Therefore, if you're just a little curious about why you are here, what life means, and what you can do to enjoy it more, this book is for you.

From Chaos to Harmony

Many researchers and scientists agree that the ego is the reason behind the perilous state our world is in today. Laitman's groundbreaking book not only demonstrates that egoism has been the basis for all suffering throughout human history, but also shows how we can turn our plight to pleasure.

The book contains a clear analysis of the human soul and its problems, and provides a "roadmap" of what we need to do to once again be happy. *From Chaos to Harmony* explains how we can rise to a new level of existence on personal, social, national, and international levels.

INTERMEDIATE

The Kabbalah Experience

The depth of the wisdom revealed in the questions and answers within this book will inspire readers to reflect and contemplate. This is not a book to race through, but rather one that should be read thoughtfully and carefully. With this approach, readers will begin to experience a growing sense of enlightenment while simply absorbing the answers to the questions every Kabbalah student asks along the way.

The Kabbalah Experience is a guide from the past to the future, revealing situations that all students of Kabbalah will experience

at some point along their journeys. For those who cherish every moment in life, this book offers unparalleled insights into the timeless wisdom of Kabbalah.

The Path of Kabbalah

This unique book combines beginners' material with more advanced concepts and teachings. If you have read a book or two of Laitman's, you will find this book very easy to relate to.

While touching upon basic concepts such as perception of reality and Freedom of Choice, *The Path of Kabbalah* goes deeper and expands beyond the scope of beginners' books. The structure of the worlds, for example, is explained in greater detail here than in the "pure" beginners' books. Also described is the spiritual root of mundane matters such as the Hebrew calendar and the holidays.

ADVANCED

The Science of Kabbalah

Kabbalist and scientist Rav Michael Laitman, PhD, designed this book to introduce readers to the special language and terminology of the authentic wisdom of Kabbalah. Here, Rav Laitman reveals authentic Kabbalah in a manner both rational and mature. Readers are gradually led to understand the logical design of the Universe and the life that exists in it.

The Science of Kabbalah, a revolutionary work unmatched in its clarity, depth, and appeal to the intellect, will enable readers to approach the more technical works of Baal HaSulam (Rabbi Yehuda Ashlag), such as *The Study of the Ten Sefirot* and *The Book of Zohar*. Readers of this book will enjoy the satisfying answers to the riddles of life that only authentic Kabbalah provides. Travel through the pages and prepare for an astonishing journey into the Upper Worlds.

Introduction to the Book of Zohar

This volume, along with *The Science of Kabbalah*, is a required preparation for those who wish to understand the hidden message of *The Book of Zohar*. Among the many helpful topics dealt with in this text is an introduction to the “language of roots and branches,” without which the stories in *The Zohar* are mere fable and legend. *Introduction to the Book of Zohar* will provide readers with the necessary tools to understand authentic Kabbalah as it was originally meant to be, as a means to attain the Upper Worlds.

The Book of Zohar: annotations to the Ashlag commentary

The Book of Zohar (*The Book of Radiance*) is an ageless source of wisdom and the basis for all Kabbalistic literature. Since its appearance nearly 2,000 years ago, it has been the primary, and often only, source used by Kabbalists.

For centuries, Kabbalah was hidden from the public, which was deemed not yet ready to receive it. However, our generation has been designated by Kabbalists as the first generation that is ready to grasp the concepts in *The Zohar*. Now we can put these principles into practice in our lives.

Written in a unique and metaphorical language, *The Book of Zohar* enriches our understanding of reality and widens our worldview. Although the text deals with one subject only—how to relate to the Creator—it approaches it from different angles. This allows each of us to find the particular phrase or word that will carry us into the depths of this profound and timeless wisdom.

GOOD FOR ALL

Attaining the Worlds Beyond

From the introduction to *Attaining the Worlds Beyond*: “...Not feeling well on the Jewish New Year’s Eve of September 1991, my

teacher called me to his bedside and handed me his notebook, saying, 'Take it and learn from it.' The following morning, my teacher perished in my arms, leaving me and many of his other disciples without guidance in this world.

"He used to say, 'I want to teach you to turn to the Creator, rather than to me, because He is the only strength, the only Source of all that exists, the only one who can really help you, and He awaits your prayers for help. When you seek help in your search for freedom from the bondage of this world, help in elevating yourself above this world, help in finding the self, and help in determining your purpose in life, you must turn to the Creator, who sends you all those aspirations in order to compel you to turn to Him.'"

Attaining the Worlds Beyond holds within it the content of that notebook, as well as other inspiring texts. This book reaches out to all those seekers who want to find a logical, reliable way to understand the world's phenomena. This fascinating introduction to the wisdom of Kabbalah will enlighten the mind, invigorate the heart, and move readers to the depths of their souls.

Basic Concepts in Kabbalah

This is a book to help readers cultivate an approach to the concepts of Kabbalah, to spiritual objects, and to spiritual terms. By reading and re-reading in this book, one develops internal observations, senses, and approaches that did not previously exist within. These newly acquired observations are like sensors that "feel" the space around us that is hidden from our ordinary senses.

Hence, *Basic Concepts in Kabbalah* is intended to foster the contemplation of spiritual terms. Once we are integrated with these terms, we can begin to see, with our inner vision, the unveiling of the spiritual structure that surrounds us, almost as if a mist has been lifted.

Again, this book is not aimed at the study of facts. Instead, it is a book for those who wish to awaken the deepest and subtlest sensations they can possess.

Together Forever

On the surface, *Together Forever* is a children's story. But like all good children's stories, it transcends boundaries of age, culture, and upbringing.

In *Together Forever*, the author tells us that if we are patient and endure the trials we encounter along our life's path, we will become stronger, braver, and wiser. Instead of growing weaker, we will learn to create our own magic and our own wonders as only a magician can.

In this warm, tender tale, Michael Laitman shares with children and parents alike some of the gems and charms of the spiritual world. The wisdom of Kabbalah is filled with spellbinding stories. *The Magician* is yet another gift from this ageless source of wisdom, whose lessons make our lives richer, easier, and far more fulfilling.

TEXTBOOKS

Shamati

Rav Michael Laitman's words on the book: Among all the texts and notes that were used by my teacher, Rav Baruch Shalom Halevi Ashlag (the Rabash), there was one special notebook he always carried. This notebook contained the transcripts of his conversations with his father, Rav Yehuda Leib Halevi Ashlag (Baal HaSulam), author of the *Sulam* (Ladder) commentary on *The Book of Zohar*, *The Study of the Ten Sefirot* (a commentary on the texts of the Kabbalist, Ari), and of many other works on Kabbalah.

Not feeling well on the Jewish New Year's Eve of September 1991, the Rabash summoned me to his bedside and handed

me a notebook, whose cover contained only one word, *Shamati* (I Heard). As he handed the notebook, he said, “Take it and learn from it.” The following morning, my teacher perished in my arms, leaving me and many of his other disciples without guidance in this world.

Committed to Rabash’s legacy to disseminate the wisdom of Kabbalah, I published the notebook just as it was written, thus retaining the text’s transforming powers. Among all the books of Kabbalah, *Shamati* is a unique and compelling creation.

Kabbalah for the Student

Kabbalah for the Student offers authentic texts by Rav Yehuda Ashlag, author of the *Sulam* (Ladder) commentary on *The Book of Zohar*, his son and successor, Rav Baruch Ashlag, as well as other great Kabbalists. It also offers illustrations that accurately depict the evolution of the Upper Worlds as Kabbalists experience them. The book also contains several explanatory essays that help us understand the texts within.

In *Kabbalah for the Student*, Rav Michael Laitman, PhD, Rav Baruch Ashlag’s personal assistant and prime student, compiled all the texts a Kabbalah student would need in order to attain the spiritual worlds. In his daily lessons, Rav Laitman bases his teaching on these inspiring texts, thus helping novices and veterans alike to better understand the spiritual path we undertake on our fascinating journey to the Higher Realms.

ABOUT BNEI BARUCH

Bnei Baruch is a group of Kabbalists in Israel, sharing the wisdom of Kabbalah with the entire world. Study materials in over 30 languages are based on authentic Kabbalah texts that were passed down from generation to generation.

HISTORY AND ORIGIN

In 1991, following the passing of his teacher, Rav Baruch Shalom HaLevi Ashlag (The Rabash), Rav Michael Laitman, Professor of Ontology and the Theory of Knowledge, PhD in Philosophy and Kabbalah, and MSc in Medical Bio-Cybernetics, established a Kabbalah study group called “Bnei Baruch.” He called it Bnei Baruch (Sons of Baruch) to commemorate his mentor, whose side he never left in the final twelve years of his life, from 1979 to 1991. Rav Laitman had been Ashlag’s prime student and personal assistant, and is recognized as the successor of Rabash’s teaching method.

The Rabash was the firstborn son and successor of Rav Yehuda Leib HaLevi Ashlag, the greatest Kabbalist of the 20th century. Rabbi Ashlag authored the most authoritative and comprehensive commentary on *The Book of Zohar*, titled *The Sulam* (Ladder) *Commentary*. He was the first to reveal the complete method for spiritual ascent, and thus was known as Baal HaSulam (Owner of the Ladder).

Today, Bnei Baruch bases its entire study method on the path paved by these two great spiritual leaders.

THE STUDY METHOD

The unique study method developed by Baal HaSulam and his son, the Rabash, is taught and applied on a daily basis by Bnei Baruch. This method relies on authentic Kabbalah sources such as *The Book of Zohar*, by Rabbi Shimon Bar-Yochai, *The Tree of Life*, by the Holy Ari, and *The Study of the Ten Sefirot*, by Baal HaSulam.

While the study relies on authentic Kabbalah sources, it is carried out in simple language and uses a scientific, contemporary approach. Developing this approach has made Bnei Baruch an internationally respected organization, both in Israel and in the world at large.

The unique combination of an academic study method and personal experiences broadens the students' perspective and awards them a new perception of the reality they live in. Those on the spiritual path are thus given the necessary tools to study themselves and their surrounding reality.

THE MESSAGE

Bnei Baruch is a diverse movement of tens of thousands of students worldwide. Students can choose their own paths and the personal intensity of their studies, according to their unique conditions and abilities. The essence of the message disseminated by Bnei Baruch is universal: unity of the people, unity of nations and love of man.

For millennia, Kabbalists have been teaching that love of man should be the foundation of all human relations. This love prevailed in the days of Abraham, Moses, and the group of Kabbalists that they established. If we make room for these seasoned, yet contemporary values, we will discover that we possess the power to put differences aside and unite.

The wisdom of Kabbalah, hidden for millennia, has been waiting for the time when we would be sufficiently developed and ready to implement its message. Now, it is emerging as a

solution that can unite diverse factions everywhere, enabling us, as individuals and as a society, to meet today's challenges.

ACTIVITIES

Bnei Baruch was established on the premise that “only by expansion of the wisdom of Kabbalah to the public can we be awarded complete redemption” (Baal HaSulam).

Therefore, Bnei Baruch offers a variety of ways for people to explore and discover the purpose of their lives, providing careful guidance for beginners and advanced students alike.

KABBALAH TELEVISION

Bnei Baruch established a production company, ARI Films (www.arifilms.tv) specializing in production of educational TV programs throughout the world, and in many languages.

In Israel, Bnei Baruch established its own channel, aired through cable and satellite 24/7. The channel is also aired on the Internet at www.kab.tv. All broadcasts on the channel are free of charge. Programs are adapted for all levels, from complete beginners to the most advanced.

Additionally, ARI Films produces educational series and documentaries.

INTERNET WEBSITE

Bnei Baruch's international website, www.kab.info, presents the authentic wisdom of Kabbalah using essays, books, and original texts. It is by far the most expansive source of authentic Kabbalah material on the net, containing a unique, extensive library for readers to thoroughly explore the wisdom of Kabbalah. Additionally, the media archive, www.kabbalahmedia.info, contains more than 5,000 media items, downloadable books, and a vast reservoir of texts, video and audio files in many languages.

Bnei Baruch's online Learning Center offers unique, free Kabbalah lessons for beginners, initiating students into this profound body of knowledge in the comfort of their own homes.

Rav Laitman's daily lessons are also aired live on **www.kab.tv**, along with complementary texts and diagrams.

All these services are provided free of charge.

PAPER

Kabbalah Today is a free monthly paper produced and disseminated by Bnei Baruch in many languages, including English, Hebrew, Spanish, and Russian. It is apolitical, non-commercial, and written in a clear, contemporary style. The purpose of *Kabbalah Today* is to expose the vast knowledge hidden in the wisdom of Kabbalah at no cost and in a clear, engaging format and style for readers everywhere.

Kabbalah Today is distributed free in every major U.S. city, as well as in Toronto, Canada, London, England, and Sydney, Australia. It is printed in English, Hebrew, and Russian, and is also available on the Internet, at **www.kabtoday.com**.

Additionally, a hard copy of the paper is sent to subscribers at delivery cost only.

KABBALAH BOOKS

Bnei Baruch publishes authentic books, written by Rav Yehuda Ashlag (Baal HaSulam), his son, Rav Baruch Ashlag (the Rabash), and Rav Michael Laitman. The books of Rav Ashlag and Rabash are essential for complete understanding of the teachings of authentic Kabbalah, explained in Rav Laitman's lessons.

Rav Laitman writes his books in a clear, contemporary style based on the key concepts of Baal HaSulam. These books are a

vital link between today's readers and the original texts. All the books are available for sale, as well as for free download.

KABBALAH LESSONS

As Kabbalists have been doing for centuries, Rav Laitman gives a daily lesson at the Bnei Baruch center in Israel between 3:00-6:00 a.m. Israel time. The lessons are given in Hebrew and are simultaneously translated into seven languages: English, Russian, Spanish, French, German, Italian, and Turkish. As with everything else, the live broadcast is provided gratis to thousands of students worldwide.

FUNDING

Bnei Baruch is a non-profit organization for teaching and sharing the wisdom of Kabbalah. To maintain its independence and purity of intentions, Bnei Baruch is not supported, funded, or otherwise tied to any government or political organization.

Since the bulk of its activity is provided free of charge, the prime sources of funding for the group's activities are donations and tithing—contributed by students on a voluntary basis—and Rav Laitman's books, which are sold at cost.

THE MYSTICAL QABALAH

FOREWORD

THE Tree of Life forms the ground-plan of the Western Esoteric Tradition and is the system upon which pupils are trained in the Fraternity of the Inner Light.

The transliteration of Hebrew words into English is the subject of much diversity of opinion, every scholar appearing to have his own system. In these pages I have availed myself of the alphabetical table given by MacGregor Mathers in *The Kabba/ah Unveiled* because this book is the one generally used by esoteric students. He himself does not adhere to his own table systematically, however, and even uses different spellings for the same words. This is very confusing for anyone who wishes to use the Gematric method of elucidation, in which letters are turned into numbers. When, therefore, Mathers gives alternative trans literations, I have followed the one which coincides with that given in his own table.

The capitalisation employed in these pages may also appear unusual, but it is the one traditionally used among students of the Western Esoteric Tradition. In this system, common words, such as earth or path, are used in a technical sense to denote spiritual principles. When this is done, a capital is used to indicate the fact. When a capital is not used, it may be taken that the word is to be understood in its ordinary sense.

As I have frequently referred to the authority of MacGregor Mathers and Aleister Crowley in matters of Qabalistic mysticism, it may be as well to explain my position in relation to these two writers.

[Page VI]

I was at one time a member of the organisation founded by the former, but have never been associated with the latter. I have never known either of these gentlemen personally, MacGregor Mathers having died before I joined his organisation, and Aleister Crowley having then ceased to be associated with it.

The Society of the Inner Light, founded by the late Dion Fortune, has courses for those who wish seriously to pursue the study of the Western Esoteric Tradition. Information about the society may be obtained by writing to the address below. Please enclose British stamps or international postal coupons in your letter if you wish a response.

- II. The Three Triangles
- III. The Tree of Life and the Thirty-two Paths

PART I CHAPTER I THE YOGA OF THE WEST

1. Very few students of occultism know anything at all about the fountain-head whence their tradition springs. Many of them do not even know there is a Western Tradition. Scholarship is baffled by the intentional blinds and defences with which initiates both ancient and modern have wrapped themselves about, and concludes that the few fragments of a literature which have come down to us are medieval forgeries. They would be greatly surprised if they knew that these fragments, supplemented by manuscripts that have never been allowed to pass out of the hands of initiates, and completed by an oral tradition, are handed down in schools of initiation to this day, and are used as the bases of the practical work of the Yoga of the West.

2. The adepts of those races whose evolutionary destiny is to conquer the physical plane have evolved a Yoga technique of their own which is adapted to their special problems and peculiar needs. This technique is based upon the well-known but little understood Qabalah, the Wisdom of Israel.

3. It may be asked why it is that the Western nations should go to the Hebrew culture for their mystical tradition ? The answer to this question will be readily understood by those who are acquainted with the esoteric theory concerning races and sub-races. Everything must have a source. Cultures do not spring out of nothing. The seed-bearers of each new phase of culture must of necessity arise within the preceding Culture. No one can deny that Judaism was the matrix of the

[Page 2]

European spiritual culture when they recall the fact that Jesus and Paul were both Jews. No race except the Jewish race could possibly have served as the stock upon which the new dispensation was to be grafted because no other race was monotheistic. Pantheism and polytheism had had their day and a new and more spiritual culture was due. The

Christian races owe their religion to the Jewish culture as surely as the Buddhist races of the East owe theirs to the Hindu culture.

4. The mysticism of Israel supplies the foundation of modern Western occultism. It forms the theoretical basis upon which all ceremonial is developed. Its famous glyph, the Tree of Life, is the best meditation-symbol we possess because it is the most comprehensive.

5. It is not my intention to write a historical study of the sources of the Qabalah, but rather to show the uses that are made of it by modern students of the Mysteries. For although the roots of our system are in tradition, there is no reason why we should be hidebound by tradition. A technique that is being actually practised is a growing thing, for the experience of each worker enriches it and becomes part of the common heritage.

6. It is not necessarily incumbent upon us to do certain things or hold certain ideas because the Rabbis who lived before Christ had certain views. The world has moved on since those days and we are under a new dispensation but what was true in principle then will be true in principle now, and of value to us. The modern Qabalist is the heir of the ancient Qabalist, but he must re-interpret doctrine and re-formulate method in the light of the present dispensation if the heritage he has received is to be of any practical value to him.

7. I do not claim that the modern Qabalistic teachings as I have learnt them are identical with those of the pre-Christian Rabbis, but I claim that they are the legitimate descendants thereof and the natural development therefrom.

8. The nearer the source the purer the stream. In order to discover first principles we must go to the fountain-head. But a river receives many tributaries in the course of its flow, and these need not necessarily be polluted. If we want to discover whether they are pure or not, we compare them with the pristine stream, and if they pass this test they may well be permitted to mingle with the main body of waters and swell their strength. So it is with a tradition: that which is not antagonistic will be assimilated. We must always test the purity of a tradition by reference to first principles, but we shall equally judge of the vitality of a tradition by its power to assimilate. It is only a dead faith which remains uninfluenced by contemporary thought.

9. The original stream of Hebraic mysticism has received many tributaries. We see its rise among the nomad star-worshippers of Chaldea, where Abraham in his tent among his flocks hears the voice of God. But Abraham has a shadowy background in which vast forms move half-seen. The mysterious figure of a great Priest-king, "born without father, without mother, without descent; having neither beginning of days nor end of life," administers to him the first Eucharistic feast of bread and wine after the battle with the Kings in the valley, the sinister Kings of Edom, "who ruled ere there was a king in Israel, whose kingdoms are unbalanced force."

10. Generation by generation we trace the intercourse of the princes of Israel with the priest-kings of Egypt. Abraham and Jacob went thither; Joseph and Moses were

intimately associated with the court of the royal adepts. When we read of Solomon sending to Hiram, King of Tyre, for men materials to aid in the building of the Temple we know that the famous Tyrian Mysteries must have profoundly influenced the Hebrew esotericism. When we read of Daniel being educated in the palaces of Babylon we know that the wisdom of the Magi must have been accessible to Hebrew illuminati.

11. This ancient mystical tradition of the Hebrews possessed three literatures: the Books of the Law and the Prophets, which are known to us as the Old Testament; the Talmud, or

[Page 4]

collection of learned commentaries thereon; and the Qabalah, or mystical interpretation thereof. Of these three the ancient Rabbis say that the first is the body of the tradition, the second its rational soul, and the third its immortal spirit. Ignorant men may with profit read the first; learned men study the second; but the wise meditate upon the third. It is a strange thing that Christian exegesis has never sought the keys to the Old Testament in the Qabalah.

12. In Our Lord's day there were three schools of religious thought in Palestine: the Pharisees and the Sadducees, of whom we read so frequently in the Gospels; and the Essenes, who are never referred to. Esoteric tradition avers that the boy Jesus ben Joseph, when His calibre was recognised by the learned doctors of the Law who heard Him speak in the Temple at the age of twelve, was sent by them to the Essenian community near the Dead Sea to be trained in the mystical tradition of Israel, and that He remained there until He came to John to be baptised in the Jordan before commencing His mission at the age of thirty. Be that as it may, the closing clause of the Lord's Prayer is pure Qabalism. Malkuth, the Kingdom, Hod, the Power, Netzach, the Glory, form the basal triangle of the Tree of Life, with Yesod, the Foundation, or Receptacle of Influences, as the central point. Whoever formulated that prayer knew his Qabalah.

13. Christianity had its esotericism in the Gnosis, which owed much to both Greek and Egyptian thought. In the system of Pythagoras we see an adaptation of the Qabalistic principles to Greek mysticism.

14. The exoteric, state-organised section of the Christian Church persecuted and stamped out the esoteric section, destroying every trace of its literature upon which it could lay hands in striving to eradicate the very memory of a gnosis from human history. It is recorded that the baths and bakehouses of Alexandria were fired for six months with the manuscripts from the great library. Very little remains to us of our spiritual heritage in the ancient wisdom. Everything that was above ground was swept away, and it is only with the excavation of ancient monuments the sands have swallowed that we are beginning to rediscover its fragments.

15. It was not until the fifteenth century, when the power of the Church was beginning to show signs of weakening, that men dared to commit to paper the traditional Wisdom of Israel. Scholars declare that the Qabalah is a medieval forgery because they cannot trace

a succession of early manuscripts, but those who know the manner of working of esoteric fraternities know that a whole cosmogony and psychology can be conveyed in a glyph which means nothing to the uninitiated. These strange old charts could be handed on from generation to generation, their explanation being communicated verbally, and the true interpretation would never be lost. When in doubt as to the explanation of some abstruse point, reference would be made to the sacred glyph, and meditation thereon would unfold what generations of meditation had ensouled therein. It is well known to mystics that if a man meditates upon a symbol around which certain ideas have been associated by past meditation, he will obtain access to those ideas, even if the glyph has never been elucidated to him by those who have received the oral tradition "by mouth to ear."

16. The organised temporal force of the Church availed to drive all rivals from the field and destroy their traces. We little know what seeds of mystical tradition sprang up only to be cut down during the Dark Ages; but mysticism is inherent in the human race, and although the Church had destroyed all roots of tradition in her group-soul, nevertheless devout spirits within her fold rediscovered the technique of the soul's approach to God and developed a characteristic Yoga of their own, closely akin to the Bhakti Yoga of the East. The literature of Catholicism is rich in treatises on mystical theology which reveal practical acquaintance with the higher states of consciousness though a somewhat naive conception of the psychology thereof, thus revealing the poverty of a system which does not avail itself of the experience of tradition.

17. The Bhakti Yoga of the Catholic Church is only Suitable for those whose temperament is naturally devotional

[Page 6]

and who find their readiest expression in loving self-sacrifice. But it is not everybody who is of this type, and Christianity is unfortunate in not having any choice of systems to offer its aspirants. The East, being tolerant, is wise, and has developed various Yoga methods, each of which is pursued by its adherents to the exclusion of the others, and yet none would deny that the other methods are also paths to God for those to whom they are suited.

18. In consequence of this deplorable limitation on the part of our theology many Western aspirants take up Eastern methods. For those who are able to live in Eastern conditions and work under the immediate supervision of a guru, this may prove satisfactory, but it seldom gives good results when the various systems are pursued with no other guide than a book and under unmodified Western conditions.

19. It is for this reason that I would recommend to the white races the traditional Western system, which is admirably adapted to their psychic constitution. It gives immediate results, and if done under proper supervision, not only does it not disturb the mental or physical equipoise, as happens with regrettable frequency when unsuitable systems are used, but it produces a unique vitality. It is this peculiar vitality of the adepts which led to

the tradition of the elixir of life. I have known a number of people in my time who might justly be considered adepts, and I have always been struck by that peculiar ageless vitality they all possessed.

20. On the other hand, however, I can only endorse what all the gurus of the Eastern Tradition have always averred-that any system of psycho-spiritual development can only be safely and adequately carried on under the personal supervision of an experienced teacher. For this reason, although I shall give in these pages the principles of the mystical Qabalah, I do not consider it would be in anybody's interest to give the keys to its practice even if by the terms of the obligation of my own initiation I were not forbidden to do so. But, on the other hand, I do not consider it fair to the reader to introduce intentional blinds and misinformation, and to the best of my knowledge and belief the information I give is accurate, even if incomplete.

21. The Thirty-two Mystical Paths of the Concealed Glory are ways of life, and those who want to unravel their secrets must tread them. As I myself was trained, so can anyone be trained who is willing to undergo the discipline, and I will gladly indicate the way to any earnest seeker.

[Page 8]

CHAPTER II

THE CHOICE OF A PATH

1. No student will ever make any progress in spiritual development who flits from system to system; first using some New Thought affirmations, then some Yoga breathing exercises and meditation-postures, and following these by an attempt at the mystical methods of prayer. Each of these systems has its value, but that value can only be realised if the system is carried out in its entirety. They are the calisthenics of consciousness, and aim at gradually developing the powers of the mind. The value does not lie in the prescribed exercises as ends in themselves, but in the powers that will be developed if they are persevered with. If we intend to take our occult studies seriously and make of them anything more than desultory light reading, we must choose our system and carry it out faithfully until we arrive, if not at its ultimate goal, at any rate at definite practical results and a permanent enhancement of consciousness. After this has been achieved we may, not without advantage, experiment with the methods that have been developed upon other Paths, and build up an eclectic technique and philosophy therefrom; but the student who sets out to be an eclectic before he has made himself an expert will never be anything more than a dabbler.

2. Whoever has any practical experience of the different methods of spiritual development knows that the method must fit the temperament, and that it must also be adapted to the grade of development of the student. Westerners, especially such as prefer

the occult to the mystic Path, often come seeking initiation at a stage of spiritual development which an Eastern guru would consider exceedingly immature.

Any method that is to be available for the West must have in its lower grades a technique which can be used as a stepping-stone by these undeveloped students; to ask them to rise immediately to metaphysical heights is useless in the case of the great majority) and prevents a start from being made.

3. For a system of spiritual development to be applicable in the West it must fulfil certain well-defined requirements. To begin with, its elementary technique must be such that it is readily grasped by minds that have in them nothing of the mystic. Secondly, the forces it brings to bear to stimulate the development of the higher aspects of consciousness must be sufficiently powerful and concentrated to penetrate the relatively dense vehicles of the average Westerner, who makes nothing whatever of subtle vibrations. Thirdly, as few Europeans, following a racial dharma of material development, have either the opportunity or the inclination to lead the life of a recluse, the forces employed must be handled in such a way that they can be made available during the brief periods that the modern man or woman can, at the commencement of the Path, snatch from their daily avocations to give to the pursuit. They must, that is to say, be handled by a technique which enables them to be readily concentrated and equally readily dispersed, because it is not possible to maintain these high psychic tensions while living the hard-driving life of the citizen of a European city. Experience proves with unfailing regularity that the methods of psychic development which are effectual and satisfactory for the recluse produce neurotic conditions and breakdowns in the person who pursues them while compelled to endure the strain of modern life.

4. So much the worse for modern life, some may say, and adduce this undeniable fact as an argument for modifying Our Western ways of living. Far be it from me to maintain that our civilisation is perfect, or that wisdom originated and will die with us, but it appears to me that if our karma (or destiny) has caused us to be incarnated in a body of a certain racial type and temperament, it may be concluded that that is

[Page 10]

the discipline and experience which the Lords of Karma consider we need in this incarnation, and that we shall not advance the cause of our evolution by avoiding or evading it. I have seen so many attempts at spiritual development that were simply evasions of life's problems that I am suspicious of any system which involves a breach with the group-soul of the race. Nor am I impressed by a dedication to the higher life which manifests itself by peculiarities of clothing and bearing and by the manner of cutting, or omitting to cut, the hair. True spirituality never advertises itself.

5. The racial dharma of the West is the conquest of dense matter. If this were realised it would explain many problems in the relationships of West and East. In order that we may conquer dense matter and develop the concrete mind we are endowed by our racial heritage with a particular type of physical body and nervous system, just as other races, such as the Mongolian and the Negro, are endowed with other types.

6. It is injudicious to apply to one type of psycho-physical make-up the developing methods adapted to another; they will either fail to produce adequate results, or produce unforeseen and possibly undesirable results. To say this is not to condemn the Eastern methods, nor decry the Western constitution, which is as God made it, but to reaffirm the old adage that one man's meat is another man's poison.

7. The dharma of the West differs from that of the East; is it therefore desirable to try and implant Eastern ideals in a Westerner? Withdrawal from the earth-plane is not his line of progress. The normal, healthy Westerner has no desire to escape from life, his urge is to conquer it and reduce it to order and harmony. It is only the pathological types who long to "cease upon the midnight with no pain," to be free from the wheel of birth and death; the normal Western temperament demands "life, more life."

8. It is this concentration of life-force that the Western occultist seeks in his operations. He does not try to escape from matter into spirit, leaving an unconquered country behind him to get on as best it may; he wants to bring the Godhead down into manhood and make Divine Law prevail even in the Kingdom of the Shades. This is the root-motive for the acquisition of occult powers upon the Right-hand Path, and explains why initiates do not abandon all for the mystic Divine Union, but cultivate a White Magic.

9. It is this White Magic, which consists in the application of occult powers to spiritual ends, by means of which a large proportion of the training and development of the Western aspirant is carried out. I have seen something of a good many different systems, and in my opinion the person who tries to dispense with ceremonial is working at a great disadvantage. Development by meditation alone is a slow process in the West, because the mind-stuff upon which it has to work, and the mental atmosphere in which the work has to be done, are very resistant. The only purely meditative school of Western Yoga is that of the Quakers, and I think that they would agree that their path is for the few; the Catholic Church combines Mantra Yoga with its Bhakti Yoga.

10. It is by means of formula that the occultist selects and concentrates the forces he wishes to work with. These formulæ are based upon the Qabalistic Tree of Life, and whatever system he may be working, whether he be assuming the God-forms of Egypt or evoking the inspiration of Iacchus with chant and dance, he has the diagram of the Tree at the back of his mind. It is in the symbolism of the Tree that Western initiates are drilled, and it supplies the essential ground-plan of classification to which all other systems can be related. The Ray upon which the Western aspirant works has manifested itself through many different cultures and developed a characteristic technique in each. The modern initiate works a synthetic system, sometimes using an Egyptian, a Greek, or even a Druidic method, for different methods are best suited for different purposes and conditions. In all cases, however, the operation he designs is strictly related to the Paths of the Tree of which he is master. If he possesses the grade which corresponds to the Sephirah Netzach, he can work with the manifestation of the force of that aspect of the

Godhead (distinguished by the Qabalists by the name of Tetragrammaton Elohim) in whatever system he may select. In the Egyptian system it will be the Isis of Nature; in the Greek, Aphrodite; in the Nordic, Freya; in the Druidic, Keridwen. In other words, he possesses the powers of the Sphere of Venus in whatever traditional system he may be using. Having attained a grade in one system, he has access to the equivalent grades of all the other systems of his Tradition.

11. But although he may use these other systems as occasion serves, experience proves that the Qabalah supplies the best groundwork and the best system upon which to train a student before he begins to experiment with the pagan systems. The Qabalah is essentially monotheistic; the potencies it classifies are always regarded as the messengers of God and not His fellow-workers. This principle enforces the concept of a centralised government of the Cosmos and of the grip of the Divine Law upon the whole of manifestation—a very necessary principle with which to imbue any student of the Arcane forces. It is the purity, sanity, and clarity of the Qabalistic concepts as resumed in the formula of the Tree of Life which makes that glyph such an admirable one for the meditations that exalt consciousness and justify us in calling the Qabalah the Yoga of the West.

CHAPTER III

THE METHOD OF THE QABALAH

1. Speaking of the method of the Qabalah, one of the ancient Rabbis says that an angel coming down to earth would have to take on human form in order to converse with men. The curious symbol-system known to us as the Tree of Life is an attempt to reduce to diagrammatic form every force and factor in the manifested universe and the soul of man; to correlate them one to another and reveal them spread out as on a map so that the relative positions of each unit can be seen and the relations between them traced. In brief, the Tree of Life is a compendium of science, psychology, philosophy, and theology.

2. The student of the Qabalah goes to work in exactly the opposite way to the student of natural science; the latter builds up synthetic concepts; the former analyses abstract concepts. It goes without saying, however, that before a concept can be analysed it must first be assembled. Someone must have thought out the principles that are resumed in the symbol which is the object of meditation of the Qabalist. Who then were the first Qabalists who built up the whole scheme? The Rabbis are unanimous upon this point, they were angels. In other words, it was beings of another order of creation than humanity who gave the Chosen People their Qabalah.

3. To the modern mind this may seem as absurd a statement as the doctrine that babies are found under gooseberry bushes; but if we study the many mystical systems of

comparative religion we find that all the illuminati are in agreement upon this point. All men and women who have had practical experience of the spiritual life tell us that they are taught by

[Page 14]

Divine beings. We shall be very foolish if we altogether disregard such a cloud of witnesses, especially those of us who never have had any personal experience of the higher states of consciousness.

4. There are some psychologists who will tell us that the Angels of the Qabalists and the Gods and Manus of other systems are our own repressed complexes; there are others with less limited outlook who will tell us that these Divine beings are the latent capacities of our own higher selves. To the devotional mystic this is not a point of any great moment; he gets his results, and that is all he cares about; but the philosophical mystic, in other words the occultist, thinks the matter out and arrives at certain conclusions. These conclusions, however, can only be understood when we know what we mean by reality and have a clear line of demarcation between the subjective and the objective. Any one who is trained in philosophical method knows that this is asking a good deal.

5. The Indian schools of metaphysics have most elaborate and intricate systems of philosophy which attempt to define these ideas and render them thinkable; and though generations of seers have given their lives to the task, the concepts still remain so abstract that it is only after a long course of discipline, called Yoga in the East, that the mind is able to apprehend them at all.

6. The Qabalist goes to work in a different way. He does not attempt to make the mind rise up on the wings of metaphysics into the rarefied air of abstract reality; he formulates a concrete symbol that the eye can see, and lets it represent the abstract reality that no untrained human mind can grasp.

7. It is exactly the same principle as algebra. Let X represent the unknown quantity, let Y represent the half of X, and let Z represent something we know. If we begin to experiment with Y; to find out its relation to Z, and in what proportions, it soon ceases to be entirely unknown; we have learnt something at any rate about it; and if we are sufficiently skilful we may in the end be able to express Y in terms of Z, and then we shall begin to understand X.

8. There are a great many symbols which are used as objects of meditation; the Cross in Christendom; the God-forms in the Egyptian system; phallic symbols in other faiths. These symbols are used by the uninitiated as a means of concentrating the mind and introducing into it certain thoughts, calling up certain associated ideas, and stimulating certain feelings. The initiate, however, uses a symbol-system differently; he uses it as an algebra by means of which he will read the secrets of unknown potencies; in other words, he uses the symbol as a means of guiding thought out into the Unseen and Incomprehensible.

9. And how does he do this? He does it by using a composite symbol; a symbol which is an unattached unit would not serve his purpose. In contemplating such a composite symbol as the Tree of Life he observes that there are definite relations between its parts. There are some parts of which he knows something; there are others of which he can intuit something, or, more crudely, make a guess, reasoning from first principles. The mind leaps from one known to another known and in so doing traverses certain distances, metaphorically speaking; it is like a traveller in the desert who knows the situation of two oases and makes a forced march between them. He would never have dared to push out into the desert from the first oasis if he had not known the location of the second; but at the end of his journey he not only knows much more about the characteristics of the second oasis, but he has also observed the country lying between them. Thus, making forced marches from oasis to oasis, backwards and forwards across the desert, he gradually explores it; nevertheless, the desert is incapable of supporting life.

10. So it is with the Qabalistic system of notation. The things it renders are unthinkable- and yet the mind, tracking from symbol to symbol, manages to think about them; and although we have to be content to see in a glass darkly, yet we have every reason to hope that ultimately we shall see face to

[Page 16]

face and know even as we are known; for the human mind grows by exercise, and that which was at first as unthinkable as mathematics to the child who cannot manage his sums, finally comes within the range of our realisation. By thinking about a thing, we build concepts of it.

11. It is said that thought grew out of language, not language out of thought. What words are to thought, symbols are to intuition. Curious as it may seem, the symbol precedes the elucidation; that is why we declare that the Qabalah is a growing system, not a historic monument. There is more to be got out of the Qabalistic symbols to-day than there was in the time of the old dispensation because our mental content is richer in ideas. How much more, for instance, does the Sephirah Yesod, wherein work the forces of growth and reproduction, mean to the biologist than to the ancient rabbi? Everything that has to do with growth and reproduction is resumed in the Sphere of the Moon. But this Sphere, as represented upon the Tree of Life, is set about with Paths leading to other Sephiroth; therefore the biological Qabalist knows that there must be certain definite relationships between the forces subsumed in Yesod and those represented by the symbols assigned to these Paths. Brooding over these symbols, he gets glimpses of relationships that do not reveal themselves when the material aspect of things is considered; and when he comes to work these out in the material of his studies he finds that therein are hidden important clues; and so upon the Tree, one thing leads to another, explanation of hidden causes arising out of the proportions and relations of the various individual symbols composing this mighty synthetic glyph.

12. Each symbol, moreover, admits of interpretation upon the different planes, and through its astrological associations can be related to the gods of any pantheon, thus

opening up vast new fields of implication in which the mind ranges endlessly, symbol leading on to symbol in an unbroken chain of associations; symbol confirming symbol as the many-branching threads gather themselves together into a synthetic glyph once more, and each symbol capable of interpretation in terms of whatever plane the mind may be functioning upon.

13. This mighty, all-embracing glyph of the soul of man and of the universe, by virtue of its logical association of symbols, evokes images in the mind; but these images are not randomly evolved, but follow along well-defined association-tracks in the Universal Mind. The symbol of the Tree is to the Universal Mind what the dream is to - the individual ego - it is a glyph synthetised from subconsciousness to represent the hidden forces.

14. The universe is really a thought-form projected from the mind of God. The Qabalistic Tree might be likened to a dream-picture arising from the subconsciousness of God and dramatising the subconscious content of Deity. In other words, if the universe is the conscious end-product of the mental activity of the Logos, the Tree is the symbolic representation of the raw material of the Divine consciousness and of the processes whereby the universe came into being.

15. But the Tree applies not only to the Macrocosm but to the Microcosm which, as all occultists realise, is a replica in miniature. It is for this reason that divination is possible. That little-understood and much-maligned art has for its philosophical basis the System of Correspondences represented by symbols. The correspondences between the soul of man and the universe are not arbitrary, but arise out of developmental identities. Certain aspects of consciousness were developed in response to certain phases of evolution, and therefore embody the same principles; consequently they react to the same influences. A man's soul is like a lagoon connected with the sea by a submerged channel; although to all outward seeming it is land-locked, nevertheless its water-level rises and falls with the tides of the sea because of the hidden connection. So it is with human consciousness, there is a subconscious connection between each individual soul and the World-soul deep hidden in the most primitive depths of subconsciousness, and in consequence we share in the rise and fall of the cosmic tides.

16. Each symbol upon the Tree represents a cosmic force or factor. When the mind concentrates upon it, it comes into touch with that force; in other words, a surface channel, a channel in consciousness, has been made between the conscious mind of the individual and a particular factor in the world-soul, and through this channel the waters of the ocean pour into the lagoon. The aspirant who uses the Tree as his meditation-symbol establishes point by point the union between his soul and the world-soul. This results in a tremendous access of energy to the individual soul; it is this which endows it with magical powers.

17. But just as the universe must be ruled by God, so must the many-sided soul of man be ruled by its god-the spirit of man. The Higher Self must dominate its universe or there will be unbalanced force; each factor will rule its own aspect, and they will war among

themselves. Then do we have the rule of the Kings of Edom, whose kingdoms are unbalanced force.

18. Thus do we see in the Tree a glyph of the soul of man and the universe, and in the legends associated with it the history of the evolution of the soul and the Way of Initiation.

CHAPTER IV

THE UNWRITTEN QABALAH

1. The point of view from which I approach the Holy Qabalah in these pages differs, so far as I know, from that of all other writers on the subject, for to me it is a living system of spiritual development, not a historical curiosity. Few people, even among those interested in occultism, realise that there is an active Esoteric Tradition in our midst, handed down in private manuscripts and by "mouth to ear." Still fewer know that it is the Holy Qabalah, the mystic system of Israel, which forms its basis. But where may we look more aptly for our occult inspiration than to the Tradition which gave us the Christ?

2. The interpretation of the Qabalah is not to be found, however, among the Rabbis of the Outer Israel, who are Hebrews after the flesh, but among those who are the Chosen People after the spirit—in other words, the initiates. Neither is the Qabalah, as I have learnt it, a purely Hebraic system, for it has been supplemented during medieval times by much alchemical lore and by the intimate association with it of that most marvellous system of symbolism, the Tarot.

3. In my presentation of the subject, therefore, I do not appeal so much to tradition in support of my views, as to modern practice among those who make use of the Qabalah as their method of occult technique. It may be 'alleged against me that the ancient Rabbis knew nothing of some of the concepts here set forth; to this I reply that it is hardly to be expected that they should, as these things were not known in their day, but are the work of their successors of the Spiritual Israel. For my part, although I would not willingly mislead

[Page 20]

anyone concerning the teachings of those of ancient days, and upon matters of historical accuracy stand subject to correction from any who are better informed than I am in these matters (and their name is legion), I care not one jot for the authority of tradition if it hampers the free development of a system of such practical value as the Holy Qabalah, and I use the work of my predecessors as a quarry whence I fetch the stone to build my city. Neither am I limited to this quarry by any ordinance that I know of; but fetch also cedar from Lebanon and gold from Ophir if it suits my purpose.

4. Let it be clearly understood, therefore, that I do not say, This is the teaching of the ancient Rabbis; rather do I say, This is the practice of the modern Qabalists, and for us a much more vital matter, for it is a practical system of spiritual unfoldment; it is the Yoga of the West.

5. Having thus guarded myself as far as possible against blame for not having done what I never undertook to do, let me now define my own position in the matter of scholarship and general qualifications for the task in hand. So far as actual scholarship goes, I am in the same class as William Shakespeare, having little Latin and less Greek, and of Hebrew only that peculiar portion which is cultivated by occultists-the ability to transliterate unpointed Hebrew script for the purposes of Gematric calculations. Of any knowledge of Hebrew as a language I am guiltless.

6. Whether such frank acknowledgment of my deficiencies will serve to disarm criticism I do not know; no doubt it will be alleged against me, and not without justification, that one so ill-equipped should not have undertaken the task at all. To this I reply that if one saw a man dying injured, should the admitted absence of a medical qualification debar one from going to his assistance and giving him what help one could, pending the arrival of qualified attention? My work upon the Qabalah is of the nature of first aid. I find an invaluable system lying neglected, and ill-qualified for the task as I may be, I am striving to draw attention to its possibilities and restore it to its proper place as the key to Western occultism; and it is my chief hope in so doing that it may attract the attention of scholars, and that they will continue the task of translation and investigation of the Qabalistic manuscripts, which are as yet a vein of which only the outcroppings have been worked.

7. One qualification for my task I can plead in justification, however. For the last ten years I have lived and moved and had my being in the Practical Qabalah; I have used its methods both subjectively and objectively till they have become a part of myself; and I know from experience what they yield in psychic and spiritual results, and their incalculable value as a method of using the mind.

8. It is not required of those who would use the Qabalah as their Yoga that they should acquire any extensive knowledge of the Hebrew language; all they need is to be able to read and write the Hebrew characters. The modern Qabalah has been pretty thoroughly naturalised in the English language, but it retains, and must ever retain, all its Words of Power in Hebrew, which is the sacred language of the West just as Sanscrit is the sacred language of the East. There are those who have objected to the free employment of Sanscrit terms in occult literature, and no doubt they will object even more strongly to the employment of Hebrew characters, but their use is unavoidable, for every letter in Hebrew is also a number, and the numbers to which words add up are not only an important clue to their significance, but can also be used to express the relationships existing between different ideas and potencies.

9. According to MacGregor Mathers, in the admirable essay which forms the introduction to his book, the Qabalah is usually classed under four heads:

[Page 22]

The Practical Qabalah, which deals with talismanic and ceremonial magic.

The Dogmatic Qabalah, which consists of the Qabalistic literature.

The Literal Qabalah, which deals with the use of letters and numbers.

The Unwritten Qabalah, which consists of a correct knowledge of the manner in which the symbol-systems are arranged on the Tree of Life, and concerning which MacGregor Mathers says, "I may say no more on this point, not even whether I myself have or have not received it." But as this portentous hint is elaborated by the late Mrs MacGregor Mathers in her introduction to the new edition of his book in the following plain-spoken words, "Simultaneously with the publication of the Qabalah in 1887, he received instructions from his occult teachers to prepare what was eventually to become his esoteric school," it may be justifiable to say that if he did receive the Unwritten Qabalah, it has for some years ceased to be unwritten, for after a quarrel with MacGregor Mathers, Aleister Crowley, the well-known author and scholar, published the lot. His books are now rare and hard to come by, and being much valued by the more scholarly of esotericists, their price has gone up out of sight, and they seldom come into the second-hand book market.

10. The breaking of an initiation oath is a serious matter, and a thing that I, for my part, do not care to do; but I admit of no authority that debars me from collecting and collating all available material that has been published upon any subject, and interpreting it according to the best of my understanding. In these pages it is the system given by Crowley of which I shall avail myself to supplement the points upon which MacGregor Mathers, Wynn Westcott, and A. E. Waite, the principal modern authorities upon the Qabalah, are silent.

11. As to whether I myself have received any knowledge of the Unwritten Qabalah, it would as ill beseem me as MacGregor Mathers to be explicit upon this point, and having followed his classic example of burying my head in the sand and waving my tail, I will return to the consideration of the matter in hand.

12. The essence of the Unwritten Qabalah lies in the knowledge of the order in which certain sets of symbols are arranged upon the Tree of Life. This Tree, Otz Chiim, consists of the Ten Holy Sephiroth arranged in a particular pattern and connected by lines which are called the Thirty-two Paths of the Sepher Yetzirah, or Divine Emanations (see The Sepher Yetzirah, by Wynn Westcott). Here there exists one of the "blinds," or traps for the uninitiated, in which the ancient Rabbis delighted. We find, if we count them, that there are twenty-two, not thirty-two Paths upon the Tree; but for their purposes the Rabbis treated the Ten Sephiroth themselves as Paths, thus misleading the uninitiated.

Thus the first ten Paths of the Sepher Yetzirah are assigned to the Ten Sephiroth, and the following twenty-two to the actual Paths themselves. It will then be seen how the twenty-two letters of the Hebrew alphabet can be associated with the Paths without discrepancy or overlapping. With them also are associated the twenty-two Tarot trumps, the Atus, or Abodes of Thoth. Concerning the Tarot cards there are three modern authorities of note: Dr Encausse, or "Papus," the French writer; Mr A. E. Waite; and the MSS. of MacGregor Mathers' Order of the Golden Dawn, which Crowley published upon his own authority. All three are different. Concerning the system Mr Waite gives, he himself says, "There is another method known to initiates." There is reason to suppose that this is the method used by Mathers. Papus disagrees with both these writers in his method, but as his system does violence to many of the correspondences when placed upon the Tree, the final test of all systems, and as the Mathers-Crowley system fits admirably, I think we may justly conclude that the latter is the correct traditional order, and I propose to adhere to it in these pages.

13. The Qabalists further placed upon the Paths of the Tree the Signs of the Zodiac, the Planets, and the Elements. Now there are twelve Signs, seven Planets, and four Elements, making twenty-three symbols in all. How are these to be fitted on to the Twenty-two Paths? Herein is another "blind," but the solution is simple. Upon the physical plane

[Page 24]

we are ourselves in the Element of Earth, therefore that symbol does not appear upon the Paths which lead into the Unseen. Remove this, and we are left with twenty-two symbols, which fit accurately and, correctly placed, are found to correspond perfectly with the Tarot trumps, each elucidating the other in the most remarkable fashion, and giving the keys to esoteric astrology and Tarot divination.

14. The essence of each Path is to be found in the fact that it connects two of the Sephiroth, and we can only understand its significance by taking into account the nature of the linked Spheres upon the Tree. But a Sephirab cannot be understood upon a single plane; it has a fourfold nature. The Qabalists express this by saying that there are four worlds:

Atziluth, the Archetypal World, or World of Emanations; the Divine World.

Briah, the World of Creation, also called Khorsia, the World of Thrones.

Yetzirah, the World of Formation and of Angels.

Assiah, the World of Action; the World of Matter.
(See MacGregor Mathers, *The Qabalah Unveiled*.)

15. The Ten Holy Sephiroth are held to have each its own point of contact with each of the four Worlds of the Qabalists. In the Atziluthic World they manifest through the Ten Holy Names of God; in other words, the Great Unmanifest, shadowed forth through the

Three Negative Veils of Existence which hang behind the Crown, declares itself in manifestation as ten different aspects which are represented by the different names used to denote Deity in the Hebrew Scriptures. These are variously rendered in the Authorised Version, and a knowledge of their true significance and the spheres to which they belong enables us to read many of the riddles of the Old Testament.

16. In the Briatic World the Divine Emanations are held to manifest through the Ten Mighty Archangels, whose names play such an important part in ceremonial magic; it is the worn and effaced remnants of these Words of Power that are the "barbarous names of evocation" of mediaeval magic, not one letter of which may be changed." Why this is so may readily be seen when we remember that in Hebrew a letter is also a number, and the numbers of a Name have an important significance.

17. In the Yetziratic World the Divine Emanations manifest, not through a single Being, but through different types of beings, which are called the Angelic Hosts or Choirs.

18. The Assiatic World is not, strictly speaking, the World of Matter when viewed from the Sephirotic standpoint, but rather the Lower Astral and Etheric Planes which, together, form the background of matter. Upon the physical plane the Divine Emanations manifest through what may not inaptly be called the Ten Mundane Chakras, likening these centres of manifestation to the centres that exist in the human body, an exact analogy. These Chakras are the Primum Mobile or First Swirlings, the Sphere of the Zodiac, the seven planets, and the Elements taken together-ten in all.

19. It will be seen from the foregoing that each Sephirah will therefore consist, firstly, of its Mundane Chakra; secondly, of an angelic host of beings, Devas or Archons, Principalities or Powers, according to the terminology used; thirdly, an Arch-angelic Consciousness, or Throne; and fourthly, a special aspect of the Deity. God as He is, in His entirety, being hidden behind the Negative Veils of Existence, incomprehensible to unenlightened human consciousness.

20. The Sephiroth may justly be considered macrocosmic, and the Paths microcosmic; for the Sephiroth, connected as they sometimes are in old diagrams by a flash of lightning, which is often depicted as hilted like a fiery sword, represent the successive Divine Emanations which constitute creative evolution; whereas the Paths represent the successive stages of the unfolding of cosmic realisation in human consciousness; in old pictures a serpent is often depicted as twined about the boughs of the Tree. This is the serpent Nechushtan "who holdeth his tail in his mouth," the symbol of wisdom and initiation. The coils of this serpent, when correctly arranged

[Page 26]

upon the Tree, cross each of the Paths in succession and see to indicate the order in which they should be numbered. With the help of this glyph, then, it is a simple matter to arrange all the tables of symbols in their correct positions upon the Tree, granted that the symbols are given in their correct order in the tables. In certain modern books which rank

as authorities upon the subject the correct order is not given, the writers apparently holding that this should not be revealed to the uninitiated. But as this order is given correctly in certain older books, and, for the matter of that, in the Bible itself and the Qabalistic literature, there seems to me no point in deliberately misleading students with spurious information. To refuse to divulge anything may be justifiable, but how is it possible to justify the handing on of misleading statements? No one is going to be persecuted nowadays for their studies in unorthodox sciences, so there can be but one purpose in withholding teaching that relates solely to the theory of the universe and the philosophy arising therefrom, and in no way to the methods of practical magic, and that purpose is to retain a monopoly of the knowledge which confers prestige, if not power.

21. For my part I believe that this selfishness and exclusiveness is the bane of the occult movement rather than its safeguard. It is the old sin of retaining the knowledge of God in the hands of a priesthood and denying it to all outside the sacred clan; justifiable enough when the people were savages, but unjustifiable in the case of the modern student. For when all is said and done, the desired information can be worked out from existing literature by those who care to take the trouble, or purchased plainly set forth by those who can afford high prices for books now rare. Surely the possession of ample time and ample cash should not be the test of the fitness to obtain the Sacred Wisdom?

22. No doubt I shall expose myself to a shower of abuse from the self-constituted guardians of this knowledge who may hold that their precious secrets have been betrayed. To this I reply that I am not betraying anything that is secret, but collecting that which has already been given to the world and is of a simple and well-known nature. When I first had access to certain manuscripts, I believed them to be secret, and unknown to the world at large, but a wider acquaintance with occult literature has revealed to me that the information is to be found scattered broadcast through it. Much, in fact, to which the initiate is sworn to secrecy has been published by Mathers and Wynn Westcott themselves, and as recently as 1926 a new edition of Mathers' work on the Qabalah was brought out under the editorship of his widow (who may be assumed to have known his wishes), and in that work will be found most of the tables that I give in these pages. As these catalogues of beings were originally given to the world by Isaiah, Ezekiel, and various mediaeval Rabbis, it may justly be held that the copyright in them has lapsed owing to the passage of time. In any case such ownership as there may be in these ideas is vested in the original author and not in any subsequent commentator, and that author, according to the Qabalah itself, is the Archangel Metatron.

23. Much that was once common knowledge has been gathered up and confined under the initiate's oath of secrecy. It is Crowley's jibe at his teachers that they bound him to secrecy with terrible oaths and then "confided the Hebrew alphabet to his safe keeping."

24. The philosophy of the Qabalah is the esotericism of the West. In it we find such a cosmogony as is found in the Stanzas of Dyman, which were the basis of Mme Blavatsky's work. Herein she found the framework of traditional doctrine which she expounded in her great book, *The Secret Doctrine*. This Qabalistic Cosmogony is the Christian Gnosis. Without it we have an incomplete system in our religion, and it is this

incomplete system which has been the weakness of Christianity. The Early Fathers, in the homely metaphor, threw away the baby with the bath-water. A very cursory acquaintance with the Qabalah serves to show that here we have the essential keys to the riddles of Scripture in general and the prophetic books in particular. Is there any good

[Page 28]

reason why initiates of the present day should put all this knowledge into a secret box and sit upon the lid? If they consider that I am wrong to give accurate information upon matters which they consider their private preserve, I reply that this is a free country and they are entitled to their opinion.

CHAPTER V NEGATIVE EXISTENCE

1. The esotericist, when endeavouring to formulate his philosophy for communication to others, is confronted by the fact that his knowledge of the higher forms of existence is obtained by a process other than thought; and this process only commences when thought is left behind. Consequently it is only in that region of consciousness which transcends thought that the highest form of transcendental ideas is known and understood; and it is only to those who are able to use this aspect of consciousness that he can communicate his ideas in their original form. When he wants to communicate these ideas to those who have had no experience of this mode of consciousness, he must either crystallise them into form or fail to convey any adequate impression. Mystics have used every imaginable simile in the endeavour to convey their impressions; philosophers have lost themselves in a maze of words; and all to no purpose so far as the unilluminated soul is concerned. The Qabalists, however, use another method. They do not try to explain to the mind that which the mind is not equipped to deal with; they give it a series of symbols to meditate upon, and these enable it to build the stairway of realisation step by step and to climb where it cannot fly. The mind can no more grasp transcendent philosophy than the eye can see music.

2. The Tree of Life, as cannot too often be emphasised, is not so much a system as a method; those who formulated it realised the important truth that in order to obtain clarity of vision one must circumscribe the field of vision. Most Philosophers founded their systems upon the Absolute; but

[Page 30]

this is a shifting foundation, for the human mind can neither define nor grasp the Absolute. Some others try to use a negation for their foundation, declaring that the Absolute is, and must ever be, unknowable. The Qabalists do neither of these things.

They content themselves with saying that the Absolute is unknown to the state of consciousness which is normal to human beings.

3. For the purposes of their system, therefore, they draw a veil at a certain point in manifestation, not because there is nothing there, but because the mind, as such, must stop there. When the human mind has been brought to its highest stage of development, and consciousness can detach itself ~ and, as it were, stand upon its own shoulders, we may be able to penetrate the Veils of Negative Existence, as they are called. But for all practical purposes we can understand the nature of the cosmos if we are content to accept the Veils as philosophical conventions, and realise that they correspond to human limitations, not to cosmic conditions. The origin of things is inexplicable in terms of our philosophy. However far we push our inquiries back into origins in the world of manifestation, we find a preceding existence. It is only when we are content to draw the Veil of Negative Existence across the path which leads back to beginnings that we get a background against which a First Cause becomes visible. And this First Cause is not a rootless origin, but a First Appearance on the Plane of Manifestation. Thus far and no farther can the mind go back; but we must always remember that different minds go back different distances, and that for some the Veil is drawn in one place, and for others in another. The ignorant man goes no further than the concept of God as an old man with a long white beard who sat on a golden throne and gave orders for creation. The scientist will go back a little further before he is compelled to draw a veil called the ether; and the philosopher will go back yet further before he draws a veil called the Absolute; but the initiate will go back furthest of all because he has learnt to do his thinking in symbols, and symbols are to the mind what tools are to the hand-an extended application of its powers.

4. The Qabalist takes for his starting-point Kether, the Crown, the first Sephirah~ which he symbolises by the figure One, Unity, and by the Point within the Circle. From this he traces backward the three Veils of Negative Existence. This is quite a different matter from starting at the Absolute and trying to work forwards into evolution. It may not yield immediately accurate and complete knowledge of the origin of all things, but it enables the mind to make a start; and unless we can make a start we have no hope of a finish.

5. The Qabalist, then, starts where he can-at the first point that is within the reach of finite consciousness. Kether is equated with the most transcendent form of God that we can conceive, Whose name is Ehieh, translated in the Authorised Version of the Bible as "I am," or, more explicitly, the Self-Existing One, Pure Being.

6. But these words are words and nothing more unless they convey an impression to the mind, and in themselves they cannot do that. They must be related to other ideas before they have any significance. We only begin to understand Kether when we study Chokmah, the Second Sephirah, its emanation; it is only when we see the full unfoldment of the Ten Sephiroth that we are ready to approach Kether, and then we approach it with the data that gives us the key to its nature. In working with the Tree it is wisest to keep on going over it, rather than to concentrate upon a single point until it is mastered, for one thing explains another, and it is out of the perception of the relationships between the

different symbols that enlightenment arises. Again we say, the Tree is a method of using the mind, not a system of knowledge.

7. But at the moment we are not engaged in the study of the Emanations, but of origins, so far as the human mind may hope to penetrate them; and paradoxical as it may appear, we shall penetrate further when we draw the Veils across them than when we try to pierce the darkness. We will, then, sum up the position of Kether in one sentence, a sentence

[Page 32]

that can have but little significance for the student approaching the subject for the first time, but which must be borne in mind, for its significance will begin to dawn presently. In so doing, we are adhering to the ancient esoteric tradition of giving the student a symbol to incubate till it hatches in his mind, rather than explicit instruction which would convey nothing to him.

The seed-sentence then, which we cast into the subconscient mind of the reader, is this: "Kether is the Malkuth of the Unmanifest." Mathers says (*op. cit.*): "The limitless ocean of negative light does not proceed from a centre, for it is centreless, but it concentrates a centre, which is the number One of the manifested Sephiroth, Kether, the Crown, the First Sephirah."

8. These words in themselves contain contradictions and unthinkable; negative light is simply a way of saying that the thing described, though having certain qualities in common with light, is nevertheless not light as we know it. This tells us very little about that which it is intended to describe. We are told not to make the mistake of thinking of it as light, but we are not told how to think of it as it really is, and for the very good reason that the mind is not equipped with any images under which to represent it, and must therefore let it alone till growth takes place. Nevertheless, although these words do not tell us all that we would like to know, they convey certain images to imagination; these sink into the subconscious mind which are related to them. Thus knowledge grows from more to more when the Qabalistic method is given its practical application as the Yoga of the West.

9. The Qabalists recognise four planes of manifestation, and three planes of unmanifestation, or Negative Existence. The first of these is called AIN, Negativity; the second, AIN SOPH, the Limitless; the third, AIN SOPH AUR, the Limitless Light. It is out of this last that Kether is concentrated. These three terms are called the three Veils of Negative Existence - depending back from Kether; in other words, they are the algebraic symbols that enable us to think of that which transcends thought, and which at the same time hide that which they represent; they are the masks of transcendent realities. If we think of the states of negative existence in terms of anything that we know, we shall err, for whatever else they may be, they cannot be that, being unmanifest. The expression "Veils," therefore, teaches us to use these ideas as counters, of no value in themselves, but useful to us in our calculations. This is the true use of all symbols; they veil that which they represent until we can reduce them to terms we can comprehend; nevertheless they enable us to use in our calculations ideas which would otherwise be unthinkable.

And as the essence of the Tree lies in the fact that it causes its symbols to elucidate one another by means of their relative positions, these Veils serve as the scaffolding of thought, enabling us to take our bearings in regions as yet uncharted. Such Veils, or non-concrete symbols, are, however, of no value to us unless one side of the Veil abuts upon known country. The Veils, in fact, while they conceal that which they represent, enable us to see clearly that to which they form a background. This is their function, and the only reason they are referred to. It is only by reason of our infirmities that we need to have these unresolvable symbols presented to us, and the mind disciplined in esoteric philosophy soon learns to work within these limitations and accept as a painted veil the symbol of that which lies beyond its ken. This way lies the unfoldment of wisdom, for the mind grows with what it feeds upon, and one of these days, when we have climbed to Kether, we may hope to stretch out our hands and rend the Veil and look through into the Limitless Light. The esotericist does not limit himself by declaring the Unknown to be the Unknowable, for he is above all things an evolutionist, and knows that that which we cannot compass to-day we may achieve to-morrow of cosmic time. He knows, too, that evolutionary time is an individual matter upon the inner planes, and is measured, not regulated, by the revolution of the earth upon its axis.

10. These three Veils - AIN, Negativity; AIN SOPH, the

[Page 34]

Limitless ; and AIN SOPH AUR, the Limitless Light - though we cannot hope to understand them, nevertheless suggest to our minds certain ideas. Negativity implies Being or existence of a nature which we cannot comprehend. We cannot conceive of a thing which is, and yet is not; therefore we must conceive of a form of being of which we have never had any conscious experience; a form of being which, according to our concepts of existence, does not exist, and yet, if one may express it so, exists according to its own idea of existence. In the words of a very wise man: There are more things in heaven and earth than are dreamt of in our philosophy.

11. But although we say that Negative Existence is outside the range of our realisation, it does not mean that we are outside the range of its influence. If this were so, we could dismiss it as non-existent so far as we are concerned, and our interest in it would be at an end. On the contrary, although we have not direct access to its being, all that we know as existing has its roots in this Negative Existence, so that, although we cannot know it directly, we have experience of it at one remove. That is to say, although we cannot know its nature, we know its effects, in the same way as we are ignorant of the nature of electricity yet are able to turn it to good account in our lives, and from our experience of its effects we are able to come to certain conclusions concerning some at least of the qualities it must possess. Those who have penetrated furthest into the Unseen have given us symbolic descriptions by means of which we may turn our minds in the direction of the Absolute, even if we cannot reach it. They have spoken of Negative Existence as Light: "Ain Soph Aur, the Limitless Light." They have spoken of the First Manifest as Sound: "In the beginning was the Word." I remember once hearing a man, who was an adept if ever there was one, say, "If you want to know what God is, I can tell you in one

word: God is pressure." And immediately an image leapt to my mind and a realisation followed. I could conceive the outflowing of life through every channel of existence. I felt that a genuine realisation of the nature of God had been conveyed to me. And yet, if one cattle to analyse the words, there was nothing in them; nevertheless they had the power to convey an image, a symbol, to the mind, and the mind, working upon it in the realm of intuition beyond the sphere of reason, achieved a realisation, even if that realisation could only be reduced to the sphere of concrete thought as an image.

12. We must clearly realise that in these highly abstract regions the mind can use nothing but symbols; but these symbols have the power to convey realisations to minds that know how to use them; these symbols are the seeds of thought whence understanding arises, even if we are not able to expand the symbol itself into a concrete realisation.

13. Little by little, like a rising tide, realisation is concreting the Abstract, assimilating and expressing in terms of its own nature things which belong to another sphere; and we shall make a great mistake if we try to prove with Herbert Spencer that because a thing is unknown by any capacity of the mind we at present possess, that it must for ever be Unknowable. Time is not only increasing our knowledge, but evolution is increasing our capacity and initiation, which is the forcing-house of evolution, bringing faculties to birth out of due season, brings the consciousness of the adept within reach of vast apprehensions which are as yet below the horizon of the human mind. These ideas, though clearly apprehended by himself after another mode of consciousness, cannot be conveyed by him to anyone who does not share this mode of consciousness. He can only put them forth in symbolic form; but any mind that has in any way had experience~ of this wider mode of functioning will be able to lay hold on these ideas on their own plane, although it may be unable to translate them into the sphere of conscious thought. In this way, therefore, in the literature of esoteric science there are scattered seed-ideas such as "God is pressure" and "Kether is the Malkuth of Negative Existence." These images, whose content does not belong to our sphere at all, are as the male germs of thought which fecundate the ova of concrete realisation. In them-

[Page 36]

selves they are incapable of maintaining more than the fugitive existence in consciousness as a flash of realisation, but without them the ova of philosophical thought will be infertile. Impregnated by them, however, though their substance is absorbed and lost in the very act of impregnation growth takes place within the formless germ of thought, and ultimately, after due gestation beyond the threshold of consciousness, the mind gives birth to an idea.

14. If we want to get the best out of our minds, we must learn to allow for this period of latency, this impregnation of our minds by something outside our plane of existence, and its gestation beyond the threshold of consciousness. The invocations of an initiation ceremony are designed to call down this impregnating influence upon the consciousness of the candidate. Hence it is that the Paths of the Tree, which are the stages of

illumination of the soul, are intimately associated with the symbolism of initiation ceremonies.

CHAPTER VI

OTZ CHIIM, THE TREE OF LIFE

1. Before we can understand the significance of any individual Sephirah, we must grasp the broad outlines of the OTZ CHIIM, the Tree of Life, as a whole.
2. It is a glyph, that is to say a composite symbol, which is intended to represent the cosmos in its entirety and the soul of man as related thereto; and the more we study it, the more we see that it is an amazingly adequate representation; we use it as the engineer or the mathematician uses his sliding-rule, to scan and calculate the intricacies of existence, visible and invisible, in external nature or the hidden depth of the soul.
3. It is represented, as will be seen from diagram III, as a set of ten circles arranged in a certain pattern, and connected among themselves by lines. The circles are the Ten Holy Sephiroth, and the connecting lines are the Paths, twenty-two in number.
4. Each Sephirah (which is the singular form of the word of which Sephiroth is the plural) is a phase of evolution, and in the language of the Rabbis they are called the Ten Holy Emanations. The Paths between them are phases of subjective consciousness, the Paths or grades (Latin, *gradus*, step) by which the soul unfolds its realisation of the cosmos. The Sephiroth are objective; the Paths are subjective.
5. Let it be recalled again that I am not expounding the traditional Qabalah of the Rabbis as a historical curio, but the structure that has been raised upon it by generations of students, initiates all of them, adepts some of them, who have made the Tree of Life their instrument of spiritual development and magical work. This is the modern Qabalah, the

[Page 38]

Alchemical Qabalah as it has sometimes been called, and it contains all manner of things beside traditional Rabbinical lore, as will be seen in due course.

6. Let us now consider the general lay-out and significance of the Tree. It will be seen that the circles which represent the Sephiroth are arranged in three vertical columns (see diagram I), and that at the head of the centre, higher than any other, forming the apex of the topmost triangle of Sephiroth, is the Sephirah Kether, to which we referred in the previous chapter. To quote again the words of MacGregor Mathers, "The limitless ocean of negative light does not proceed from a centre, for it is centreless, but it concentrates a

centre, which is the number one of the manifested Sephiroth, Kether, the Crown, the First Sephirah."

7. Mme Blavatsky draws from Eastern sources the term "The point within the circle" to express the First Becoming of manifestation, and the idea is contained in the Rabbinical term, Nequdah Rashunab, the Primal Point, a name applied to Kether.

S. But Kether does not represent a position in space. The Am Soph Aur has been called a circle whose centre is every-where and whose circumference is nowhere, a statement which, like so many in occultism, is inconceivable, yet nevertheless presents an image to the mind and therefore serves its purpose. Kether, then (and for the matter of that, all the other Sephiroth), is a state or condition of existence. We must always bear in mind that the planes do not tower up one above another into the empyrean like the storeys of a building, but are conditions of being, states of existence of different types, and though they developed successively in time, they occur simultaneously in space; existence of all types being present in a single being, as we realise when we remember that the being of man is made up of a physical body, emotions, mind, and spirit, all occupying the same space at the same time.

9. If anyone has ever watched a heated liquid, at saturation point, crystallise out as it cools, they will have a useful symbol of Kether. Fill a tumbler with boiling water and dissolve in it as much sugar as it will take up, and then, as the mixture cools, watch the sugar crystals appearing. When you have done this in actuality, and not merely read about it, you will have a concept under which you can think of the First Manifest coming into existence out of the Primordial Unmanifest. The liquid is transparent and formless, but a change occurs within it, and crystals, solid, visible, and of a definite form, begin to appear. Equally may we conceive that a change occurs within the Limitless Light, and Kether crystallises out.

10. I do not propose at the present moment to go deeply into the nature of any of the Sephiroth, but merely to indicate the general scheme of the Tree. We shall go over the ground again and again in the course of these pages until a comprehensive concept is built up. This can only be done gradually, and if we spend a great deal of time upon an individual point before the student has a general concept, much of that time will be wasted because the bearing of that concept on the scheme as a whole will not be understood. The Rabbis themselves apply to Kether the titles, Concealed of the Concealed, and the Inscrutable Height, hinting that there is not a great deal that the human mind can hope to know about Kether.

11. It is worthy of note that Exoteric Judaism, to whose liabilities Christianity is the not altogether fortunate heir, does not contain any concept of the Emanations, or overflowing of the Sephiroth one from another. It declares that God made the sea and the hills and the beasts of the field, and we visualise this process, if we visualise it at all, as the work of a celestial craftsman fashioning each new phase of manifestation and putting the finished product in its place in the world. This concept kept science back for hundreds of years in Western Europe, and in the end men of science had to break with religion and endure

persecution as heretics in order to arrive at that conception of evolution which was explicitly taught in the Mystic Tradition of Israel, a tradition with which the writers of the Old Testament were unquestionably familiar, for their works are full of Qabalistic references and implications.

[Page 40]

12. The Qabalah does not conceive of God as fabricating creation stage by stage, but thinks of the different phases of manifestation as evolving one from another, as if each Sephirah were a pool which, being filled, overflowed into a lower pool. To borrow again from MacGregor Mathers, hidden moan acorn is an oak with its acorns, and hidden in each of these is an oak with *its* acorns. So each Sephirah contains the Potentiality of all that come after it in the scale of downflowing manifestation. Kether contains the rest of the Sephiroth, nine in number; and Chokmah, the second, contains the potentialities of all its successors, eight in number. But in each Sephirah only one aspect of manifestation is unfolded; the subsequent ones remain latent, and the preceding ones are received by reflection. Each Sephirah, then, is a pure form of existence in its essence; the influence of preceding phases of evolution is external to it, being reflected. These aspects, as it were, having been crystallised out in the previous stages, are no longer in solution in the outflowing stream of manifestation which ever proceedeth from the Unmanifest through the channel of Kether. When therefore we want to find the essential nature, the basis of manifestation, of a particular type of existence, we get it in the Sephirah to which it corresponds when we meditate upon that Sephirah in its primal form; for there are four forms, or worl[ds], under which the Qabalists conceive of the Tree, and these we will consider in due course. They are only referred to now in order that the student may have enough background to see his picture in perspective.

13. The student will find it very helpful to refer to the chapters in *The Ancient Wisdom*, by Annie Besant, which deal with the phases of evolution. These throw much light upon the subject with which we are dealing, though the system of classification is not the same.

14. Let us conceive of Kether, then, as a fountain which fills its basin, and the overflow therefrom feeds another fountain, which in its turn fills its basin and overflows. The Unmanifest for ever flows under pressure into Kether, and there comes a time when evolution has gone as far as it can in the extreme simplicity of the form of existence of the First Manifest. All possible combinations have been formed, and they have undergone all possible permutations. Action and reaction are stereotyped, there can be no new development save the combining of the combinations among themselves. Force has formed all possible units; the next phase of development is for these units to combine into more complex structures. When this occurs, a new and more highly organised phase of existence begins; all that has already been evolved remains, but that which evolves now is more than the sum of the previously existing parts, for new capacities come into being.

15. This new phase represents a change of mode of existence. Just as Kether crystallised out of the Limitless Light, so the second Sephirah, Chokmah, crystallises out of Kether in

this new mode of being, this new system of actions and reactions which have ceased to be simple and direct and become complex and tangential. We now have two modes of existence, the simplicity of Kether and the relative complexity of Chokmah; both these are so simple that no kind of life known to us could be maintained in them ; nevertheless, they are the forerunners of organic life. We might say that Kether is the first activity of manifestation, movement; it is a condition of pure becoming, *Rashith ha Gilgalim*, the First Swirlings, the commencement of Whirling Motions as it is called by the Qabalists- *Primum Mobile* as it is called by the Alchemists. Chokmah, the Second Sephirab, is called by the Rabbis *Mazloth*, the Sphere of the Zodiac. Here we have introduced the concept of the circle with its segments. Creation has moved onwards. Out of the primordial Egg has developed the Serpent that holdeth his tail in his mouth, as Mme Blavatsky chronicles in her invaluable storehouses of archaic symbolism, the *Secret Doctrine* and *Isis Unveiled*.

16. In a similar manner to that in which Kether overflowed into Chokmah does Chokmah overflow into Binab, the Third Sephirab. The Paths pursued by the Emanations in these successive overflows is represented upon the Tree of Life by a Lightning Flash, or in some diagrams by a Flaming

[Page 42]

Sword. It will be observed by reference to diagram I that the Lightning Flash must proceed from Kether outwards and downwards to the right to reach Chokmah, and then turns on a level course to the left and proceeds an equal distance beyond Kether upon that side, and there establishes Binah. The result is a triangular figure upon the glyph, and it is called the Triangle of the Three Supernals, or the First Trinity and is separated from the rest of the Sephiroth by the Abyss, which normal human consciousness cannot cross. Here are the toots of existence, hidden from our eyes.

CHAPTER VII

THE THREE SUPERNALS

1. Having considered in outline the development of the three first Divine Emanations, we are now in a position to obtain a deeper insight into their nature and significance, for we can study them in relation to each other. This is the only way to study the Sephiroth, for a single Sephirab, taken by itself, is barren of significance. The Tree of Life is essentially a scheme of relationships, stresses, and reflections (see diagram II).

2. The Rabbinical books apply many curious appellations to the Sephiroth, and we learn much from considering these; for every word in these books has a weighty significance,

and none are used lightly or for the sake of idle poetic imagery; all are as precise as scientific terms, which, in fact, is what they are.

3. The meaning of the word Kether, we have already noted, is Crown. Chokmah means Wisdom, and Binah means Understanding. But pendent to these two latter Sephiroth is a curious and mysterious third, which is never represented in the glyph of the Tree; this is the invisible Sephirah, Daath, Knowledge, and it is said to be formed out of the conjunction of Chokmah and Binah and is situated astride the Abyss. Crowley tells us that Daath is in another dimension to the other Sephiroth, and forms the apex of a pyramid of which Kether, Chokmah, and Binah form the three basal angles. To me, Daath presents the idea of realisation and consciousness.

4. Let us now proceed to elucidate the Three Supernals according to the method of the mystical Qabalah, which consists in filling the mind with all the correspondences and

[Page 44]

symbols assigned thereto and letting contemplation work among them.

5. It will be observed that these three and their mysterious fourth all contain symbolism relating to the head, which in the archetypal man represents the highest level of consciousness. When we seek in the Rabbinical literature to see what further names may have been applied to them, we find yet more head symbolism applied to Kether; this, although not specifically referred to them, may be taken to embrace the other two Supernals also, for they are aspects of Kether on a lower plane.

6. The Rabbis called Kether, among other titles, which we need not consider now, Arik Anpin, The Vast Countenance, The White Head, The Head Which Is Not. The magical symbol of Kether, according to Crowley, is an ancient bearded king seen in profile. MacGregor Mathers says: "The symbolism of the Vast Countenance is that of a profile in which one side only of the countenance is seen; or as it is said in the Qabalah, 'In him is all right side.'" The left side, being turned towards the Unmanifest, is for us like the dark side of the moon.

7. But Kether is primarily the Crown. Now the Crown is not the head, but rests upon it and above it. Therefore Kether cannot be consciousness, but the raw material of consciousness when considered microcosmically, and the raw material of existence when considered macrocosmically. For there is this twofold way of considering the Tree, as we have already noted; it can be regarded as the universe and as the soul of man, and these two aspects throw light upon each other. In the words of the Emerald Tablet of Hermes: "As above, so below."

8. Kether differentiates into Chokmah and Binah before it achieves phenomenal existence, and these two are called by the Qabalists, Abba, the Supernal Father, and Ama, the Supernal Mother. Binah is also called the Great Sea, and Shahathai, the Sphere of Saturn. As we continue, we shall find that the Sephiroth are called successively the

Spheres of the planets, but Binah is the first of the Emanations to be so assigned; Kether is called the First Whirlings, and Chokmah the Sphere of the Zodiac.

9. Now Saturn is the Father of the Gods; he is the greatest of the old gods that were the predecessors of the Olympians over which Jupiter rules. In the secret titles attributed to the Tarot trumps, the Path of Saturn is called, according to Crowley, The Great One of the Night of Time.

10. We have, then, Kether differentiating into an active male potency, Chokmah, and a passive female potency, Binah, and these are placed at the head of the two side columns formed by the vertical alignment of the Sephiroth in their spacing on the Tree of Life. Of these two columns, the left-hand one under Binah is called Severity; the right-hand one under Chokmah is called Mercy; the middle one under Kether is called Mildness, and it is said to be the Column of Equilibrium. These two side columns are the two pillars that stand at the entrance to King Solomon's Temple and are represented in all Lodges of the Mysteries, the candidate himself, when he stands between them, is the Middle Pillar of Equilibrium.

11. Here we meet with the idea put forth by Mme Blavatsky, that there can be no manifestation without differentiation into the Pairs of Opposites. Kether differentiates its two aspects as Chokmah and Binah, and manifestation is in being. Now in this supernal triangle, The Head Which Is Not, the Father and the Mother, we have the root concept of our cosmogony, and we shall return to it again and again under innumerable aspects, and each time that we return to it we shall receive illumination. These earlier chapters do not attempt to deal with any of the points exhaustively for reasons already noted, for the student unfamiliar with the subject (and there are very few students who are familiar with it) has not yet got the necessary mental furniture of facts to enable him to appreciate the significance of a more detailed study; we are at the present moment engaged in assembling this furniture; in due course we shall begin to arrange it into a house of life, and study it in detail.

[Page 46]

12. Binah, the Superior Mother (as distinguished from Mal kuth, the Inferior Mother, the Bride of Microprosopos, the Isis of Nature, the Tenth Sephirah), is two-aspected, and these aspects are distinguished as Ama, the Dark Sterile Mother, and Aima, the Bright Fertile Mother. We have already noted that she is called the Great Sea, Marah, which not only means Bitter, but also is the root of Mary; and here we meet again the idea of the Mother, at first virgin, and then with child by the Holy Spirit.

13. By the association of Binah with the sea we are reminded that life had its primordial beginnings in the waters; from the sea arose Venus, the archetypal woman. The association of Saturn suggests the idea of primordial age: "Before the gods that made the gods had drunk at eve their fill" It suggests the most ancient rocks: "Within the shady stillness of the vale . . . sat grey-haired Saturn, quiet as a stone." Max Heindel speaks of the Lords of Form as among the earliest phases of evolution, and an inspirational work in

my possession, *The Cosmic Doctrine*, speaks of the Lords of Form as the Laws of Geology.

14. Considering again the symbolism of the two lateral columns of the Tree, we see Chokmah and Binah as Force and Form, the two units of manifestation.

15. It would not profit us to go more deeply into the endless ramifications of this symbolism at the present moment, for it is carrying us beyond the three Sephiroth we have already studied. Let us proceed to a further consideration of the mysterious Daath, which never appears on the Tree, and to which no Deity-name or angelic host is assigned and which has no mundane symbol in planet or element, as have all the other stations on the Tree.

16. Daath is produced by the conjunction of Chokmah and Binah, as has been already noted. The Supernal Father, Abba, marries the Supernal Mother, Ama, and Daath is the issue. Now Daath is called some curious things by the Qabalists; we will note a few of them.

17. In verse 38 of the *Book of Concealed Mystery* (Mathers' English translation from the Latin translation of Knorr von Rosenroth) it says: "For Father and Mother are perpetually conjoined in Yesod, the Foundation (the ninth Sephirah), but concealed under the mystery of Daath or Knowledge"; and in verse 40 we read concerning Daath: "The man that shall say, I am the Lord's, he descendeth. . . . Yod (the tenth letter of the Hebrew alphabet) is the foundation of Knowledge of the Father; but all things are called BYODO, that is, all things are applied to Yod concerning which this discourse is. All things cohere in the tongue which is concealed in the mother. That is, through Daath or Knowledge, whereby Wisdom is combined with Understanding, and the Beautiful Path (Tiphareth, the Sixth Sephirah) with his bride the Queen (Malkuth, the Tenth Sephirah); and this is the concealed idea, or soul, pervading the whole emanation. Since it is opened for that which proceedeth from itself; that is, Daath is itself the beautiful path, but also the inner, whereto Moses referred; and that Path lieth hid within the mother, and is the medium of its conjunction." When it is noted that Yod is identical with the Lingam in the Hindu system; and that Kether, Daath, and the Beautiful Path, Tiphareth, the Sixth Sephirah, are in a line on the Middle Pillar of the Tree, which equates with the spine in man, the microcosm; and that Kundalini is coiled in Yesod, also on the Middle Pillar, we shall see that we have here an important key for those who are equipped to use it.

18. In the *Greater Holy Assembly*, verse 566 (Mathers' translation), we read concerning the Head of Microprosopos, whose whole body is being taken as a glyph of the cosmos:

"From the Third Cavity there goes forth a thousand times a thousand conclaves and assemblies, wherein Daath, Knowledge, is contained and dwelleth. And the hollow place of this cavity is between the other two cavities; and all these conclaves are filled from either side. This is that which is written in Proverbs, 'And in knowledge (Daath) shall the conclaves be filled.' And those three are expanded over the whole body, on this side and on that, and with them does the whole body cohere, and the body is contained by them on

[Page 48]

every side, and through the whole body are they expanded and diffused."

19. When it is recalled that Daath is situated at the Point where the Abyss bisects the Middle Pillar, and that up the Middle Pillar lies the Path of the Arrow, the way by which consciousness goes when the psychic rises on the Planes, and that here also is Kundalini, we see that in Daath is the secret of both generation and regeneration, the key to the manifestation of all things through the differentiation into pairs of Opposites and their union in a Third.

20. Thus doth the Tree unfold its secrets to the Qabalists,

21. The Second Triangle upon the Tree of Life is formed of the Sephiroth Chesed, Geburah, and Tiphareth. Chesed is formed by the overflowing of Binah, and is situated in the Right-hand Pillar of Mercy, immediately below Chokmah; the angle of the Lightning Flash, which is used to indicate the course of the emanations upon the Tree, slopes downwards to the right across the glyph, from Binah at the head of the Pillar of Severity to Chesed, which occupies the middle section of the Pillar of Mercy. Then the Flash turns and goes horizontally across the glyph back again to the Pillar of Severity, in the middle section of which is found the Sephirah Gehurah. Down and to the right slopes once more the symbol of emanating force, and indicates the Sephirah Tiphareth, which occupies the very centre of the Tree in the Pillar of Mildness or Equilibrium. These three Sephiroth constitute the next functional triangle we have to consider, and although we do not intend to go exhaustively into their symbolism until we have completed our schematic survey of the whole system, it is necessary to say enough to give some clue to their significance and enable them to be assigned to a place in the concept we are building up. This concept is so vast and so infinite in its elaboration of detail that to attempt to teach it exhaustively from A to Z must end in confusion. Only gradually can it reveal its significance to the student as one aspect interprets another. My method of teaching the Tree may not be ideal from the point of view of systematic thought, but I believe it is the only one which will enable the beginner to "get the hang" of the subject. It was upon the Tree that I got my own mystical training, and I have lived and moved and had my being in its company for a good many years now, so I feel that I am competent to speak upon it from the point of view of practical mysticism; for I know from my own experience the difficulties of getting hold of the Qabalistic system, so intricate, abstract, and voluminous, and yet so comprehensive and satisfactory when once it is mastered.

22. Before we can consider the Second Triangle of the Tree as a unit, we must know the meaning of its component Sephiroth. Chesed means Mercy or Love; it is also called Gedulah, Greatness or Magnificence, and to it is assigned the Sphere of the planet Jupiter. Geburah means Strength; it is also called Pachad, Fear; to it is assigned the Sphere of the planet Mars. Tiphareth means Beauty, and to it is assigned the Sphere of the Sun. When the gods of the various pagan pantheons are being correlated with the Spheres on the Tree, it will be found that the sacrificed gods invariably come on to Tiphareth, and for this reason it has been called the Christcentre in the Christian Qabalah.

23. We now have sufficient material to make a survey of the Second Triangle. Jupiter, the beneficent ruler and lawgiver, is balanced by Mars the Warrior, the fiery and destructive force, and the two are equilibrated in Tiphareth, the Redeemer. In the Supernal Triangle we see the primary Sephirah emanating a pair of opposites which express the two sides of its nature, Chokmah, Force, and Binah, Form, masculine and feminine Sephiroth respectively. In the Second Triangle we have the pairs of opposites which find their equilibrium in a third, placed upon the Middle Pillar of the Tree. From this we deduce that the First Triangle derives its significance from that which lies behind it, and the Second Triangle derives its significance from that into which it issues forth. In the First Triangle we find a representation of the creative forces of the substance of the universe; in the Second we have a representation of the governing forces of evolving life. In Chesed is the wise and kindly king, the father of his people, organising his realm, building up industry, fostering learning, and bringing the gifts of civilisation. In Geburah we have a warrior king, leading his people in battle, defending his kingdom from the assaults of the enemy, extending his boundaries by conquest, punishing crime, and destroying evil-doers. In Tiphareth we have the Saviour, sacrificed upon the Cross for the salvation of his people, and thereby bringing Geburah into equilibrium with Gedulah, or Chesed. Here we find the sphere of all the beneficent sun-gods and healing gods. Thus we see that the mercies of Gedulah and the severities of Geburah unite for the healing of the nations.

24. Behind Tiphareth, traversing the Tree, is drawn Paroketh, the Veil of the Temple, the analogue, on a lower plane, of the Abyss which separates the Three Supernals from the rest of the Tree. Like the Abyss, the Veil marks a chasm in consciousness. The mode of mentation on one side of the chasm differs in kind from the mode of mentation prevailing upon the other. Tiphareth is the highest sphere to which normal human consciousness can rise. When Philip said to Our Lord, "Show us the Father," Jesus replied, "He that hath seen Me hath seen the Father." All the human mind can know of Kether is its reflection in Tiphareth, the Christ-centre, the Sphere of the Son. Paroketh is the Veil of the Temple which was rent asunder at the Crucifixion.

25. We now come in our brief preliminary survey to the Third Triangle composed of the Sephiroth Netzach, Hod, and Yesod. Netzach is the basal Sephirah of the Pillar of Mercy, Hod is the basal Sephirah of the Pillar of Severity, and Yesod is upon the Middle Pillar of Mildness or Equilibrium, in direct alignment with Kether and Tiphareth. Thus the Third Triangle is an exact replica of the Second Triangle upon a lower arc.

26. The meaning of Netzach is Victory, and to it is assigned the Sphere of the planet Venus; the meaning of Hod is Glory, and to it is assigned the Sphere of the planet Mercury; the meaning of Yesod is Foundation, and to it is assigned the Sphere of the Moon.

27. While the Second Triangle might not inaptly be termed the Ethical Triangle, the Third may well be called the Magical Triangle; and if we assign to Kether the Sphere of the Three in One, the undivided Unity, and to Tiphareth the Sphere of the Redeemer or Son, we may be justified in referring to Yesod the Sphere of the Holy Spirit, the Enlightener;

this is an attribution of the Christian Trinity that fits better upon the Tree than its assignation to the Three Supernals, which brings the Son in the place of Abba, the Father, and the Holy Spirit in the place of Ama, the Mother, and is obviously irrelevant and productive of innumerable discrepancies in the correspondences and symbolisms. In this we see an example of the value of the Tree as a method of counterchecking vision or meditation; correct attributions fit upon the Tree through endless ramifications of symbolism, as we saw when considering Binah as the Mother; incorrect symbolism breaks down and reveals its bizarre associations at the first attempt to follow out a chain of correspondences. It is amazing what ramifications of association-chains can be followed when the attribution is correct. It seems as if it were only the extent of our knowledge which limits the length of the chain that can be linked logically together; it will extend through science, art, mathematics, and the epochs of history; through ethics, psychology, and physiology. It was this peculiar method of using the mind which in all probability gave the ancients their premature knowledge of natural science, knowledge which has had to await the invention of instruments of precision for its confirmation. We get clues to this method in the dream-analysis of analytical psychology. We might describe it as the symbol-using power of the subconscious mind. It is an instructive experiment to toss a mass of irrelevant symbolism into the mind and watch it sort itself out in meditation upon the Tree, rising into consciousness in long association-chains like dream analysis.

28. Netzach is the Sphere of the Goddess of Nature, Venus. Hod is the Sphere of Mercury, the Greek analogue of the Egyptian Thoth, Lord of Books and Learning. Observing their opposition, we shall expect to find two different aspects represented in them, these finding their equilibrium in a third, Yesod, the Sphere of Luna. We see then a Triangle Composed of the Lady of Nature, the Lord of Books, and the Mistress of Witchcraft; in other words, subconsciousness and super-consciousness correlate in psychism.

29. Anyone who is familiar with practical mysticism knows that there are three paths of superconsciousness-devotional mysticism, which correlates with Tiphareth; nature mysticism, of the inebriating Dionysian. type, which equates with the Venus Sphere of Netzach; and intellectual mysticism of the occult type, which equates with Hod, the Sphere of Thoth, Lord of Magic. Tiphareth, as will be seen by reference to the diagram of the Tree, belongs to a higher plane than any member of the Third Triangle; Yesod, on the other hand, is drawing very near to the Sphere of Earth.

30. To Yesod are assigned all the deities that have the moon in their symbolism: Luna herself; Hecate, with her dominion over evil magic ; and Diana, with her presidency over child-birth. The physical moon, Yesod in Assiah, as the Qabalists would say, with its twenty-eight day cycle, correlates with the reproductive cycle of the human female. If the symbolism of the luna crescent be traced through the various pantheons it will be found that the deities associated with it are predominantly female; it is interesting to note in confirmation of our assignation of the Holy Spirit to Yesod that according to MacGregor Mathers the Holy Spirit is a feminine force. He says (*Kabbalah Unveiled* p. 22): "We are usually told that the Holy Spirit is masculine. But the word Ruach, Spirit, is feminine, as

appears from the following passage of the Sepher Yetzirah, 'Achath (feminine, not Achad, masculine), ruach elohim chum: One is *she*, the Spirit of the Elohim of Life.'" When we consider the Middle Pillar as referring to levels of consciousness we shall find further confirmation of this view.

31. There remains for our final consideration the Sephitah Malkuth, the Kingdom of Earth. This Sephirah differs from the others in several respects. Firstly, it is not part of any equilibrated triangle, but is said to be the receptacle of the influences of all the others. Secondly, it is a fallen Sephirah, for it was cut off from the rest of the Tree by the Fall, and the coils of the Stooping Dragon arising from the World of Shells, the Kingdoms of Unbalanced Force, separate it from its brethren. Behind the shoulder of the Queen, the Bride of Microprosopos (Malkuth), the Serpent rears his head, and here is said to be the place of severest judgments. The Sphere of Malkuth abuts upon the Hells of the Averse Sephiroth, the Qliphoth, or evil demons. It is the firmament whereby Elohim separated the supernal waters of Binah from the infernal waters of Leviathan.

32. The signification of the Qliphoth must be considered fully in due course; but having referred to them here in order to explain the position of Malkuth, we must say something further in order to render the explanation intelligible.

33. The Qliphoth (singular Qliphah, an immodest woman or harlot) are the Evil or Averse Sephiroth, each an emanation of unbalanced force from its corresponding Sphere upon the Holy Tree; these emanations took place during the critical periods of evolution when the Sephiroth were not in equilibrium. For this reason they are referred to as the Kings of Unbalanced Force, the Kings of Edom, "who ruled before there was a king in Israel," as the Bible puts it; and in the words of the *Siphrah Denioutha*, the *Book of Concealed Mystery* (Mathers' translation), "For before there was equilibrium, countenance beheld not countenance. And the kings of ancient time were dead, and their crowns were found no more; and the earth was desolate."

34. We have now completed our preliminary survey of the Tree of Life, and the arrangement of the Ten Holy Sephiroth thereon; we also have some clue to their significance and have been given a hint or two of the manner in which the mind works when it uses these cosmic symbols for its meditations. Consequently we are now in a position to assign each fresh bit of information to its correct position in our scheme; we are building up the jigsaw puzzle with a knowledge of the outlines of the picture. Crowley has aptly likened the Tree to a card-index file, in which each symbol is an envelope. This is a simile which it would be difficult to improve upon. In the course of our studies we shall begin to fill these filing cases, and to find the cross-indexing among them indicated by the appearance of the same symbol in other associations.

CHAPTER VIII

THE PATTERNS OF THE TREE

1. There are various methods by which the Ten Holy Sephiroth can be grouped upon the Tree of Life. Of these it cannot be said that one is correct and another incorrect; they serve different purposes and throw much light upon the meaning of the individual Sephiroth by revealing their associations and equilibrium.
2. They are also of value because they enable the decimal system of the Tree to be equated with the three, four, and sevenfold systems.
3. The primary conformation of the Tree is into three Pillars. It will be observed by reference to the diagrams that the Sephiroth readily lend themselves to this threefold vertical division, for they are arranged in three columns. These are called the Right-hand Pillar of Mercy, the Left-hand Pillar of Severity, and the Middle Pillar of Mildness or Equilibrium (see diagram I).
4. Before proceeding any further we must make clear the significance of the right and left sides of the Tree. As we look at the Tree in the diagram we see Binah, Geburah, and Hod upon the left side, and Chokmah, Chesed, and Netzach upon the right side; this is the way we view the Tree when we are using it to represent the Macrocosm. But when we are using it to represent the Microcosm, that is our own being, we, as it were, back into it, so that the Middle Pillar equates with the spine, and the Pillar that contains Binah, Geburah, and Hod with the right side, and the Pillar that contains Chokmah, Chesed, and Netzach with the left side. These three Pillars can also be equated with the Shushumna, Ida, and Pingala of the Yoga system. It is very important to remember

[Page 56]

the reversal of the Tree when it is used as a subjective symbol, otherwise confusion results. In his valuable book Upon the literature of the Qabalah, *The Holy Kabalah*, Mr Waite, in the frontispiece, for some reason best known to himself, reverses the usual presentation of the Tree; but it may be taken for granted that most representations of the symbol give the objective Tree, not the subjective. When the Tree is being used to indicate the lines of force in the aura, it is the subjective Tree that must be used, so that Geburah equates with the right arm. In all cases, of course, the Middle Pillar remains steadfast.

5. The Pillar of Severity is considered to be negative or feminine, and the Pillar of Mercy to be positive or masculine. Superficially it may be thought that these attributions lead to incompatible symbolism, but a study of the Pillars in the light of what we now know concerning the individual Sephiroth will reveal that the incompatibilities are purely superficial and that the deeper significance of the symbolism is entirely consonant.
6. It will be observed that the line which indicates the successive development of the Sephiroth zigzags from side to side of the glyph and has been aptly named the Lightning Flash in consequence. This indicates graphically that the Sephiroth are successively positive, negative, and equilibrated. This is a far better representation of the process of

creation than if the Spheres were represented one above another in a straight line, for it indicates the difference in the nature of the Divine Emanations and their relations to each other; for when we look at the glyph of the Tree we readily perceive the relations existing between the different Sephiroth, and see how they group, reflect, and react upon each other.

7. At the head of the Pillar of Severity, the negative, feminine Pillar, is Binah, the Great Mother. Now to Binah is assigned the Sphere of Saturn, and Saturn is the Giver of Form. At the head of the Pillar of Mercy is Chokmah, the Supernal Father, a male potency. Thus we see that we have here the apposition of Form and Force.

8. In the Second Trinity we have the apposition of Chesed (Jupiter) and Geburah (Mars). Again we have the pairs of opposites of construction in Jupiter, the lawgiver and beneficent ruler, and destruction in Mars, the warrior and destroyer of evil. It may be asked why such a male potency as Geburah should be placed in the feminine Pillar. It must be remembered that Mars is a destructive potency, one of the infortunes in astrology. The positive builds up, the negative breaks down; the positive is a kinetic force, the negative is a static force.

9. These aspects appear again in Netzach at the base of the Pillar of Mercy, and Hod at the base of the Pillar of Severity. Netzach is Venus, the Green Nature Ray, elemental force, the initiation of the emotions. Hod is Mercury, Hermes, the initiation of knowledge. Netzach is instinct and emotion, a kinetic force; Hod is intellect, concrete thought, the reduction of intuitive knowledge to form.

10. We must remember, however, that each Sephirah is negative, that is to say feminine, in relation to its predecessor, whence it emanates and whence it receives the Divine Influence; and positive, masculine, or stimulating in respect of its successor, to whom it transmits the Divine Influence. Therefore each Sephirah is bi-sexual, like a magnet of which one pole must of necessity be negative and the other positive. We may perhaps explain matters further by an analogy with astrology, and say that a Sephirah in the feminine Pillar is well-dignified when it is functioning in its negative aspect, and ill-dignified when functioning positively; and that in the masculine Pillar the position is reversed. Thus Binah, Saturn, is well-dignified when providing stability and endurance, but ill-dignified when the overplus of resistance causes it to become actively aggressive and we get obstruction and the accretion of effete matter. On the other hand, Chesed, Mercy, is well-dignified when ordering and preserving all things harmoniously; but ill-dignified when mercy becomes sentimentality and it usurps the Sphere of Saturn, preserving that which the fiery energy of Mars, its opposite number, the Sephirah Geburah, should sweep out of existence.

11. The two Pillars, then, represent the Positive - negative forces in Nature, the active and passive, the destructive and constructive, concreting form and free-moving force.

12. The Sephiroth on the Middle Pillar may be taken as representing levels of consciousness and the planes on which they operate. Malkuth is sensory consciousness;

Yesod is astral psychism; Tiphareth is illuminated consciousness, the highest aspect of the personality with which the individuality has coalesced; this is the condition which really constitutes initiation; it is the consciousness of the higher self brought through into the personality. It is a gleam of higher consciousness coming from behind the veil Paroketh. It is for this reason that the Messiahs and Saviours of the world are assigned to Tiphareth in the symbolism of the Tree, for they were the Light-Bringers to humanity; and as all who bring fire from heaven must do, they died the sacrificial death for the sake of mankind. It is here, too, that we die to the lower self in order that we may rise in the higher self. 'In Jesu morimur.'

13. The Middle Pillar rises through Daath, the Invisible Sephirah, which we have already seen is Knowledge according to the Rabbis, and conscious awareness or apprehension according to the terminology of the psychologist. At the head of this Pillar is Kether, the Crown, the Root of all Being. Consciousness, theri, reaches from the spiritual essence of Kether, through the realisation of Daath, which carries it across the Abyss, into the translated consciousness of Tiphareth, whither it is brought by the sacrifice of the Christ which rends the veil Paroketh; then on into the psychic consciousness of Yesod, the Sphere of the Moon, and thence to the sensory brain consciousness of Malkuth.

14. Thus does consciousness descend in the course of involution, which is the term applied to that phase of evolution which leads down from the First Manifest through the subtle planes of existence to dense matter; the esotericist should, strictly speaking, only use the term evolution when describing

[Page 58]

the ascent from matter back to spirit, for then is evolved that which was involved in the descent through the subtle phases of development. It is obvious that nothing can be evolved, unfolded, which was not previously involved, infolded. The actual course of evolution follows the track of the Lightning Flash or Flaming Sword, from Kether to Malkuth in the order of development of the Sephiroth previously described; but consciousness descends plane by plane, and only begins to manifest when the polarising Sephiroth are in equilibrium; therefore the modes of consciousness are assigned to the Equilibrating Sephiroth upon the Middle Pillar, but the magical powers are assigned to the opposing Sephiroth, each at the end of the beam of the balance of the pairs of opposites.

15. The Way of Initiation follows the coilings of the Serpent of Wisdom upon the Tree; but the Way of Illumination follows the Path of the Arrow which is shot from the Bow of Promise, Qesheth, the rainbow of astral colours that spreads like a halo behind Yesod. This is the way of the mystic as distinguished from that of the occultist; it is swift and direct, and free from the danger of the temptation of unbalanced force that is met with in either pillar, but it confers no magical powers save those of sacrifice in Tiphareth and psychism in Yesod.

16. We have noted the Three Trinities of the Tree in our preliminary discussion of the Ten Sephiroth. Let us recapitulate these again for clearness' sake. Mathers calls the First Trinity of Kether, Chokmah, and Binah the Intellectual World; the Second Trinity of Chesed, Geburah, and Tiphareth the Moral World; and the Third Trinity of Netzach, Hod, and Yesod the Material World. To my way of thinking, this terminology is misleading, for these words do not connote in our minds what is meant by these Worlds. The intellect is essentially a concreting of intuition and apprehension, and as such is an unsuitable term for the World of the Three Supernals. With the use of the term Moral World for Chesed, Geburah, and Tiphareth I agree; it is identical with my term, Ethical Triangle; but with the term Material World for the Trinity

[Page 60]

of Netzach, Hod, and Yesod I emphatically disagree, for this term belongs exclusively to Malkuth. These three Sephiroth are not material but astral, and for this Trinity I propose the term Astral, or Magical World; it is not well to wrest words from their dictionary meaning, even if you define your use of them, and this Mathers has not troubled to do.

17. The Intellectual Sphere is not so much a level as a Pillar, for the intellect, being the content of consciousness, is essentially synthetic. These terms, however, are apparently taken from a somewhat crude translation of the Hebrew names given to the four levels into which the Qabalists divide manifestation.

18. These four levels permit of yet another grouping of the Sephiroth. The highest of these is Atziluth, the Archetypal World, consisting of Kether. The second, Briah, called the Creative World, consists of Chokmah and Binah, the Supernal Abba and Ama, Father and Mother. The third level is that of Yetzirah, the Formative World, consisting of the six central Sephiroth, viz. Chesed, Geburah, Tiphareth, Netzach, Hod, and Yesod. The fourth World is Assiah, the Material World, represented by Malkuth.

19. The Ten Sephiroth are also conformed into Seven Palaces. In the First Palace are the Three Supernals; in the Seventh Palace are Yesod and Malkuth; and the rest of the Sephiroth each has a Palace to itself. The grouping is of interest as revealing the intimate relationship of Yesod and Malkuth, and enabling the tenfold scale of the Qabalah to be equated with the sevenfold scale of Theosophy.

20. There is also a threefold division of the Sephiroth which is very important in Qabalistic symbolism. In this system Kether is given the title of Arik Anpin, the Vast Countenance. This is manifested as Abba, the Supernal Father, Chokmah, and Ama, the Supernal Mother, Binah, these being the positive and negative aspects of the Three in One. These two differentiated aspects, when united, are, according to Mathers, Elohim, that curious Divine Name which is a feminine noun with a masculine plural attached to it. This union takes place in Daath, the invisible Sephirah.

11. The next six Sephiroth are conformed into Zaur Anpin, the Lesser Countenance, or Microprosopos, whose special Sephirah is Tiphareth. The remaining Sephirah, Malkuth, is called the Bride of Microprosopos.

22. Microprosopos is also sometimes called the King; Malkuth is then called the Queen. She is also called the Lesser Mother or Terrestrial Eve as distinguished from Binah, the Supernal Mother.

23. These different methods of classifying the Sephiroth are not competing systems, but are designed to enable the decimal system of the Qabalists to be equated with other systems, using a threefold notation, such as the Christian, or as we have already noted, a sevenfold system like Theosophy; they are also valuable as indicating functional affiliations among the Sephiroth themselves.

24. The final system of classification which we must note is under the presidency of the Three Mother Letters of the Hebrew alphabet: Aleph, A; Mem, M; and Shin, Sh. These three, according to the Yetziratic attribution of the Hebrew alphabet, are assigned to the three elements of Air, Water, and Fire. Under the presidency of Aleph is the Airy triad of Kether, in which is the Root of Air, reflecting downward through Tiphareth, the Solar Fire, into Yesod, the Lunar radiance. In Binah is the Root of Water (Marah, the Great Sea), reflected through Chesed into Hod, under the presidency of Mem, the Mother of Water. In Chokmah is the Root of Fire, reflected downwards through Geburah into Netzach, under the presidency of Shin, the Mother of Fire.

25. These groupings must be borne in mind, for they aid greatly in understanding the significance of individual Sephiroth, for, as we have already pointed out in various connections, a Sephirah is best interpreted by its affiliations.

CHAPTER IX

THE TEN SEPHIROTH IN THE FOUR WORLDS

I. We have already noted the division of the Sephiroth into the Four Worlds of the Qabalists, for this is one of the methods of classification much employed in Qabalistic thought and of great value when studying evolution. We must remember, however, that the Tree is not an arbitrary method of classification, and because a thing is classified under one head in one system it does not mean that it cannot equally properly be classified under another head in another system. The reappearance of the same symbol in a different Sphere often affords valuable clues.

2. Under another method of classification the Ten Holy Sephiroth are considered as appearing in each Qabalistic World upon another arc or level of manifestation; so that just as Am Soph Aur, the Limitless Light of the Unmanifest, concentrated a point, which was Kether, and the emanations worked down through increasing grades of density to Malkuth, so the Malkuth of Atziluth is conceived of as giving rise to the Kether of Briah,

and so on consecutively down the planes, the Malkuth of Briah giving rise to the Kether of Yetzirah, the Malkuth of Yetzirah giving rise to the Kether of Assiah, and the Malkuth of Assiah, in its lowest aspect, abutting upon the Qliphoth.

3. It is Atziluth, however, which is considered the natural sphere of the Sephiroth as such, and for this reason it is called the World of Emanations. It is here, and here only, that God acts directly and not through His ministers. In Briah He acts through the mediation of the Archangels, in Yetzirah through the Angelic Orders, and in Assiah through those centres which I have named the Mundane Chakras-the planets, elements, and signs of the Zodiac.

[Page 62]

4. We have, then, in these four sets of symbols a complete system of notation for expressing the mode of function of any given power at any given level, and this system of notation is the basis of ceremonial magic with its Names of Power, and also of talismanic magic and the Tarot system of divination. It is for this reason that it is said of the "barbarous names of evocation" that not so much as a letter may be changed, for these names are formulae based on the Hebrew alphabet, which is the sacred language of the West as Sanskrit is the sacred language of the East. In Hebrew, moreover, each letter is also a number, so the Names are numerical formulae; a most intricate system of metaphysical mathematics, called Gematria, is based on this principle. There are aspects of Gematria which I, at the present stage of my knowledge at any rate, consider debased and idle, being the accretions of superstition, but the basic idea of the system of cosmic mathematics unquestionably enshrines great truths and contains great possibilities. Using this system, it is possible to unravel the relationships of all manner of cosmic factors if the correct Hebrew spelling of the Names of Power is known, for these Names were formulated in accordance with the principles of Gematria, and therefore Gematria supplies the key to them. But this aspect of our subject, fascinating as it is, we cannot enter upon now.

5. In the Archetypal World of Atziluth there are assigned to the Ten Sephiroth ten forms of the Divine Name. Anyone who has read the Bible cannot fail to have observed that God is referred to under divers titles, as the Lord, as the Lord God, as the Father, and by several other appellations. Now these are not literary devices to avoid needless repetition, but are exact metaphysical terms, and according to the Name used we know the aspect of Divine force in question and the plane on which it is functioning.

6. In the world of Briah it is held that the mighty Archangels carry out the mandates of God and give them expression, and assigned to the Sephirothic Spheres on the Tree in this World are the names of these ten mighty spirits.

[Page 64]

7. In Yetzirah it is the choirs of angels, innumerable in their concourse, who carry out the Divine commands; and these also are assigned to their Sephirothic Spheres, thus enabling us to know their mode and level of function.

8. In Assiah, as we have already noted, certain natural centres of force are given similar correspondences. We will consider all these associations when we come to study the Sephiroth in detail.

9. In the symbolic rendering of the Ten Holy Sephiroth in the Four Worlds there is another important set of factors to be considered, and these are the four colour scales classified by Crowley as the King scale, assigned to the Atziluthic World; the Queen scale, assigned to the Briatic World; the Emperor scale, assigned to the Yetziratic World; and the Empress scale, assigned to the Assiatic World.

10. This fourfold classification has a far-reaching significance in all Qabalistic matters, and also in Western magic, which is largely based upon the Qabalah. It is said to be under the presidency of the Four Letters of Tetragrammaton, the Sacred Name popularly rendered as Jehovah. In Hebrew, which has no vowels in its alphabet, this word is spelt JHVH, or, according to the Hebrew names of these letters, Yod, He', Vau, He'. The vowels are indicated in Hebrew by points inserted in and under the square letters of the script, which is written from right to left. These vowel-points were only introduced at a comparatively recent date, and the older Hebrew scripts are unpointed so that the reader cannot see the pronunciation of any proper name for himself, but needs to have it communicated to him by someone who knows it. The true mystical pronunciation of the Tetragrammaton is said to be one of the arcana of the Mysteries.

11. To the Four Letters of the Name are allotted any fourfold mystical classification, and by means of their correspondences we can trace all manner of relationships, and these are very important in practical occultism, as will be seen later.

12. Four important fourfold divisions find a place under them, thus enabling us to see their relationships among themselves. These are the Four Worlds of the Qabalists; the four elements of the alchemists; the fourfold classification of the signs of the Zodiac and the planets into triplicities, employed by the astrologers; and the four suits of the Tarot pack used in divination. This fourfold classification resembles the Rosetta Stone which gave the key to the Egyptian hieroglyphs, for on it were inscriptions in Egyptian and Greek; Greek being known, it was possible to work out the meaning of the corresponding Egyptian hieroglyphs. It is the method of arranging all these sets of factors on the Tree which gives the real esoteric clue to each of these systems of practical occultism. Without this key they have no philosophical basis and become matters of rule of thumb and superstition. It is for this reason that the initiated occultist will have nothing to do with the uninitiated fortune-teller, for he knows that, lacking this key, his system is valueless. Hence the vital importance of the Tree in Western occultism. It is our basis, our standard of measurement, and our textbook.

13. To understand a Sephirah, then, we need to know firstly its primary correspondences in the Four Worlds; its secondary correspondences in the four systems of practical occultism mentioned above; and, thirdly, any other correspondences we can by any means gather together, in order that the testimony of many witnesses may yield the truth. Of this gathering of correspondences there can be no end, for the whole cosmos on all its planes corresponds in endless sequences. We are constantly adding to our knowledge if we are good students of occult science. No better simile than that of the card-index system could possibly have been found.

14. But yet again we must remind the reader in this connection that the Qabalah is as much a method of using the mind as a system of knowledge. If we have the knowledge without having acquired the Qabalistic technique of mentation, it is of little use to us. In fact, we might go so far as to say that it is not possible to acquire any great degree of knowledge until this technique of the mind has been mastered; for it is not the

[Page 66]

conscious mind to which the Tree appeals, but subconsciousness, for the logical method of the Qabalah is the logical method of dream association; but in the case of the Qabalah the dreamer is the racial subconsciousness, the oversoul of the peoples, the Earth-spirit. Into communion with this Earth-soul the adept enters by means of meditation on the prescribed symbols. This is the real import of the Tree and its correspondences.

15. The highest of the Four Worlds, Atziluth, the plane of pure Deity, is called by the Qabalists the Archetypal World. It is also called, in the somewhat clumsy translation of MacGregor Mathers, the Intellectual World. This term is misleading. It is only intellectual as we commonly understand the word as relating to the mind, the rational intellect, in so far as it is the realm of archetypal ideas. But these ideas are entirely abstract, and are conceived by a function of consciousness quite outside the range of mind as we know it. Therefore to call this level the Intellectual World is to mislead the reader, unless at the same time we say that by intellect we mean something quite different to what the dictionary means. This is a poor way of expressing our ideas. It is far better to coin a new term with a precise meaning than to use an old one in a misleading sense, especially as, in the case of Atziluth, there is an excellent term already current, the term Archetypal, which exactly describes it.

16. The Atziluthic World is said by the Qabalists to be under the presidency of the Yod of the Sacred Name of Tetragrammaton. We may justly deduce from this that in any other fourfold system whatever is said to be also under the presidency of Yod will refer to the Atziluthic, or purely spiritual aspect of that force or subject. Among other associations given by different authorities are the Wands suit of the Tarot pack and the Element of Fire. It will be apparent to anyone who has any knowledge of occult matters that as soon as we know the element to which a symbol is assigned, we know a good deal, for it opens up all the ramifications of astrology for us, and we can trace out its astrological affinities through the triplicities of the Zodiac and the affinities of the planets with them. As soon as we know what Zodiacal and planetary associations exist, we are in a position to

explore the correlated symbolism of any pantheon, for all the gods and goddesses of all the systems that the human mind has ever invented have astrological associations. The stories of their adventures are really parables of the workings of cosmic forces. Through this maze of symbolism we could never hope to find our way unaided, but if we anchor the end of each chain of correspondences to its Sephirah, we have the clue we need.

17. All systems of esoteric thought, as well as all popular theologies, attribute the construction and presidency of the different parts of the manifested universe to the mediation of intelligent and purposive beings, working under the instruction of Deity. Modern thought has tried to escape from the implications of this concept by reducing manifestation to a matter of mechanics; it has not succeeded, and there are signs that it is not far from the point when it will perceive mind as being at the root of form.

18. The concepts of the Ancient Wisdom may be crude from the standpoint of modern philosophy, but we are forced to admit that the causative force behind manifestation is more akin in its nature to mind than to matter. To go a step further and personify the different types of force is a legitimate analogy, provided we realise that the entity which is the soul of the force may differ as much in kind and degree from our minds as our bodies differ in type and scale from the bodies of the planets. We shall be nearer an understanding of nature if we look for mind in the background than if we refuse to admit that the visible universe has an invisible framework. The ether of the physicists is closer akin to mind than to matter; time and space, as understood by the modern philosopher, are more like modes of consciousness than linear measures.

19. The initiates of the Ancient Wisdom made no bones about their philosophy; they took each factor in Nature and personified it, gave it a name, and built up a symbolic figure

[Page 68]

to represent it, just as British artists have by their collective efforts produced a standard Britannia, a female figure with shield charged with the Union Jack, a lion at her feet, a trident in her hand, a helmet on her head, and the sea in the back ground. Analysing this figure as we would a Qabalistic symbol, we realise that these individual symbols in the complex glyph have each a significance. The various crosses which make up the Union Jack refer to the four races united in the United Kingdom. The helmet is that of Minerva, the trident is that of Neptune; the lion would need a chapter to himself to elucidate his symbolism. In fact, an occult glyph is more akin to a coat of arms than anything else, and the person who builds up a glyph goes to work in the same way as a herald designing a coat of arms. For in heraldry every symbol has its exact meaning, and these are combined into the coat of arms that represents the family and affiliations of the man who bears it, and tells us his station in life. A magical figure is the coat of arms of the force it represents.

20. These magical figures are built up to represent the different modes of the manifestation of cosmic force in its different types and on its different levels. They are given names, and the initiate thinks of them as persons, not troubling himself about their

metaphysical foundations. Consequently, for all practical purposes they are persons, for whatever they may be in actual fact, they have been personalised, and thought-forms have been built up on the astral plane to represent them. These, being charged with force, are of the nature of artificial elementals; but the force with which they are charged being cosmic, they are much more than what we ordinarily imply when we speak of artificial elementals, and we assign them to the angelic kingdom and call them angels or archangels according to their grade. An angelic being, then, may be defined as a cosmic force whose apparent vehicle of manifestation to psychic consciousness is a form built up by the human imagination. In practical occultism, these forms are built up with great care and the most elaborate attention to the details of the symbolism, and are used to evoke the force

[Page 69]

required; anyone who has had experience of their use will agree that they are peculiarly effectual for the purposes for which they are designed. By holding the magical image in it and vibrating the traditional name assigned thereto, remarkable phenomena are obtained.

21. As we have already noted, it is necessary to use the mental technique of the Qabalists in order to get any sense out of the Qabalah; this formulation of the image and vibration of the name is designed to put the student in touch with the forces behind each Sphere of the Tree, and when he comes into touch in this way his consciousness is illuminated and his nature energised by the force thus contacted, and he obtains remarkable illuminations from his contemplation of the symbols. These illuminations are not a generalised flooding of light, as in the case of the Christian mystic, but a specific energising and illumination according to the Sphere opened up; Hod gives understanding of sciences, Yesod understanding of life-force and its tidal modes of functioning. When Hod is contacted we become filled with enthusiasm and energy for research; when Yesod is contacted we enter deeply into psychic consciousness and touch the hidden life-forces of the earth and our own natures. These are matters of experience; those who have used the method know what it yields them. Whatever may be the rational foundations of the system, as an empirical method it yields results.

22. If we want to study a Sephirah-in other words, if we want to investigate the aspect of Nature to which it refers-we not only study it intellectually and meditate upon it, but we try to get into psychic and intuitive touch with its influence and Sphere. In order to accomplish this, we always start at the top and try to get into spiritual touch with the aspect of Deity which emanated that Sphere and manifests in it. If this is not done, the forces belonging to the Sphere on the elemental levels may get out of hand and cause difficulties. Starting under the presidency of the Divine Name, however, no evil can enter.

23. Having adored the Creator and Sustainer of All under

[Page 70]

His Holy Name in the Sphere we are investigating, we next invoke the Archangel of the Sphere, the mighty spirit being in whom we personify the forces that built up that level of evolution and continue to function in the corresponding aspect of Nature. We ask the blessing of the Archangel, and beg that he will bid the Order of Angels assigned to that Sphere that they shall be friendly and helpful towards us in the realm of nature in which they function. By the time we have done this, we shall be thoroughly tuned to the keynote of the Sphere we are investigating, and be ready to follow out the ramifications of the correspondences of that Sephirah and its cognate symbols.

24. Approached in this way, we shall find the association-chains far richer in symbolism than we have ever believed to be possible, for the subconscious mind has been stirred and one of its many chambers of imagery thrown open, to the exclusion of all the others. The association-chains that rise into consciousness should therefore be free from any admixture of extraneous ideas and true to type.

25. First we review in our minds all the possible symbols that we can recollect, and as these present themselves to consciousness we try and see their import and bearing upon the secrets of the Sphere under investigation. But we do not try too hard; for if we concentrate upon a symbol and strain at it, as it were, we shall close the meshes of the tenuous veil that shields the subconscious mind. In these investigations, half meditation, half reverie, we want to work on the borders of consciousness and subconsciousness so as to induce that which is subconscious to cross the threshold and come within our reach.

26. As we proceed thus, following out the ramifications of the association-chains, we shall find that a running comment of intuition accompanies the process, and after the experiment has been repeated two or three times we shall feel that we know that Sephirah in a peculiarly intimate way, that we feel at home there, that the feel of it is quite different to that of the other Sephiroth which we have not yet worked with.

[Page 71]

We shall also find that some Sephiroth are more congenial to us than others, and that we get better results when working with them than we do with the uncongenial ones, where the associations-chains keep on breaking and the doors of subconsciousness resolutely refuse to open to our knocking. One pupil of mine could do excellent meditations on Binah Saturn, and Tiphareth, the Redeemer, but did not get on at all well with Geburah-Severity-Mars.

27. I shall never forget my own experience with the first attempt I made at this method. I was working on the Thirty-second Path, the Path of Saturn, uniting Malkuth and Yesod, a very difficult and treacherous Path. In my horoscope Saturn is not well aspected, and I have often experienced his opposing influence in my affairs. But after I had succeeded in treading the Path of Saturn out into the indigo darkness of the Unseen until the Moon of Yesod rose in purple and silver over the horizon, I felt that I had received the initiation of Saturn, that he was no longer inimical to me, but a friend who, though candid and stern, was to be trusted to protect me from mistakes and rash judgments. I realised his function

as the tester, and not the antagonist or avenger. I realised him as Time with his scythe, but knew also why he was called in Hebrew Shabbathal, rest, "for he giveth his beloved sleep." After that, the Thirty-second Path was open to me, not only on the Tree, but in life, for the forces and problems symbolised by that Path and its correspondences had become harmonised in my soul. From these two brief examples it will be seen that the meditations upon the Tree form a most practical and exact system of mystical development; and one that is peculiarly valuable in that it is equilibrated, for the different aspects of manifestation are, as it were, dissected out and dealt with in turn, nothing being neglected. By the time we have trodden all the Paths of the Tree we shall have learnt the lessons of Death and the Devil, as well as of the Angel and the High Priest.

CHAPTER X THE PATHS UPON THE TREE

1. The *Sepher Yetzirah* refers to the Ten Sephiroth theni selves, as well as the lines connecting them, as Paths, and justly so, for they are all equally channels of Divine influence; but it is usual in practical working to consider the lines between the Sephiroth only as the Paths, and the Sephiroth themselves as Spheres upon the Tree. This is one of the many tricks and blinds to be found in the Qabalistic system, for if we think of the Paths as thirty-two in number, as they are given in the *Sepher Yetzirah*, we shall not be able to equate them with the twenty-two letters of the Hebrew alphabet which, with their numerical value and correspondences, form the key to the Paths.

2. Each Path is said to represent the equilibrium of the two Sephiroth it connects, and we have to study it in the light of our knowledge of these Sephiroth if we are to appreciate its significance. Certain symbols are also assigned to the Paths themselves. These are, as already noted, the twenty-two letters of the Hebrew alphabet; the signs of the Zodiac, the planets, and the elements. Now there are twelve signs in the Zodiac, seven planets, and four elements, making in all twenty-three symbols. How are these to be arranged on Twenty-two Paths? Here is another Qabalistic blind to puzzle the uninitiated. The answer is quite simple when it is known. Our consciousness being in the element of Earth, we do not need the symbol of earth in our calculations when we make contact with the Unseen, so we leave it out and then find ourselves with the correct set of correspondences. Malkuth is all the earth we need for practical purposes.

[Page 72]

The third set of symbols to go upon the Paths are the twenty-two trumps or major arcana of the Tarot pack. With these three sets of symbols and the colours of the four colour scales, our major symbolism is complete; the minor symbolism consists of the innumerable ramifications of the correspondences through all systems and planes.

4. The Tree of Life, astrology, and the Tarot are not three mystical systems, but three aspects of one and the same system, and each is unintelligible without the others. It is only when we study astrology on the basis of the Tree that we have a philosophical system; equally does this apply to the Tarot system of divination, and the Tarot itself, with its comprehensive interpretations, gives the key to the Tree as applied to human life.

5. Astrology is so elusive because the uninitiated astrologer works on one plane only; but the initiated astrologer, with the Tree as his ground-plan, interprets on the four planes of the Four Worlds, and the effect of, shall we say, Saturn, is very different in Atziluth, where it is the Divine Mother, Binah, to what it is in Assiah.

6. All systems of divination and all systems of practical magic find their principles and philosophy based upon the Tree; whoever tries to use them without this key is like the foolhardy person who has a pharmacopoeia of patent medicines and doses himself and his friends according to the descriptions given in the advertisements, wherein backache includes every disease which does not cause pain in front. The initiate who knows his Tree is like the scientific physician who understands the principles of physiology and the chemistry of drugs, and prescribes accordingly.

7. Various methods of attributing the Tarot cards have been worked out from traditional sources. In his little book, *The Key to the Tarot*, A. E. Waite gives the chief of these; but refrains from indicating which, in his opinion, is the correct one. In his valuable tabulation of esoteric symbolism, "777," Crowley has no such reticence, but gives the system as it is known among initiates. This is the method I propose to

[Page 74]

follow in these pages, for I believe it to be the correct because the correspondences work out without discrepancies, a thing they do in none of the other systems.

8. According to this system, the four suits of the Tarot pack are assigned to the Four Worlds of the Qabalists and the four elements of the Alchemists. The suit of Wands is assigned to Atziluth and Fire. The suit of Cups to Briah and Water. The suit of Swords to Yetzirah and Air. The suit of Pentacles or Coins to Assiah and Earth.

9. The four aces are assigned to Kether, the first Sephirah; the four twos to Chokmah, the second Sephirah; and so on down the pack. the four tens being assigned to Malkuth. It will thus be seen that the cards of the four suits of the Tarot pack represent the action of the Divine Forces in each sphere and on each level of nature. Equally, if we know the significance of the Tarot cards we shall obtain much light on the nature of the Paths and Spheres to which they are assigned. Both these systems, the Tarot and the Tree, being of immemorial antiquity, their origins lost in the vistas of the ages, there is an enormous mass of symbolic correspondences accumulated around each of them. Every practical occultist who has ever worked with the Tree has added to this stock of associations, making the symbols live in the Astral by means of his operations. The Tree and its keys are infinite in their adaptability.

10. The four court-cards of the Tarot are called in modern packs, King, Queen, Knight, and Knave; but in the traditional packs they are, according to Crowley, arranged and symbolised differently. The King, being a mounted figure, indicating the swift action of the Yod of Tetragrammaton; the Prince of the esoteric Tarot is a seated figure, corresponding to the Vau of Tetragrammaton; and the Princess, the Knave of the modern packs, correspond to the Hé final of the Sacred Name.

11. The twenty-two trumps are arranged in various ways by various authorities, of which Mr. Waite gives a selection, but in our system we will follow the order given by Crowley for reasons already discussed.

12. In these pages we propose to give the philosophical Tree of Life, and enough practical instruction to render it available for meditation purposes; but we do not propose to give the Practical Qabalah, which is used for magical purposes; because that can only properly be learnt and safely practised in a Temple of the Mysteries. Reference must be made to the Practical Qabalah, however, in order to render some of the concepts intelligible, but those who are rightfully in possession of its keys need have no fear that these keys will be revealed to the uninitiated in these pages, for I am quite alive to the consequences of so doing.

13. If, from the information here given, and as a result of pursuing the methods described herein, anyone is able to work out for himself the keys of the Practical Qabalah, as he well may, can any dispute that he is entitled to them?

14. The Tree is enormously valuable as a meditation glyph, quite apart from its use in magic. By meditation such as I have described in my account of my own experiences on the Thirty-second Path, it is possible to equilibrate the warring elements in one's own nature and bring them into harmonious balance. It is also possible to get into sympathetic rapport with the different aspects of Nature which these symbols represent when applied to the Macrocosm, even if these forces are not given a definite form in talismanic magic. The information that is obtained from the study of one's own horoscope is not to be accepted passively as the dispensation of Fate from which there is no appeal. We ought to realise that talismanic magic, or the less concentrated method of meditation upon the Tree, should be used to compensate all unbalanced force in the horoscope and bring all into equilibrium. Talismanic magic is to astrology what medical treatment is to medical diagnosis.

15. It is not possible for me to give any formulae of practical

[Page 76]

magic here; before such formulae can be made use of it is necessary to have received the grades of initiation to Which they belong. Without these grades the student is no better off than the person who tries to diagnose and treat his own complaints after reading a medical textbook. That delightful humorist, Jerome K. Jerome, has told us what happens in such a case. The unfortunate imagines that he has every disease described therein,

except housemaid's knee, and cannot make up his mind as to the appropriate treatment, for everything he fancies is contra-indicated.

16. The ritual initiations of the Greater Mysteries of the Western Esoteric Tradition are based upon the principles of the Tree of Life. Each grade corresponds to a Sephirah and confers, or should confer, if the Order working them is worthy of the name, the powers of that sphere of nature. Likewise it opens up the Paths leading to that Sephirah, so that the initiate is said to be Lord of the Thirty-second Path when he has taken the initiation that corresponds to Yesod, or Lord of the Twenty-fourth, Twenty-fifth, and Twenty-sixth Paths when he has taken the initiation corresponding to Tiphareth, which constitutes him a full initiate. Beyond this lie the higher grades of adepthood.

17. The aim of each grade of initiation of the Greater Mysteries is to introduce the candidate to the Sphere of each Sephirah in turn, working from Malkuth up the Tree. The instructions given in each grade concern the symbolism and forces of the Sphere to which it refers and the Paths that equilibrate it. The sign and word of the grade are used when treading these Paths in the spirit-vision or projecting by them on the astral plane. Consequently the initiate is able to move with accuracy and certainty into whatsoever sphere of the Unseen he desires to penetrate, and to countercheck all beings he meets and all visions he sees, for he knows what the colours of the Paths are in all four scales, and he checks his vision by these. If he is working up the Thirty-second path of Saturn, whose colours are all in the sombre hues of indigo, dark blue and black, he knows that something is amiss if a scarlet-robed figure presents itself. Either that figure is illusive, or he himself has wandered off the Path.

18. To project the astral body along the Paths it is necessary *for* many reasons to hold the degrees of initiation to which they correspond; chief among which is that, unless one has received the grade, one will be unknown to guardians of the Paths, and they will be inimical rather than helpful, and do all in their power to turn the wanderer back. Secondly, if one should succeed in forcing one's way past the guardian, one still has no means of counterchecking the vision or knowing whether one is on or off the Path, and there are plenty of beings in the lower sphere who are only too ready to take advantage of presumptuous ignorance.

19. These considerations, however, need in no way discourage anyone who wishes to meditate upon the Paths and Spheres in the manner I have described; and in the course of his meditations he may so enter into the spirit of the Path that its guardian shall come to know him and make him welcome. He will then literally have initiated himself, and no one can deny his right to be there.

20. The Tree, considered from the initiatory standpoint, is the link between the microcosm, which is man, and the Macrocosm, which is God made manifest in Nature. A ritual initiation is the act of linking the microcosmic Sephirah, the chakra, with the Macrocosmic Sephirah; it is the introduction of a newcomer to the Sphere by those who are already there. They construct a symbolic representation of the Sphere on the physical plane in the furniture of the temple; they construct an astral replica of it by concentrated

imagination; and by means of invocation they call down into this temple not made with hands the forces of the Sphere of the Sephirah they are working upon.

21. These forces stimulate the corresponding chakras of the initiate and wake them to activity in his aura. The process of self-initiation by the meditations I have described is slower than the processes of ritual initiation, but it is sure enough if Persevered with by a suitable person, but one cannot teach a jelly-fish to sing by feeding it on canary-seed.

CHAPTER XI THE SUBJECTIVE SEPHIROTH

1. As above, so below, man is a miniature macrocosm. All the factors that go to the make-up of the manifested universe are present in his nature. Hence, in his perfection, he is said to be higher than the angels. At the present time, however, the angels are fully evolved beings and man is not. Thus he is as much lower than the angels as a three-year-old child is less developed than a three-year-old dog.

2. Hitherto we have considered the Tree of Life as an epitome of the Macrocosm, the universe, and the use of its symbols to put us in touch with the different spheres of objective Nature. We will now consider it in relation to the subjective sphere of the nature of the individual.

3. The accepted correspondences, as given by Crowley (who, unfortunately, never gives his authorities, so we do not know when he is using MacGregor Mathers' system and when he is relying upon his independent researches), are based partly on the astrological attribution of the planets assigned to the different Sephiroth, and partly upon a crude anatomical scheme of the human form standing with its back to the Tree. This is too crude for our purposes, and probably represents the work of later generations of scribes; during the Middle Ages the Qabalah was rediscovered by European philosophers, and they grafted astrological and alchemical symbolism upon its system. Moreover, the Rabbis themselves used an extremely detailed set of anatomical metaphors, discussing in detail the significance of every hair on the head of God, and even the more intimate parts of His anatomy. Such references cannot be taken literally and applied to the human form.

[Page 78]

4. The Sephiroth, individually and in their pattern of relationships, represent in relation to the Macrocosm the successive phases of evolution, and in relation to the Microcosm the different levels of consciousness and factors of character. That these levels of consciousness have some relation to the psychic centres of the physical body is a reasonable assumption, but we must not be crude and mediaeval in the conclusions we draw. Occult anatomy and physiology have been worked out in detail in the Yoga science of the Hindus, and we can learn much from their teachings. The latest advances in

physiology are pointing to the conclusion that the link between mind and matter is to be sought primarily in the endocrine system of ductless glands and only secondarily in the brain and central nervous system. We can learn much from this source of knowledge also, and piecing together all the information we can collect from every source, we may finally arrive by inductive reasoning at what the ancients learnt by means of the intuitive and deductive methods which they brought to such a high degree of perfection in their Mystery schools.

5. It is generally agreed that the chakras, or psychic centres described in Yoga literature, are not situated inside the organs with which they are associated, but in the auric envelope at spots roughly approximating thereto. We shall do well, therefore, not to associate the different Sephiroth with the limbs and other parts of our anatomy, but to regard the use of such analogies as metaphorical and look for the psychic principles which they may be held to represent.

6. Before proceeding to a detailed study of each Sephirah from this standpoint, it is very helpful to have a general survey of the Tree as a whole, because so much of the elucidation of the symbolism depends upon the relationship of one symbol to another in the pattern of the Tree. This chapter must needs be discursive and inconclusive, but it will enable the detailed study of the individual Sephiroth to be much more effectually carried out.

7. The first and most obvious division of the Tree is into

[Page 80]

the three Pillars, and this immediately reminds us of the three channels of Prana described by the yogis, Ida, Pingala, and Shushumna; and the two principles, the Yin and the Yang of Chinese philosophy, and the Tao, or Way, which is the equilibrium between them. By the agreement of witnesses truth is established, and when we find three of the great metaphysical systems of the world in complete agreement - we may conclude that we are dealing with established principles and should accept them as such.

8. The Central Pillar should, in my opinion, be taken to represent consciousness, and the two side pillars as the Positive and negative factors of manifestation. It is noteworthy that in the Yoga system consciousness is extended when Kundalini rises through the central channel of the Shushumna, and that the Western magical operation of Rising on the Planes takes place up the Central Pillar of the Tree; that is to say, the symbolism employed to induce this extension of consciousness does not take the Sephiroth in their numerical order, commencing with Malkuth, but goes from Malkuth to Yesod, and Yesod to Tiphareth, by what is called the Path of the Arrow.

9. Malkuth, the Sphere of Earth, is taken by occultists as signifying brain-consciousness, as is proved by the fact that after any astral projection the ceremonial return is made to Malkuth and normal consciousness re-established therein.

10. Yesod, the Sphere of Levanah, the Moon, is taken as psychic consciousness, and also as the reproductive centre. Tiphareth is taken as the higher psychism, the true illuminated vision, and is associated with the highest grade of the initiation of the personality, as is evidenced by the fact that to it is assigned, in the system taken by Crowley from Mathers, the first of the grades of adepthood.

11. Daath, the mysterious, invisible Sephirah, which is never marked upon the Tree, is associated in the Western system with the nape of the neck, the point where the spine meets the skull, the spot at which the development of the brain from the notochord took place in our primeval ancestors.

Daath is usually held to represent the consciousness of another dimension, or the consciousness of another level or plane; it essentially represents the idea of change of key.

12. Kether is called the Crown. Now a crown is above the head, and Kether is generally held to represent a form of consciousness which is not achieved during incarnation. It is essentially outside the scheme of things so far as the planes of form are concerned. The spiritual experience associated with Kether is Union with God, and whoso achieves that experience is said to enter into the Light and come not forth *again*.

13. These Sephiroth unquestionably have their correlations in the chakras of the Hindu system, but the correspondences are given differently by different authorities. As the method of classification is different, the West using a fourfold system and the East a sevenfold system, correlation is not easy to obtain, and in my opinion it is better to look for first principles rather than obtain a tidy pattern of arrangement which does violence to the correspondences.

14. The only two writers known to me who have attempted this correlation are Crowley and General J. F. C. Fuller. General Fuller assigns the Muladhara Lotus to Malkuth, pointing out that its four petals correspond with the four elements. It is interesting to note that in the Queen scale of colour, as given by Crowley, the Sphere of Malkuth is represented as divided into four quarters, coloured respectively citrine, olive, russet, and black, to represent the four elements, and bearing the closest resemblance to the usual representations of the Four-petalled Lotus.

15. This Lotus is represented as situated in the perineum and is associated with the anus and the function of excretion. In column XXI of the table of correspondences given by Crowley in ~ he attributes the buttocks and anus of the Perfected Man to Malkuth. I consider that from every point of view the attribution of Fuller, who refers the Muladhara Lotus to Malkuth, is to be preferred to that of Crowley, who in column CXVIII refers it to Yesod, thus contradicting

himself. In the infantile mind, according to Freud, the functions of reproduction and excretion are confused, but I don't consider that this attribution is one that can be generally accepted or ought to be perpetuated.

16. Malkuth, viewed as the Muladhara Lotus, represents, we may take it, the end-result of the life processes, their final concretion in form, and their submission to the disintegrating influences of death in order that their substance may be utilised again. The form into which they have been organised by the slow processes of evolution has served its purpose, and the force must be set free; this is the spiritual significance of the processes of excretion, putrefaction, and decomposition,

17. The Svadisthana Chakra, the Six-petalled Lotus, at the base of the generative organs, is assigned by General Fuller to Yesod. This agrees with the Western tradition, which assigns Yesod to the reproductive organs of the Divine Man; its astrological correspondence with the Moon, Diana-Hecate, also agrees with this attribution. Crowley, though assigning Yesod to the phallus in column XXI of "777," assigns the Svadisthana Lotus to Hod, Mercury. It is difficult to understand this attribution, and as he does not give his authority, I consider it better to adhere to the principle of referring the levels of consciousness to the Central Pillar.

18. Tiphareth, by universal consent, represents the solar plexus and breast; it therefore seems reasonable to attribute to it the Manipura and Anahata Chakras, as Crowley does. Fuller attributes these chakras to Geburah and Chesed, but as these two Sephiroth find their equilibrium in Tiphareth, this attribution presents no difficulty and causes no discrepancy.

19. In the same way the Visuddhu Chakra, which in the Hindu system correlates with the larynx and is referred to Binah by Crowley, and the Ajna Chakra at the root of the nose, which correlates with the pineal gland and is referred to Chokmah by the same authority, may be taken as uniting for function in Daath, situated at the base of the skull.

20. The Sahasrara Chakra, the Thousand-petalled Lotus, situated above the head, is referred by Crowley to Kether, and there can be little reason to quarrel with this attribution, for it is foreshadowed in the very name of the First Path, Kether, the Crown, which rests upon and above the head.

21. The two flanking pillars of Severity and Mercy can be seen as representing the positive and negative principles- and their respective Sephiroth as representing the modes of functioning of these forces upon the different levels.

22. The Pillar of Severity contains Binah, Geburah, and Hod, or Saturn, Mars, and Mercury. The Pillar of Mercy contains Chokmah, Chesed, and Netzach, or the Zodiac, Jupiter, and Venus. Chokmah and Binah, in the symbolism of the Qabalah, are represented by male and female figures and are the supernal Father and Mother, or in

more philosophical language, the positive and negative principles of the universe, the Yin and the Yang, of which maleness and femaleness are but specialised aspects.

23. Chesed (Jupiter) and Geburah (Mars) are both represented in Qabalistic symbolism as crowned figures, the former a lawgiver upon his throne, and the latter a warrior king in his chariot. These are the constructive and destructive principles respectively. It is interesting to note that Binah, the supernal Mother, is also Saturn, the solidifier, who connects through his sickle with Death with his scythe, and Time with his hour-glass. In Binah we find the root of Form. It is said of Malkuth in the *Sepher Yetzirah* that it sitteth upon the throne of Binah-matter has its root in Binah-Saturn Death; form is the destroyer of force. With this passive destroyer goes also the active destroyer, and we find MarsGeburah immediately below it on the Pillar of Severity; thus is the force locked up in form set free by the destructive influence of Mars, the Siva aspect of the Godhead. Chokmah, the Zodiac, represents kinetic force; and Chesed, Jupiter, the benign king, represents organised force; and the two are synthesised in Tiphareth, the Christ-centre, the Redeemer and Equilibrator.

24. The next trinity, of Netzach, Hod, and Yesod, represents the magical and astral side of things. Netzach (Venus)

[Page 84]

represents the higher aspects of the elemental forces, the Green Ray; and Hod (Mercury) represents the mind side of magic. The one is the mystic and the other the occult, and they synthesise in the elemental Yesod. This pair of Sephiroth should never be considered apart, any more than the upper pair of Geburah and Gedulah, which is another name for Chesed. This is indicated by the fact that the Qabalah attributes them respectively to the right and left arms and the left and right legs.

25. It will thus be seen that the three form-Sephiroth are in the Pillar of Severity, and the three force-Sephiroth in the Pillar of Mercy, and between them, in the Pillar of Equilibrium, are set the different levels of consciousness. The Pillar of Severity, with Binah at its head, is the female principle, the Pingala of the Hindus and the Yang of the Chinese; the Pillar of Mercy, with Chokmah at its head, is the Ida of the Hindus and the Yin of the Chinese; and the Pillar of Equilibrium is Shushumna and Tao.

CHAPTER XII

THE GODS UPON THE TREE

1. All students of comparative religion and its poor relation, folk-lore, are agreed that primitive man, observing and beginning to analyse the natural phenomena surrounding him, attributed them to the agency of beings akin to himself in nature and type, but transcending him in power. As he could not see them, he not unnaturally called them

invisible; and as he could not see his own mind during life, or his friend's soul after death, he concluded that the beings that produced natural phenomena were of the same nature as the invisible but active mind and soul.

2. Now all this sounds very crude as it is put by the anthropologists, but that is only because when translating savage ideas they choose words that have crude associations. For instance, the standard translation of one of the chief scriptures of China refers to the venerable philosopher Lao Tse as "the Old Boy." This sounds comical to European ears, yet it is not so far removed from the words of another Scripture which has been fortunate enough to receive translation at the hands of those who revered it-" Except ye become as a little child" I am not a sinologue, but I incline to the opinion that the translation "Eternal Child" would have been equally accurate and in better taste.

3. There is a saying in the Mysteries, "See that ye blaspheme not the Name by which another knoweth his God. For if ye do this in Allah, ye will do it in Adonai."

4. And after all, was primitive man so very far off the mark when he attributed the causation of natural phenomena to activities of the same nature as the thought-processes of the

[Page 86]

human mind, but upon a higher arc? Is not that the Point towards which both physics and metaphysics are gradually converging? Supposing we were to re-cast the statement of the savage philosopher and say, The essential nature of man is similar in type to that of his Creator, would we be held to have said anything either blasphemous or ridiculous?

5. We may personalise natural forces in terms of human consciousness; or we may abstract human consciousness in terms of natural forces; both are legitimate proceedings in occult metaphysics, and the process yields some very interesting clues and some very important practical applications. We must not, however, make the mistake of the ignorant, and say A is B when we mean A is of the same nature as B. But equally we may legitimately avail ourselves of the Hermetic axiom, "As above, so below," because if A and B are of the same nature, the laws governing A can be predicated concerning B. What is true of the drop is true of the ocean. Consequently, if we know anything concerning the nature of A, we may conclude that, allowing for the difference in scale, it will apply to B. This is the method of analogy used in the inductive science of the ancients, and provided it is counter-checked by observation and experiment, it can yield some very fruitful results and cut out many leagues of weary wandering in the dark.

6. The personification and deification of the natural forces was man's first crude and shrewd attempt to evolve a monistic theory of the universe and save himself from the destructive and crippling influence of an unresolved dualism. As age by age extended his knowledge and elaborated his intellectual processes, he read more and more significance into the first simple classifications. Nevertheless, he did not discard his original classifications, because they were fundamentally sound and represented actualities. He

simply elaborated and extended them, and finally, when he fell on evil times, overlaid them with superstition.

7. We should not, therefore, regard the pagan pantheons as so many aberrations of the human mind; nor should we try to understand them from the viewpoint of the uninstructed and uninitiated; we should try to find out what they must have meant to the highly intelligent and cultured high-priests of the cults in their heyday. Compare Mme David Neel and W. B. Seabrook on the subject of heathen rites with the reports of the average missionary. Seabrook shows us the spiritual significance of voodoo, and Mme David Neel shows us the metaphysical aspect of Thibetan magic. These things appear in one way to the sympathetic observer who wins the confidence of the exponents of these systems and succeeds in being received into their holy of holies as a friend, and who goes to learn instead of merely to observe and ridicule, and in another way to the "beef-fed zealot" who walks into the holy place in his dirty boots and gets stoned by the indignant worshippers.

8. In judging these things let us consider the form Christianity would present if approached in the same way. Unsympathetic observers would probably conclude that we worshipped a sheep, and the Holy Ghost would yield some spectacular interpretations. Let us credit other people with using metaphors if we do not expect to be taken literally our-selves. The outer form of the ancient pagan faiths is no cruder than Christianity in backward Latin countries, where Jesus Christ is represented in topper and tails and the Virgin Mary in lace-edged pantaloons. The inner form of the ancient faiths can compare very favourably with the best of our modern metaphysicians. After all, they produced Plato and Plotinus. The human mind does not change, and what is true of ourselves is probably true of the pagans. The Lamb of God which taketh away the sins of the world is only another version of the Bull of Mithra which does the same thing, the only difference being that the ancient initiate was literally "Washed in blood" and the modern one takes it metaphorically. *Autres temps autres mours.*

9. If we approach those whom we elect to call pagans, both ancient and modern, in a reverent and sympathetic spirit, knowing that Allah and Brahma and Amen Ra are but other

[Page 88]

names for that which we worship as God, we shall learn a very great deal that was forgotten in Europe when the Gnosis was stamped out and its literature destroyed.

10. We shall find, however, that the pagan faiths present their teaching in a form that is not readily assimilable by the European mind, and that if we are to arrive at its significance we must re-state it in our own terms. We must correlate the metaphysical concept with the pagan symbol; then we shall be able to apply to the former the vast mass of mystical experience which generations of contemplatives and exper. mental psychologists have organised about the latter. And when we speak of experimental psychologists, we must not make the mistake of thinking that they are an exclusively

modern product, because the priests of the ancient Mysteries, with their temple sleep and deliberately induced hypnogogic visions, were nothing more nor less than experimental psychologists, though their art has been lost, like many other of the ancient arts, and is only being laboriously recovered piecemeal in the more advanced circles of scientific thought.

11. The method used by the modern initiate for interpreting the language spoken by the ancient myths is a very simple and effectual one. He finds in the Qabalistic Tree of Life a link between the highly stylistic pagan systems and his own more rational methods; the Jew, Asiatic by blood and monotheistic by religion, has a foot in both worlds. Upon the Tree of Life with its Ten Holy Sephiroth the modern occultist bases both a metaphysic and a magic. He uses a philosophical conception of the Tree to interpret what it represents to his conscious mind, and he uses a magical and ceremonial application of its symbolism to link it up with his subconscious mind. The initiate, consequently, makes the best of both worlds, ancient and modern; for the modern world is all surface consciousness, and has forgotten and repressed the subconsciousness, to its own great hurt; and the ancient world was mainly subconsciousness, consciousness having been but recently evolved. When the two are linked up and brought into polarised function they yield super-consciousness, which is the goal of the initiate.

12. Holding the foregoing conceptions in mind, let us now try to co-ordinate the ancient pantheons with the Spheres upon the Tree of Life. There are ten such Spheres, the Ten Holy Sephiroth, and between these we must distribute, according to type, the different gods and goddesses of whatever pantheon we wish to study; we are then in a position to interpret their significance in the light of what we already know concerning the principles represented by the Tree, and to add to our knowledge of the Tree all that is available concerning the significance of the ancient deities.

13. This is, obviously, of great intellectual value-but there is another value which does not so readily appear to the average man who has had no experience of Mystery-workings; the performance of a ceremonial rite symbolically representing the working of the force personified as a god, has a very marked and even drastic effect on the subconscious mind of any person who is at all susceptible to psychic influences. The ancients had brought these rites to a very high pitch of perfection, and when we moderns are trying to reconstruct the lost art of practical magic we can go to them with great profit. The whole philosophy of European magic is based upon the Tree, and no one can hope to understand it or use it intelligently who has not been trained in the Qabalistic methods. It is this lack of training which makes popular occultism so very apt to degenerate into the crudest superstition. "Your number in your name" becomes a different thing when we understand the mathematical Qabalah; fortunes in tea-cups are another matter when we understand the significance of the Magical Images and the method of their formulation and interpretation as a psychological device for penetrating the veil of the unconscious.

14. Broadly speaking, then, we sort out the gods and goddesses of all the pagan pantheons into the ten pigeon-holes of the Ten Holy Sephiroth, relying chiefly upon their astrological associations to guide us, because astrology is the

[Page 90]

one universal language, for all people see the same Planets. Space is referred to Kether, the Zodiac to Chokmah, the seven planets to the next seven Sephiroth, and Earth to Malkuth. Consequently, any god who has an analogy with Saturn will be referred to Binah, as will any goddess who might be termed the primordial mother, the Superior Eve, as distinguished from the Inferior Eve, the Bride of Microprosopos, Malkuth. The Supernal triangle of Kether, Chokmah) and Binah always refers to the Old Gods, which every pantheon recognises as the predecessors of those forms of godhead worshipped by the current faith. Thus Rhea and Kronos would be referred to Binah and Chokmah, and Jupiter to Chesed. All the corn goddesses refer to Malkuth, and all the lunar goddesses to Yesod. The war gods and destructive gods, or divine devils, refer to Geburah, and the goddesses of love to Netzach. The initiator gods of wisdom are referred to Hod, and the sacrificed gods and redeemers to Tiphareth. So great an authority as Richard Payne Knight in his valuable book, *The Symbolic Language of Ancient Art and Mythology*, speaks of "the remarkable concurrence of the allegories, symbols, and titles of ancient mythology in favour of the mystic system of emanations." With this clue we sort out the pantheons, thus enabling ourselves to compare like with like and make the one illuminate the other.

15. In the system he gives in his book of correspondences, 777," Crowley assigns the gods to the Paths as well as to the Sephiroth. This, in my opinion, is a mistake and leads to confusion. It is the Sephiroth alone that represent natural forces; the Paths are states of consciousness. The Sephiroth are objective and the Paths are subjective. It is for this reason that in the working glyph of the Tree used by initiates the Sephiroth are always represented in one Colour Scale and the Paths in another. Those who possess this glyph will know to what I refer.

16. The Paths themselves, in my opinion, should be regarded as under the direct presidency of the Holy Names governing their Sephirothic attributions only, and should not be confused with other pantheons; for although we may go to other systems for intellectual enlightenment, we are unwise to attempt to mix the methods of practical working and unfoldment of consciousness.

17. For instance, the Seventeenth Path, between Tiphareth and Binah, is assigned by the *Sepher Yet-rah* to the Element of Air. We are far wiser to work it with the rite of the Element of Air and the Holy Names assigned thereto, and to approach it through the appropriate Tattva, rather than confuse the issue with the associations of the assorted collection of deities, Castor and Pollux, Janus, Apollo, Merti, and other incompatibles assigned to it by Crowley, whose correspondences present an inextricable tangle of associations.

18. The Sephiroth should be interpreted macrocosmically, and the Paths microcosmically; thus we shall find the clue to the Tree in both man and nature.

CHAPTER XIII PRACTICAL WORK UPON THE TREE

1. If among the readers who have followed these studies in the Qabalah thus far there are any of the more advanced students of Western occultism, they will no doubt have found much more that is familiar than is new or original. In working upon this storehouse of ancient knowledge we are in the position of excavators working on the site of a buried temple; we are digging up fragments rather than studying a coherent system; for the system, though coherent enough in its heyday, was broken and scattered and defaced by the persecutions of twenty centuries of unenlightened bigotry and spiritual jealousy.

2. More work has been done upon these scattered fragments than is generally realised, however. Mme Blavatsky gathered together a great mass of data and exposed it to the gaze of a public which understood it little better than the child gazing at the cases in a museum and marvelling at the queer things they contain. The scholarly work of G. R. S. Mead has given us much information concerning the Gnosis, the esoteric tradition of the Western world during the earlier centuries of our epoch; Mrs Atwood's monumental book has revealed the significance of the Alchemical symbolism to us. None of these, however, have expounded the Western Tradition as initiates of that Tradition, but have approached it from outside and either pieced together its fragments, or, as in the case of Mme Blavatsky, interpreted it by analogy in the light of the more familiar system of another Tradition.

3. Those who approached the study of the subject from the inside—that is to say, with the initiatory keys—and employed

[Page 92]

it as a practical system for the exaltation of consciousness have, for the most part, maintained a secrecy which, though it might have been not only justifiable and even essential in the days when the Holy Inquisition rewarded such researches with the stake, is difficult to assign to any more creditable motive in our liberal age than a desire to create and maintain prestige. A very effectual "corner" in occult practice, if not in occult knowledge, has been established and maintained among English-speaking peoples for the last quarter of a century. A "corner" that effectually defeated the spiritual impulse which should have given rise to a renaissance of the Mysteries during the last quarter of the last century. Consequently, the earth being ripe for the sowing and the wheat not being broadcast therein, the four winds brought strange seeds to the waiting ground, and a

tropical growth sprang up that, having no roots in racial tradition, withered away or developed strange forms.

4. The buried temple of our native tradition has in actuality been excavated in part at any rate, but the rescued fragments have not been made available for students according to the honourable traditions of European scholarship, but have been gathered together into private collections the keys whereof have rested in the pockets of individuals who have opened and closed the doors in an entirely arbitrary fashion. I have no doubt these pages will cause heart-burnings in certain quarters whose private collections they depreciate in value. But I have no doubt also that the innumerable students who essayed the Western Path in vain may find in these pages the keys to what was incomprehensible to them in the method, or perhaps, to be more accurate, the complete lack of method, in which they were trained. Speaking for myself, it took me ten years' work in the dark before I found the keys, and I only found these in the end because I was sufficiently psychic to pick up the Inner Plane contacts. I find it difficult to believe that any useful purpose is served by deliberately darkening counsel or by withholding from the student keys and explanations that are essential to his work. If the student is unworthy

[Page 94]

to be trained, do not let us train him. If he is to be trained at all, let us train him properly.

5. In the following pages I have done my best to elucidate the principles governing the use of magical symbolism. The practical use of the ceremonial method is best attempted under the guidance of one who is already experienced in its use; to work alone or with equally inexperienced comrades is to run unnecessary risks, but there is no reason why anyone should not experiment with the meditative method.

6. In order to use the magical symbols effectually one has to make the contact of each individual symbol. It is of little use to make a list of symbols and proceed to the construction of a ritual. In magic, as in violin-playing, one has to "make one's notes"; one does not find them ready-made as on the piano. The student of the violin has to learn to make each individual note before he can play an air. So it is with any occult operation, we must know how to construct and contact the magical images before we can work with them.

7. The sets of symbols associated with each of the Thirty-two Paths are used by the initiate to build up the magical images; it is necessary that he should know these symbols not only in theory, but also in practice; that is to say, he must not only have them thoroughly well rooted in his memory, but must also have performed meditations upon them individually~until he has penetrated their significance and experienced the force they represent. To know the vast range of symbols associated with each Path is, of course, the work of a lifetime, but the student must learn the key-symbols of each Path as the essential preliminary to his studies; he is then able to recognise all other symbol-forms as they come his way and assign them to their proper classification. His knowledge will thus develop under two aspects: firstly, the knowledge of the symbolism in its

infinite ramifications; and secondly, the philosophy of the interpretation of that symbolism. Once he has mastered a working knowledge of the concepts of esoteric cosmogony and has the general scheme of symbolism assigned to each Sephirah well fixed in his memory, the student is equipped with a card-index system and can commence filing, collecting the material for his files from every imaginable source in archeology, folk-lore, mystical religion, travellers' tales, and the speculations of ancient and modern philosophy and ultra-modern science.

8. The uninitiated inquirer may wonder how the enormous mass of data is kept sorted in the memory. To begin with, the serious student who uses the Tree as his meditation method works at it regularly every day. Moreover, it will be found by experience that the assignation of symbols to each Sephirah has a peculiar logical basis, hidden somewhere deep in the subconscious mind, and the symbol-sequences are not nearly so difficult to remember as might be supposed, especially if they have been used for meditation. Some of the symbols refer to the concepts of esoteric philosophy, some to the methods of projecting consciousness in vision, and some to the composing of ceremonial. The student must remember, however, that the symbols will never yield their significance to conscious meditation alone, however correctly and completely they are known; they must be used as the initiates intended them to be used, to evoke images from the subconscious mind into conscious content.

9. One set of symbols is assigned to the Ten Holy Sephiroth themselves, and another set to the Twenty-two Paths that connect them. Some of the symbols, however, occur in both sets, and all of them interconnect through their astrological and numerical correlations. This sounds most perplexingly complex, but in actual practice it is far simpler than it sounds, because the work is not done with the conscious mind, but with the subconscious mind, and it matters very little in what manner the symbols are pitchforked into it, the strange diemon that sits behind the censor sorts them out, picking that which it requires and rejecting all else, until finally a coherent pattern reappears in consciousness that only requires analysis to yield its significance after the same manner as a dream.

10. A vision evoked by the use of the Tree is, in fact, an

[Page 96]

artificially produced waking dream, deliberately motived and consciously related to some chosen subject whereby not only the subconscious content, but also the superconscious perceptions are evoked and rendered intelligible to consciousness. In a spontaneous dream the symbols are drawn at random from experience; in the Qabalistic vision, however, the picture is evoked from a limited set of symbols to which consciousness is rigidly restricted by a highly trained habit of concentration. It is this peculiar power to turn the mind loose within determined limits which constitutes the technique of occult meditation, and it is only to be acquired by constant practice over a considerable period. It is this which constitutes the difference between the trained and the untrained occultist; the untrained person may be able to detach consciousness from the control of the directing personality and thus allow the images to rise, but he has no power to restrict and

select what shall appear, and consequently anything may appear, including a varying proportion of subconscious content. The trained occultist, however, accustomed to use this method in his meditations, is able to swing instantly clear of the normal subconscious content unless it is disturbed by emotion, in which case he is liable to be entangled in its meshes; but even in this case his method is his protection, for he is immediately able to recognise confused symbolism in the images because he has a definite standard of comparison with which to compare them.

11. In studying the Tree the student should always think of each Sephirah under the threefold aspect we have already mentioned of philosophy, psychism, and magic; to this end he should always think of it firstly as representing a certain factor in the evolution of the cosmos in the immemorial past of cosmic time, whether it remains in manifestation, has passed away, or has not yet arrived at the level of dense matter.

12. With this aspect of the Tree are also taken the curious cryptic texts of the *Sepher Yetzirah*, one to each Path. These most baffling utterances have a curious way of yielding sudden flashes of illumination to meditation and are by no means to be rejected as rubbish, incomprehensible though they may appear at first sight.

13. Another source of illumination is to be found in the additional titles of the Sephiroth, each of which has anything from one to two or three dozen. These are graphic descriptive names applied to the various Sephiroth by the ancient Rabbis and found scattered through the Qabalistic literature, and they tell us a great many things. For instance, the titles "Concealed of the Concealed" and "Primordial Point" that are applied to Kether convey a good deal to those who know where to look for it.

14. We can also, once we are acquainted with the symbolism, assign to the various Sephiroth their equivalent gods in other systems, and when we look up the symbols, functions, cosmic concepts, and methods of worship assigned to these deities we get a fresh flood of illumination. By the use of a good mythological dictionary or an encyclopaedia, Frazer's *Golden Bough*, and Mme Blavatsky's *Secret Doctrine and Isis Unveiled*, we can, by the mere application of diligence, read a great many riddles that at first appeared insoluble, and the exercise is a fascinating one. When used thus the Tree is peculiarly valuable, because its diagrammatic form causes things to be seen in relation to each other, thus causing them to throw light upon each other.

15. In order to manipulate the psychic aspect of the Tree and its Paths the occultist uses images, because it is by means of images and the names that evoke them that vision is formulated. He associates with each Sephirah a primary symbol, which is called its Magical Image. Secondly, he associates with it in his mind a geometrical form which, in various ways, embodies its characteristics, and when he composes symbols he uses that form as the basis. For instance, Geburah, Mars, the Fifth Sephirah, has assigned to it a pentagon or five-sided figure. Any symbol of Geburah, whether it be a talisman, an altar to Mars, or a mental picture of a symbol, would be in the form of a pentagon coloured in one of the colours of the Mars colourscale.

[Page 98]

16. The most important forms upon the Tree, however, are those associated with the four Names of Power assigned to each Sephirah; with these are associated four colours in which they are conceived to manifest in a symbolic form in each of the Four Worlds of the Qabalists. The highest of these is the God-name, which manifests in Atziluth, the plane of spirit, and is the supreme Name of Power of that Sephirothic Sphere and dominates all its aspects, whether cosmic, evolutionary, or subjective. It represents the idea underlying the development of manifestation in that Sphere; the idea that runs through all subsequent evolution and expresses itself in all ensuing effects and manifestations.

17. The second Name of Power is that of the Archangel of the Sphere, and represents the organised consciousness of the being through the activities of which the evolution of that phase was inaugurated and directed. Although these beings are represented pictorially as of human form, though etherealised, it must not be thought that life and consciousness as we know them in any way correspond to their nature. They are more akin in essence to natural forces, yet if we consider them simply as unintelligent energy we shall have no adequate concept of their nature, because they are essentially individualised, intelligent; and purposive. Both these ideas must enter into our concept, modifying each other, till finally we shall arrive at a realisation that differs very widely from anything to which Western thought is accustomed.

18. The third Name of Power denominates, not one being, but a whole class of beings, the choirs of angels as they are called by the rabbis, and these again represent intelligent natural forces.

19. The fourth denominates what we have called the Mundane Chakra, that is to say the celestial object which is looked upon as the product of the particular phase of evolution which took place under the presidency of that Sephirah and which represents it.

20. The third aspect under which we consider the Sephiroth is the magical aspect and is essentially practical. To arrive at this, we think of what may be experienced under the presidency of these different aspects of deity-manifestation, and what powers may be wielded by the magician when he has mastered their lessons.

21. Each Sephirah has assigned to it a virtue, which represents its ideal aspect, the gift which it brings to evolution; and a vice which is the result of the overplus of its qualities. For instance, Geburah, Mars, has for its virtues energy and courage, and for its vices cruelty and destructiveness. The student of astrology will at once recognise that the virtues and vices attributed to the various Sephiroth are derived from the characteristics of the planets associated with them, and will find that in this correspondence a whole new line of approach to astrology is opened up.

22. The spiritual experience as I prefer to call it, or occult power as Crowley calls it, is a profound realisation or vision of some aspect of cosmic science. This constitutes the

essence of the initiation of the grade assigned to each Sephirah, for in the Greater Mysteries of the West the grades are associated with the Sephiroth.

23. The mediaeval Qabalists also assigned a part of the body to each Sephirah, but this must not be taken too literally; the real key is to be found in the realisation that the different Sephiroth represent factors in consciousness, and if we take Geburah as the strong right arm, we must realise that it really means the dynamic will, the executive capacity, the destruction of the effete and unbalanced.

24. Each Sephirah and Path has assigned to it symbolic animals, plants, and precious stones. It is necessary that the student should know these for two reasons: firstly, they give some very important keys to the relations of the gods of the different pantheons to the Sephiroth; and secondly, they form part of the symbolism of the Astral Paths and serve as landmarks when travelling in the spirit-vision. For instance, if one saw a horse (Mars) or a jackal (Luna) in the sphere of Netzach (Venus), one would know that there was confusion of plane and the vision was not reliable. In her Sphere one

[Page 100]

would expect to see her doves, and a spotted beast, such as a lynx or leopard.

25. It may be thought that the association of the symboli~ beasts with the gods and goddesses in the old myths is entirely arbitrary and the fruit of the poetic imagination, which, like the wind, bloweth where it listeth. To this the occultist answers that the poetic imagination is not an arbitrary thing and refers the sceptic to the works of Dr Jung of Zurich, the famous psychiatrist, and to the essays of the Irish poet, "A. E.," in particular *Song and its Fountains*, wherein he analyses the nature of his own sources of inspiration. From the intrinsic nature of his poetry, and from many passing references in his works, I think we may be entitled to claim "A. E." as one of that band of students who have been nurtured on the mystical Qabalah. At any rate, what he has to say is sound Qabalistic doctrine and extremely illuminating to our present argument.

26. Dr Jung has a great deal to say concerning the myth-making faculty of the human mind, and the occultist knows it to be true. He knows also, however, that its implications are much farther reaching than psychology has yet suspected. The mind of poet or mystic, dwelling upon the great natural forces and factors of the manifested universe, has, by the creative use of the imagination, penetrated far more deeply into their secret causes and springs of being than has the scientist; it is not for nothing that the racial imagination, working thus, has come to associate certain animals with certain gods; a brief examination of the examples cited serves to show the basis of the association. The doves of Venus show her gentler aspect, and the cat-beasts her sinister beauty.

27. The association of plants with the different Paths rests upon a twofold basis. Firstly, there are plants traditionally associated with the legends of the gods, as is corn with Ceres and the vine with Dionysos; these we find associated with the Sephiroth, with which the functions of these gods are correlated~orn with Malkuth and the vine with Tiphareth, the

Chnst-centre, wherewith are associated all the Sacrificed Gods and the givers of illumination.

28. Plants are also associated with the Sephiroth in another way; the old doctrine of signatures assigned various plants to the presidency of various planets in a somewhat erratic fashion. In some cases there was a genuine association, in others it was arbitrary and superstitious. Old Culpepper and other ancient herbalists have a great deal to say on the subject, and some very interesting researches are being done on the Anthroposophical experimental farms.

29. In a similar way certain drugs are associated with the different Sephiroth; and here again we need to distinguish the superstitious from the mystical. The arbitrary attribution of drugs cannot always be justified by actual experiment, but we raay safely say that whole classes of drugs could be regarded as under the presidency of certain Sephiroth because they partake of the nature of certain modes of activity which are classified under these Sephiroth. For instance, all aphrodisiacs could justly be assigned to Netzach (Venus), and all abortifacients to Yesod in her Hecate aspect; analgesics to Chesed (Mercy), and irritants and caustics to Geburah (Severity).

30. This opens up a very interesting aspect of the study of materia medica-the psychic and psychological aspect of drug activity. It was this aspect which was especially studied by the initiate-physicians such as Paracelsus, and it was the ignorant and superstitious abuse of this aspect by uninitiated physicians that led to the extraordinary aberrations of folk-medicine.

31. The occultist knows that there is a psychological aspect to every physiological action and function; he also knows that it is possible powerfully to reinforce the action of all drugs by the appropriate mental action, and that certain chemically inert substances lend themselves effectually to the transmission and storing of mental activities, just as other substances are effectual conductors or insulators of electricity.

32. This consideration brings us to the question of the association of certain precious stones and metals with the different Sephiroth, an association determined by both astrological and alchemical considerations. As is well known to

[Page 102]

psychics, crystalline substances, metals, and certain liquids are the best media for conveying or storing subtle forces. Colour plays an important part in the visions induced by meditation on the various Sephiroth, and it is found by experience that a crystal of the appropriate colour is the best material out of which to make a talisman: a blood-red ruby for the fiery Martian forces of Geburah; an emerald for the Green Ray nature forces of Netzach.

33. Perfumes, especially incense, are also associated with the different Sephiroth. As has already been noted, certain spiritual experiences and certain modes of consciousness are

assigned to each Sphere on the Tree; it is well known that nothing induces states of mind or stimulates psychic consciousness more effectually than odours. "Scents are surer than sights or sounds to make your heart-strings crack," says the most objective of poets, and the experience of practical occultists proves this to be true. There are certain aromatic substances associated by tradition with the different gods and goddesses, and these are most effectually potent to stimulate the mood which is in harmony with the function of that deity.

34. Magical weapons are also included in the long lists of symbols and substances associated with each Path. A magical weapon is an instrument of some sort which is used in the evocation of a particular force, or is the vehicle of its manifestation, such as the rod of the magician or the bowl of water or crystal sphere of the seer. The assignation of the magical weapons to the Paths tells us a good deal about the nature of the Paths, because we can deduce therefrom the kind of power that operates in the particular sphere in question.

35. As already noted, the various divinatory systems have their relations with the Tree and find their subtlest clues therein. The associations of astrology are readily traced through the symbolism of the planets and elements and their triplicities, houses, and rulership; geomancy links with the Tree *via* astrology; and the Tarot, the most satisfactory of all the systems of divination, rises from and finds its explanation in the Tree and nowhere else. That may seem a dogmatic statement to the scholarly historian searching for traces of the origin of those mysterious cards, and, may we add, most unamentably failing to find it; but when it is realised that the initiate works the Tarot and the Tree together, and that they dovetail into each other at every imaginable angle, it will be seen that such an array of correspondences could be neither arbitrary nor fortuitous.

36. A most interesting and important aspect of the practical work of the Tree concerns the manner in which ceremonial and talismanic magic are used to compensate the findings of the divinatory sciences. Each prick-symbol of geomancy, each card of the Tarot, and each horoscopic factor have their places assigned to them on the Paths of the Tree, and the occultist with the necessary knowledge can put together a ritual or design a talisman to compensate or reinforce each and any of these.

37. It is for this reason that divination by the uninitiated is apt to bring bad luck in its train, for it stirs the subtle forces by concentrating the mind upon them, without compensating that which is out of equilibrium by the appropriate magical effort.

PART II

CHAPTER XIV

GENERAL CONSIDERATIONS

1. In Part I we considered the general scheme and method of using the Qabalistic Tree of Life. We now come to the detailed study of the individual Sephiroth. This study must necessarily be tentative, for a life's research could be given to the significance of the correspondences that spread in end less ramifications from every symbol associated with each Sephirah. But a start must be made, hence these tentative jottings; for I do not consider the following chapters on the individual Sephiroth worthy to be called anything better than this, even though they are the fruit of ten years' meditation on that marvellous composite symbol.

2. The Tables of Correspondences at the head of each section consist of a selection of the principal symbols and ideas associated with each Sephirah, and have no claim whatsoever to comprehensiveness. They contain, however, the more significant symbols, and are sufficient to enable the student to gain a sound philosophical grasp of the subject, and experiment for himself in the use of the Tree as a meditation symbol.

3. The references are taken chiefly from "777," by Aleister Crowley, who got them from the MacGregor Mathers MSS. Mathers, so far as I have been able to trace his references, for he gives no authorities, drew upon the work of Dr Dee and Sir Edward Kelly; Cornelius Agrippa; Raymond Lully and Pietro de Abana among the earlier writers. Among the moderns the same material is found scattered through the works of Knorr von Rosenroth; Wynn Westcott; Eliphas Levi; Mrs Atwood; Mme Blavatsky; Anna Kingsford;

[Page 104]

Mabel Collins; Papus (Encausse); St Martin; Gerald Massey; G. R. S Mead, and many others. To some of these it is probable he was indebted; others may have been indebted to him; some of them were actually members of the Order of the Golden Dawn which he founded.

4. Other sources of information are Frazer's *Golden Bough*; the works of Wallis Budge; the writings of Drs Jung and Freud; the translations of Dr Jowett from the Greek; the Sacred Books of the East Series, the Loeb Classical Library; the translation of Plotinus by Stephen MacKenna; the translation of the Zohar issued by the Soncino Press; and last, but by no means the least valuable source of information, the Holy Bible. So much for occult secrecy!

5. It will be seen that the symbols assigned to each Sephirah are classified in regular order under certain headings. To understand the significance attached to these different sections by the occultist and the use he makes of them it is necessary to explain the method of classification in detail.

6. SECTION 1. *The Title assigned to the Sephirah.* - Its name is given first in Hebrew and then in English, and the Hebrew spelling appended. The accurate spelling of all proper names used in the Qabalah is vitally important because of the numerical value attached to them by the Qabalists and the use made of the significance of these numbers by those

who work the numerological methods. I am neither a numerologist nor a mathematician, and I do not therefore propose to comment on that which lies outside the sphere of my knowledge. I merely give the data for the convenience of those who can appreciate its significance.

7. SECTION 2. *The Magical Image and the Symbols associated with each Sephirah.* -The magical image is the mental picture which the occultist builds up to represent the Sephirah, and its details yield many significant symbols to meditation. These images are so old, and have been built with such a wealth of magical working, that they are apt to build themselves up of their own accord during meditation upon the Sephiroth. In the course of my own work on the Qabalah I saw most of

[Page 106]

them long before I had access to the tables that gave the~ In practical working the initiated adept builds them detailed symbolism, and it is a very valuable magical exercise up to practise the visualisation of the magical images in their fullest detail. Much of this detail can be gleaned from the accounts I give of each Sephirah, but readers who have specialised knowledge of the Eastern or classical pantheons any can elaborate these images to any extent, surrounding them with all the paraphernalia of the gods assigned to each Station on the Tree; these can be identified through their astrological associations.

8. SECTION 3. *The Situation on the Tree.* This throws an immense amount of light upon any meditation, for it reveals the equilibrium of the spiritual forces working in nature. For instance, Geburah (Mars) and Chesed or Gedulah (Jupiter) are opposite each other upon the Tree. The warrior king and the wise and benign lawgiver of peace balance each other. Geburah when unbalanced becomes cruelty and oppression, and Gedulah when unbalanced suffers evil to multiply.

9. SECTION 4. *The Yetziratic Text.* -This consists of the description of the Sphere or Path given in the *Sepher Yetzirah*, or Book of Formations. The translation I have used is that of Wynn Westcott.

10. These descriptions are exceedingly cryptic, but they will from time to time yield a flash of inspiration, and undoubtedly contain the essence of the Qabalistic philosophy.

11. SECTION 5. *Descriptive Titles.* -A catalogue of the names that have been applied to that particular Sephirah in the Rabbinical literature. These throw great light on the subject and are also useful to the student for purposes of reference when tracing out the ideas associated with a particular Sephirah.

12. SECTION 6. *The Names of Power assigned to each Sephira* -The God-name represents the most spiritual form of the force and is conceived of as representing the function of that force in the Kingdom of Atziluth, the highest of the FOLLZ Kingdoms of the Qabalists.

13. *The Archangelic Names* represent the functioning of a force in Briah, the Kingdom of the higher mind, are the archetypal ideas.

14. Angelic choirs correspond to the Kingdom of or the Astral Plane, and the Mundane Chakras are representatives of each force in the Kingdom of Assiah - the Material Plane.

15. What I call in my tables the spiritual experience assigned to each sephirah is called by Crowley the magical power. - whereas this term may be rightly assigned to the Twenty-two paths, it is misleading when applied to the Sephiroth. I have changed the term in relation to the Sephiroth themselves, but retained it in reference to the Paths for reasons which will presently be seen.

16. SECTION 7. *The Virtues and Vices assigned to each Sephirah of the Tree.*-These indicate the qualities necessary in order to take the initiation of that grade, and the form that is taken by any unbalanced force in that sphere. In the highest grade of all, before form is developed, there is no correspondence.

17. SECTION 8. *Correspondence in Microcosm.*-The microcosm - which is man, corresponds with the Sephirothic macrocosm, and is important from many practical standpoints, particularly that of spiritual healing and astrology.

18. SECTION 9. *The Four Suits of the Tarot Pack.*-The • • ~IO' don of the Tarot cards to the Tree opens up immense 1 of practical importance and forms the philosophical b~h of the divinatory art.

19 N the reader keeps these explanations in mind he will be able to follow the lines of reasoning and allusion developed

the Ciucidation of the symbolism assigned to each Sephirah.

~ There is an immense amount of work to be done in
 " ~ the different polytheistic pantheons and the of Christian, Hebrew, and Mohammedan

Y Crowley, and is, I fancy, original work and not rtrl Mathers. Its implications are not altogether

108 THE MYSTICAL QABALAH

[Page 108]

clear to me, and I doubt if I could subscribe to all of them. An immensely wide range of scholarship is necessary for the satisfactory accomplishment of this branch, a range of scholarship which I do not possess. I shall therefore content myself with touching upon such points as have come within the range of my knowledge and make no attempt in the present pages at an ordered classification.

21. SECTION 10. *The Flashing Colours*. - This is only of Use to advanced students who possess the necessary keys.

CHAPTER XV KETHER, THE FIRST SEPHIRAH

TITLE: Kether, the Crown. (Hebrew spelling: - Kaph, Tau, Resh.)

MAGICAL IMAGE: An ancient bearded king seen in profile. **SITUATION ON THE TREE:** At the head of the Pillar of Equilibrium in the Supernal Triangle.

YETZIRATIC TEXT: The First Path is called the Admirable or Hidden Intelligence because it is the Light giving the power of comprehension of the First Principle, which hath no beginning. And it is the Primal Glory, because no created being can attain to its essence.

TITLES GIVEN TO KETHER: Existence of Existences. Concealed of the Concealed. Ancient of Ancients. Ancient of Days. The Primordial Point. The Point within the Circle. The Most High. The Vast Countenance. The White Head. The Head which is not. Macroprosopos. Amen. Lux Occulta. Lux Interna. He.

GOD-NAME: Eheieh.

ARCHANGEL: Metatron.

ORDER OF ANGELS: Holy living creatures. Chaioth ha Qadesh.

MUNDANE CHAKRA: Rashith ha Gilgalim. Primum Mobile. First Swirlings.

SPIRITUAL EXPERIENCE: Union with God.

VIRTUE: Attainment. Completion of the Great Work.

VICE: -

CORRESPONDENCE IN MICROCOSM: The Cranium. The Sah. Yechidah. The Divine Spark. The Thousand-petalled Lotus.

SYMBOLS: The point. The crown. The swastika.

TAROT CARDS: The four Aces.

ACE OF WANDS: Root of the Powers of Fire.

ACE OF CUPS: Root of the Powers of Water.

ACE OF SWORDS: Root of the Powers of Air.

ACE OF PENTACLES: Root of the Powers of Earth.

[Page 110]

COLOUR IN ATZILUTH: Brilliance.

BRIAH: Pure white brilliance.

YETZIRAH: Pure white brilliance.

ASSIAH: White, flecked gold.

I

1. Kether, the Crown, is placed at the head of the Middle Pillar of Equilibrium, and from it depend backwards the Negative Veils of Existence. I have already written concerning the use of these Negative Veils as a background to thought, so I will not repeat myself upon this point, but remind the reader that Kether, the First Manifest, represents the primal crystallisation into manifestation of that which was hitherto unmanifest and therefore unknowable by us. Concerning the root from which Kether springs we can know nothing; but concerning Kether itself we can know something. It may be for us at our stage of development the Great Unknown, but it is not the Great Unknowable. The mind of the magus must compass it in his higher visions. In my own experiences with the operation known as Rising on the Planes, which consists in carrying consciousness up the Middle Pillar by means of concentration on the successive symbols and the Paths, Kether, on the one occasion when I touched its fringe, appeared as a blinding white light, in which all thought went completely blank.

2. In Kether there is no form but only pure being, whatever that may be. It is, one might say, a latency only one degree removed from non-existence. Such concepts must necessarily be vague, and I am ill-equipped to give them such definiteness as they might possess, but I am quite satisfied that we should recognise grades of becoming, and that the crude differentiation of Being and Non-being does not represent the facts. With manifested existence there come into being the pairs of opposites; but in Kether there is no division into the pairs of opposites, which must wait for their manifestation till Chokmah and Binah are emanated.

3. Kether, then, is the One, and existed before there was any reflection of itself to serve it for an image in consciousness and set up polarity. We must believe that it transcended all known laws of manifestation by existing alone, without reaction. But when we speak of Kether it must be remembered that we do not mean a person, but a state of existence, and this state of existing substance must have been utterly inert, pure being without activity, until the activity began which emanated Chokmah.

4. The human mind, knowing no other mode of existence than that of form and activity, has the greatest difficulty in obtaining any adequate concept of an entirely formless state of passivity which is nevertheless most distinctly not non-being. Yet this effort must be made if we are to understand cosmic philosophy in its fundamentals. We must not draw the Veils of Negative Existence in front of Kether or we shall condemn ourselves to a perpetual unresolved duality; God and the Devil will for ever war in our cosmos, and there can be no finality to their conflict. We must train the mind to conceive the state of pure being without attributes or activities; we may think of it as the blinding white light, undifferentiated into rays by the prism of form; or we may think of it as the darkness of interstellar space, which is nothing, yet contains the potentialities of all things. These symbols, dwelt upon by the inner eye, are a greater aid to the understanding of Kether than any amount of exact philosophical definitions. We cannot define Kether; we can only indicate it.

5. It is a continual surprise and illumination to discover the extraordinary significance of the hints contained in the tables of correspondences, and the manner in which they lead the mind on from concept to concept when pondered upon. The First Sephirah is called the Crown, be it noted, not the head. Now the Crown is something superimposed upon the head, and this gives us a clear hint that Kether is of our cosmos, but not in it. We also find its microcosmic correspondence in the Thousand-petalled Lotus, the Sahasra Chakra, which is in the aura immediately above the head. This, I think, teaches

[Page 112]

us clearly that the innermost spiritual essence of anything, whether man or world, is never in actual manifestation, but is always the underlying, behind-standing basis or root whence all springs, belonging in fact to a different dimension, a different order of being. It is this concept of the different types of existence which is fundamental to esoteric philosophy) and must always be borne in mind when considering the invisible kingdoms of the magician, or operative occultist.

6. In the Vedantan philosophy Kether would undoubtedly equate with Parabrahman, Chokmah with Brahman, and Binah with Mulaprakriti. In the other great Systems of human thought Kether equates with their primary concept and may be taken as the Father of the Gods. If for them the universe originated in space, then Kether is the Sky God. If it originated in water, Kether is the primordial ocean. Always we find in connection with Kether the sense of formlessness and timelessness. The gods of Kether are terrible gods which eat their children, for Kether, although the parent of all, reabsorbs the universe back into itself at the end of an epoch of evolution.

7. Kether is the abyss whence all arose, and back into which it will fall at the end of its epoch. Therefore in exoteric myths associated with Kether we find the implication of non-existence. In esoteric concepts, however, we learn that such a concept is erroneous. Kether is the intensest form of existence, pure being unlimited by form or reaction; but it is existence of another type than that to which we are accustomed, and therefore it appears to us as non-existence because it conforms to none of the requirements we are accustomed to think of as determining existence. This concept of other modes of existence is implicit in our philosophy and must ever be borne in mind, for it is the key to Kether, and Kether is the key to the Tree of Life.

8. The Yetziratic Text descriptive of Kether, like all the sayings of the *Sepher Yetzirah*, is a hidden saying. It calls Kether the Hidden Intelligence, and this appellation is confirmed by several other of the titles given to Kether in Qabalistic literature. It is the Concealed of the Concealed, the Inscrutable Height, the Head which is not. Here again we get confirmation of the idea that the crown is above the head of the Celestial Man, Adam Kadmon; that pure being stands behind manifestation and is not absorbed into it, but rather emanates or projects it. As we express ourselves in our works, so does Kether express itself in manifestation. But a man's works do not constitute his personality, but are the expression of its natural activity. So it is with Kether; its mode of existence is not manifested, but is the cause of manifestation.

II

9. We have hitherto considered Kether in Atziluth, that is to say as its essential and primal essence. We must now consider Kether as it appears in the three other Kingdoms distinguished by the Qabalists.

10. Each Kingdom or plane of manifestation has its primary form; matter, for instance, is in all probability primarily electric, and this is expressed by the esotericists as the etheric sub-plane which lies behind the four elemental planes of Earth, Air, Fire, and Water; or in other words, the four conditions of dense matter, solid, liquid, gaseous, and etheric.

11. The Qabalists conceive of the Tree as existing in each of the four Kingdoms of Atailuth, pure spirit; Briah, archetypal mind; Yetzirah, astral picture-consciousness; and Assiah, the material world in both its dense and subtler aspects. The operations of the

forces of each Sephirah are represented in each world under the presidency of a Divine Name, or Word of Power, and these words give the keys to the operations of practical occultism upon the planes. The God-name represents the action of the Sephirah in the world of Atziluth, pure spirit; when the occultist invokes the forces of a Sephirah by the God-name, it means that he desires to contact its most abstract essence, that he is seeking the spiritual principle underlying and conditioning that particular mode of manifestation. It is a maxim of White Occultism that every operation should commence with the invocation of the God-name

[Page 114]

of the Sphere in which the operation is to take place. This ensures that the operation shall be in harmony with cosmic law. The balance of natural force is not lightly to be upset. It is essential to the safety of the magician that he should conduct his operations in accordance with cosmic law; therefore he must seek to understand the spiritual principle involved in every problem and work it out accordingly. Every operation, therefore, must have its final unification or resolution in Eheieh, the God-name of Kether in Atziluth.

12. The invocation of Deity under the name of Eheieh, that is to say the affirmation of pure being, eternal, unchanging, without attributes or activities, underlying, maintaining, and conditioning all, is the primary formula of all magical working. It is only when the mind is imbued with the realisation of this endless unchanging being of the utmost concentration and intensity that it can have any realisation of limitless power. Energy derived from any other source is a limited and partial energy. In Kether alone is the pure source of all energy. The operations of the magician that aim at the concentrating of energy (and what operations do not?) must always start with Kether, because here we touch the upwelling force arising from the Great Unmanifest, the reservoir of limitless power.

It is through Kether, from the Great Unmanifest hidden behind the Veils of Negative Existence, that power is drawn. If we draw power from any specialised sphere of nature, we are, as it were, robbing Peter to pay Paul. The power has come from somewhere, and gone somewhere, and it has to be accounted for at the final reckoning. It is for this reason that it has been held that the magician pays in suffering for what he wins by magical means. This is true if his operation is performed in any of the lower spheres of nature; but if it starts in the Kether of Atziluth, he is drawing unmanifest force into manifestation; he is adding to the resources of the universe, and provided he keeps the forces in equilibrium, there need be no untoward reaction and no payment in suffering for the use of the magical powers.

13. This is a point of tremendous practical importance. Students have been taught that the Three Supernals, Kether, Chokmah, and Binah, are beyond the range of practical working so long as we are in incarnation. True, they are beyond the range of brain consciousness, but they are the essential basis of all magical calculations, and if we do not work from this basis we have no cosmic foundation, but are poised between heaven and earth and

find no place of rest or security, but must ever maintain the magical stresses that keep the astral forms in being.

14. The great difference between Christian Science and the cruder forms of New Thought and Auto-suggestion is that it starts all its workings in the Divine Life; and utterly irrational though its attempts to philosophise its system may be, its methods are empirically sound. The occultist, and especially the practitioner of ceremonial magic, if uninstructed in this discipline, tends to start his operation without any reference to cosmic law or spiritual principle; consequently the astral images he forms are like foreign bodies in the organism of the Celestial Man, or Macrocosm, and all the forces of nature are spontaneously directed towards the elimination of the foreign substance and the restoration of the normal equilibrium of stresses. Nature fights the magician tooth and nail; consequently, whosoever has resorted to unconsecrated magic may never lay down his sword, but must always be on the defensive in order to maintain that which he has won. But the adept who starts his work in the Kether of Atziluth, that is to say in spiritual principle, and works that principle downwards to its expression on the planes of form, employing power drawn from the Unmanifest for this purpose, has made his Operation a part of the cosmic process, and Nature is with him instead of against him.

15. We cannot hope to understand the nature of Kether in Atziluth, but we can open our consciousness to its influence; and its influence is very powerful and gives a strange sense of eternity and immortality. We may know when the invocation of Eheieh in its pure white brilliance has been effectual, because We shall find ourselves realising with complete conviction the

[Page 116]

utter impermanence and insignificance of the planes of form and the supreme importance of the One Life which conditions all form as clay in the hands of the potter.

16. Meditation upon Kether gives us an intuitive realisation that the issue of an Operation does not matter in the very least. "Let the dirt play with the dirt if it pleases the dirt." Once that realisation has been obtained we have lordship over the astral images and can turn them this way and that as it pleases us. It is only when the operator cares nothing for the outcome of the operation on the physical plane that he attains to this complete lordship over the astral images. He is concerned simply and solely with the handling of forces and the bringing of them through into manifestation in form; but he does not care what form the forces may ultimately assume, he leaves that to them; for they will assuredly assume the form that is most consonant with their nature, and thus be truer to cosmic law than any design which his limited knowledge could assign to them. This is the real key to all magical operations, and their sole justification, for we may not turn the universe round and about to suit our whim or convenience, but are only justified in the deliberate work of magic when we work with the great tide of evolving life in order to bring ourselves into fullness of life whatever form that experience or manifestation may take. "I am come that they might have life, and that they might have it more abundantly," said Our Lord, and that should be the word of the magician. Life, and life alone, should

be his word, and not any specialised manifestation of it as Wisdom, Power, nor even Love.

17. Those who have followed the preceding discussion point by point may now be able to see some significance in the cryptic words of the Yetziratic Text assigned to Kether. The words "Hidden Intelligence" convey a hint of the unmanifest nature of the existence of Kether, which is confirmed by the statement that "No created being can attain to its essence"; that is to say, no being using as its vehicle of consciousness any organism of the planes of form. When, however, consciousness has been exalted to the point where it transcends thought, it receives from the "Primal Glory" 'the power of comprehension of the First Principle,'; or in other words, "Then shall we know even as we are known."

III

18. Eheieh, I Am That I Am, pure being, is the God-name of Kether, and its magical image is an ancient bearded king seen in profile. The *Zohar* says of this ancient bearded king that he is all tight side; we do not see the magical image of Kether full-face, that is to say complete, but only partially. There is an aspect which must ever be hidden from us, like the hidden side of the moon. This side of Kether is the side that is towards the Unmanifest, which the nature of our manifested consciousness prevents us from comprehending, and which must ever be a sealed book to us. But accepting this limitation we may gaze in contemplation upon the aspect of Kether, the profile of the ancient bearded king, presented to us reflected downwards into form.

19. Ancient is this king, the Ancient of Ancients, the Ancient of Days, for he was from the beginning, when countenance beheld not countenance. A king he is, because he rules all things according to his supreme and unquestioned will. In other words, it is the nature of Kether that conditions all things, because all things are evolved from it. Bearded he is, because in the curious symbolism of the rabbis every hair of his beard has significance.

20. The manifestation of the forces of Kether in Briah, the world of archetypal mind, is said to be through the archangel Metatron, the Prince of Countenances, who tradition avers was the teacher of Moses. The *Sepher Yetzirah* says of the Tenth Path, Malkuth, that "it causes an influence to flow from the Prince of Countenances, the archangel of Kether, and is the solirce of illumination of all the lights of the universe." Thus plainly do we learn that not only does spirit flow out into manifestation in matter, but matter by its own energy draws spirit into manifestation, an important point for the Ptactitioner of magic, for it teaches him that he is justified

[Page 118]

in his operations and that man is not required to wait upon the word of the Lord, but may call upon God to hear him.

21. The angels of Kether, operating in the Yetziratic world, are the Chaioth ha Qadesh, Holy Living Creatures, and their name carries the mind to the Chariot Vision of Ezekiel and the Four Holy Creatures before the Throne. The fact that the four aces of the Tarot, assigned to Kether, are regarded as representing the roots of the four elements of Earth, Air, Fire, and Water further bears out this association. We may look, then, to Kether as the fountain-head of the elements. This concept clears up many occult and metaphysical difficulties that occur if we limit their operation to the astral plane and regard elementals as little better than devils, as Some schools of transcendental thought appear to do.

22. The whole question of the angels, archons, and elementals is a very vexed and very important one in occultism, because its practical application to magic is immediate. Christian thought can tolerate with an effort the idea of archangels, but the ministering spirits, the messengers who are flames of fire, and the heavenly builders, are alien to its theology; God, alone and in an instant, made the heavens and earth. The Great Architect of the universe is also the bricklayer. Not so does esoteric science. The initiate knows the legions of spiritual beings who are agents of God's will and the vehicles of creative activity. It is through these that he works, by the grace of their ruling archangel. But an archangel cannot be conjured by any spell, however potent. Rather is it that when we effect an operation of the Sphere of a particular Sephirah, the archangel works through us for the fulfilment of its mission. The art of the magician therefore lies in aligning himself with cosmic force in order that the operation he desires to perform may come about as a part of the working of cosmic activities. If he be truly purified and dedicated, this will be the case with all his desires; and if he be not truly purified and dedicated, he is no adept, and his word is not a word of power.

23. It is interesting to note that in the World of Assiah the title of the Sphere of Kether is Rashith ha Gilgalim, or First -wirlings, thus indicating that the rabbis were acquainted with the Nebular Theory before science was acquainted with the telescope. The manner in which the ancients deduced the basic facts of cosmogony by purely intuitive means and the use of the method of correspondences, centuries before the invention and perfection of the instruments of precision which enabled modern man to make the same discoveries from another angle, must be a matter of perpetual amazement to anyone who comes to the traditional philosophy unbiased.

24. As above, so below. The microcosm corresponds to the macrocosm, and we must therefore seek in man the Kether above the head which shines with a pure white brilliance in Adam Kadmon, the Heavenly Man. The rabbis call it the Yechidah, the Divine Spark; the Egyptians call it the Sab; the Hindus call it the Thousand-petalled Lotus. But under all these names we have the same idea-the nucleus of pure spirit which emanates but does not indwell its many manifestations upon the planes of form.

25. It is said that never while in incarnation can we rise to the consciousness of Kether in Atziluth and retain the physical vehicle intact against our return. Even as Enoch walked with God and was not, so the man that has the vision of Kether is disrupted so far as the vehicle of incarnation is concerned. Why this must be is readily discerned when we remember that we cannot enter into a mode of consciousness save by reproducing it in

ourselves, just as music means nothing to us unless the heart sings with it. If therefore we reproduce in ourselves the mode of being of that which has neither form nor activities, it follows that we must free ourselves from form and activity. If we succeed in doing so, that which is held together by the form-mode of consciousness will fall apart and return to its elements. Thus dissolved, it cannot be reassembled by returning consciousness. Therefore when we aspire to the Vision of Kether in Atziluth we must be prepared to enter into the Light and come not forth again.

26. This does not imply that Nirvana is annihilation, as an

[Page 120]

ignorant rendering of Eastern philosophy has taught European thought; but it does imply a complete change of mode or dimension. What we shall be when we find ourselves ranked with the Holy Living Creatures, we do not know, and none who achieved the vision of Kether in Atziluth have returned to tell us; but tradition avers that there are those who have done so, and that they are intimately concerned with the evolution of humanity and are the prototypes of those supermen concerning whom all races have a tradition; a tradition which, unfortunately, of recent years has been cheapened and debased by pseudo-occult teaching. Whatever these beings may or may not be, it is safe to say that they have neither astral form nor human personality, but are as flames in the fire which is God. The state of the soul which has attained Nirvana may best be likened to a wheel that has lost its rim and whose spokes have become rays that penetrate and interpenetrate the whole creation; a centre of radiation to whose influence no limit is set save that of its own dynamism, and which maintains its identity as a nucleus of energy.

27. The Spiritual Experience assigned to Kether is said to be Union with God. This is the end and aim of all mystical experience, and if we look for any other goal we are as those who build a house in the world of illusion. Anything that holds him back from the straight path to this goal is felt by the mystic to be a bond that binds, and as such to be broken. All that holds consciousness to form, all desires other than the one desire—these are to him evils, and from the standpoint of his philosophy he is right, and to act otherwise would invalidate his technique.

28. But this is not the only test which the mystic has to face; it is required of him that he shall fulfil the requirements of the planes of form before he is free to commence his withdrawal and escape from form. There is a Left-hand Path that leads to Kether, the Kether of the Qliphoth, which is the Kingdom of Chaos. If he embarks upon the Mystic Path prematurely it is thither he goes, and not to the Kingdom of Light. To the man who is naturally of the Mystic Path the discipline of form is uncongenial, and it is the subtlest of temptations to abandon the struggle with the life of form that resists his mastery and retreat back up the planes before the nadir has been rounded and the lessons of form have been learnt. Form is the matrix in which the fluidic consciousness is held till it acquires an organisation proof against dispersal; till it becomes a nucleus of individuality differentiated out of the amorphous sea of pure being. If the matrix be broken too soon, before the fluidic consciousness had become set as an organised system of stresses

stereotyped by repetition, consciousness settles back again into formlessness, even as the clay returns to mud if freed from the supporting restraint of the mould before it has set. If there is a mystic whose mysticism produces mundane incapacity or any form of dissociation of consciousness, we know that the mould had been broken too soon for him, and he must return to the discipline of form until its lesson has been learnt and his consciousness has attained a coherent and cohesive organisation that not even Nirvana can disrupt. Let him hew wood and carry water in the service of the Temple if he will, but let him not profane its holy place with his pathologies and immaturities.

29. The virtue assigned to Kether is that of Attainment, the Completion of the Great Work, to use a term borrowed from the alchemists. Without completion there can be no attainment, and without attainment no completion. Good intentions weigh light in the scale of cosmic justice; it is by our completed work that we are known. True, we have all eternity in which to complete it, but complete it we must, even to the final Yod. There is no mercy in perfect justice save that which gives us leave to try again.

30. Kether, viewed from the standpoint of form, is the crown of the kingdom of oblivion. Unless we have realisation of the nature of the life of the pure white light we shall have little temptation to strive for the Crown which is not of this order of being at all; and if we have this realisation, then are we free from the bondage of manifestation and can speak to all forms as one having authority.

CHAPTER XVI CHOKMAH, THE SECOND SEPHIRAH

TITLE: Chokmah, Wisdom. (Hebrew spelling: Cheth, Kaph, Mem, He'.)

MAGICAL IMAGE: A bearded male figure.

SITUATION ON THE TREE: At the head of the Pillar of Mercy in the Supernal Triangle.

YETZIRATIC TEXT: The Second Path is called the Illuminating Intelligence. It is the Crown of Creation, the Splendour of Unity, equalling it. It is exalted above every head, and is named by Qabalists the Second Glory.

TITLES GIVEN TO CHOKMAH: Power of Yetzirah. Ah. Abba. The Supernal Father. Tetragrammaton. Yod of Tetragrammaton.

GOD-NAME: Jehovah.

ARCHANGEL: Ratziel.

ORDER OF ANGELS: Auphanim, wheels.

MUNDANE CHAKRA: Mazloth, the Zodiac.

SPIRITUAL EXPERIENCE: The Vision of God face to face.

VIRTUE: Devotion.

VICE:

CORRESPONDENCE IN MICROCOSM: The left side of the face.

SYMBOLS: The Lingam. The Phallus. The Yod of Tetragrammaton. The Inner Robe of Glory. The Standing-stone. The Tower. The Uplifted Rod of Power. The Straight Line.

TAROT CARDS: The four Twos.

Two OF WANDS: Dominion.

Two OF CUPS: Love.

Two OF SWORDS: Peace restored.

Two OF PENTACLES: Harmonious change.

COLOUR IN AZILUTH: Pure soft blue.

BRIAH: Grey.

YETZIRAH: Pearl-grey, iridescent.

ASSIAH: White flecked with red, blue, and yellow.

[Page 122]

I

1. Every phase of evolution commences by being in a state of unstable force and proceeds through organisation to equilibrium. Equilibrium having been achieved, no further development is possible without once more oversetting the stability and passing through a phase of contending forces.

As we have already seen, Kether is the Point formulated in the Void. According to Euclid's definition, a point has position but no dimensions. If, however, a point may be conceived of as extending through space, it becomes a line. The nature of the organisation and evolution of the Three Supernals is so remote from our experience that we can only conceive of them symbolically; but if we conceive of the Primordial Point which is Kether as being extended into the line which is Chokmah, we shall have as adequate a symbolic representation as we may hope to achieve at our present state of understanding.

2. This forth-flowing energy, represented by the straight line or the uplifted rod of power) is essentially dynamic. It is, in fact, the primary dynamism, for we cannot conceive the crystallisation of Kether in space as a dynamic process; it partakes rather of a staticism-of the limiting of the formless and free in the bonds of form, tenuous as that form may be in our eyes.

3. The limits of the organisation of such a form having been reached, the ever-inflowing force of the Unmanifest transcends its limitations, demanding fresh modes of development, establishing fresh relationships and stresses. It is this out-driving of unorganised, uncompensated force which is Chokmah, and because Chokmah is a dynamic Sephirah, ever out-flowing in boundless energy, we do well to look upon it as a channel for the passage of force rather than a receptacle for the storage of force.

4. Chokmah is not an organising Sephirah, but it is the Great Stimulator of the Universe. It is from Chokmah that Binah, the Third Sephirah, receives its influx of emanation, and Binah is the first of the organising, stabilising Sephiroth. It

[Page 124]

is not possible to understand either of the paired Sephiroth without considering its mate; therefore in order to understand Chokmah we shall have to say something about Binah. Let it be noted, then, that Binah is assigned to the planet Saturn and is called the Superior Mother.

5. In Binah and Chokmah we have the archetypal Positive and Negative; the primordial Maleness and Femaleness, established while "countenance beheld not countenance" and manifestation was incipient. It is from these primary Pairs of Opposites that the Pillars of the Universe spring, between which is woven the web of Manifestation.

6. As we have already noted, the Tree of Life is a diagrammatic representation of the Universe on which the positive and negative, male and female aspects are represented by the two flanking Pillars of Mercy and Severity. It may seem strange to uninstructed thought that the title of Mercy should be given to the male or positive Pillar, and that of Severity to the female Pillar; but when it is realised that the dynamic male type of force is the stimulator of upbuilding and evolution, and that the female type of force is the builder of forms, it will be seen that the nomenclature is apt; for form, although it is the builder and organiser, is also the limiter; each form that is built must in turn be outgrown, lose its

usefulness, and so become a hindrance to evolving life, and therefore the bringer in of dissolution and decay, which lead on to death. The Father is the Giver of life; but the Mother is the Giver of death, because her womb is the gate of ingress to matter, and through her life is ensouled in form, and no form can be either infinite or eternal. Death is implicit in birth.

7. It is between these two polarising aspects of manifestation-the Supernal Father and the Supernal Mother-that the web of Life is woven; souls going back and forth between them like a weaver's shuttle. In our individual lives, in our physiological rhythms, and in the history of the rise and fall of nations, we observe the same rhythmic periodicity.

8. In these; the first paired Sephiroth, we have the key to sex-the pair of biological opposites, maleness and femaleness.

But the pairing of opposites does not only occur in type, it also occurs in time, and we have alternating epochs in our lives, in our physiological processes, and in the history of nations, during which activity and passivity, construction and destruction alternately prevail; the knowledge of the periodicity of these cycles is part of the secret, guarded, ancient wisdom of the initiates, and is worked out astrologically and Qabalistically.

9. The Magical Image of Chokmah and the symbols assigned to it bear out this idea. The Magical Image is that of a bearded male, bearded to indicate maturity; the father who has proved his manhood, not the untried virgin male. The symbolic language speaks plainly, and the lingam of the Hindus and the phallus of the Greeks are the male generative organ in their respective tongues. The standing-stone, the tower, and the uplifted rod all signify the same virile member at its most potent.

10. It must not be thought, however, that Chokmah is a phallic or sexual symbol and nothing else. It is primarily a dynamic or positive symbol, for maleness is a form of dynamic force, just as femaleness is a form of static, latent, or potential force, inert till stimulus be given. The whole is greater than the part, and Chokmah and Binah are wholes of which sex is a part. In understanding the relationship which sex has to polarising force as a whole, we find the key to the right understanding of sex, and we can assess against a cosmic standard the teachings of psychology and morality relating thereto. We can also see how it comes about that the subconscious mind of man can represent the sexes by so many and such diverse symbols, as the Freudians aver; and why sublimation of the sexual instinct is possible, as the moralists aver. Manifestation, then, is sexual inasmuch as it takes place always in terms of the pairs of opposites; and sex is cosmic and spiritual because it has its roots in the Three Supernals. We must learn not to dissociate the airy flower from the earthy root, for the flower that is cut off from its root fades, and its seeds are barren; whereas the root, secure in mother earth, can produce flower after flower and bring their fruit to maturity. Nature is greater and truer than conventional morality, which is often

nothing but taboo and totemism. Happy the people whose morality embodies Nature's laws, for they shall lead harmonious lives and increase and multiply and possess the earth. Unhappy the people whose morality is a savage system of taboos designed to propitiate an imaginary Moloch of a deity, for they shall be sterile and sinful. Equally unhappy the people whose morality outrages the sanctity of natural process and in plucking the flower has no regard for the fruit, for they shall be diseased of body and corrupt of estate.

11. In Chokmah, then, we must see both the creative Word which said "Let there be light," and the lingam of Siva and the phallus adored by the Bacchantes. We must learn to recognise dynamic force, and revere it wherever we see it, for its God-name is Jehovah Tetragrammaton. We see it in the spread tail of the peacock and the iridescence of the neck of the dove; but we also hear it in the yowl of the tom-cat and smell it in the stench of the he-goat. Likewise we meet it in the colonising adventurers of the most virile epochs of our history, notably those of Elizabeth and Victoria—both women! We see it again in the man diligent in his toil, strenuous in his profession, in order that his home may be provided for. All these are types of Chokmah, whose additional titles are Abba-Father. In all these manifestations let us see the father, the giver of life to the unborn as well as the male lusting after its mate; thus we shall get a truer perspective in matters of sex. The Victorian attitude, in its reaction against Restoration grossness, practically arrived at the standard of the most primitive tribes, who, travellers tell us, do not associate the union of the sexes with the production of offspring.

12. The colour of Chokmah is said to be grey; in its higher aspects, pearl-grey, iridescent. In this we see the veiling of the pure white light of Kether descending in its path of emanation towards Binah, whose colour is black.

13. The Mundane Chakra, or direct physical manifestation of Chokmah, is said to be the Zodiac, called in Hebrew Mazloth. We thus see that the ancient rabbis rightly understood the process of the evolution of our solar system.

14. The Yetziratic Text assigned to Chokmah is, as usual, exceedingly obscure in its wording; nevertheless we can gather from it certain illuminating hints. The Second Path, as it denominates Chokmah, it calls the Illuminating Intelligence. We have already referred to the creative Word which said "Let there be light." Among the symbols assigned to Chokmah in "777" (Mathers-Crowley system) is that of the Inner Robe of Glory, a gnostic term. These two ideas, taken together, lead on the imagination to the idea of the ensouling life, the illuminating spirit. It is the male force that implants the fecundating spark in the passive ovum on all planes and transforms its inert latency into the active up-building of growth and evolution. It is the dynamic force of life, which is spirit, that ensouls the clay of physical form and constitutes the Inner Robe of Glory that is worn by all beings in whom is the breath of life. Force embodied in form, and form ensouled by force, is signified by the Illuminating Intelligence and the Inner Robe of Glory.

15. The Yetziratic Text also calls Chokmah the Crown of Creation, thus implying that, like Kether, it is overshadowing and external to, rather than imminent and absorbed in, the manifested Universe. Actually it is the virile force of Chokmah which gives the impulse to manifestation, and thus is prior to manifestation itself. The Voice of the Logos was crying "Let there be light" long ere the waters were separated from the waters and the firmament appeared. This idea is further borne out in the phrase of the Yetziratic Text which speaks of Chokmah as the Splendour of Unity, equalling it, thus clearly indicating its affinity to Kether, Unity, rather than to the planes of dualistic form. The word splendour, as used here, clearly indicates an emanation, or shining forth, and teaches us to think of Chokmah as the emanating influence of pure being rather than as a thing in itself. This again leads us on to a truer apprehension of sex. Let it be made quite clear, however, that the sphere of Chokmah has nothing to do with fertility cults as such, save that maleness, dynamic force, is the primary life-giver and caller into manifestation. Though

[Page 128]

the higher and lower manifestations of dynamic force are the same in essence, they are upon different levels; Priapus is not identical with Jehovah. Nevertheless, the root of Priapus is to be found in Jehovah, and the manifestation of God the Father is to be found in Priapus, as is indicated by the fact that the rabbis call Chokmah the Yod of Tetragrammaton, and Yod is identical with lingam in their phraseology.

16. It is curious that the *Sepher Ye~irah* says of two of the Sephiroth that they are exalted above every head—a contradictory statement; yet in the fact that it is made with regard to Chokmah and Malkuth there is illumination for us if we ponder its significance. Chokmah is the Supernal Father, Malkuth is the Inferior Mother, and the text which declares her exaltation above every head also says that she sitteth upon the throne of Binah, the Superior Mother, the negative counterpart of Chokmah. Now Chokmah is the most abstract form of force, and Malkuth is the densest form of matter; so in this statement we have a hint that each of this pair of extreme opposites is the supreme manifestation of its own type; and both are equally holy in their different ways.

17. We must distinguish between the fertility rite, the vitality rite, and the illumination or inspiration rite, which calls down the Pentecostal tongues of flame. The fertility cult aims at plain and simple reproduction, whether of flocks, fields, or wives; it belongs to Yesod, and has nothing whatever to do with the vitality cult, which belongs to Netzach, the sphere of Venus-Aphrodite. This concerns certain very important esoteric teaching on the subject of the vitalising or magnetic influences which the sexes have on each other, quite apart from physical intercourse, and will be dealt with when Netzach, the sphere of Venus, comes to be considered.

18. The Rite of Chokmah, if such it can be called, is concerned with the influx of cosmic energy. It is formless, being the pure impulse of dynamic creation; and being formless, the creation it gives rise to can assume any and every form; hence the possibility of sublimating creative force from its purely Priapic aspect.

19. So far as I know, there is no formal magical ceremony of any of the Three Supernals. They can only be contacted through participation in their essential nature. Kether, pure being, is contacted when we win to realisation of the nature of existence without parts, attributes or dimensions. This experience is aptly called the Trance of Annihilation, and those who experience it walk with God and are not, for God has taken them; therefore is the spiritual experience assigned to Kether that of Divine Union, of which it is said that those who experience it enter into the Light and come not forth again.

20. In order to contact Chokmah we must experience the rush of the dynamic cosmic energy in its pure form; an energy so tremendous that mortal man is fused into disruption by it. It is recorded that when Semele, mother of Dionysos, saw Zeus her divine lover in his god-form as the Thunderer, she was blasted and burnt, and gave birth to her divine son prematurely. The spiritual experience assigned to Kether is the Vision of God face to face; and God (Jehovah) said to Moses, "Thou canst not look upon my face and live."

21. But although the sight of the Divine Father blasts mortals as with fire, the Divine Son comes familiarly among them and can be invoked by the appropriate ntes-Bacchanalia in the case of the Son of Zeus, and the Eucharist in the case of the Son of Jehovah. Thus we see that there is a lower form of manifestation, which "shews us the Father," but that this rite owes its validity solely to the fact that it derives its Illuminating Intelligence, its Inner Robe of Glory, from the Father, Chokmah.

II

22. The grade of initiation corresponding to Chokmah is said to be that of Magus, and the magical weapons assigned to that grade are the phallus and the Inner Robe of Glory. This teaches us that these symbols have a microcosmic or psychological significance as well as a macrocosmic or mystical one. The Inner Robe of Glory must surely signify the Inner Light

[Page 130]

which lighteth every man that cometh into the world~the spiritual vision whereby the mystic discerns spiritual things, the subjective form of the Illuminating Intelligence referred to in the Yetziratic Text.

23. The phallus or lingam is given as one of the magical weapons of the initiate operating the grade of Chokmah; this tells us that a knowledge of the spiritual significance of sex and the cosmic significance of polarity concern this grade. Any-one who can see beneath the surface in things mystical and magical cannot fail to be aware of the fact that in the understanding of the tremendous and mysterious potency (which we call sex in one of its manifestations) lies the key to a very great deal. It is not for nothing that sexual imagery pervades the visions of the seer, from the *Song of Songs* to *The Interior Castle*.

24. It must not be thought from this that I advocate orgiastic rites as the Way of Initiation; but I may as well say plainly that without the right understanding of the esoteric aspect of sex, the Path is a blind alley. Freud spoke the truth to this generation when he pointed to sex as a key to psychopathology; he erred, in my opinion, when he made it the only key to the nine-chambered soul of man. As there can be no health of subconsciousness without harmony of sex-life, so there can be no positive or dynamic working upon the plane of superconsciousness unless the laws of polarity are understood and observed. To many mystics, seeking refuge from matter in spirit, this may be a hard saying, but experience will prove it a true one; therefore it must be said, though there may be few thanks for saying it.

25. The tremendous down-rush of the Chokmah-force invoked through the Divine Four-lettered Name comes from the macrocosmic Yod to the microcosmic Yod, and is then sublimated. Unless the subconscious mind is free from dissociations and repressions, and all the parts of the many-sided nature of man are co-ordinated and synchronised, reactions and pathological symptoms are the result of that down-rush. This does not mean that the invoker of Zeus is necessarily a worshipper of Priapus, but it *does* mean that no man can sublimate a dissociation. When the channel is free from obstructions the down-rushing force can swing round the nadir and become an up-rushing force which can be directed to any sphere or turned into any channel that is desired; but, like it or not, it will be a down-rushing force before it is an up-rushing one, and unless our feet are firmly planted on elemental earth we shall be like bursting wine-skins.

26. Every practical occultist knows that Freud has spoken the truth, even though it is not the whole truth, but they are afraid to say so for fear of being accused of phallic worship and orgiastic practices. These things have their place, though it is not in the Temple of the Holy Spirit, and to deny them their place is a folly for which the Victorian age paid dearly in a rich harvest of psychopathology.

27. Whenever we are working dynamically upon any plane we are operating the Right-hand Pillar of the Tree and derive our primary energy from the Yod-force of Chokmah. In this connection we must refer to the fact that the microcosmic correspondence of Chokmah is given as the left side of the face. The macrocosmic and microcosmic correspondences play an important part in the practical workings. The Macrocosm, or Great Man, is, of course, the universe itself; and the microcosm is the individual man. It is said that man is the only being that has a fourfold nature exactly corresponding in its levels to the cosmos. The angels lack the lower planes, and the animals lack the higher planes.

28. The references to the microcosm should not, of course, be taken crudely as representing the parts of the physical body; the references are to the aura and the functions of the magnetic currents in the aura, and it must always be borne in mind, as the Swami Vivekananda points out, that what is on the right in the male is on the left in the female. In addition to this it must be remembered that what is positive on the physical plane is negative on the astral plane; it is positive again on the mental plane and negative

on the spiritual plane, as is indicated in the twining black and white serpents of the Caduceus of Mercury.

[Page 132]

If this Caduceus be placed upon the Tree when the Tree is marked off to represent the Four Worlds of the Qabalists, a glyph is formed which reveals the workings of the Law of Polarity in relation to the Planes. This is a very important glyph, and yields a great deal to meditation.

29. From this we learn that when the soul is in a female incarnation it will function negatively in Assiah and Briah, but positively in Yetzirah and Atziluth. In other words, a woman is physically and mentally negative, but psychically and spiritually positive, and the reverse holds good for a man. In initiates, however, there is a considerable degree of compensation, for each learns the technique of both positive and negative psychic methods. The Divine Spark, which is the nucleus of every living soul, is, of course, bisexual, containing the roots of both aspects, as does Kether, to which it corresponds. In the more highly evolved souls the compensating aspect is developed in some degree at least. The purely female woman and the purely male man prove to be oversexed as judged by civilised standards, and can only find an appropriate place in primitive societies, where fertility is the primary demand that society makes upon its women, and hunting and fighting are the constant occupation of the men.

30. This does not mean, however, that the physical functions of the sexes are perverted in the initiate, or that the configuration of the body is modified. Esoteric science teaches that the physical form and racial type which the soul assumes in each incarnation are determined by destiny, or Karma, and that the life has to be worked out and lived accordingly. It is inadvisable for us to play tricks with our type, racial or physical, and we should always accept it as the basis of our operations, and choose our methods accordingly. There are certain operations and certain offices in the lodge for which a male vehicle is more suitable than a female, and when practical work is on hand the officers in a ceremony are selected on type; but when the routine training of an initiate is in progress it is the custom to let everyone take turns at the different offices in order that they may learn to handle the different types of force and so become equilibrated.

31. Benjamin Kidd, in his very stimulating book, *The Science of Power*, points out that the highest type of human being approximates to the infantile. We observe the enormous relative size of the head as compared with the body-weight in the infant, and that the secondary sexual characteristics are not present. We find the same tendency appearing in a modified form in the civilised adult. The highest type of man is not a hirsute gorilla, nor is the highest type of woman an exaggerated mammal. The tendency of evolution in civilisation is to an approximation of type between the sexes so far as the secondary sexual characteristics are concerned. What percentage of city-dwelling males could grow a really patriarchal beard? The primary sexual character, however, must be maintained unimpaired or the race speedily dies Out, and we have no reason to believe that this is the

case even among our most epicene moderns, who fill the divorce courts with abundant evidence of their overflowing philoprogenitiveness.

32. These things we can understand in the light that is thrown on them when they are "placed upon the Tree." The two Pillars, the positive under Chokmah and the negative under Binah, correspond respectively to the Jda and Pingala of the Yoga systems. These two magnetic currents, running in the aura parallel to the spine, are called the Sun and Moon currents. In a male incarnation we work predominantly with the Sun current, the fertiliser; in a female incarnation we work predominantly with the moon-forces. If we desire to work with the Opposite type of force to that with which we are naturally endowed, we have to do so by using our natural mode as the basis of operations and, as it were, "cannoning off the cushion." The male who wants to use the moon-forces employs devices that enable him to get his natural sun-force reflected, and the female who wants to use the sun-forces employs a device whereby she is enabled to focus them upon herself and reflect them. On the physical plane the sexes mate, and the man begets a child upon the woman, thus

[Page 134]

availing himself of her moon-powers. The woman, on the other hand, desiring creation and unable to compass it single-handed, entices the male through his desires till he bestows upon her his sun-force and she is impregnated.

33. In magical workings the man or woman who desires to work with the opposite type of force to that of their physical vehicle, and it is part of the routine of occult training that they should do so, shifts the level of consciousness on to a plane on which they find themselves of the requisite polarity, and works thereon. The priest of Osiris sometimes employs the elemental spirits to supplement his polarity, and the priestess of Isis invokes angelic influences.

34. Because manifestation takes place through the Pairs of Opposites, the principle of polarity is implicit not only in the macrocosm but also in the microcosm. By understanding it, and knowing how to avail ourselves of the potentialities it affords, we can raise our natural powers far above their normal; we can use our environment as a thrust-block; we can look for the potent Chokmah-force in books, in our racial tradition, in our religion, in our friends and associates; from all these we can receive the stimulus that fecundates us and makes us creative mentally, emotionally, and dynamically. We make our environment play Chokmah to our Binah. Equally, we can play Chokmah to its Binah. Upon the subtle planes polarity is not fixed, but is relative; that which is more forceful than ourselves is positive towards us, and renders us negative towards itself; that which is less forceful than we are in any given aspect is negative towards us, and we can assume the positive role towards it. This fluidic, ever-fluctuating subtle polarity is one of the most important points in the practical workings; if we understand it and avail ourselves of it, we can do some very remarkable things and put our lives and our relations with our environment on an altogether different basis.

35. We must learn to know when we can function as Chokmah and beget deeds upon the world; and when we had best function as Binah, and make our environment fertilise us so that we become productive. We must never forget that self-fertilisation involves sterility in a few generations, and that we must ever and again be fertilised by the medium in which we are working. There must be an interplay of polarity between us and whatever we have set out to do, and we must always be on the alert to find polarising influences, whether in tradition, or in books, or in fellow-workers in the same field, or even in the very opposition and antagonism of enemies; for there is just as much polarising force in a hearty hatred as there is in love, if we know how to use it. We must have stimulus if we are to create anything, even a useful life weH lived. Chokmah is the cosmic stimulus. Whatever stimulates is assigned to Chokmah in the classification of the Tree. Sedatives are assigned to Binah. We shall obtain further insight into this principle of cosmic polarity as we study Binah, the Third Sephirah, for it is hardly possible to understand the implications of Chokmah without reference to its polarising opposite, with which it always functions. We will, therefore, carry no further our study of polarity at the present time, but conclude our examination of Chokmah by reference to the cards attributed to it in the Tarot pack, and resume our research into this most significant subject when Binah has afforded us further data.

III

36. As was noted in the chapter upon Kether, the four suits of the Tarot pack are assigned to the four elements, and we saw that the four aces represented the roots of the powers of these elements, The four twos are assigned to Chokmah, and represent the polarised functioning of these elements in harmonised balance; therefore a two is always a card of harmony.

37. The two of Wands, which is assigned to the element of Fire, is called the Lord of Dominion. The wand is essentially a male phallic symbol, and is attributed to Chokmah, so we may take this card as meaning polarisation; the positive that has found its mate in the negative, and is in equilibrium. There

[Page 136]

is no antagonism or resistance to the Lord of Dominion, hu~ a contented land accepts his rule; Binah, fulfilled, accepts her mate.

38. The two of Cups (Water) is called the Lord of Love and here again we have the concept of harmonious polarisation.

39. The two of Swords (Air) is called the Lord of Peace Restored, indicating that the disruptive force of Swords is in temporary equilibrium.

40. The two of Pentacles (Earth) is called the Lord of Harmonious Change. Here, as in Swords, we see a modification of the essential nature of the elemental force by its polarising opposite, thus inducing equilibrium. The disruptive force of Swords is restored to peace, and the inertia and resistance of Earth becomes, when polarised by the influence of Chokmah, a balanced rhythm.

41. These four cards indicate the Chokmah-force in polarity, that is to say the essential balance of power as it manifests in the Four Worlds of the Qabalists. When they appear in a divination they indicate power in equilibrium. They do not indicate a dynamic force, as might be expected where Chokmah is concerned; because Chokmah, being one of the Supernals, its force is positive upon the subtle planes, and consequently negative upon the planes of form. The negative aspect of a dynamic force is represented by equilibrium, polarity. The negative aspect of a negative potency is represented by destruction, as is shown in the glyph of Kali, the terrible wife of Siva, girdled with skulls and dancing upon the body of her husband.

42. This concept gives us a key to another of the many problems of the Tree—the relative polarity of the Sephiroth. As has previously been explained, each Sephirah is negative in its relation with those above it, from which it receives the influx of the emanations, and positive in relation to those beneath it, which proceed from it, and to which it therefore acts as emanator. Certain of the paired Sephiroth are, however, more definitely positive or more definitely negative in their nature. For instance, Chokmah is a positive Positive, and Binah is a positive Negative. Chesed is a negative positive, and Geburah a negative Negative. Netzach (Venus) and Hod (Mercury) are said to be hermaphroditic. Yesod (Luna) is a positive Negative, and Malkuth (Earth) is a negative Negative. Neither Kether nor Tiphareth are predominantly male or female. In Kether the Pairs of Opposites are latent and have not yet declared themselves; in Tiphareth they are in perfect equilibrium.

43. There are two ways in which transmutation can be effected on the Tree; and these are indicated by two of the glyphs which are superimposed upon the Sephiroth; one of these is the Glyph of the Three Pillars, and the other is the Glyph of the Lightning Flash. The Pillars have been already described; the Lightning Flash simply indicates the order of emanation of the Sephiroth, zigzagging from Chokmah to Binah and from Binah to Chesed, backwards and forwards across the Tree. If transmutation takes place according to the Lightning Flash, the force changes its type; if according to the Pillars, it remains of the same type, but on a higher or lower level as the case may be.

44. This sounds very complex and abstract, but examples will soon serve to show it to be simple and practical when understood. Take the problem of the sublimation of sex-force, which besets the psychotherapists, concerning which they talk so glibly and say so little. In Malkuth, which in the microcosm is the physical body, sex-force is in terms of ovum and spermatozoon; in Yesod, which is the etheric double, it is in terms of magnetic force, concerning which nothing is known to orthodox psychology, but concerning which we shall have a good deal to say under the heading of the appropriate Sephirah. Hod and Netzach are on the astral plane, and in Hod we find that the sex-force is expressed in

visual images, and in Netzach in another and altogether subtler type of magnetism popularly referred to as "(salt)~ It." In Tiphareth, the Christ-centre, the force becomes spiritual inspiration, illumination, the influx from the higher consciousness. If it is positive in type, it becomes the Dionysiac inspiration, a divine

[Page 138]

inebriation; and if it is negative, it becomes the impersonal, all-harmonising Christ-love.

45. When the transmutation is worked upon the Pillars we *are* impressed by the truth of the ironical French phrase

Plus qu'il change, plus c'est la meme chose. Chokmah, pure dynamism, pure stimulus without formed expression, in Chesed becomes the upbuilding, Organising aspect of evolution; anabolism, as distinguished from the katabolism of Geburah. In Chesed the Chokmah force becomes that peculiarly subtle form of magnetism which gives power of leadership and is the root of greatness. Equally, on the Left-hand Pillar, the force-restraining Binah becomes the form-destroying Geburah, and again the maker of magical images, Mercury-Hermes-Thoth.

46. From time to time the symbols of occult science have leaked out into popular knowledge, but the uninitiated have not understood the method of arranging these symbols in their pattern as the Tree, nor of applying to them the alchemical principles of transmutation and distillation wherein lie • the real secrets of their use.

CHAPTER XVII

BINAH, THE THIRD SEPHIRAH

TITLE: Binah, Understanding. (Hebrew spelling: Beth, Yod, Nun, He'.)

MAGICAL IMAGE: A mature woman. A matron.

SITUATION ON THE TREE: At the head of the Pillar of Severity in the Supernal Triangle.

YETZIRATIC TEXT: The Third Intelligence is called the Sanctifying Intelligence, the Foundation of Primordial Wisdom; it is also called the Creator of Faith, and its roots are in Amen. It is the parent of faith, whence faith emanates.

TITLES GIVEN TO BINAH: Ama, the dark sterile Mother. Aima, the bright fertile Mother. Khorsia, the Throne. Marab, the Great Sea.

GOD-NAME: Jehovah Elohim.

ARCHANGEL: Tzaphkiel.

ORDER OF ANGELS: Aralim, Thrones.

MUNDANE CHAKRA: Shabbathai, Saturn.

SPIRITUAL EXPERIENCE: Vision of Sorrow.

VIRTUE: Silence.

VICE: Avarice.

CORRESPONDENCE IN MICROCOSM: The right side of the face.

SYMBOLS: The Yoni. The Kteis. The Vesica Piscis. The cup or chalice. The Outer Robe of Concealment.

TAROT CARDS: The four Threes.

THREE OF WANDS: Established Strength.

THREE OF CUPS: Abundance.

THREE OF SWORDS: Sorrow.

THREE OF PENTACLES: Material works.

COLOUR IN ATZILUTH: Crimson.

IN BRIAH: Black.

YETZIRAH: Dark brown.

ASSIAH: Grey flecked pink.

[Page 140]

I

1. Binah is the third member of the Supernal Triangle, and the task of its elucidation will be both extended and simplified because we can study it in the light of Chokmah, which balances it on the opposing Pillar of the Tree. It is never possible to understand a Sephirah if we consider it apart from its position on the Tree, because this position

indicates its cosmic relationships; we see it in perspective, as it were, and can deduce whence it comes and whither it goes; what influences have gone to its making, and what it contributes to the scheme of things entire.

2. Binah represents the female potency of the universe, even as Chokmah represents the male. As already noted, they are Positive and Negative; Force and Form. Each heads its Pillar, Chokmah at the head of the Pillar of Mercy, and Binah at the head of the Pillar of Severity. It may be thought that this is an unnatural distribution; that the Supernal Mother should preside over the mercies, and the male force of the universe over the severities. But we must not sentimentalise these things. We are dealing with cosmic principles, not personalities; and even the symbols under which they are presented give us insight if we have eyes to see. Freud would not have quarrelled with the attribution of Binah to the head of the Pillar of Severity, for he has a great deal to say about the image of the Terrible Mother.

3. Kether, Eheieh, I Am, is pure being, all-potential but non-active; when a flowing-forth of activity takes place from it, we call that activity Chokmah; it is this descending stream of pure activity which is the dynamic force of the universe, and all dynamic force belongs to this category.

4. It must be remembered that the Sephiroth are states, not places. Wherever there is a state of pure, unconditioned being, without parts or activities, it is referred to Kether. Thus into these ten pigeon-holes of our metaphysical card-index system we can sort our ideas of the whole of the manifested universe without the necessity of removing any object from its place in nature as it appears to our understanding. In other words, wherever we see pure energy functioning, we know that the underlying force is that of Chokmah; this enables us to see the intrinsic identity in type of all manner of phenomena which at first sight appear entirely unrelated; for we learn by the Qabalistic method to refer them according to their type to the different Sephiroth, thus enabling ourselves to link them up with all manner of cognate ideas according to the system of correspondences explained on a previous page. This is the method of the subconscious mind, which it pursues automatically; the occultist trains his conscious mind in the use of the same method. Incidentally we may note that whenever individuals are working directly off the subconscious, as occurs in artistic genius, in lunacy, and in dream or trance, this method is used.

5. It may seem strange to the reader that this digression concerning Chokmah should be included under the heading of Binah, but it is only in the light of its polarity with Chokmah that Binah can be understood; and equally, we shall have a great deal more to add to our explanation of Chokmah now that we have got Binah to compare it with. Each of the Pairs of opposites throws light on the other and is incomprehensible alone.

6. But to return to Binah. The Qabalists state that it is emanated by Chokmah. Let us translate this statement into other terms. It is an occult maxim, which is, I believe, confirmed by the researches of Einstein, though I have not the knowledge necessary to correlate his findings with the esoteric doctrines, that force never moves in a straight line,

but always curve vast as the universe, and therefore eventually returns whence it issued forth, but upon a higher arc, for the universe has progressed since it started. It follows, then, that force proceeding thus, dividing and redividing and moving at tangential angles, will eventually arrive at a state of interlocking stresses and some manner of stability; a stability which tends to be overset in course of time as fresh forces are emanated from it into manifestation and introduce new factors with which adjustment has to be made.

[Page 142]

7. It is this state of stability, which is arrived at by the inter acting forces when they act and react and come to a standstill, which is the basis of form, as is exemplified in the atom, which is nothing more nor less than a constellation of electrons, each of which is a vortex, or whirlpool. The stability thus achieved, which, be it noted, is a condition and not a thing in itself, is what Qabalists call Binah, the Third Sephirah. Wherever there is a state of interacting stresses which have achieved stability, the Qabalists refer the condition to Binah. For instance, the atom, being for all practical purposes the stable unit of the physical plane, is a manifestation of the Binah type of force. All social organisations on which the dead hand of unprogressiveness weighs heavily, such as the Chinese civilisation before the revolution, or our older universities, are said to be under the influence of Binah. To Binah are attributed the Greek God Chronos (who is none other than Father Time) and the Roman God Saturn. It will be observed the importance attached to time, in other words to age, in these Binah institutions; only grey hairs are venerable; ability alone carries little weight. That is to say, only those who are congenial to Chronos can succeed in such an environment.

8. Binah, the Great Mother, sometimes also called Marah, the Great Sea, is, of course, the Mother of All Living. She is the archetypal womb through which life comes into manifestation. Whatsoever provides a form to serve life as a vehicle is of Her. It must be remembered, however, that life confined in a form, although it is enabled thereby to organise and so evolve, is much less free than it was when it was unlimited (though also unorganised) on its own plane. Involvement in a form is therefore the beginning of the death of life. It is a straitening and a limiting; a binding and a constricting. Form checks life, thwarts it, and yet enables it to organise. Seen from the point of view of free-moving force, incarceration in a form is extinction. Form disciplines force with a merciless severity.

9. The disembodied spirit is immortal; there is nothing of it that can grow old or die. But the embodied spirit sees death on the horizon as soon as its day dawns. We can see then how terrible must the Great Mother appear as She binds free-moving force into the discipline of form. She is death to the dynamic activity of Chokmah; the Chokmah-force dies as it issues into Binah. Form is the discipline of force; therefore is Binah the head of the Pillar of Severity.

10. We may conceive that the first Cosmic Night set in, the first Pralaya, or sinking of manifestation to rest, when the Supernal Triangle found stability and equilibrium of force with the emanation and organisation of Binah. All was dynamic before; all was

forthrushing and expansion; but with the coming into manifestation of the Binah aspect there was an interlocking and stabilising, and the old dynamic free flow was no more.

11. That such an interlocking and consequent stabilisation was inevitable in a universe whose lines of force ever move in curves is a foregone conclusion. And we can see, if we observe how the Binah-state was the inevitable outcome of the Chokmah-state in a curvilinear universe, that time must move through epochs in which either Binah or Chokmah predominate. Before the lines of force had completed their circuit of the manifested universe and begun to return upon themselves and interlace, all was Chokmah, and dynamism was unrestricted. After Binah and Chokmah, as the first Pairs of Opposites, had found equilibrium, all was Binah, and stability was immovable. But Kether, the Great Emanator, continues to make manifest the Great Unmanifest; force flows in upon the universe, and the sum of force is increased. This inflowing force oversets the equilibrium that is arrived at when Chokmah and Binah have acted, reacted, and come to a stop. Action and reaction commence again, and the Chokmah-phase, a phase in which dynamic force predominates, supervenes upon the static condition which is Binah, and the cycle proceeds once more; equilibrium between the Pairs of Opposites being arrived at in a more complex form-on a higher arc, as it is called from the evolutionary point of view-only to be upset again as the ever-emanating Kether weighs down the balance

[Page 144]

in favour of the kinetic principle as opposed to the static principle.

12. It will thus be seen that if Kether, the source of all being is conceived of as the highest good, as it inevitably must be, and the nature of Kether is kinetic and its influence is for ever inclined towards Chokmah, it inevitably follows that Binah, the opposite of Chokmah, the perpetual opposer of the dynamic impulses, will be regarded as the enemy of God, the evil one. Saturn-Satan is an easy transition; and so is Time-Death-Devil. Implicit in the ascetic religions such as Christianity and Buddhism is the idea that woman is the root of all evil, because she is the influence which holds men to a life of form by their desires. Matter is regarded by them as the antinomy of spirit in an eternal, unresolved duality. Christianity is ready enough to recognise the heretical nature of this belief when it is presented to it in the form of Antinomianism; but it does not realise that its own teaching and practice are equally antinomian when it regards matter as the enemy of spirit, and as such to be abrogated and overcome. This unhappy belief has caused as much human suffering in Christian countries as war and pestilence.

13. The Qabalah teaches a wiser doctrine. To it, all the Sephiroth are holy, Malkuth equally with Kether, and Geburah the destroyer with Chesed the preserver. It recognises that rhythm is the basis of life, not a steady forward progress. If we understood this better, how much suffering we should save ourselves, for we should watch the Chokmah and Binah phases succeeding each other, both in our own lives and the lives of nations, and would realise the deep significance of Shakespeare's words when he says:

"There is a tide in the affairs of men
Which taken at the flood leads on to fortune."

14. Binah is the primordial root of matter, but the full development of matter is not found till we arrive at Malkuth, the material universe. We shall see repeatedly in the course of our studies that the Three Supernals have their specialised expressions on a lower arc in one or another of the six Sephiroth which form Microprosopos. It is repeatedly said of these that they have their roots in or are reflections of the higher triad, and these hints have a deep significance. Binah links with Malkuth as the root with the fruit. This is indicated in the Yetziratic text of Malkuth, in which it says: "She sitteth upon the throne of Binah." It is for this reason that a hard and fast attribution of the gods of other pantheons to the different Sephiroth is impracticable. Aspects of Isis are to be found in Binah, Netzach, Yesod, and Malkuth. Aspects of Osiris are to be found in Chokmah, Chesed, and Tiphareth. This comes out clearly in Greek mythology, wherein the different gods and goddesses are given descriptive titles. For instance, Diana, the moon-goddess, the virgin huntress, was worshipped at Ephesus as the Many-breasted; Venus, the goddess of female beauty and of love, had a temple where she was worshipped as the Bearded Venus. These things teach us some important truths. They teach us to look for the principle behind the multiform manifestation, and to realise that it assumes different forms on different levels. Life is not quite so simple as the uninformed would like to believe.

II

15. The meaning of the Hebrew names of the second and third Sephiroth are Wisdom and Understanding, and these are curiously balanced one against the other as if the distinction were of primary importance. Wisdom suggests to our minds the idea of accumulated knowledge, of the infinite series of images in the memory; but Understanding conveys to us the idea of a penetration into their significance, a power to perceive their essence and interrelation, which is not necessarily implicit in wisdom, taken as intellectual knowledge. Thus we get a concept of an extended series, a chain of associated ideas, in relation to Chokmah, which at once correlates with the Chokmah symbol of a straight line. But in regard to Understanding we get the idea of synthesis, of the perception of significances

[Page 146]

which comes when ideas are related one to another, and superimposed, metaphorically speaking, one upon another. in evolutionary series from the dense to the subtle. Thus does the idea of the binding-together Binah-principle come once again to our minds.

16. These are subtle ways of mind-working, and may appear foolishness to those unaccustomed to the initiate's method of using his mind; but the psycho-analyst understands them and appreciates them at their true significance; and so likewise does the poet when he constructs his cloud-capped towers of imagery.

17. The Yetziratic Text stresses the idea of faith, the faith that rests on understanding, whose parent is Binah. This is the only place where faith may rightly rest. A cynic defined faith as the power of believing what you know isn't true; and this appears to be a fairly accurate definition for the manifestations of faith as they appear in many uninstructed minds, the fruit of the discipline of sects unenlightened by mystical consciousness. But in the light of that consciousness we may define faith as the conscious result of superconscious experience which has not been translated into terms of brain-consciousness, and of which, therefore, the normal personality is not directly aware, though it nevertheless feels, possibly with great intensity, the effects, and its emotional reactions are fundamentally and permanently modified thereby.

18. In the light of this definition we can see how the roots of faith may indeed rest in Binah, Understanding, the synthetic principle of consciousness. For there is a form aspect to consciousness as well as to substance, and that aspect we shall consider in detail when we come to the study of Hod, the basal Sephirah of Binah's Pillar of Severity. Thus we see yet again how the Sephiroth link up among themselves, and the illumination that comes from observing their interrelationships.

19. The statement that the roots of Binah are in Amen refers to Kether, for one of the titles of Kether is Amen. This clearly declares that although Chokmah emanates Binah, we must not pause there when seeking origins, but move back to the fount of all as it rises from the Unmanifest behind the Veils of Negative Existence. This concept is brought out very clearly by the Yetziratic Text of Chesed, wherein it says, speaking of spiritual forces: "They emanate one from another by virtue of the primordial emanation, the highest crown, Kether."

10. We must not be misled or confused in this respect by the fact that the Yetziratic Text of Geburah declares that Binah, understanding, emanates from the primordial depths of Chokmah, Wisdom. Binah is in Kether as well as Chokmah, "but after another manner." In pure being, formless and partless though it is, are the possibilities of both force and form; for where there is a positive pole, there is necessarily the correlative aspect of a negative pole. Kether is for ever in a state of becoming. In fact, I have been told by a Jewish Qabalist that the real translation of Eheieh, the God-name of Kether, is "I will be," not "I am." This constant becoming cannot remain static, it must overflow into activity; and that activity cannot for ever remain uncorrelated within itself; it must organise; some manner of adjustment of interlocking stresses must be arrived at; thus we have the potentiality of both Chokmah and Binah implicit in Kether; for be it said yet again that the Holy Sephiroth are not things, but states, and that all manifested things exist in one or another of these states, and contain an admixture of these factors in their make-up, so that the whole of the manifested universe can be sorted out into its appropriate pigeon-holes in our minds when the glyph of the Tree is established there. Indeed, when once that glyph is clearly formulated and well established, the mind uses it automatically, and the complex phenomena of objective existence sort themselves out in our understanding. It is for this reason that the student of occultism who is working in an initiatory school is made to learn the principal correspondences of the Ten Holy Sephiroth off by heart, instead of being allowed to depend upon tables of reference. It has often been objected

that this is an intolerable waste of time and energy, and that reference to the tables of correspondences,

[Page 148]

such as Crowley's "777," is quite as good. But experience proves that this is not the case, and that the esotericist who sets himself to this discipline and rehearses them daily, as the Catholic tells his rosary, is amply repaid by the subsequent illumination he receives as his mind automatically sorts out the innumerable changes and chances of mundane life on to the Tree, thus revealing their spiritual significance. It must always be borne in mind that the use of the Tree of Life is not merely an intellectual exercise; it is a creative art in the literal meaning of the words, and faculties have to be developed in the mind even as manual skill is acquired by sculptor or musician.

21. The Yetziratic Text specifically refers to Binah as the Sanctifying Intelligence. Sanctification conveys the idea of that which is holy and set apart. The Virgin Mary is held to be intimately associated with Binah, the Great Mother; and from this attribution the mind is led on to the idea of that which brings forth the All but retains its virginity; in other words, whose creativeness does not involve it in the life of its creation, but which remains apart and behind as the basis of manifestation, the root-substance whence matter arises. For although matter is held to have its roots in Binah, yet matter as we know it is of a very different order of being to the Supernal Sephirah in which its essence lies. Binah, the primordial formative influence, the parent of all form, is behind and beyond manifesting substance; in other words, is ever-virgin. It is this formative influence underlying all form-building, this tendency for curving lines of force to correlate and achieve stability, which is Binah.

22. These two basal Sephiroth of the Supernal Triad are especially referred to as the Father and Mother, Abba and Ama, and their magical images are those of the bearded male and the matron, thus representing, not the sex attraction of Netzach and Yesod, who are represented as maiden and youth, but the mature beings who have mated and reproduced. We must always distinguish between magnetic sex attraction and reproduction; they are by no means one and the same thing; Oft are they even different levels or aspects of the same thing. Herein is an important occult truth which we will consider in detail in due course.

23. Chokmah and Binah, then, represent essential maleness and femaleness in their creative aspects. They are not phallic images as such, but in them is the root of all life-force. We shall never understand the deeper aspects of esotericism unless we realise what phallicism really means. It most emphatically does not mean the orgies in the temples of Aphrodite that disgraced the decadence of the pagan faiths of the ancients and brought about their downfall; it means that everything rests upon the principle of the stimulation of the inert yet all-potential by the dynamic principle which derives its energy direct from the source of all energy. In this concept lie tremendous keys of knowledge; it is one of the most important points in the Mysteries. It is obvious that sex represents one aspect of this factor; it is equally obvious that there are many other applications of it which are not

sexual. We must not allow any preconceived concept of what constitutes sex, or a conventional attitude towards this great and vital subject, to frighten us away from the great principle of the stimulation or fecundation of the inert all-potential by the active principle. Whosoever is thus inhibited is unfit for the Mysteries, over whose portal was written the words, "Know thyself."

24. Such knowledge does not lead to impurity, for impurity implies a loss of control that permits forces to override the bounds that Nature has set them. Whoso has not control of his own instincts and passions is no more fitted for the Mysteries than he who inhibits and dissociates them. Let it be clearly realised, however, that the Mysteries do not teach asceticism or celibacy as a requirement of achievement, because they do not regard spirit and matter as an unreconcilable pair of antinomies, but rather as different levels of the same thing. Purity does not consist in emasculation, but in keeping the different forces to their proper levels and in their proper places, and not allowing one to invade another. It teaches that frigidity and impotence are just as much imperfections,

[Page 150]

and therefore pathologies of sex, as is uncontrolled lust that destroys its object and debases itself.

25. Every relationship of manifested existence involves the Binah and Chokmah principles, and because sex is such a perfect representation of these it was used as such by the ancients, who were not troubled by our timidities on the subject, and took their metaphors from the subject of reproduction as freely as we take ours from the Bible. For to them reproduction was a sacred process, and they referred to it, not with ribaldry, but with reverence. If we want to understand them, we must approach their teaching on the subject of the life-source and life-force in the same spirit in which they approached it, and no one whose eyes are not blinded by prejudice, or who does not stand in the shadow thrown by his own unsolved problems, can fail to realise that our present-day attitude towards life would be both saner and sweeter for a leavening of pagan common sense and discernment.

26. The principles of maleness and femaleness as manifested in Chokmah and Binah represent more than mere positivity and negativity, activity and passivity. Chokmah, the All-begetter, is a vehicle of primal force, the immediate manifestation of Kether. It is, in fact, Kether in action; for the different Sephiroth do not represent different things, but different functions of the same thing, *i.e. pure force welling up into manifestation from the Great Unmanifest which is behind the Negative Veils of Existence. Chokmah is pure force, even as the expansion of petrol as it explodes in the combustion-chamber of an engine is pure force. But just as this expansive force would expand and be lost if there were no engine to transmit its power) so the undirected energy of Chokmah would radiate into space and be lost if there were nothing to receive its impulse and utilise it. Chokmah explodes like petrol; Binah is the combustion-chamber; Gedulah and Geburah are the back and forth strokes of the piston.*

27. Now the expansive force given off by petrol is pure energy, but it will not drive a car. The constrictive organisation of Binah is potentially capable of driving a car, but it cannot do so unless set in motion by the expansion of the stored-up energy of petrol-vapour. Binah is all-potential, but inert. Chokmah is pure energy, limitless and tireless, but incapable of doing anything except radiate off into space if left to its own devices. But when Chokmah acts upon Binah, its energy is gathered up and set to work. When Binah receives the impulse of Chokmah, all her latent capacities are energised. Briefly, Chokmah supplies the energy, and Binah supplies the machine.

III

28. Consider now the maleness and femaleness of this Pair of Supernal Opposites as reflected in the act of generation. The spermatozoa of the male are incapable of more than the briefest life; they are the simplest possible units of energy; once that energy is expended, they dissolve. But the reproduct~uctive mechanism of the female, the womb that bears and the breasts that feed, are capable of bringing this handed-on life to independent life of its own; and yet all this elaborate machinery must lie inert till the stimulus of the Chokmah-force sets it in action. The female reproductive unit is all-potential, but inert; the male reproductive unit is all-potent, but incapable of bringing to birth.

29. Most people think that because maleness and femaleness as they know them on the physical plane are fixed principles determined by structure, that the potent and the potential are rigidly bound to their respective mechanisms. Now this is an error. There is a continual alternation of polarity on every plane except the physical. And indeed, among primitive types of animal life there is even an alternation of polarity on the physical plane. Among higher types, and especially the vertebrates, polarity is fixed by the accident of birth, save in hermaphroditic anomalies, which can't be regarded as other than pathological, and in which only one sex is ever functionally active, whatever the apparent development of the other aspect may be. It is a knowledge of this continual interplay of polarity which is one of the most important secrets of the Mysteries.

[Page 152]

It is in no sense homosexuality, which is a perverted and pathological expression of this fact that breaks out as a disorder of sexual feeling when the law of alternating polarity is not rightly understood.

30. Briefly, although his actual mode of reproduction on the physical plane is determined for every individual by the configuration of his body, his spiritual reactions are not so fixed, for the soul is bi-sexual; in other words, in every relation of life we are sometimes positive and sometimes negative, according to whether circumstances are stronger than we are, or we are stronger than circumstances. This is clearly indicated in the proverb, that the grey mare is sometimes the better horse. It also comes out clearly in the fact that Netzach (Venus-Aphrodite) is the basal Sephirah of Chokmah's Pillar. We thus get the female nature showing a different polarity on different levels, for in Netzach she is as positive and dynamic as she is static in Binah.

31. All this is not only bewildering intellectually, but also confusing morally, and even at the risk of being accused of fostering all manner of abnormalities, I must try to make the matter clear, for its practical implications are so far-reaching.

32. It has been said by the Rabbis that each Sephirah is negative in relation to the one above it by which it is emanated, and positive in relation to the one below it which it emanates. This gives us the key; we are negative in our relationships with that which is of a higher potential than we are; and we are positive in our relationships with that which has a lower potential. This is a relationship which is in a perpetual state of flux, and which varies at every separate point at which we make our innumerable contacts with our environment.

33. For the most part, the relationship between a man and a woman is not entirely satisfactory to either party, and they have either to put up with incomplete satisfaction in their relationship under the compulsion of religious or economic pressure, or supplement elsewhere their incompleteness, with as a rule a recurrence of the previous conditions when once the novelty has worn off. It is to be observed that under such circumstances it is only in novelty that sexual satisfaction at its highest is to be found; and novelty is a thing which requires constantly to be renewed, with disastrous results to sexual economics.

34. The trouble is, that while the male gives the physical stimulus which leads to reproduction, he does not realise that on the inner planes he is by virtue of the law of reversed polarity, negative, and is dependent for his emotional completeness upon the stimulation given by the female. He is dependent upon her for emotional fertilisation, as is clearly shown in the case of any highly creative mind, such as Wagner or Shelley.

35. Marriage is not a matter of two halves, but of four quarters, uniting in balanced harmony of reciprocal fecundation. Binah and Chokmah are balanced by Hod and Netzach. There are goddesses as well as gods for man to worship. Boaz and Jakin are both pillars of the Temple, and only when united do they produce stability. A goddessless religion is half-way to atheism. In the word Elohim we find the true key. Elohim is translated "God" in both Authorised and Revised Versions of the Holy Scriptures. It really ought to be translated "God and Goddess," for it is a feminine noun with a masculine plural termination affixed. This is an incontrovertible fact, in its linguistic aspect at any rate, and it is to be presumed that the various authors of the books of the Bible knew what they meant, and did not use this peculiar and unique form without good reason. "And the spirit of the male and female conjoined principles moved upon the surface of the formless, and manifestation took place." If we want equilibrium instead of our present condition of unequal stresses, we must worship the Elohim, not Jehovah.

36. The worship of Jehovah instead of the Elohim is a Potent influence in preventing us from "rising on the planes," that is to say from obtaining supernormal consciousness as Part of our normal equipment; for we must be prepared to Shift our Polarity as we shift level, for what is positive on the Physical Plane becomes negative on the astral, and *vice versa*.

[Page 154]

Also, as practical occult work always involves the use of more than one plane, either simultaneously, as in invocation and evocation, or in succession, as when we correlate the levels of consciousness after psychic work, the negative factor must always have its place in our work, both subjectively and objectively.

37. This again opens up new aspects of the subject, how many people realise that their own souls are literally bi-sexual within themselves, and that the different levels of consciousness act as male and female towards each other?

38. Freud declared that the sex life determines the type of the whole life. Probably, fundamentally, the life as a whole determines the type of the sex life; but for practical purposes his manner of putting it is true; for while it is not possible to straighten out a tangled sexual life by operating upon life as a whole—for instance, no amount of wealth or fame is any adequate compensation if this fundamental instinct be thwarted—it is quite possible to straighten out the whole life-pattern by disentangling the sex life. This is a matter of practical experience, and does not need to be reasoned from a priori grounds. No doubt it is for this reason, learned by practical experience of the workings of the human consciousness, that the ancients made phallicism such an important part of their rites. Actually, it is a very important factor in the ceremonial aspect of the worship of moderns also, but recognition of the significance of the symbols employed traditionally has been repressed from consciousness.

39. Freudian psychology supplies the key to phallicism and opens a door that leads into the Adytum of the Mysteries. There is no getting away from this fact in practical occultism, unpalatable as it may be to many; and it explains why so many magical enterprises are sterile.

40. These matters are highly recondite secrets of the Mysteries, of which we moderns have lost the keys; but the experience of the new psychology, and its allied art of psychiatry, has abundantly proved the soundness of the basis on which the ancients built when they made adoration of the creative principle and of fertility an important part of their religious life. It is a matter of well-established experience that the person who has dissociated his or her sexual feelings from consciousness can never get to grips with life on any level. This fact is the basis of modern psychotherapy. In occult work the inhibited, repressed person tends to unbalanced forms of psychism and mediumship, and is totally useless for magical work in which power has to be directed and handled by the will. This does not mean that either total repression or total expression is necessary for magical working, but it does most emphatically mean that the person who is cut off from his instincts, which are his roots in Mother Earth, and in whose consciousness in consequence there is a gap, cannot be an open channel through which power can be brought down the planes into manifestation on the physical level.

41. I shall no~doubt be abused and misrepresented for my frankness in these matters; but if no one will come forward and bear the odium of speaking the truth, how is the

wayfaring man to find his way in the Mysteries? Are we to maintain a Victorian attitude in the lodge which has everywhere been abandoned outside it? Someone must break these false gods made in the image of Mrs Grundy. I am inclined to think, however, that any loss I may sustain on this account will be small, for it would not be possible to train or to co-operate with the kind of person who is thrown into a panic by plain speaking? Do not let it be thought that I am inviting anyone to participate with me in phallic orgies, as it will probably be said that I am doing. I am merely pointing out that the person who cannot see the significance of phallic worship from the psychological point of view has not got enough brains to be of very much use in the Mysteries.

IV

42. Having given considerable space to the elucidation of the Binah principle functioning in polarity with Chokmah, for not otherwise can it be understood, for it is essentially a principle of polarity, we can now consider the significance of the

[Page 156]

symbolism assigned to the Third Sephirah. This falls into two divisions - the Great Mother aspect and the Saturn aspect, for both these attributions are given to Binah. She is the mighty Mother of All Living, and she is also the death principle; for the giver of life in form is also the giver of death, for form must die when its use is outworn. Upon the Planes of form, death and birth are the two sides of the same coin.

43. The mother aspect of Binah finds expression in the title of Marah, the Sea, which is given her. It is a curious fact that Venus-Aphrodite is represented as being born of the sea-foam, and the Virgin Mary is called by Catholics Stella Mans, Star of the Sea. The word Marab, which is the root of Mary, also means bitter, and the spiritual experience attributed to Binah is the Vision of Sorrow. A vision which calls to ruin the picture of the Virgin weeping at the foot of the Cross, her heart pierced by seven swords. We also recall the teaching of the Buddha that life is sorrow. The idea of subjection to sorrow and death is implicit in the idea of the descent of life to the planes of form.

44. The Yetziratic Text of Malkuth, already referred to, speaks of the Throne of Binah. One of the titles given to the Third Sephirah is Khorsia, the Throne; and the angels assigned to this Sephirah are called the Aralim, which also means thrones. Now a throne essentially suggests the idea of a stable basis, a firm foundation, upon which the wielder of power takes his seat and cannot be moved. It is, in fact, a thrust-block which takes the back-pressure of a force as the shoulder takes the kick of a rifle. The great guns used for long-distance ranging have to be bedded in a mass of concrete in order that they may resist this back pressure of the charge that drives the shell forwards; for it is obvious that the pressure on the breech of the gun must equal the pressure on the base of the shell when the gun goes off. This is a truth which our idealising religious tendencies are inclined to ignore, with a consequent weakening and invalidating of their teaching. Binah, Marah, matter, is the thrust-block which gives dynamic life-force its secure basis, out of the resistance to spiritual force, as we have already noted, comes the idea of

implicit evil, which is so unjust as Binah. This comes out very clearly when we consider the ideas that rise up in association with Saturn-Chronos. There is something sinister about Saturn. He is the Greater Malefic of the astrologers, and anyone who finds a square to Saturn in their horoscope regards it as a heavy affliction. Saturn is the resister; but, being a resister, he is also a stabiliser and tester who does not allow us to trust our weight to that which will not bear it. It is an illuminating point that the Thirty-second Path, which leads from Malkuth to Yesod and is the first Path trodden by the soul striving upwards, is assigned to Saturn. He is the god of the most ancient form of matter. The Greek myth of Chronos, which is simply the Greek name for the same principle, looks upon him as one of the Old Gods; that is to say, the Gods that made the Gods. He was the father of Jupiter-Zeus, who was saved from him by a cunning device of his mother, for Saturn had an unpleasant habit of eating his children. In this myth we get again the idea of the bringer into life as the giver of death. As we have already noted, Saturn with his reaping-hook readily becomes Death with his scythe. It is very interesting to note the re-entrant curves of these chains of associated ideas in connection with each Sephirah, for we cannot but see how the same images crop up again and again in every train of ideas that we pursue, even when we start from ideas as apparently divergent as the mother, the sea, and time.

46. To each planet is assigned a virtue and a vice; in other words, each planet may be, in the words of the astrologers, well or badly aspected, well or ill dignified. We cannot go through life without noting that every type of character has the vices of its virtues; that is to say, its virtues, carried to extremes, becomes vices. So it is with the seven planetary Sephiroth; they have their good and bad aspects according to the proportions in which they are represented; when there is lack of equilibrium owing to the unbalanced force of a particular Sephirah, we experience the evil influences of that

[Page 158]

Sephirah; for instance, Saturn ate his children! Death began to destroy life before it had fulfilled its function. No Sephirah, therefore, is wholly and solely evil, not even Geburah - which is destruction personified. They are all equally indispensable to the scheme of things as a whole, and their relative good or evil influence depends on their being where they are wanted, in the right proportions, neither too much nor too little. Too little of the influence of a given Sephirah leads to unbalance on the part of its opposite number. Too much becomes a positively evil influence a Poisonous overdose.

47. The virtue of Binah is said to be Silence, and its vice Avarice. Here again we see the Saturn influence making itself felt. Keats speaks of "grey-haired Saturn, silent as a stone," and in these few words the poet conjures up a magical image of the primordial age and silence of the Saturnian influence. Saturn is indeed one of the Old Gods and is concerned with the mineral aspect of earth. He is throned upon the most ancient rocks where no plant grows.

48. It is this silence which has ever been held to be an especially desirable virtue in women. Be that as it may, and no doubt her tongue is her most dangerous weapon,

silence indicates receptivity. If we are silent, we can listen, and so learn; but if we are talking, the gates of entrance to the mind are closed. It is the resistance and receptivity of Binah which are her chief powers. And out of these virtues comes the vice which is constituted by their overplus, the avarice which denies too much and would withhold even that which is needful. When this prevails, we need the generous Gedulah-Geburah, Jupiter-Mars influence to slay the old god, the slayer of his children, and reign in his stead.

49. The magical symbols of Binah are said to be the yoni and the Outer Robe of Concealment, the latter is a gnostic term and the former an Indian one, meaning the genitals of the female, the negative correspondence of the phallus of the male. The less well-known term Kteis is the European equivalent. In Hindu religious symbols the yoni and lingam appear with the greatest frequency, for the idea of life-force and fertility is a prime mover in their faith.

50. The idea of fertility is the main motif in the aspects of Binah that manifest in the world of Assiah, the material level. Life not only enters into matter for discipline, but it also issues thence triumphantly, increased and multiplied. The fertility aspect, balancing the Time-Death-Limitation aspect, is essential to our concept of Binah. Time-Death puts his sickle to the wheat of Ceres, and both are Binah symbols.

51. The idea of the Outer Robe of Concealment clearly suggests matter; and the shrouding herein of the Inner Robe of Glory of the life-principle. How clearly do these two ideas, taken together, convey to us the concept of the body ensouled by the spirit; its Inner Robe of Spiritual Glory concealed from all eyes by the outer covering of dense matter. Again and again, as we meditate upon these mysteries, do we find illumination from the apparently fortuitous collection of symbols assigned to each Sephirah. We have seen already in our study that no symbol stands alone, and that any penetration on the part of the intuition and the imagination serves to reveal long lines of interlacing connections between them.

52. The four Threes of the Tarot pack are the cards assigned to Binah, and indeed the number three is intimately associated with the idea of manifestation in matter. The two opposing forces find expression in a third, the equilibrium between them, which manifests on a lower plane than its parents. The triangle is one of the symbols assigned to Saturn as the god of densest matter, and the triangle of art, as it is called, is used in magical ceremonies and it is the intention to evoke a visible appearance on the plane of matter; for other modes of manifestation the circle is used.

53. The Three of Wands is called the Lord of Established Strength. Here again we have the idea of power in equilibrium, which is so characteristic of Binah. Wands, be it remembered, represent the dynamic Yod force. This force, when in the sphere of Binah, ceases to be dynamic and becomes consolidated.

54 Cups are essentially the female force, for the cup or chalice is one of the symbols of Binah and is intimately allied with the yoni in esoteric symbolism. The three of Cups is, therefore, at home in Binah, for the two sets of symbols reinforce each other. The three of Cups, which is aptly named Abundance, represents the fertility of Binah in her Ceres aspect.

55. The Three of Swords, however, is called Sorrow, and its symbol in the Tarot pack is a heart pierced by three swords. Out readers will recall the reference to the sword-pierced heart of the Virgin Mary in Catholic symbolism, and Mary equates with Marab, bitter, the Sea. *Ave, Maria, stella maris!*

56. Swords are, of course, Geburah cards, and as such represent the destructive aspect of Binah as Kali, the wife of Siva, the Hindu goddess of destruction.

57. Pentacles are cards of Earth, and as such are congenial to Binah, form. The three of Pentacles, therefore, is Lord of Material Works, or activity on the plane of form.

58. It will be observed that, just as the planets have their influence reinforced when they are in those signs of the Zodiac which are called their own houses, so the Tarot cards, when the significance of the Sephirah coincides with the spirit of the Suit, represent the active aspect of the influence; and when the Sephirah and the suit represent different influences, the card is malefic. For instance, the fiery Sword card is a card of evil omen when it finds itself in the sphere of influence of Binah.

59. And finally to sum up. I have written of Binah at this length because with her is completed the Supernal Triad and the first of the Pairs of Opposites. She represents not only herself but also the functioning partners, for it is impossible to understand any unit on the Tree save by reference to those other units with which it interacts and equilibrates. Chokmah without Binah, and Binah without Chokmah, are incomprehensible, for the pair are the functional unit, and not either of them separately.

CHAPTER XVIII

CHESSED, THE FOURTH SEPHIRAH

TITLE: Chesed, Mercy. (Hebrew spelling: Cheth, Samech, Daleth.)

MAGICAL IMAGE: A mighty crowned and throned king.

SITUATION ON THE TREE: In the centre of the Pillar of Mercy.

YETZIRATIC TEXT: The Fourth Path is called the Cohesive or Receptive Intelligence because it contains all the Holy Powers, and from it emanate all the

spiritual virtues with the most exalted essences. They emanate one from another by virtue of the Primordial Emanation, the Highest Crown, Kether.

TITLES GIVEN TO CHESED: Gedulah. Love. Majesty.

GOD-NAME: El.

ARCHANGEL: Tzadkiel.

ORDER OF ANGELS: Chasmalim, Brilliant Ones.

MUNDANE CHAKRA: Tzedek, Jupiter.

SPIRITUAL EXPERIENCE: Vision of Love.

VIRTUE: Obedience

VICE: Bigotry. Hypocrisy. Gluttony. Tyranny.

CORRESPONDENCE IN THE MICROCOSM: The left arm.

SYMBOLS: The solid figure - Tetrahedron. Pyramid. Equal armed Cross. Orb. Wand. Sceptre. Crook.

TAROT CARDS: The four Fours.

FOUR OF WANDS : Perfected work.

FOUR OF CUPS: Pleasure.

FOUR OF SWORDS: Rest from strife.

FOUR OF PENTACLES: Earthly power.

COLOUR IN ATZILUTH: violet. Deep

BRIAH: Blue.

YETZIRAH: Deep purple.

ASSIAH: Deep azure, flecked yellow.

I

1. Between the Three Supernals and the next pair of balancing Sephiroth upon the Tree there is a great gulf fixed

[Page 162]

which is called by mystics the Abyss. The next six Sephiroth, Chesed, Geburah, Tiphareth, Netzach, Hod, and Yesod, constitute what Qabalists call Microprosopos, the

Lesser Countenance, Adam Kadmon, the King. The Queen, the Bride of the King, is Malkuth, the Physical Plane. We have, then, the Father (Kether), the King, and the Bride, and in this configuration of the Tree there is profound symbolism and great practical importance in both philosophy and magic.

2. The Abyss, the gulf fixed between Macroprosopos and Microprosopos, marks a demarcation in the nature of being, in the type of existence prevailing upon the two levels. It is in the Abyss that Daath, the Invisible Sephirah, has its station, and it might aptly be named the Sephirah of Becoming. It is also called Understanding, which might be further interpreted as Perception, Apprehension, Consciousness.

3. These two types of existence, Macroprosopos and Microprosopos, serve to indicate the potential and the actual. Actual manifestation, as our finite minds can conceive it, begins with Microprosopos; and the first aspect of Microprosopos to come into being is Chesed, the Fourth Sephirah, situated immediately below Chokmah, the Father, in the Pillar of Mercy, of which it is the central Sephirah. It is balanced across the Tree by Geburah, Severity; and this pair, Geburah and Gedulah, form "the Power and the Glory" of the final invocation of the Lord's Prayer; the "Kingdom" being, of course, Malkuth.

4. As we have already seen, we can learn much from the position of a Sephirah in the pattern of the Tree; and from the position of Chesed on the Pillar of Mercy we see that it is Chokmah upon a lower arc. It is emanated by Binah, a passive Sephirah, and emanates Geburah, a katabolic Sephirah, whose Mundane Chakra is Mars with all his warlike symbolism, who is Saturn upon a lower arc.

5. From these things we can learn a great deal about Chesed. It is the loving father, the protector and preserver, just as Chokmah is the All-begetter. It continues the work of Chokmah, organising and preserving that which the All-Father has begotten. It balances with mercy the severity of Geburah. It is anabolic, or upbuilding, in contra-distinction to the katabolism, or down-breaking of Geburah.

6. These two aspects are very well expressed in the Magical Images assigned to these two Sephiroth. These Magical Images are both kings; that of Chesed a king on his throne, and that of Geburah a king in his chariot; in other words, the rulers of the kingdom in peace and in war; the one a lawgiver and the other a warrior.

7. The analogy of physiology gives us a clear understanding of the significance of these two Sephiroth. Metabolism consists of anabolism, or the ingesting and assimilating of food and its building up into tissue, and katabolism, or the breaking down of tissue in active work and the output of energy. The by-products of katabolism are the fatigue-poisons which have to be eliminated from the blood by rest. The life-process is an everlasting upbuilding and downbreaking, and Geburah and Gedulah (another name for Chesed) represent these two processes in the Macrocosm.

8. Chesed, being the first Sephirah of Microprosopos, or the manifested universe, represents the formulation of the archetypal idea, the~ concretion of the abstract. When

the abstract principle that Qms the root of some new activity is formulating in our minds, we are operating in the sphere of Chesed. Let an example serve to make this clear. Supposing an explorer is looking out from a mountain over a newly discovered country and sees that the inland plains lying behind the coastal ranges are fertile, and that a river flows through these plains and makes its way to the sea through a gap in the mountain chain. He thinks of the agricultural wealth of the plains, transport down the river, and a harbour on the estuary, he knows that the scour of the river will have made a tunnel by which ships can come in. In his mind's eye he sees the wharfs and the warehouses, the stores and the dwellings. He wonders whether the mountains contain minerals, and pictures a railway line alongside the river and branch lines up the valleys. He sees the colonists coming in, and the need

[Page 164]

for a church, a hospital, a gaol, and the ubiquitous saloon. His imagination maps out the main street of the township, and he determines to stake corner lots that he may prosper with the prosperity of the new settlement. All this he sees while virgin forest covers the coastal belt and blocks the mountain passes. But because he knows that the plains are fertile and that the river has come through the mountains, he sees in terms of first principles all the development that follows. While his mind is working thus, he is functioning in the sphere of Chesed whether he knows it or not; and all those who can also function in terms of Chesed and think ahead as he does, seeing the thing that must arise from given causes long before the first line is drawn on the plan or the first brick laid in the trench, are able to possess themselves of the valuable land where the wharfs must be built and the main street must run.

9. All the creative work of the world is done thus, by minds working in terms of Chesed the King seated upon his throne, holding sceptre and orb, ruling and guiding his people.

10. By contrast with this we observe the people whose minds cannot function above the level of Malkuth, the Bride of the King. They are the folk who cannot see the wood for trees. They think in terms of detail, lacking any synthetic principle. Their logic is never able to reach back to origins but is always materialistic. They are never able to discern subtle causes, and are the victims of what they call the caprices of chance. They are unable to discern subtle conditions, nor can they work out the line that primary impulses will follow, or can be made to follow, when these are coming down, or being brought down, into manifestation.

11. The occultist who does not possess the initiation of Chesed will be limited in his function to the sphere of Yesod, the plane of Maya, illusion. For him the astral images reflected in the magic mirror of subconsciousness will be actualities; he will make no attempt to translate them into terms of a higher plane and learn what they really represent. He will have made himself a dwelling in the sphere of illusion, and he will be deluded by the phantasms of his own unconscious projection. If he were able to function in terms of Chesed, he would perceive the underlying archetypal ideas of which these magical images are but the shadows and symbolic representations. He then becomes a master in

the treasure-house of images instead of being hallucinated by them. He can use the images as a mathematician uses algebraic symbols. He works magic as an initiated adept and not as a magician.

12. The mystic functioning in the Christ-centre of Tiphareth, if he lacks the keys of Chesed, will also be hallucinated, but in a different and more subtle way. Upon this level he will read the magical images truly enough, referring them to that which they represent and giving them no values save as tokens, as St Theresa has so clearly shown in her *Interior Castle*. He will fall into the error, however, of thinking that the images he perceives and the experiences he undergoes are the direct and personal dealings of God with his soul, instead of realising that they are stages on the Path. He will find a personal Saviour in the God-man instead of in the regenerative influence of the Christ-force. He will worship Jesus of Nazareth as God the Father, thus confounding the Persons.

13. Chesed, then, is the sphere of the formulation of the archetypal idea; the apprehension by consciousness of an abstract concept which is subsequently brought down the planes and concentered in the light of experience of the concretization of analogous abstract ideas. Equally, in its macrocosmic aspect, it represents a corresponding phase in the process of creation. Materialistic science believes that the only abstract concepts are those formulated by the mind of man. Esoteric science teaches that the Divine Mind formulated archetypal ideas in order that substance might take form, and that without such Archetypal ideas substance was formless and void, primordial slime awaiting the breath of life to organise into the crystal and cell. The latest researches in physics have revealed that every substance, without exception, has a crystalline structure, and the lines of tension that the psychic perceives as etheric stresses have been revealed by the X-rays.

[Page 166]

14. A very important and very imperfectly understood part in the Mysteries is played by those beings who are generally called the Masters. Different schools define the term differently, and some include living adepts of a high grade among the Masters; but we consider that it is advisable to make a distinction between the incarnate and disincarnate Elder Brethren because their mission and mode of function are entirely different. The title of Master should therefore be given only to those who are free from the wheel of birth and death. In the terminology of the Western Esoteric Tradition the grade of Adeptus Exemptus is assigned to Chesed, the term Exemptus, or exempt, indicating that freedom from karma which liberates from the Wheel. I am fully aware that others may attach a different significance to the title, and that there are persons in incarnation who hold this grade. To these I reply that such persons, if the grade be a functioning one and not a mere empty honour, are karma-free and will not reincarnate. Such persons might justly be termed Masters, for their consciousness is of the grade of a Master, but as it is so necessary to make the distinction between incarnate and disincarnate adepts, it is better to qualify the classification by this minor distinction than to allow to humans a prestige which human nature is not fitted to bear. As long as an adept is incarnated he will be liable to human frailties in some degree, and to the limitations imposed by old age and physical health. It is not until he is free from the Wheel, and functions as pure

consciousness, that he will escape from human bondage to heredity and environment; therefore the same reliance cannot be placed in him that can be placed in the true, disincarnate Masters.

15. A very important part of the work of the Masters is the concretion of the abstract ideas conceived by the Logoidal consciousness. The Logos, Whose meditation gives birth to worlds and Whose unfolding consciousness is evolution, conceives archetypal ideas out of the substance of the Unmanifest - to use a metaphor where definition is impossible. These ideas remain within the Cosmic consciousness of the Logos like the seed within the flower, because there is no soil therein for their germination. The Logoidal consciousness, as pure being, cannot upon Its own plane provide the formative aspect necessary for manifestation. It is taught in the esoteric traditions that the Masters, disincarnate consciousnesses disciplined by form but now formless, in their meditations upon the Godhead are able to perceive telepathically these archetypal ideas in the mind of God, and by realising the practical application of them to the planes of form and the line this development will follow, produce concrete images in their own consciousness which serve to bring the abstract archetypal ideas down to the first of the planes of form, called by the Qabalists, Briah.

16. This, then, is the work that the Masters perform in their special sphere, the sphere of the organising, upbuilding, constructive Chesed on the Pillar of Mercy. The work of the Dark Masters, who are quite different from the Black Adepts, is performed in the corresponding sphere of Geburah, on the Pillar of Severity, which will be considered in due course. The point of contact between the Masters and their human disciples is in Hod, the Sephirah of ceremonial magic, as is indicated by the Yetziratic Text, which declares that from Gedulah, the Fourth Sephirah emanates the essence of Hod. These hints given in the Yetziratic Texts concerning the relations between the individual Sephiroth are very important in practical occultism. Ho then, may be taken as representing Chokmah and Chesed upon a lower arc, even as Netzach represents Binah and Geburah. This will be explained in detail when these Sephiroth are dealt with, but it must be referred to briefly now in order to make the function of Chesed intelligible.

17. We have now reached a point in the scheme of the Tree where the type of activity comes within the range of human consciousness. In the study of the preceding Sephiroth we were formulating metaphysical concepts. These concepts, although {???rei~dte} from immediate application to the life of form, are exceedingly important, for unless they are at the

[Page 168]

basis of our understanding of esoteric science we shall fall into superstition and use magic as magicians, not as adepts; in other words, we shall be unable to transcend the bondage of the planes of form and will be hallucinated and fall under the domination of the phantoms evoked by the magical imagination, instead of using them as the beads on the abacus of our calculations, which is as if the engineer used the slide-rule as if it were a foot-rule.

18. Chesed, then, reflects into Hod through the Christcentre of Tiphareth, just as Geburah reflects into Netzach. This teaches us a great deal, for it indicates that for consciousness to rise from form to force, and for force to descend to form, it must pass through the Centre of Equilibrium and Redemption, to which are assigned the Mysteries of the Crucifixion.

19. It is to the Sphere of Chesed that the exalted consciousness of the adept rises in his occult meditations; it is here that he receives the inspirations which he works out on the planes of form. It is here that he meets the Masters as spiritual influences contacted telepathically, without any intermingling of personality. This is the true, and the highest, mode of contact with the Masters, contact with them as mind to mind in their own sphere of exalted consciousness. When the Masters are seen clairvoyantly as robed beings, the colours of whose robes indicate their ray, they are being perceived reflected into the sphere of Yesod, which is the kingdom of phantasms and hallucinations. We are treading on precarious ground when we have to meet the Masters here. It is here that the anthropomorphic form is given to the spiritual inspiration which so misleads those psychics who cannot rise to Chesed. It is thus that the announcement of a spiritual impulse flowing out upon the world gets interpreted as the coming of a World Teacher.

II

20. As we come down the Tree into those spheres more within the range of our comprehension than the Three Supernals, we find the symbols associated with each Sephirah becoming more and more eloquent as they speak to our experience instead of causing us to reason by analogy.

21. The magical image representing Chesed is a mighty throned and crowned king; throned because he is seated in stability in a kingdom at peace, not going forth in his chariot to war, as is suggested by the magical image of Geburah. The additional titles of Chesed-Majesty, Love-bear out this concept of the benignant king, the father of his people; and the situation of Chesed in the centre of the Pillar of Mercy further bears out the idea of stability and ordered and merciful law, governing for the good of the governed. The title of the angelic host associated with Chesed-the Chasmalim, or Brilliant Ones-enhances the idea of the royal splendour of Gedulah, which is an alternative title frequently used for Chesed. The Mundane Chakra assigned to Chesed-Jupiter, the great benignity of astrology-confirms the whole chain of associations.

22. Upon the microcosmic, or subjective, side we find that the virtue assigned to this sphere of experience is that of obedience. It is only through the virtue of obedience that the subject can profit by the wise rule of Chesed. We have to sacrifice much of our independence and egoism in order to share in the amenities of organised social life. From this sacrifice and restriction there is no escape. In this sphere no more than in any other is impossible to eat one's cake and have it. There is no such thing as liberty if liberty is to be interpreted as unrestricted self-will. The force of gravity resists us, if nothing else. Liberty might be defined as the right to

choose one's master, for a ruler one must have in all organised corporate life, else there is chaos. It is effectual and inspiring leadership that is the crying need of the world at the present time, and country after country is seeking and finding the ruler who approximates most closely to its national ideal, and is falling {???4nasLn~} man behind him. It is the benign, organised in the ordering Jupiter influence that is the only medicine for

[Page 170]

the world's sickness; as this comes to bear, the nations will recover their emotional poise and physical health.

23. Conversely, the vices assigned to Chesed - bigotry, hypocrisy, gluttony, and tyranny - are all social vices. Bigotry refuses to move with the times or see another point of View, both fatal vices in racial relationships. Hypocrisy **implies** that we do not give ourselves whole-heartedly to the corporate life, but, like Ananias, keep back a part of the price. Gluttony exposes us to the temptation of taking more than our fair share of the common store, and is but another name for selfishness. And tyranny is that wrong use of authority which arises where there are taints of cruelty and vanity in the nature.

24. The correspondence in the microcosm is given as the left arm, which indicates a less dynamic mode of the functioning of power than that of the right hand which grasps~the sword in the magical image of Geburah. The left hand holds the orb, which signifies the earth itself, and shows that all is held secure in the firm grasp of the ruler. Chesed, in fact, denotes firmness rather than dynamic strength and energy.

25. The mystical number of Chesed is said to be four, and this is often represented as a four-sided figure, or tetrahedron. A talisman of Jupiter is always set up on such a figure. Another symbol of Chesed is the solid figure as understood in geometry. The reason for this is easily seen if one considers the geometrical figures assigned to the Sephiroth which have already been studied. The point is assigned to Kether; the line to Chokmah; the two-dimensional plane to Binah; consequently the three-dimensional solid naturally falls to Chesed.

26. But more is signified in this connection than a mere random series of symbols. The solid essentially represents manifestation as it is known to our three-dimensional consciousness. We cannot conceive of one- or two-dimensional existence save mathematically or symbolically. Chesed, as we have already noted, is the first of the manifested Sephiroth; therefore how naturally does the symbol of the solid figure come into line with the rest of its symbolism. The solid figure used for the purpose of symbolising Chesed is usually the pyramid, which is a four-sided figure, consisting of three faces and a base, thus expressing the numerological quality of Chesed.

27. There are many different aspects of the cross as a significant Mystery symbol, besides the Calvary Cross of the Christian Mystery, and each of these crosses represents different modes of the functioning of spiritual power, just as do the different forms of the Holy Names of God. The form of cross associated with Chesed is the equal-armed cross, which

is symbolic of the four elements in equilibrium, and implies the ruling of nature by a synthesising influence which brings all things into balanced harmony.

28. The orb, wand, sceptre, and crook, all assigned to this Sephirah, express so perfectly the different aspects of the benign royal power of Chesed that they are in no need of elucidation.

29. The four Tarot cards that are placed on Chesed when is set up for a divination carry out the ruling idea in the correspondence. The Four of Wands symbolises Perfected Work, thus representing admirably the achievement of the king in peace-dome in his well-governed kingdom. The Four of Cups is called the Lord of Pleasure, and is in keeping with the title of Splendour assigned to Chesed and with the brilliancy of its angelic host. The Four of Swords indicates Rest from Strife, and agrees perfectly with the significance of the seated ruler. The Four of Pentacles is the Lord of Earthly Power, a symbolism so obvious that it needs no elucidation.

30. The consideration of the Yetziratic Text has been left to the last in this study, in order that the sequence of the symbolism, unfolding in such ordered relationship, might not be broken in upon. Moreover, this text contains so much significance that it is best studied when we are as fully equipped as possible with the cognate symbolism. Much that relates to the thing contained in this text, however, has already been studied as it came up for examination in relation to the

[Page 172]

preceding Sephiroth. I will not repeat this at length, but content myself with referring the student to those pages where the matters are dealt with in detail, thus avoiding needless repetition which otherwise is bound to occur in the study of such a subject as the Tree of Life, where different symbols represent the same potency upon different levels of manifestation or under different aspects.

31. "The Fourth Path is called the Cohesive Intelligence." How clearly can we see the meaning of these words when we have learnt to look upon Chesed through the symbol of the king seated upon his throne, organising the resources and prosperity of his kingdom, and causing all things to be drawn together into an ordered whole for the common good.

32. It is also called the Receptive Intelligence in the Yetziratic Text, and this is borne out in the symbol of the left arm, which is assigned to this Sephirah in the microcosm.

33. Chesed "Contains all the Holy Powers, and from it emanate all the spiritual virtues with the most exalted Essences." The teaching implicit in this statement has already been elucidated in the previous exegesis under the concept of archetypal ideas.

34. "They emanate one from another by virtue of the primordial emanation, the Highest Crown, Kether." These concepts have already been dealt with in relation to the Second

Sephirah, Chokmah, when the overflowing of force from Sphere to Sphere was considered.

CHAPTER XIX

GEBURAH, THE FIFTH SEPHIRAH

TITLE: Geburah, Strength, Severity. (Hebrew spelling: Gimel, Beth, Vau, Resh, Heh.)

MAGICAL IMAGE: A mighty warrior in his chariot.

SITUATION ON THE TREE: In the centre of the Pillar of Severity.

YETZIRATIC TEXT: The Fifth Path is called the Radical Intelligence because it resembles Unity, uniting itself to Binah, Understanding, which emanates from the primordial depths of Chokmah, Wisdom.

TITLES GIVEN TO GEBURAH: Din: Justice. Pachad: Fear.

GOD-NAME: Elohim Gebor.

ARCHANGEL: Khamael.

HOST OF ANGELS: Seraphim, Fiery Serpents.

MUNDANE CHAKRA: Madim, Mars.

SPIRITUAL EXPERIENCE: Vision of Power.

VIRTUE: Energy. Courage.

VICE: Cruelty. Destruction.

CORRESPONDENCE IN THE MICROCOSM: The right arm.

SYMBOLS: The Pentagon. The Five-petalled Tudor Rose. The Sword. The Spur. The Scourge. The Chain.

TAROT CARDS: The four Fives.

FIVE OF WANDS: Strife.

FIVE OF CUPS: Loss in pleasure.

FIVE OF SWORDS: Defeat.
FIVE OF PENTACLES: Earthly trouble.
COLOUR IN ATZILUTH: orange.

BRIAH: Scarlet red.
YETZIRAH: Bright scarlet.
ASSIAH: Red, flecked with black.

I

1. One of the least understood things in Christian philosophy is the problem of evil; and one of the things least

[Page 174]

adequately dealt with in the Christian ethic is the problem of force, or severity, as contrasted with mercy and mildness. Consequently Geburah, the Fifth Sephirah, which has for additional titles Din (Justice) and Pachad (Fear), is one of the least understood of all the Sephiroth, and is therefore one of the most important. Were it not that the Qabalistic doctrine explicitly lays it down that all the Ten Sephiroth are holy, there are many who would be inclined to look Upon Geburah as the evil aspect of the Tree of Life. Indeed, the planet Mars, whose sphere is the Mundane Chakra of Geburah, is called in astrology an infortune.

2. Those, however, who are instructed beyond the crude pretty-pretty of a wish-fulfilling philosophy know that Geburah is by no means the Enemy or Adversary described in Scripture, but the king in his chariot going forth to war whose strong right arm protects his people with the sword of righteousness and ensures that justice shall be done. Chesed, the king on his throne, the father of his people in times of peace, may win our love; but it is Geburah, the king in his chariot going forth to war, who commands our respect. Sufficient justice has not been done to the part played by the sentiment of respect in the emotion of love. We have a kind of love for the person who can put the fear of God into us, should occasion arise, which is of quite a different quality, is far more steadfast and permanent, and, curiously enough, far more emotionally satisfying, than the love with which no tinge of awe is mingled. It is Geburah that supplies the element of awe, of the fear of the Lord which is the beginning of wisdom, and of a general wholesome respect which helps us to keep to the straight and narrow way and calls forth our better nature, because we know our sins will find us out.

3. This is a factor to which the Christian ethic, as popularly understood, does not give sufficient weight; and because the general tone of Christian society is biased against the holy Fifth Sephirah, it will be necessary to consider its place in relation to the Tree and the part it plays in both spiritual and social life in considerable detail; for it is ill-

understood, and this absence of understanding of the Geburah-factor is the cause of many of our difficulties in modern life.

4. Geburah holds the central position on the Pillar of Severity; it therefore represents the katabolic, or down-breaking aspect of force. Katabolism, be it remembered, is that aspect of metabolism, or the life-process, which is combined with the release of force in activity. It has been said that good is that which is constructive, which builds up, and evil is that which is destructive, which breaks down. How false this philosophy is we see when we try to classify, according to this principle, a cancer and a disinfectant. In the deeper, more philosophical teaching of the Mysteries we recognise that good and evil are not things in themselves, but conditions. Evil is simply misplaced force; misplaced in time, if it is out of date, or so far ahead of its day as to be impracticable. Misplaced in space, if it turns up in the wrong place, like the burning coal on the hearth-rug or the bath-tub through the drawing-room ceiling. Misplaced in proportion, if an excess of love makes us silly and sentimental, or a lack of love makes us cruel and destructive. It is in such things as these that evil lies, not in a personal Devil who acts as Adversary.

5. Geburah the Destroyer, the Lord of Fear and Severity, is therefore as necessary to the equilibrium of the Tree as Chesed, the Lord of Love, and Netzach, the Lady of Beauty. Geburah is the Celestial Surgeon; he is the knight in shining armour, the dragon-slayer; beautiful as a bridegroom in his strength to the maiden in distress, though, no doubt, the dragon might have preferred a little more love.

6. The initiations of the infortunes, Saturn, Mars, and the deceptive lunar Yesod, are just as necessary to the evolution and balanced development of the soul as are the Mysteries of the Crucifixion assigned to Tiphareth. It is the one-sidedness of Christianity which is its bane, and is responsible for so much that is unsound and pathological in both our national and our private lives. But, equally, we must not forget that Christianity as a corrective to a pagan world that was sick unto death

[Page 176]

with its own toxins. We need what Christianity has to give but also, unfortunately, we cannot do without that which it lacks. Let us now consider the astringent, corrective influence of Geburah.

7. Dynamic energy is as necessary to the welfare of society as meekness, charity, and patience. We must never forget that the eliminatory diet, which will restore health in disease, will produce disease in health. We must never exalt the qualities which are necessary to compensate an overplus of force into ends in themselves and the means of salvation. Too much charity is the handiwork of a fool; too much patience is the hallmark of a coward. What we need is a just and wise balance which makes for health, happiness, and sanity all round, and the frank realisation that sacrifices are necessary to obtain it. You cannot eat your cake and have it in the spiritual sphere any better than anywhere else.

8. Geburah is the sacrificial priest of the Mysteries. Now sacrifice does not mean giving up something that is dear to you because a jealous God will brook no rival interests in His devotees and is flattered by your pain. It means the deliberate and open-eyed choice of a greater good in preference to a lesser good, and the athlete prefers the fatigue of exercise to the ease of the sloth that puts him out of condition. Coal burned in a furnace is sacrificed to the god of steam-power. Sacrifice is really the transmutation of force; the latent energy in the coal offered up on the sacrificial altar of the furnace is transmuted into the dynamic energy of steam by means of the appropriate machinery.

9. There is both psychological and cosmic machinery available in connection with every act of sacrifice which converts it into spiritual energy; and this spiritual energy can be applied to other mechanisms and re-appear on the planes of form as an entirely different type of force to that as which it started.

10. For instance, a man may sacrifice his emotions to his career; or a woman may sacrifice her career to her emotions. If the cut is clean, and there is no repining, an immense amount of psychic energy is released for use in the chosen channel. But if the lesser desire is merely inhibited and denied expression and not really laid upon the altar of sacrifice as a deliberate free-will offering, the unfortunate victim has made the worst of both worlds. It is here that we need Geburah to come like the priest that takes the sacrifice from our hands, even if it be our first-born, and offers it up to God with the quick, clean, merciful stroke. For Geburah in the microcosm, which is the soul of man, is the courage and resolution that frees us from the taint of self-pity.

11. How badly do we need the Spartan virtues of Geburah in this age of sentimentality and the neuroses. How many break-downs would be saved if this Celestial Surgeon were permitted to make the clean cut that has a chance to heal, and so avoid the deadly compromise and irresolution that is like an open wound and so often goes septic.

12. And again, if there were no strong hand at the service of good in the world, evil would multiply. Though it is not well to quench smoking flax when the flax is making an effort, it is equally evil to put up with the smouldering when what it really wants is the use of the poker. There is a place where patience becomes weakness and wastes the time of better men, and when mercy becomes folly and exposes the innocent to danger. The policy of non-resistance to evil can only be pursued satisfactorily in a well-policed society; it has never been tried with success under frontier conditions. For Nature, red in tooth and claw, wears the colour of Geburah; whereas the compensatory civilisation is of Chesed, Mercy, which modifies the unrestricted force and mutual destructiveness of all that is in the Geburah phase of its development. But, equally, we must remember that civilisation rests upon Nature as a building rests upon its foundations, wherein is concealed the sanitation so necessary to health.

13. Whenever there is anything that has outlived its usefulness, Geburah must wield the pruning-knife; wherever there is selfishness, it must find itself impaled on the spear-point of Geburah; wherever there is violence against the

[Page 178]

weak, or the merciless use of strength, it is the sword of Geburah, not the orb of Chesed, that is the most effectual counteractant; wherever there is sloth and dishonesty, Geburah's sacred scourge is needed; and where there is a removal of the landmarks set for our neighbour's protection, it is the chain of Gebu'rah that must restrain.

14. These things are as necessary to the health of society and of the individual as brotherly love, and a good deal rarer, used medicinally and not vengefully, in our sentimental age. Someone has got to cry "Halt" to the aggressor, and "Move on" to those who are blocking the way, and that someone is functioning as a priest in the sphere of the holy Fifth Sephirah.

II

15. If we watch life we shall see that rhythm, not stability, is its vital principle. Such stability as manifesting existence achieves is the stability of a man on a bicycle, balanced between two opposing pulls; he can fall over to the right, or he can fall over to the left, and he keeps his balance by means of his momentum.

16. In the life of individuals, in the development of any transaction, in the tone of any disciplined or highly organised group-mind, we see the constant alternation of the Geburah and Gedulah influences in a rhythmic swing from one side to the other. Anyone who is responsible for the disciplining of an organised group knows the constant need for tightening and slackening the reins; for stimulating and steadying. There is a sense of the need to pay out line as the group surges forward with an impulse of interest and keenness, followed by the need to take up the slack as the impulse spends itself. If the slack is not taken up with a firm hand, the group tangles itself in the loops and waxes insubordinate. The wise handler of humans knows when the reaction has spent itself, and the moment has come to crack the whip of Geburah over the team and make it jump into the collar again as the new dynamic impulse surges up; but he also knows that he must not crack it too soon, while the team is having a breather, or one of the less stable units will get a leg over the traces.

17. Especially do we see the alternating rhythms of Geburah and Gedulah in national life. I venture to prophesy that the nation is passing out of a Gedulah phase and entering a Geburah one. Everywhere we see a mercy, that has been overstrained by the imperfections of human nature, being abrogated in favour of a severity which shall restore the balance of even-handed justice and prevent evil from multiplying. Police work is being reorganised; judges are giving stiffer sentences; penal reform has had a set-back; the humanitarian no longer has the last word. The group-soul of the race is entering upon a Geburah phase, and has lost patience with its sub-standard units.

18. For the next cycle the tendency will be to push the unfit into the discard and concentrate on bringing the fit to their finest development. Geburah will be the senior partner, and any mitigations of severity that Gedulah proposes will have to pass the scrutiny of even-handed justice. This is a very necessary reform, for towards the end of a phase extremes tend to develop, and the humanitarianism of Gedulah has been abused and made ridiculous, and its refinement has become finicking and lost touch with actualities.

19. When a new phase comes in on a group-mind scale, it is upon the least enlightened, the most crowd-minded that its influence is strongest; the cultured always tend to stand aside from extremes. We see this clearly indicated in the line taken by the various types of journalism. Popular journalism is crying Out for the free use of the cat as a punishment for crime; for the repudiation of debts and international agreements; for, in fact, a general slashing around with the sword of Geburah. There is on every hand a growing tendency to stand no non-Sense from anybody; a tendency which makes negotiations exceedingly difficult to carry on, for Geburah is at his worst as a negotiator, his one contribution to the discussion being that of the Greek soldier who took his sword and cut the knot.

20. Now the initiate, knowing that phase succeeds phase in

[Page 180]

rhythmic alternation, does not take any phase too seriously, nor think that it is either the end of the world or the millenium.

He knows that it will run its course being at first a valuable and necessary corrective, and in the end running to extremes; but provided there is sufficient vision among the illuminati of a race, the people will not perish, for the very fact of extremes being arrived at indicates the end of the swing, and the pendulum will normally reverse its motion and start coming back towards the centre of stability. It is only when vision is completely lost to a people that the pendulum is allowed to fly off its hook into self-destruction. Rome did it; Carthage did it; more recently Russia has done it. But even when social organisation breaks down and the pendulum has gone off into space, the principle of rhythm is inherent in all manifesting existence, and re-establishes itself as soon as any sort of organisation begins to arise out of the wreckage.

21. The great weakness of Christianity lies in the fact that it ignores rhythm. It balances God with Devil instead of Vishnu with Siva. Its dualisms are antagonistic instead of equilibrating, and therefore can never issue in the functional third in which power is in equilibrium. Its God is the same yesterday, to-day, and for ever, and does not evolve with an evolving creation, but indulges in one special creative act and rests on His laurels. The whole of human experience, the whole of human knowledge, is against the likelihood of such a concept being true.

22. The Christian concept being static, not dynamic, it does not see that because a thing is good, its opposite is not necessarily evil. It has no sense of proportion because it has no realisation of the principle of equilibrium in space and rhythm in time. Consequently, for

the Christian ideal the part is all too often greater than the whole. Meekness, mercy, purity and love are made the ideal of Christian character, and as Nietzsche truly points out, these are slave virtues. There should be room in our ideal for the virtues of the ruler and leader—courage, energy, justice and integrity. Christianity has nothing to tell us about the dynamic virtues; consequently those who get the world's work done cannot follow the Christian ideal because of its limitations and inapplicability to their problems. They can measure right and wrong against no standard save their own self-respect. The result is the ridiculous spectacle of a civilisation, committed to a one-sided ideal, being forced to keep its ideals and its honour in separate compartments.

23. We need Geburah's realism to balance Gedulah's idealism quite as much as we need to temper justice with mercy. Experience in the handling of children soon teaches us that the child that is never checked is a spoilt child; that the youth who lacks the spur of competition is apt to be a slack youth, for it is only the few who will work for work's sake. And so it is with nations; The monopoly, lacking the spur of competition, has always proved itself to be ineffectual; the non-competitive professions always suffer from intellectual obesity.

24. Geburah is the dynamic element in life that drives through and over obstacles. The character which is lacking in Martian aspects never gets to grips with life. Those who have had to depend on a non-Geburah bread-winner know that love is not a complete solution of life's problems. We must learn to love and trust the mailed warrior with the sword as well as Divine Love which gives us the cup of cold water and says, "Come unto me all ye that are weary and heavy laden."

25. When we have learnt to kiss the rod and realise the value of astringent experiences we have taken the first of the Geburah initiations; and when we have learnt to lose our lives in order to find them, we have taken the second. There is a certain type of courage which does not fear dissolution, for it knows that all spiritual principles are indestructible, and so long as the archetypes persist, anything can be rebuilt. Geburah is only destructive to that which is temporal; it is the servant of that which is eternal; for when by the acid activity of Geburah all that is impermanent has been eaten away, the eternal and incorporeal realities shine forth in all their glory, every line revealed.

26. Geburah is the best friend we can have if we are honest.

[Page 182]

Sincerity has no need to fear his activities; indeed, it is the greatest we can have against the insincerity of others for there is nothing to equal the Geburah-influence for debunking" both persons and viewpoints.

27. Geburah and Gedulah must work together; never the one without the other. We must adore the God of Battles as well as the God of Love in order that the combative element in the universe may not break from its allegiance to the One God, I Am That I Am. The sword must not be cursed as an instrument of the Devil, but blessed and dedicated in

order that it may never be unsheathed in an unrighteous cause. It must not be cast aside in an impracticable pacifism, but placed at God's service; so that when the command goes forth that the evil thing shall not be suffered any longer, the mighty Khamael, Archangel of Geburah, may lead the Seraphim into battle, not in destructive rage, but temperately and impersonally in God's service in order that evil may be cleared up and good prevail.

III

28. So much has already been said concerning the nature of Geburah that a great deal does not remain to say in the analysis of the attribution.

29. The Yetziratic Text tells us that the Fifth Path is called the Radical Intelligence because it resembles Unity. Now Unity is one of the titles applied to Kether; therefore we may say that Geburah is akin to Kether on a lower arc. There are several Sephiroth which are thus referred to in the *Sepher Yetzirah*, and these references are very important when arriving at an understanding of their nature. Chokmah is spoken of as the Splendour of Unity, equalling it. Of Binah it is said that its roots are in Amen, which is also a title of Kether.

30. Geburah is a highly dynamic Sephirah, and its energy overflowing into the world of form and energising it bears a close analogy to the overflowing force of Kether, which is the basis of all manifestation. It is also said of Geburah in the Yetziratic Text that it ~nites itself to Binah, Understanding. When we recall that in astrology Saturn, the Mundane Chakra of Binah, and Mars, the Mundane Chakra of Geburah, are called the Greater and Lesser Infortunes, we see that there must be more than a superficial connection between the two.

32. Binah is called the bringer-in of death because it is the giver of form to primordial force, thus rendering it static; Geburah is called the Destroyer because the fiery Mars-force breaks down forms and destroys them. Thus we see that Binah is perpetually binding force into form, and Geburah perpetually breaking up and destroying all forms with its disruptive energy.

33. But equally we must see that it is only when the protecting, preserving influence of Chesed is in abeyance that the destructive influences of Geburah are able to work upon the forms built up by Binah, for the path of the Emanations between Binah and Geburah is *via* Chesed. Geburah is the essential corrective of Binah, without which Binah would bind all creation into rigidity. Binah, in its turn, as is pointed out in the Yetziratic Text, emanates from the primordial depths of Cliokmah, Wisdom. Thus we see that there is a dynamic aspect even to Binah. No Sephirah is wholly of one kind of force, for each emanates from a SephiAah of the opposite type of polarity to itself, and in its turn emanates a Sephirah of opposite polarity. What we really have in the Lightning Flash is successive phases in the development of a single force; and because these emanate, but do not supersede each other, they remain as planes of manifestation and types of organisation.

34. These successive phases and planes of manifestation might be likened to the successive reaches of a river. It starts as a mountain stream; in the next reach is a series of rapids and waterfalls; then come water-meadows and placidity; and finally the great waterway between docks bearing shipping. The different reaches of the river remain constant; the type of water in each is constant; clear and sparkling in the upper reaches, loaded with alluvia among the water-meadows, and

[Page 184]

fouled with grime below the docks. But at the same time) the water itself is not constant, for it does not stagnate on any reach, for they are all in unbroken communication the one with the other; they "emanate" each other, to use the language of the Qabalah. But the water changes its nature as it progresses because something is added to it by the experiences it undergoes in each reach; alluvial soil from the water-meadows; city grime from the docks.

35. So the primordial emanation of Kether becomes modified in each Sephirotic "reach" of the cosmic river; the reaches," or Sephirotic Spheres, remain constant; the emanations flow on, undergoing modification in each Sphere.

36. The titles assigned to Geburah of Strength, Justice, Severity, and Fear speak for themselves and indicate the dual aspects of this Sephirah. Now that we are coming down the Tree into the planes of form we see more and more clearly that every Sephirah is two-sided, and that its overplus tends to unbalanced force.

37. The Magical Image of a mighty warrior in his chariot, crowned and armed, indicates the dynamic nature of the Geburah-force. The Mundane Chakra of the fiery Mars expresses even more fully the same idea.

38. The Spiritual Experience that is conveyed by initiation into the Sphere of Geburah is the Vision of Power. It is only when a man has received this that he becomes an Adeptus Major. The right handling of power is one of the greatest tests that can be imposed on any human being. Up to this point in his progress up the grades an initiate learns the lessons of discipline, control, and stability; he acquires, in fact, what Nietzsche calls slave-morality-a very necessary discipline for unregenerate human nature, so proud in its own conceit. With the grade of Adeptus Major, however, he must acquire the virtues of the superman, and learn to wield power instead of to submit to it. But even so, he is not a law unto himself, for he is the servant of the power he wields and must carry out its purposes, not serve his own. Though no longer responsible to his fellow-men he is still responsible to the Creator of heaven and earth, and will be required to give an account of his stewardship.

39. Great freedom is his; but also great strain. He can speak the word of power that unlooses the wind, but he must be prepared to ride the ensuing whirlwind. This is a thing that the amateur magician does not always realise.

40. The energy and courage which are the virtues of Mars, and the cruelty and destruction which are his vices when these qualities run to excess, call for no comment, for they are self-explanatory.

41. The symbols assigned to Mars-Geburah need some elucidation, however, as their significance is not in all cases apparent at first sight.

42. Figures with a varying number of sides are assigned to the different planets, and in ceremonial or talismanic magic are used as the outline of any form associated with a planetary force. To Saturn, the oldest planet, the first to develop in evolutionary time, is assigned the simplest two-dimensional figure-the triangle. The balanced stability of Chesed gets the four-sided figure, the square; and to the third planetary Sephirah, Mars, is assigned the five-sided figure, and five is looked upon in the Qabalistic system as the number of Mars. Consequently the Pentagon, the five-sided figure, is the symbol of Mars, and any altar to Mars should be pentagonal or five-sided, likewise any talisman. The five-petalled Tudor rose, which is another symbol of Mars, requires more explanation; but when we remember the intimate association between Mars and Venus in mythology, and that the rose is the flower of Venus, we get a clue to the significance of the symbolism. The lines of force, crossing over on the Tree, go from Geburah-Mars to Netzach-Venus through Tiphareth, the Place of the Redeemer, the centre of equilibrium, in the same way that Caesed and Hod connect up, as is clearly indicated in the Yetziratic Text, which says of Hod that it has its root in the hidden places of Gedulah, the Fourth Sephirah.

43. Realising, then, the intimate relationship between the diagonal pairs that form the four corners of the central square

[Page 186]

of the Tree, we understand the linked relationship indicated by the form of the rose with its five petals.

44. The sword, the spear, the scourge, and the chain are all such characteristic weapons of Mars that no comment is called for.

45. The four Fives of the Tarot pack are all evil cards, each according to its type. In fact, the five suit of Swords, which is under the presidency of Mars, represents contentiousness. for its best aspects are "Rest from strife" and "Success after struggle," and where a Sword card is associated with a Sephirah whose Mundane Chakra is one of the astrological infortunes, the result is disastrous, and we find the Lords of Defeat and Ruin in this suit.

46. Our ability to take the Geburah initiation depends upon our ability to handle the Martian forces, and this is determined by the degree of self-discipline and stability we have attained in our own natures.

47. Geburah is the most dynamic and forceful of all the Sephiroth, but it is also the most highly disciplined. Indeed, the military discipline, presided over by the god of War, is a synonym for the sternest kind of control that can be imposed upon human beings. The discipline of Geburah must exactly equate with its energy; in other words, the brakes of a car must bear a relationship to its horse-power if it is to be safe on the road. It is this tremendous Geburah discipline which is one of the testing-points of the Mysteries. We speak of an iron discipline, and iron is the metal of Mars.

48. The initiate of Geburah is a very dynamic and forceful person, but he is also a very controlled person. His characteristic virtues are an even temper and patience under provocation. It is well known on the sports field, which is the play~aspect of the god of War, that a loss of temper gives the game away. Every boxer knows that if he gets angry and starts fighting instead of boxing, the odds are against him. The initiate of Mars is essentially the Happy Warrior, the initiate who has passed through the grade of Tiphareth and gained equilibrium.

49. He fights without malice; he spares the weak and wounded; he does not set Out to destroy the law but to see to it that it is properly fulfilled. He is the corrector of the balance, and as such is always the defender of the weak and oppressed. He is never a god that is found on the side of the large armies, although he says, "With the froward I will show myself froward." He takes that two-headed giant of the Qliphoth, Thaumiel, the Dual Contending Forces, knocks his heads together and says, "A plague on both your houses! Keep God's peace or it will be the worse for you."

50. When a soul is at that stage of development when the only way it can learn is by experience, Geburah sees that it shall not be disappointed when it goes about looking for trouble. Geburah is the Great Initiator of the swollen-headed.

CHAPTER XX

TIPHARETH, THE SIXTH SEPHIRAH

TITLE: Tiphareth, Beauty. (Hebrew spelling: Tau, Pe, Aleph, Resh, Tau.)

MAGICAL IMAGE: A majestic king. A child. A sacrificed god.

SITUATION ON THE TREE: In the centre of the Pillar of Equilibrium.

YETZIRATIC TEXT: The Sixth Path is called the Mediating Intelligence, because in it are multiplied the influxes of the Emanations; for it causes that influence to flow into all the reservoirs of the blessings with which they themselves are united.

TITLES GIVEN TO TIPHARETH: Zoar Anpin, the Lesser Countenance. Melekh, the King. Adam. The Son. The Man.

GOD-NAME: Tetragrammaton Aloah Va Daath.

ARCHANGEL: Raphael.

ORDER OF ANGELS: Malachim, Kings.

MUNDANE CHAKRA: Shemesh, the Sun.

SPIRITUAL EXPERIENCE: Vision of the harmony of things. Mysteries of the Crucifixion.

VIRTUE: Devotion to the Great Work.

VICE: Pride.

CORRESPONDENCE IN THE MICROCOSM: The breast.

SYMBOLS: The Lamén. The Rosy Cross. The Calvary Cross. The truncated pyramid. The cube.

TAROT CARDS: The four Sixes.

SIX OF WANDS: Victory.

SIX OF CUPS: Joy.

SIX OF SWORDS: Earned success.

SIX OF PENTACLES: Material success.

COLOUR IN ATZILUTH: Clear rose-pink.

BRIAH: Yellow.

YETZIRAH: Rich salmon-pink.

ASSIAH: Golden amber.

I

[Page 188]

1. There are three important keys to the nature of Tiphareth. Firstly, it is the centre of equilibrium of the whole 'ree, being in the middle of the Central Pillar; secondly, it is Kether on a lower arc and Yesod on a higher arc; thirdly, it is the point of transmutation between the planes of force and the planes of form. The titles that are bestowed on it in Qabalistic nomenclature bear this out. From the point of view of Kether it is a child; from the point of view of Malkuth it is a king; and from the point of view of the transmutation of force it is a sacrificed god.

2. Macrocosmically, that is to say from the Kether standpoint, Tiphareth is the equilibrium of Chesed and Geburah; microcosmically, that is to say from the point of view of transcendental psychology, it is the point where the types of consciousness characteristic of Kether and Yesod are brought to a focus. Hod and Netzach equally find their synthesis in Tiphareth.

3. The six Sephiroth, of which Tiphareth is the centre, are sometimes called Adam Kadmon, the archetypal man; in fact, Tiphareth cannot rightly be understood save as the central point of these six, wherein it rules as a king in his kingdom. It is these six which, for all practical purposes, constitute the archetypal kingdom which lies behind the kingdom of form in Malkuth and completely dominates and determines the passivities of matter.

4. When we have to consider a Sephirah in relation to its neighbours in order to interpret in the light of its position on the Tree, it is not possible to proceed with an entirely systematic and orderly exposition of the Qabalistic system, for we must of necessity forestall with partial explanations if our argument is to be comprehensible. We must therefore give some explanation of the three lower Sephiroth grouped around Tiphareth, Netzach, Hod, and Yesod.

5. Netzach is concerned with the Nature forces and elemental contacts; Hod with ceremonial magic and occult

[Page 190]

knowledge; and Yesod with psychism and the etheric double. Tiphareth itself, supported by Geburah and Gedulah, represents seership, or the higher psychism of the individuality. Each Sephirah, of course, has its subjective and objective aspects—its factor in psychology and its plane in the universe,

6. The four Sephiroth below Tiphareth represent the personality or lower self; the four Sephiroth above Tiphareth are the Individuality, or higher self, and Kether is the Divine Spark, or nucleus of manifestation.

7. Tiphareth, therefore, must never be regarded as an isolated factor, but as a link, a focussing-point, a centre of transition or transmutation. The Central Pillar is always concerned with consciousness. The two side Pillars with the different modes of the operation of force on the different levels.

8. In Tiphareth we find the archetypal ideals brought to a focus and transmuted into archetypal ideas. It is, in fact, the Place of Incarnation. For this reason it is called the Child. And because incarnation of the god-ideal also implies the sacrificial disincarnation, to Tiphareth are assigned the Mysteries of the Crucifixion, and all the Sacrificed Gods are placed here when the Tree is applied to the pantheons. God the Father is assigned to Kether; but God the Son is assigned to Tiphareth for the reasons given above.

9. Exoteric religion goes no farther up the Tree than Tiphareth. It has no understanding of the mysteries of creation as represented by the symbolism of Kether, Chokmah, and Binah; nor of the modes of operation of the Dark and Bright Archangels as represented in the symbolism of Geburah and Gedulah; nor of the mysteries of consciousness and the transmutation of force as represented in the invisible Sephirab Daath, which has no symbolism.

10. In Tiphareth God is made manifest in form and dwells among us; i.e. comes within range of human consciousness. Tiphareth, the Son, "shows us" Kether, the Father.

11. In order that form may be stabilised, the component forces out of which it is built must be brought into equilibrium. Therefore do we find the idea of the Mediator, or Redeemer, inherent in this Sephirah. When the Godhead in its very Self manifests in form, that form must be perfectly equilibrated. One might with equal truth reverse the proposition and say that when the forces building a form are perfectly equilibrated, the Godhead its very Self is manifesting in that form according to its type. God is made manifest among us when the conditions permit of manifestation.

12. Having come through into manifestation on the planes of form in the Child aspect of Tiphareth, the incarnated god grows to manhood and becomes the Redeemer. In other words, having obtained incarnation by means of matter in a virgin state, *i.e.* Mary, Marah, the Sea, the Great Mother, Binah, a Supernal, as distinguished from the Inferior Mother, Malkuth, the developing God-manifestation, is for ever striving to bring the Kingdom of the six central Sephiroth into a state of equilibrium.

13. When the glyph of the Fall is represented upon the Tree it is interesting to note that the heads of the Great Serpent that rises out of Chaos only come as far as Tiphareth and do not overpass it.

14. The Redeemer, then, manifests in Tiphareth, and is for ever striving to redeem His Kingdom by re-uniting it to the Supernals across the gulf made by the Fall, which separated the lower Sephiroth from the higher, and by bringing the diverse forces of the sixfold kingdom into equilibrium.

15. To this end are the incarnated gods sacrificed, dying for the people, in order that the tremendous emotional force set free by this act may compensate the unbalanced force of the Kingdom and thus redeem it or bring it into equilibrium.

16. It is this Sphere on the Tree that is called the Christ-centre, and it is here that the Christian religion has its focussing-point. The pantheistic faiths, such as the Greek and Egyptian, centre in Yes od; and the metaphysical faiths, such as the Buddhist and Confucian, aim at Kether. But as all religions worthy of the name have both an esoteric, or mystical, and an exoteric, or pantheistic, aspect, Christianity, although it is essentially a Tiphareth faith, has its mystical aspect centring in

Kether, and its magical aspect, as seen in popular continental Catholicism, centring in Yesod. Its evangelical aspect aims at a concentration on Tiphareth as Child and Sacrificed God, and ignores the aspect of the King in the centre of his Kingdom, surrounded by the five Holy Sephiroth of manifestation.

17. Hitherto we have considered the Tree from the macrocosmic point of view, seeing the different archetypes of manifesting force come into action and build the universe, and have but remotely approached them from the microcosmic point of view in their psychological aspect as factors in consciousness. But with Tiphareth our mode of approach changes, for from henceforward the archetypal forces are locked up in forms, and can only be approached from the point of view of their effect upon consciousness; in other words, our mode of approach must now be through the direct experience of the senses, though these senses are not of the physical plane only, but function in both Tiphareth and Yesod, each according to type. While we were on the higher levels we had to rely on metaphysical analogy and reasoning by deduction from first principles; now we are within the legitimate field of inductive science, and must submit ourselves to its discipline and express our findings in its terms; but at the same time we must maintain our link with the transcendentals through Tiphareth; this is achieved by expressing the symbolism of Tiphareth in terms of mystical experience. All mystical experiences of the type in which the vision ends in blinding light are assigned to Tiphareth; for the fading-out of form in the overwhelming influx of force characterises the transitional mode of consciousness of this Sphere on the Tree. Visions which maintain clearly outlined form throughout are characteristic of Yesod. Illuminations which have no form, such as those described by Plotinus, are rising towards Kether.

18. In Tiphareth also are gathered up and interpreted the operations of the nature magic of Netzach and the Hermetic magic of Hod. Both these operations are in terms of form, though form predominates in the operation of Hod to a greater degree than in those of Netzach. All the astral visions of Yesod also must be translated into terms of metaphysics *via* the mystical experiences of Tiphareth. If this translation is not made, we become hallucinated; for we think the reflections cast into the mirror of the subconscious mind and translated there into terms of brain-consciousness are the actual things of which they are really only the symbolic representations.

19. Kether is metaphysical; Yesod is psychic; and Tiphareth is essentially mystical; mystical being understood as a mode of mentation in which consciousness ceases to work in symbolic subconscious representations but apprehends by means of emotional reactions.

20. The different additional titles and symbolism assigned to the various Sephiroth, and especially the God-names thereof, give us a very important key for the unlocking of the mysteries of the Bible, which is essentially a Qabalistic book. According to the manner in which Deity is referred to, we know to what Sphere on the Tree the particular mode of manifestation should be assigned. All references to the Son always refer to Tiphareth; all references to the Father refer to Kether; all references to the Holy Ghost refer to Yesod; and very deep mysteries are concealed here, for the Holy Ghost is the aspect of the

Godhead that is worshipped in the occult lodges; the worship of pantheistic nature-forces and elemental operations take place under the presidency of God the Father; and the regenerative ethical aspect of religion, which is the exoteric aspect for this epoch, is under the presidency of God the Son in Tiphareth.

21. The initiate, however, transcends his epoch, and aims at uniting all three modes of adoration in his worship of Deity as a trinity in unity; the Son redeeming the pantheistic nature worship from debasement and making the transcendental Father comprehensible to human consciousness, for "whoso hath seen Me hath seen the Father."

22. Tiphareth, however, is not only the centre of the Sacrificed God, but also the centre of the Inebriating God, the Giver of Illumination. Dionysos is assigned to this centre

[Page 194]

as well as Osiris, for, as we have already seen, the Central Pillar is concerned with the modes of consciousness; and human consciousness, rising from Yesod by the Path of the Arrow, receives illumination in Tiphareth; therefore all the givers of illumination in the Pantheons are assigned to Tiphareth.

23. Illumination consists in the introduction of the mind to a higher mode of consciousness than that which is built up out of sensory experience. In illumination the mind changes gear, as it were. Unless, however, the new mode of consciousness is connected up with the old and translated into terms of finite thought, it remains as a flash of light so brilliant that it blinds. We do not see by means of the ray of light that shines upon us, but by means of the amount of that ray which is reflected from objects of our own dimension upon which it lights. Unless there are ideas in our minds which are illuminated by this higher mode of consciousness, our minds are merely overwhelmed, and the darkness is more intense to our eyes after that blinding experience of a high mode of consciousness than it was before. In fact, we do not so much change gear as throw the engine of our mind out of gear altogether. This, for the most part, is what so-called illumination amounts to. There is enough of a flash to convince us of the reality of super-physical existence, but not enough to teach us anything of its nature.

24. The importance of the Tiphareth stage in mystical experience lies in the fact that the incarnation of the Child takes place here; in other words, mystical experience gradually builds up a body of images and ideas that are lit up and made visible when illuminations take place.

25. This Child aspect of Tiphareth is also a very important one to us in such practical work of the Mysteries as is concerned with illumination. For we must accept the fact that the Child-Christ does not spring like Minerva, full-armed from the head of God the Father, but starts as a small thing, humbly laid among the beasts and not even housed in the {? il?n} with the humans. The first glimpses of mystical experience must perforce be very limited because we have not had time to build up through experience a body of images and ideas that shall serve to represent them. These can only be got together with

time, each transcendental experience adding its quota and subsequent rational meditation organising them.

26. Mystics are very apt to make the mistake of thinking that they are following the Star to the place of the Sermon on the Mount, not to the Manger at Bethlehem, the birth-place. It is here that the method of the Tree is so valuable, enabling the transcendent to be expressed in terms of symbolism, and symbolism to be translated into terms of metaphysics ; thus linking the psychic with the spiritual *via* the intellect, and bringing all three aspects of our trinitarian consciousness into focus.

27. It is in Tiphareth that this translation is made, for in Tiphareth are received the mystical experiences of direct consciousness which illuminate the psychic symbols.

II

28. The Central Pillar of the Tree is essentially the Pillar of Consciousness, just as the two side Pillars are the Pillars of the active and passive powers. When considered microcosmically, that is to say from the point of view of psychology instead of cosmology, Kether, the Divine Spark round which the individualised being builds up, must be regarded as the nucleus of consciousness rather than consciousness itself. Daath, the invisible Sephirah, is also on the Central Pillar, though, strictly speaking, it always belongs to another plane to that on which the Tree is being considered. For instance, as we are considering the Tree microcosmically at the moment, Daath would be the point of contact with the macrocosm. It is not until we come to Tiphareth that we get clear-cut, individualised consciousness.

29. Tiphareth is the functional apex of the Second Triad on the Tree, whose two basal angles consist of Geburah and Gedulah (Chesed). This Second Triad, emanating from the

[Page 196]

First Triad of the Three Supernals, forms the evolving individuality, or spiritual soul. It is this which endures and builds up throughout an evolution; it is from this that the successive personalities, the units of incarnation, are emanated; it is into this that the active essence of experience is absorbed at the end of each incarnation when the incarnating unit dissolves into dust and ether.

30. It is this Second Triad which forms the Oversoul, the Higher Self, the Holy Guardian Angel, the First Initiator. It is the voice of this higher self which is so often heard with the inner ear, and not the voice of discarnate entities, or of God Himself, as is thought by those who have had no training in tradition.

31. Overshadowed and directed by the Second Triad, the Third Triad builds up through the experience of incarnation, with Malkuth as its physical vehicle. Brain consciousness

is of Malkuth, and as long as we are imprisoned in Malkuth, that is all we have. But the doors of Malkuth are not closely shut nowadays, and many there are who can peer through the crack at the phantasmagoria of the astral plane and experience the psychic consciousness of Yesod. When this has been achieved the way opens for the higher psychism, the true seership, which is characteristic of the consciousness of Tiphareth.

32. Our first experience of the higher psychism, therefore, is usually in terms of the lower psychism to commence with; for we have only just risen clear of Malkuth, and are looking up at the Sun of Tiphareth from the Moon-sphere of Yesod. Therefore we hear voices with the inner ear and see visions with the inner eye, but they differ from ordinary psychic consciousness because they are not the direct representations of astral forms, but symbolic presentations of spiritual things in terms of astral consciousness. This is a normal function of the subconscious mind, and it is very important that it should be thoroughly understood, for misconceptions on this point give rise to very serious problems and may even lead to mental unbalance.

33. Those who are familiar with Qabalistic terminology know that the first of the greater initiations is said to consist of the power to enjoy the knowledge and conversation of our Holy Guardian Angel; this Holy Guardian Angel, be it remembered, is really our own higher self. It is the prime characteristic of this higher mode of mentation that it consists neither in voices nor visions, but is pure consciousness; it is an intensification of awareness, and from this quickening of the mind comes a peculiar power of insight and penetration which is of the nature of hyper-developed intuition. The higher consciousness is never psychic, but always intuitive, containing no sensory imagery. It is this absence of sensory imagery which tells the experienced initiate that he is on the level of the higher consciousness.

34. The ancients recognised this, and they differentiated between the mantic methods which induced the chthonic, or underworld contacts, and the divine inebriation of the Mysteries. The Mienads rushing in the train of Dionysos were of an entirely different order of initiation to the pytho-nesses; the pythonesses were psychics and mediums, but the Monads, the initiates of the Dionysiac Mysteries, enjoyed exaltation of consciousness and a quickening of life that enabled them to perform amazing prodigies of strength.

35. All the dynamic religions have this Dionysiac aspect; even in the Christian religion many saints have left record of the Crucified Christ of their devotion coming to them at last as the Divine Bridegroom; and when they speak of this divine inebriation that comes to them, their language uses the metaphors of human love as its appropriate expression-"How lovely art thou, my sister, my spouse."-"Faint from the kisses of the lips of God . . ."
"These things tell a great deal to those who have understanding.

36. The Dionysiac aspect of religion represents an essential factor in human psychology, and it is the misunderstanding of this factor which upon the one hand prevents the manifestation of the higher spiritual experiences in our modern civilisation, and upon the other permits of the strange aberrations of religious feeling that from time to time give rise to scandal

[Page 198]

and tragedy in the high places of the more dynamic religious movements.

37. There is a certain emotional concentration and exaltation which makes the higher phases of consciousness available, and without which it is impossible to attain them. The images of the astral plane pass over into an intensity of emotion that is like a burning fire, and when all the dross of the nature has gone up in flame the smoke clears, and we are left with the white heat of pure consciousness. By the very nature of the human mind, with the brain as its instrument) this white heat cannot endure for long; but in the brief space of its lasting, changes occur in the temperament, and the mind itself receives new concepts and undergoes an expansion that never wholly retracts. The tremendous exaltation of the experience dies away, but we are left with a permanent expansion of personality, an enhanced capacity for life in general, and a power of realisation of spiritual realities which could never have been ours if we had not been swung forcibly across the great gulf of consciousness by the momentum of ecstasy.

38. Modern spiritual leaders have no knowledge of the technique of the deliberate production of ecstasy and no idea how to direct it when it occurs spontaneously. Revivalists succeed in producing a mild form of it among unsophisticated people by means of personal magnetism, and the worth of a revivalist is judged by his power to inebriate his hearers. But the consequences of this inebriation are apt to be like the consequences of any other inebriation, and life seems exceedingly stale, flat, and unprofitable when the revivalist moves on to other fields of activity. Because the inebriation dies away, the convert thinks he has lost God; no one seems to realise that ecstasy is a magnesium flash in consciousness, and if it were prolonged, would burn up the brain and nervous system. But although it cannot be, and is not meant to be, prolonged, by means of it we swing over the dead centre of consciousness and awake to a higher life.

39. The technique of the Tree gives accurate definition to these spiritual experiences, and those who are trained in that technique do not mistake the stirring of their own higher consciousness for the voice of God. From the sensory consciousness of Malkuth, through the astral psychism of Yesod, to the formless intuitions and quickened consciousness of Tiphareth they rise and descend smoothly and skilfully; never confusing the planes or suffering them to leak one into another, but bringing them all into focus in a centralised consciousness.

III

40. Tiphareth is called by the Qabalists Shemesh, or the Sphere of the Sun; and it is interesting to note that all sun-gods are healing gods, and all healing gods are sun-gods, a fact which affords us food for thought.

41. The sun is the central point of our existence. Without the sun there would be no solar system. Sunlight plays a very important part in the metabolism, the life-process, of living creatures, and the whole of the nutrition of green plants depends upon it. Its influence is

closely allied to that of vitamins, as is proved by the fact that certain vitamins can be used to supplement its activities. We see, therefore, that sunlight is a very important factor in our well-being; we might go even further and say that it is essential to our very existence and that our association with the sun is far more intimate than we realise.

42. The symbol of the sun in the mineral kingdom is gold, pure and precious, which all nations have agreed in calling the metal of the sun and recognising as the most precious metal and the basic unit of exchange. The part played by gold in the polity of nations far exceeds its intrinsic utility as a metal. It is, moreover, the one substance on earth which is incorruptible and untarnishable. It may be dulled by the accumulation of dirt upon its surface, but the metal itself, unlike silver or iron, undergoes no chemical change or decomposition. Neither does water corrode it.

43. The sun is to us truly the Giver of Life and source of all being; it is the only adequate symbol of God the Father, who

[Page 200]

may aptly be called the Sun behind the Sun, Tiphareth, in fact, being the immediate reflection of Kether. It is through the mediation of the sun that life comes to the earth, and it is by means of the Tiphareth consciousness that we contact the sources of vitality and draw upon them, both consciously and unconsciously.

44. The sun is, above all things, the symbol of manifesting energy; it is sudden, unaccustomed gushes of solar-spiritual energy that cause the divine inebriation of ecstasy; it is gold, as the basis of money, which is the objective representative of externalised life-force; for verily, money is life and life is money, for without money we can have no fullness of life. Life-force, manifesting on the physical plane as energy and on the mental plane as intelligence and knowledge, can be transmuted by the appropriate alchemy into money, which is a token of the capacity or energy of someone. Money is the symbol of human energy, by means of which we can store up our output of work hour by hour, receiving it back as wages at the end of the week, and spending it on necessities or saving it for future use as we think fit. The gold which backs the notes is a symbol of human energy, and is only earned by an expenditure of that energy; though it may be the energy of a father or a husband, transmitted through an heiress, yet nevertheless it is the symbol of some human being's activity in some sphere, even if it be only the sphere of company-promoting or burglary.

45. The secret, underground movements of gold act in the polity of nations as hormones act in the human body, and there are cosmic laws governing their tidal and epochal movements which economists do not suspect.

46. Kether, Space, the source of all existence, reflects into Tiphareth, which acts as a transformer and distributor of the primal, spiritual energy. We receive this energy directly by means of sunlight, and indirectly by means of the chlorophyll in green plants, which

enables them to utilise sunlight, and which we eat at first hand in vegetable foods, and at second hand in the tissues of herbivorous creatures

47. But the Sun-god is more than the source of life. He is also the healer when life goes wrong. For it is life, plus, minus, or misdirected, which is the activity in disease processes; disease has no energy save what it borrows from the life of the organism. It is therefore by adjustments in the life-force that healing must be brought about, and the sun-gods are the natural gods to invoke in this connection, for life and the sun are so intimately connected.

48. It is by means of their knowledge of the manipulation of the solar influence that the ancient initiate-priests performed their healings, and sun-worship lay at the root of the IEsculapian cult of ancient Greece.

49. We moderns have learnt the value of sunlight and vitamins in our physiological economy, but we have not realised the very important part played by the spiritual aspect of the solar influences in our psychic economy, using that word in its dictionary sense. There is a Tiphatic factor in the soul of man which, according to ancient tradition, has its physical correspondence in the solar plexus, not in the head or the heart, which is able to pick up the subtle aspect of the solar energy in the same way that the chlorophyll in the leaf of a plant picks up its more tangible aspect. If we are cut off from this energy and prevented from assimilating it, we become as sickly and feeble in mind and body as plants growing in a cellar cut off from its more tangible aspect.

50. This cutting-off from the spiritual aspect of Nature is due to mental attitudes. When we refuse to acknowledge our part in Nature, and Nature's part in us, we inhibit this free flow of life-giving magnetism between the part and the whole; and lacking certain elements essential to spiritual function, psychic health is impossible.

51. Psycho-analysts attach great importance to repression as a cause of psychic disease; they learnt to recognise repression because in its extreme form of sex-repression its ill effects are conspicuous. They did not realise, however, that sex-repression, unless it is caused by circumstances, in which case it does not give rise to dissociation, is but the result of a cause

[Page 202]

which lies far deeper than sex, and has its roots in a false spirituality, a spurious refinement and idealism, which has led to the cutting-off of the sympathies, of the recognition, of the gratitude of a living creature from the Giver of Life, the higher aspect of Nature. This is caused by a spiritual vanity which considers the more primitive aspects of nature as beneath its dignity.

52. It is because of our spurious ideals with their false values that we have so much neurotic ill-health in our midst. It is because Priapus and Cloacina are not given their due

as deities that we are cursed by the Sun-god and cut off from Ilis benign influence, for an insult to His subsidiary aspects is an insult to Him.

53. When a creature is not in a fit state for reproduction, sexual advances are repellent to it; this is the natural basis of modesty and protects the organism from waste and exhaustion. Because an accumulation of decomposing excreta gives rise to disease, the odour of their excreta is repulsive to living creatures of even the lowliest development, so that they avoid its neighbourhood. Out of these two repulsions, so rational and valuable under natural conditions, under our artificial conditions of civilised life all manner of irrational taboos have grown up. The repulsion is overdone, and no longer serves its biological purpose.

54. Our attitude towards two important sections of natural life implies that they are unnatural, debased, poisonous. Consequently we cut ourselves off from the earth-contacts; then the circuit is broken and the heavenly contacts also fail us. The cosmic current comes down from Kether, through Tiphareth and Yesod, into Malkuth; if the circuit be broken anywhere, it cannot function. True, it is impossible totally to break the circuit during life, for the life-processes are so deeply rooted in nature that we cannot altogether suppress them; but a mental attitude can cause such a kinking of the tube, as it were, can so insulate and inhibit, that only a scanty flow can be sucked through against resistance by the desperate organism.

55. In Tiphareth, the Sun Centre, we have the spiritual manifesting in the natural, and we should give reverence to the Sun-god as representing the naturalisation of spiritual processes; the spiritualisation of natural processes has had a good deal to answer for in the history of human suffering.

IV

56. The symbols assigned to the Sixth Sephirah become a very illuminating study when we examine them in the light of what we now know about the significance of Tiphareth, for we have here a very clear example of the way in which the symbols assigned to a given Sephirah lace in and out, in and out, in long chains of interrelated associations.

57. The meaning of the Hebrew word Tiphareth is Beauty; and of the many definitions of beauty that have been proposed, the most satisfying is that which finds beauty to lie in a due and just proportion, whatever the beautiful thing may be, whether moral or material. It is interesting, therefore, to find the Sephirah of Beauty as the central point of equilibrium of the whole Tree, and that one of the two Spiritual Experiences assigned to Tiphareth is the Vision of the Harmony of Things.

58. It is curious that two separate and, at first sight, unrelated Spiritual Experiences should be assigned to Tiphareth; it is, in fact, the only Sphere on the Tree where this

occurs. It is also unique in having several Magical Images assigned to it. We must therefore ask ourselves why it is that the central Sephirah has these multiple aspects. The answer is to be found in the Yetziratic Text assigned to Tiphareth, which declares that "The Sixth Path is called the Mediating Intelligence. A mediator is essentially a connecting link, an intermediary; consequently Tiphareth, in its central position, must be looked upon as a two-way switch, and we must Consider it both as receiving the "influxes of the Emanations" and as "causing that influence to flow into all the reservoirs of the blessings." We may therefore look upon it as the out-ward manifestation of the five subtler Sephiroth, and also as

[Page 204]

the spiritual principle behind the four denser Sephiroth. If looked at from the side of form, it is force; if looked at from the side of force, it is form. It is, in fact, the archetypal Sephirah in which the great principles represented by the five higher Sephiroth are formulated into concepts; "In it are multiplied the influxes of the Emanations," as the *Sepher Yetzirah* declares.

59. The name Zoar Anpin, Lesser Countenance, as distinguished from Arik Anpin, the Vast Countenance, one of the titles of Kether, further bears out this idea. For the formless formulations of Kether take shape in this, the sphere of the higher mind. As previously noted, Kether is reflected into Tiphareth. The Ancient of Days sees Himself reflected as in a glass, and the reflected image of the Vast Countenance is called the Lesser Countenance and the Son.

60. But although a lesser manifestation and a younger generation as viewed from above, Tiphareth is also Adam Kadmon, the Archetypal Man, when viewed from beneath—from the side, that is to say, of Yesod and Malkuth. Tiphareth is Malek, the King, the husband of Malkab, the Bride, which is one of the titles of Malkuth.

61. It is in Tiphareth that we find the archetypal ideas which form the invisible framework of the whole of manifested creation formulating and expressing the primary principles emanating from the subtler Sephiroth. It is, as it were, a Treasure-house of Images on a higher arc; but whereas the astral plane is peopled by images reflected from forms, the images of the Sphere of Tiphareth are those formulating, and as it were crystallising out, from the spiritual emanations of the higher potencies.

62. Tiphareth mediates between the microcosm and the macrocosm; "As above, so below," is the keynote of the Sphere of Shemesh, wherein the Sun that is behind the sun focusses into manifestation.

63. In the anatomy of the Divine Man is the interpretation of all organisation and evolution; in fact, the material universe. is literally the organs and members of this Divine Man; and it is through an understanding of the soul of Adam Kadmon, which consists of the "influxes of the Emanations," that we can interpret His anatomy in terms of function, which is the only way in which anatomy can be intelligently appreciated. It is because

science is content largely to be descriptive, and shrinks from purposive explanations, that it is so barren of all philosophical import.

64. In transcendental psychology, which is the anatomy of the microcosm, the breast is the correspondence assigned to Tiphareth. In the breast are the lungs and the heart, and immediately below these organs, and intimately connected with them and controlling them, is the greatest network of nerves in the body, known as the solar plexus, aptly so named by the ancient anatomists. The lungs maintain a singularly intimate relationship between the microcosm and the macrocosm by determining the ceaseless tidal motion of the atmosphere, in and out, in and out, that never ceases day or night, until the golden bowl is broken and the silver cord is loosed and we cease to breathe. The heart determines the circulation of the blood, and the blood, as Paracelsus truly said, is a "singular fluid." Modern medicine knows well what sunlight means to the blood. It has also discovered that chlorophyll, which is the green substance in the leaves of plants which enables them to utilise the sunlight as their source of energy, has a very potent influence upon the blood-pressure.

65. The three Magical Images of Tiphareth are curious, for at first sight they are so utterly unrelated that each one appears to cancel out the others. But in the light of what we now know concerning Tiphareth, their significance and relationship appears clearly, speaking through the language of symbolism, especially when studied in the light of the life of Jesus Christ the Son.

66. Tiphareth, being the first coagulation of the Supernals, is aptly represented as the new-born Child in the manger at Bethlehem; as the Sacrificed God he becomes the Mediator between God and man; and when He has risen from the dead he is as a king come to his kingdom. Tiphareth is the child

[Page 206]

of Kether and the king of Malkuth, and in His own sphere he is sacrificed.

67. We shall not understand Tiphareth aright unless we have some concept of the real meaning of sacrifice, which is very different to the popular one, which conceives of it as the voluntary loss of something dear. Sacrifice is the translation of force from one form to another. There is no such thing as the total destruction of force; however completely it disappears from our ken, it maintains itself in some other form according to the great natural law of the conservation of energy, which is the law that maintains our universe in existence. Energy may be locked up in form, and therefore static; or it may be free from its bondage to form and in circulation. When we make a sacrifice of any sort, we take a static form of energy, and by breaking up the form that imprisons it, put it into free circulation in the cosmos. That which we sacrifice in one form turns up again in due course in another form. Apply this concept to the religious and ethical ideas of sacrifice and some very valuable clues are obtained.

68. The God-name of this sphere is Aloah Va Daath, which associates it intimately' with the Invisible Sephirah that comes between it and Kether. This Sephirah, as we have already seen, may best be understood as apprehension, the dawning of consciousness; and we may interpret the phrase "Tetragrammaton Aloah Va Daath" as "God made manifest in the sphere of mind."

69. In the microcosm Tiphareth represents the higher psychism, the mode of consciousness of the individuality, Jr higher self. It is essentially the sphere of religious mysticism as distinguished from the magic and psychism of Yesod; for be it remembered, the Sephiroth of the Central Pillar of the Tree represent levels of consciousness, and the Sephiroth on the side pillars represent powers and modes of function. Tiphareth is also said to be the Sphere of the Greater Masters; it is the Temple not made with hands, eternal in the heavens and the Great White Lodge. It is here that the initiated adept functions when in the higher consciousness; here that he hopes to meet the Masters, and it is by means of the Name, and by an understanding of the significance of the Name of Aloah Va Daath that he opens up the higher consciousness.

70. For be it noted that it is only in proportion to the significance a word has for us that it becomes a Word of Power. The name of his victim is a word of power to a murderer; and such is its recognised potency that in some countries an instrument to register the changes of blood-pressure is attached to the arm of a suspect while he is being questioned by the police, and the name of the dead man, and other words connected with the crime, are suddenly whispered in his ear, and if these are "words of power" for him, the instrument registers it beyond all question.

71. It is popularly believed that Names of Power exercise direct influence over spirits, angels, demons and such-like, but this is not so. The Name of Power exercises its influence upon the magician, and by exalting and directing consciousness enables him to get into touch with the chosen type of spiritual influence; if he has had experience of that particular type of influence, the Word of Power will stir potent subconscious memories; if he has not, and approaches the matter in the unimaginative and incredulous spirit of the scholar, the "barbarous Names of Evocation" will be just hocus-pocus for him. But be it noted that to the believing Catholic, "hocus-pocus," which is the Protestant's name for deception and superstition and from which is derived the word hoax, means "Hoc est Corpus," which is an altogether different story. So much lies in the viewpoint in these matters.

72. Therefore it is that a definite spiritual experience is assigned to each Sephirah, and until a person has had that experience he is not an initiate of that Sephirah, and cannot make use of its Names of Power even if he knows them. As tradition has it, it is not enough to know a Name of Power, one must also know how to vibrate it. It is generally believed that the vibration of a Name of Power is the right note on which to chant it; but magical vibration is something much more than that. When one is deeply moved, and at the same

time devotionally exalted, the voice drops several tones below its normal pitch and becomes resonant and vibrant; it is this tremor of emotion combined with the resonance of devotion which constitutes the vibration of a Name, and this cannot be learnt or taught; it can only be spontaneous. It is like the wind, it bloweth where it listeth. When it comes, it shakes one from head to heel with a wave of fiery heat, and all who hear it involuntarily come to attention. It is an extraordinary experience to hear a Word of Power vibrated. It is an even more extraordinary experience to vibrate it.

73. The archangel of Tiphareth is Raphael, the "spirit that standeth in the sun," who is also the angel of healing.

74. When the initiate is "working on the Tree," that is to say is building up in his imagination a diagram of the Tree of Life in his aura, he formulates Tiphareth in his solar plexus between the abdomen and the breast; if he intends to work in the sphere of the Sixth Sephirah, and concentrates the power in this centre, he will find that he himself has suddenly become a spirit standing in the sun, with the blazing photosphere all round him. It is one thing to formulate a Sephirah in one's aura; but it is quite another to find oneself right inside the Sephirah. Although one can receive the influence of a Sephirah by means of the former operation, and it is a good routine method for daily meditation, it is not until one has everted-as it were, turned clean inside out, so that the position is reversed, and instead of the Sphere being inside one, one is inside the Sphere-that one can work with the power of a Sephirah. It is this experience which is the culmination of the initiation of a Sephirah.

75. The Order of Angels of Tiphareth are the Malachim, or Kings. These are the spiritual principles of natural forces--and no one can control, or even safely make contact with elemental principles unless he holds the initiation of Tiphareth, which is that of a minor adept. For he must have been accepted by the Elemental Kings, that is to say he must have realised the ultimate spiritual nature of natural forces before he can handle them in their elemental form. In their subjective elemental form they appear in the microcosm as powerful instincts of combat, of reproduction, of self-abasement, of self-aggrandisement, and all those emotional factors known to the psychologist. It is obvious, therefore, that if we stir and stimulate these emotions in our natures it must be in order that we may use them as servants of the higher self, directed by reason and spiritual principle. It is necessary, therefore, that when we operate the elemental forces we do so through the Kings, under the presidency of the Archangel and by the invocation of the Holy Name of God appropriate to the sphere. Microcosmically, this means that the powerful elemental driving-forces of our nature are correlated with the higher self, instead of being dissociated into the Quphothic underworld of the Freudian unconscious.

76. Elemental operations are not, of course, performed in the Sphere of Tiphareth, but it is essential that they should be controlled from the Sphere of Tiphareth if they are to remain White Magic. If there is no such higher control, they will soon slide off into Black Magic. It is said that at the Fall the four lower Sephiroth became detached from Tiphareth and assimilated to the Quphoth. When the elemental forces become detached from their spiritual principles in our concepts so that they become ends in themselves, even if no

ev'l but merely experimentation is intended, a Fall takes place and degeneration soon follows. But when we clearly realise the spiritual principle behind all natural things, they are then in a state of innocence, to use a theological term with a definite connotation; they are unfallen, and we can safely work with them and advantageously develop them in our own natures; thus bringing about the unrepression and equilibrium so necessary to mental health. This correlation of the natural with the spiritual, thus maintaining it unfallen and in a state of innocence, is a very important point in all practical workings in any form of magic.

V

77. As has already been seen, two spiritual experiences go to make up the initiation of Tiphareth, the Vision of the Harmony

[Page 210]

of Things and the Vision of the Mysteries of the Crucifixion, We have already seen in another connection that there are two aspects to Tiphareth, and therefore must be two Spiritual experiences in its initiation.

78. In the Vision of the Harmony of Things we see deep into the spiritual side of Nature; in other words, we meet the Angelic Kings, the Malachim. Through this experience we understand that the natural is but the dense aspect of the spiritual, the "Outer Robe of Concealment" covering the "Inner Robe of Glory." It is this understanding of the spiritual significance of the natural which is so lamentably lacking in our religious life to-day, and which is responsible for so much neurotic ill-health and so much married unhappiness.

79. It is through this Vision of the Harmony of Things that we are made one with Nature, not by means of elemental contacts. Human beings who are in anywise raised by culture above the primitive cannot become one with Nature upon the elemental level, for to do so is degeneration, and they become beastly in both senses of the word. The nature contacts are made through the Angelic Kings of the Elements in the Sphere of Tiphareth-in other words, through the realisation of the spiritual principles behind natural things-and the initiate then comes to the elemental beings in the name of their presiding King. He descends into the elemental kingdoms from above, as it were, bringing with him his manhood; thus he is an initiator to the elementals; but if he meets them on their own level, he abrogates his manhood and returns to an earlier phase of evolution. Elemental force, not limited and kept in check by the limitations of an animal brain, is bound to be unbalanced force when it flows through the wide channels of a human intellect, and the result is chaos, which is one of the Kingdoms of the Qliphoth.

80. The Mysteries of the Crucifixion are both macrocosmic and microcosmic. In their macrocosmic aspect we find them in the myths of the Great Redeemers of mankind, who are always born of God and a Virgin mother, thus again emphasising the dual nature of Tiphareth, wherein form and force meet together. But let us not forget their microcosmic

aspect, as *an* experience of mystical consciousness. It is by means of an understanding of the Mysteries of the Crucifixion, which concern the magical power of sacrifice, that we are able to transcend the limitations of brain consciousness, limited to sensation and habituated to form, and enter into the wider consciousness of the higher psychism. We thus become able to transcend form and thereby release the latent force, changing it from static to kinetic and rendering it available for the Great Work, which is regeneration.

81. The characteristic virtue of the Sphere of Tiphareth is Devotion to this Great Work. Devotion is a very important factor in the Way of Initiation that leads to the higher consciousness, and we must therefore examine it carefully and analyse it into the factors of which it consists. Devotion might be defined as love for something higher than ourselves; something that evokes our idealism; which, while we despair of becoming equal to it, yet makes us aspire to become like it; "Beholding as in a glass the glory of the Lord, are changed into the same image from glory to glory." When a stronger emotional content is infused into devotion and it becomes adoration, it carries us across the great gulf fixed between the tangible and the intangible, and enables us to apprehend things that eye hath not seen, nor ear heard. It is this Devotion, rising to Adoration, in the Great Work, which initiates us into the Mysteries of the Crucifixion.

82. The Vice assigned to Tiphareth is Pride, and in this attribution we have some very true psychology. Pride has its roots in egoism, and as long as we are self-centred we Cannot be made one with all things. In the true selflessness of the Path the soul overflows its boundaries and enters into all things through limitless sympathy and perfect love; but in pride the soul tries to extend its boundaries till it possesses all things, and it is a very different matter to possess a thing to being made one with it, wherein it equally possesses us in Perfect reciprocity. It is this one-sided arrangement which

[Page 212]

is the vice of the adept. He must give as well as receive, and he must give himself unreservedly if he would participate in mystical union, which is the fruit of the sacrifice of crucifixion. "Let him who would be the greatest among you be the servant of all," said Our Lord.

83. The symbols associated with Tiphareth are the lamén; the Rosy Cross; the Calvary Cross; the truncated pyramid; and the cube.

84. The lamén is the symbol upon the breast of the adept and indicates the force he represents. An adept performing work in the Sphere of Shemesh, for instance, would wear upon his breast an image of the sun in splendour. A lamén is the magical weapon of Tiphareth; and it therefore becomes necessary to say something concerning the nature of magical weapons in general in order that the function of a lamén can be understood.

85. A magical weapon is some object which is found to be suitable as a vehicle for force of a particular type. For instance, the magical weapon of the Element of Water is a cup or chalice; the magical weapon of the Element of Fire is a lighted lamp. These objects are

chosen because their nature is congenial to that of the force to be invoked; or in modern language, because their form suggests the force to the imagination by association of ideas.

86. Tiphareth is traditionally associated with the breast, both by virtue of the network of nerves which is called the solar plexus, and by its position when the Tree is built up in the aura. Consequently the breast jewel of the adept is held to be the focus of the Tiphareth force, whatever operation may be performed. The actual force, operating in its own sphere, is represented by the magical weapon assigned to it. For instance, an adept performing an operation of the Element of Water would have as his magical weapon the Cup, and with the Cup would make all signs, and upon the Cup would concentrate the force called down by invocation. But upon his breast would be the sigil of the Element of Water, and this would be recognised as representing the spiritual factor in the operation, and as referring to the archangel over that particular kingdom. Unless the adept understands the significance of his lamen, as distinguished from his magical weapon, he is no adept, but a wizard.

87. The Rosy Cross and the Calvary Cross are both given as symbols of the Sphere of Tiphareth. In order to understand their significance, it is necessary to say something concerning crosses in general, and how they are used in systems of symbol-ism. Although the cross with which we are most generally familiar is the Calvary Cross, Owing to its association with Christianity, there are many other forms of cross, and each has its own significance. The Equal-armed Cross, such as the Red Cross of the army medical service, is called by initiates the Cross of Nature, and represents power in equilibrium. It is to be found at the top of some Keltic crosses, often enclosed in a circle, so that a Keltic cross actually consists of a tapering shaft ending in a nature cross, and has no relationship whatever to the Calvary Cross, which is the Cross of Christianity. The tapering shaft of the Keltic cross is, in actual fact, a truncated pyramid, and examples of this type of Keltic cross exist which leave no doubt upon this point whatsoever. Some archaic forms suggest the imposition of the cross and circle upon the conical phallic stone which is so universal an object in primitive worship.

88. The Swastika is also a nature cross, and is sometimes called the Cross of Thor, or the Hammer of Thor, its form being supposed to indicate the whirling action of his thunderbolts.

89 The Calvary Cross is the Cross of Sacrifice, and should properly be coloured black. Its shaft should be three times the length of its arms, and the length of each arm three times its width. Meditation on this cross brings initiation through suffering, sacrifice, and self-abnegation. The Crucifix is, of course, an elaboration of the Calvary Cross.

90. The circle upon the cross is an initiatory symbol, especially when the cross is raised upon three steps, as it should be in this form. The circle indicates eternal life; also wisdom;

and we see a form of it in the emblem of the Theosophical Society, which has for its badge the "serpent that holdeth his tail in his mouth." A Calvary Cross with the circle Super imposed means initiation by the Way of the Cross, and the three steps are the three degrees of illumination. It is this which is the so-called Rosy Cross. The fanciful object with brambles growing over it is not an initiatory symbol at all. The Rose associated with the Cross in Western symbolism is the Rosa Mundi, and is a key to the interpretation of the nature forces. On its petals are marked the thirty-two signs of the natural forces; these correspond to the twenty-two letters of the Hebrew alphabet and the Ten Holy Sephiroth; these in their turn are assigned to the Thirty-two Paths of the Tree of Life, and this is the key to the understanding of the Rosa Mundi. The curious scribbles that are called the sigils of the elementary spirits are made by drawing lines from one to another of the letters of their names on the Rose.

91. In the light of this explanation we are at no loss to understand the value of the claims of those organisations which sport a floral emblem as their symbol. They are on a par with those of the gentleman who demanded of his haberdasher a Public School tie with a bit of red in it.

92. The cube is usually said to be assigned to Tiphareth because it is a six-sided figure, and six is the number of Tiphareth. But there is more than this in the symbolism of the cube. The cube is the simplest form of solid, and as such is the appropriate symbol of Tiphareth, in whose sphere is found the first foreshadowing of form. The symbol of Malkuth is the double cube, which symbolises "As above, so below."

93. The pyramid symbolises the perfected man, broad-based on earth and tapering to unity in the heavens; in other words, the Ipsissimus. The truncated pyramid symbolises the initiated adept, or Adeptus Minor, who has passed within the Veil but has not yet completed his grades. This pyramid, to whose six sides correspond the six central Sephiroth which constitute Adam Kadmon, or the Archetypal Man, is completed by the addition of the Three Supernals which terminate in the unity of Kether.

94 The Sixes of the Tarot suits are also assigned to Tiphareth, and in them the harmonious and balanced nature of this Sephirah shows clearly. The Six of Wands is the Lord of Victory. The Six of Cups, the Lord of Joy. Even the maleficent Suit of Swords is tuned to harmony in this sphere, and the Six of Swords is known as the Lord of Earned Success - that is to say, success achieved after struggle. The Six of Pentacles is Material Success; in other words, power in equilibrium.

PART III

CHAPTER XXI

THE FOUR LOWER SEPHIROTH

1. The Ten Holy Sephiroth, when arranged upon the Tree of Life in their traditional pattern, fall into three main horizontal divisions, as well as the three vertical divisions of the Pillars. The highest of these horizontal divisions consists of the Three Supernals, which for all practical purposes are beyond the sphere of our comprehension. We posit them as fundamental principles which must exist if subsequent manifestations are to be explained. They represent Pure Being and the opposing principles of Activity and Passivity, and they are well described by calling them the Supernal Triangle.
2. The next functional triangle upon the Tree consists of Chesed, Geburah, and Tiphareth. These represent the active principles of Anabolism, Katabolism, and Equilibrium, and might best be described by calling them the Abstract Triangle.
3. All these six higher Sephiroth we have considered in detail, and we have seen how the three Supernal principles form the basis of manifestation, and the three Abstract principles give expression to manifestation. The three higher are latent, and the three lower are potent. If we understand these things, we find we have a system for explaining the infinite diversity of manifestation of the planes of form by reducing them to their primary principles, which renders the relations between them and the mode of their interaction and development clearly comprehensible; which it never has been, and never can be when the attempt is made to reduce all things to terms of form, instead of resolving them into terms of force.
4. The lowest functional unit on the Tree of Life consists,

[Page 216]

not of a triangle, but of a quaternary, and this quaternary is said by the Qabalists to have been affected by the Fall, the head of Leviathan rising out of the Abyss to a point between Yesod and Tiphareth. Beyond this it was not permitted to go, and the six higher Sephiroth retained their innocence. In other words, the four lower Sephiroth belong to the planes of form, wherein force is no longer free-moving, but "cabined, cribbed, confined"; only to be freed by works of destruction.

5. Tiphareth, as has already been seen, is the centre of equilibrium of the Tree. Equilibrium gives rise to stability, and stability to cohesion. From now onwards in the descent of life upon the Path of Involution we find the principle of cohesion playing an increasingly predominant part, until in Malkuth it reaches its apogee.
6. We may well conceive that the active principles of the Abstract Triangle underwent subdivision and specialisation in the course of the descent of life through Netzach, and in Yesod attained to a considerable degree of stereotyping by means of which the forms of Malkuth were determined. Once Malkuth, which is the plane of pure form, attained development, the evolutionary stream began to turn back towards spirit, freeing itself from the bondage of form while retaining the capacities acquired by experience of the discipline of form.
